At the Arnold Arboretum the opinion is expressed that the Santa Cruz reservation should be considered as only the entering wedge; other and larger reservations being required if a really adequate and typical portion of one of the most remarkable forest growths in the world—by all odds the most remarkable in this country—is to be saved from the ravages of the lumber dealer. The director of the Arboretum, Professor Charles S. Sargent—whose work in charge of the forest investigation of the tenth census, and later as head of the committee of the National Academy appointed to consider the dangers arising from the wholesale destruction of the Western timber lands, was the direct cause of such national forest reservations as we now possess—is not disposed, however, to minimize in the slightest the importance of the action which has been taken. A recent statement of Professor Sargent sums up what has been done as follows:—

"The action of the California legislature, which is largely due to the efforts of the Sempervirens Society, a body of Californians organized specially to accomplish the preservation of some part of the redwood forest, is a matter of national rejoicing. The redwood tree (*Sequoia sempervirens*) is one of the wonders of the world. Its first cousin, the so-called Big Tree of the western slopes of the Sierra Nevada, surpasses it in girth of stem, but no other tree in the world attains a larger size, and no North American tree grows so tall."

The redwood forest extends, or once extended, before it was attacked by the lumberman, from the northern borders of California southward to Monterey County in a belt facing the ocean and rarely more than thirty miles wide, for the redwood has only flourished, in post-glacial times, within the influence of the cold fogs which, sweeping in from the Pacific Ocean, are arrested by the range of mountains which follows the California coast. Fifty years ago this belt of redwood contained more merchantable timber than any other forest of a similar area which has been known to the human race. Trees ten, twelve, or fifteen feet in diameter were abundant, and individuals from twenty to twenty-five feet in diameter were not rare. Only some of the gum-trees of Australia approach or surpass it in height. Indeed, the extreme height which this tree attains has never been satisfactorily determined. A few years ago John Muir, the well-known California naturalist, General Henry L. Abbott, one of the engineer corps of the army, and Professor Sargent, found a tree which had recently

been cut on one of the streams which flow into Humboldt Bay that had a total length of 340 feet. In Professor Sargent's opinion this special individual is probably the tallest North American tree of which there is any authentic measurement, the tallest sequoia of the Sierras hardly surpassing the height of 320 feet. This tree, moreover, was hardly more than a sapling, with a trunk but six feet in diameter, or little more than a quarter of the size which redwood trunks sometimes attain.

"The redwood tree is interesting for its size," says Professor Sargent; "but it is more interesting as the sole representative, with the allied species of the Sierras, of a race of giant trees which before the glacial period were widely spread over the northern hemisphere. The forest of redwood, too, is probably the most beautiful coniferous forest in the world, with mighty trunks covered with bright red bark lifting aloft broad crowns of dark green delicate foliage, while the ground beneath the trees is clothed with masses of ferns, mosses, and many charming flowering shrubs and herbs.

"By the bill known generally as the timber and stone act, which was enacted by Congress in 1878, authority was given the Land Department to sell unreserved surveyed but unoccupied timber lands in California, Nevada, and Washington, in parcels not exceeding one hundred and twenty acres to one person or association of persons, at the rate of \$2.50 an acre. Under the workings of this act great areas of valuable timber lands speedily passed into the hands of individuals, corporations, and syndicates, domestic and foreign, for purposes of speculation, the government only obtaining a small part of the actual value of the standing timber.

"Under this act practically all the valuable redwood forest was quickly secured at merely nominal prices. Every acre of redwood forest has passed from the control of the government into the control of private hands, and if it had not been for the recent action of the California legislature in securing for the benefit of future generations a small area of redwoods, this primeval forest would have disappeared in the course of a comparatively short time. For it must be remembered that the redwood is one of the most valuable timber trees in the world; that the nearness of the redwood forests to the coast makes them accessible and easily worked; and that the demand for redwood lumber is rapidly increasing, not only in the Pacific States, but also in the East, and in Australia, New Zealand, China, and in many of the countries of South America.

"Satisfactory as the action of the legislature of California has been," Professor Sargent continues, "it is inadequate. The area which can be purchased for two hundred and fifty thousand dollars is entirely too small; the best redwoods are found to the northward and not in the neighborhood of Santa Cruz, which is near the southern limit of the region occupied by this tree; and many of the best trees have already been removed from the land which it is proposed to take. Properly to preserve a specimen of the redwood forest that all future generations of men may see what the greatest

forest of the world once was, a much larger tract than that contemplated in the present purchase should be secured in the best part of the redwood forest—which probably will be found in the neighborhood of Humboldt Bay. Here a tract of redwood forest land several thousand acres in extent might be acquired, running from the ocean back across the summit of the Coast Range, and if possible bounded on the north and on the south by streams flowing into the sea.

"Such a property, once acquired, should be put in the hands of a self-perpetuating body of trustees, that it might be free from the interference of national or state politics.

"The care of such a reservation would not be expensive. Fire, which is the great danger to forest property, is not much to be feared among the redwoods, owing to the prevalence of sea fogs and the natural non-inflammability of the wood."—*Boston Transcript*.

Popular Names and State Flowers.

THE popular names of the states are as follows:—

Alabama—Cotton State.
 Arkansas—Bear State.
 California—Golden State.
 Colorado—Centennial State.
 Connecticut—Nutmeg State, Freestone State, and State of Steady Habits.
 Delaware—Diamond State (on account of its size), and Blue Hen State.
 Florida—Peninsula State, Everglade State, and the Florida State.
 Georgia—Empire State of the South.
 Idaho—Gem of the Mountains.
 Illinois—Prairie State and Sucker State.
 Indiana—Hoosier State, a corruption of brusher or bully.
 Iowa—Hawkeye State.
 Kansas—Sunflower State and Garden of the West.
 Kentucky—Blue Grass State and Corn-Cracker State.
 Louisiana—Creole State and Pelican State.
 Maine—Lumber, or Pine Tree State.
 Maryland—Monumental State.
 Massachusetts—Old Bay State.
 Michigan—Lake State and Wolverine State.
 Minnesota—Gopher State.
 Mississippi—Bayou State and Eagle State.
 Missouri—The Iron State.
 Montana—Stub-toe State.
 Nebraska—Sage Hen State.
 Nevada—Silver State.
 New Hampshire—Granite State.
 New Jersey—Jersey Blue.
 New York—Empire, or Excelsior State.
 North Carolina—Old North State, Tar State, or Turpentine State.
 North Dakota—Flickertale State.
 Ohio—Buckeye State.
 Oregon—Beaver State.
 Pennsylvania—Keystone State.
 Rhode Island—Little Rhody.
 South Carolina—Palmetto State.
 South Dakota—Singed Cat State.
 Tennessee—Big Bend State and the Volunteer State.
 Texas—Lone Star State.
 Utah—Mormon State.
 Vermont—Green Mountain State.
 Virginia—Old Dominion and Mother of Presidents.
 Washington—Chinook State.
 West Virginia—Pan Handle State.
 Wisconsin—Badger State.
 About half of the states have chosen a state flower.

The choice is determined either by an act of the Legislature or the vote of the schoolchildren, and in a few cases by a general ballot.

New York chose the rose; Alabama the golden rod; Colorado, the columbine; Delaware, the peach blossom; Idaho, the syringa; Iowa, the rose; Maine, the pine cone and tassel; Minnesota, the moccasin flower; Montana, the bitter root; Nebraska, the golden rod; North Dakota, the wild rose; Oregon, the golden rod; Utah, the sego lily; Vermont, the red clover; Michigan, the apple blossom; California, the poppy; Kansas, the sunflower; Nevada, the sage brush; and Washington, the rhododendron. These are the only states that have adopted a floral emblem, though the partiality for certain flowers in various states has been closely indicated. The Cherokee rose is Georgia's favorite flower; the schoolchildren of Illinois are divided in their preferences between the rose and the violet; the latter flower is the favorite of Rhode Island, and it is supposed that the trailing arbutus would, on a vote, be accepted as the favorite flower of Massachusetts. Oklahoma Territory has adopted as its favorite the mistletoe, and if New Mexico took any vote on the subject, its preference would probably be given to the cactus.—*Boston Herald*.

The Law of Interstellar Measurements.

ONE of the most notable scientific discoveries in a century is claimed by an electrical engineer now in this city, H. Barringer Cox, who is known throughout the scientific world for his investigations in electrical phenomena.

This discovery is the long-sought-for law for the measurement of distance between the earth and the sun, moon, and other planets and stars in space. Mr. Cox calls it "the law of interstellar measurements." In importance it is claimed to rank with Newton's law of gravitation.

Mr. Cox proposes applying his knowledge of physics to the solution of the great problem of computing interstellar distances. It will be the first time, he says, that scientists have attempted to use electricity in their efforts at computing these measurements. Mr. Cox holds that his method will work out as accurately as the electrical instruments now compute distances on the earth's surface.

It is a well-known fact that electricians are now able to compute electrical measurements to the one-billionth part of a unit, and Mr. Cox holds that the delicacy of electrical instruments has been perfected to such a degree that it is high time they should be utilized to catch and record the magnetic waves coming from sister planetary bodies.

That these magnetic waves are transmitted through space and may be recorded is asserted by Nikola Tesla among others. Mr. Tesla believed that he had received communications from Mars, and while Mr. Cox refuses to admit such a possibility, he holds to the theory that Mars, as well as the other members of the solar system, are signaling to the earth and to each other, and have been signaling for millions of years by means of magnetic waves.

His proposition, in brief, is to catch these wave signals and record them even more accurately than it would be possible for light waves to be recorded from the stars.

"It is not in my province to make electrical instruments to record magnetic impulses, nor to build telescopes to observe the movements of heavenly bodies," he says. "I assume only to furnish the system to be utilized in procuring accurate electrical measurements.

"The necessary electrical instruments are obtainable in my own experience with wireless telegraphy and other electrical investigation. I have used instruments that were delicate enough to have recorded these magnetic waves had they been used for that purpose.

"Mr. Tesla's statements of his belief in extra-terrestrial interference with his instruments is not to be laughed at, but is undoubtedly true.

"Marconi has had similar interferences with his instruments, but they, being possibly not so delicate as Tesla's, did not indicate the effect in such a pronounced manner. The plan which I will propose for my measurements is by the use of well-known electrical and optical devices. At present I do not care to make public the technical means by which my deductions make possible accurate interstellar measurements, but it is no longer a theory with me. It is a demonstrable fact, simple of solution and application, as simple, in fact, as the famous egg demonstration of Columbus.

"The method of employing the means of computation is not so simple, however, but requires technical explanation, assisted by illustrations and diagrams. This technical exposition I desire and expect to give to science and to the public at my earliest possible convenience."

Chicago Times-Herald.

The Lectures.

At San Jose, Cal.

Victory Theatre was crowded to its doors last evening (Monday, April 15), the occasion being the lecture given by Dr. Abraham A. Sulcer, C.S.B., of Riverside. His subject was "Christian Science Applied." The able discussion of the theories and practices of his religion held the close attention of his large and intelligent audience for nearly two hours. For twenty-seven years Dr. Sulcer was a practitioner of medicine of the allopathic school. Seven years ago he became a convert to Christian Science and was a pupil of Mrs. Mary Baker G. Eddy.

Dr. Sulcer was introduced by Professor Frank P. Russell, City Superintendent of Schools, in a brief address.

San Jose Daily Mercury.

Professor Russell's introductory remarks were as follows:

Ladies and Gentlemen:—Sooner or later there comes a time in the life of every individual when his whole nature hungers for spiritual truths. There come times when he lifts his weak hands upward and the despairing cry of his heart is, Show me the true way. It has ever been thus. Since the twilight of history man has ever been searching for the true way. The Druids of old sought it by weird, mystic rites, forms, and ceremonies in the depths of the hoary forests; the wise men of Egypt sought it down by the pyramids of the Nile; while peerless statuary of the mythological gods, remains of temples of matchless beauty and grandeur, attest the same vain desire and yearnings of the classic Greek and Roman civilizations.

Nineteen centuries ago, down by the Galilean Sea, appeared a meek and lowly Nazarene. He went about among the poor, healing the sick, cleansing the leper, raising the dead. "He taught them as one having authority." He taught as never man taught. When asked to show his disciples the true way, his answer was, "I am the way."

All down through the ages, from Calvary until now, man has been searching for Christ's way, and his truth. Through life's tangled forests they have blazed many and many a different path, and each has said, "This is the true way, walk ye therein." They have divided into different sects and denominations and built many different temples of worship, but along each path and over the door of each temple has gleamed the cross and the crown. These religious bodies, varied as they are, which have marched under that banner, have been leading the vanguard of civilization.

A little more than a score of years ago another sect appeared. It has a new way; its growth has been phenomenal. Whether Christian Science be the true way, I know not; that it is a good way, I am convinced.

For four years past, nearly every Sunday and one evening in the week, I have listened to the teachings of these people. I have heard their testimony and I have yet to hear the first unkind word ever spoken of any other denomination, of any profession, or of any person. I have seen them going about in their quiet, happy way, healing the sick, raising the fallen, clothing the naked, feeding the hungry, and comforting the dying. They worship the same God that you of other denominations worship. They lean upon the same strong arm of divine Love when in sorrow; they adore the same Saviour, they kneel at the same cross; the cross and the crown is engraven upon their banner as upon yours, and so long as that is the symbol of their faith, neither sect, denomination, nor society has anything to fear. That glorious symbol has never grown old; it is as fadeless as the stars; it is as fresh as the flowers. Like the morning star it is robed in beauty, and like the night it is ever crowned in glory.

We have with us to-night a gentleman who is to speak to you upon the subject of Christian Science. A gentleman who for twenty-five years was a practising physician. In the midst of a most prosperous career he gave it up and entered this new field solely, as we are convinced, from a sense of duty. His ability in his chosen profession, his well won reputation as a medical practitioner, his high position as a cultured gentleman and scholar, entitle him to our regard, and command our attention. It is now my pleasure and privilege to present to this audience, Dr. Abraham A. Sulcer, C.S.B., member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass.

Correspondence.

At Sacramento, Cal.

A lecture on "Christian Science and Christian Scientists" was given by Dr. F. J. Fluno, C.S.D., at the Congregational Church, in Sacramento, Cal., on Friday evening, April 12, under the auspices of First Church of Christ, Scientist, of this city. There was a very large audience and great interest was manifested.

The lecturer was introduced by Charles M. Beckwith, one of the leading lawyers of Sacramento, who said:—

Ladies and Gentlemen:—Some nineteen hundred years ago, the wise men of the East were attracted to a new and brilliant star in the eastern horizon, the star of Bethlehem, which announced to them the birth of the Messiah, the Saviour of mankind,—Christ Jesus,—who brought glad tidings, taught brotherly love, the fatherhood of God, healed the sick, made the blind to see, cured the deaf, strengthened the palsied, cleansed the leper, raised the dead, and went about teaching mankind and doing good. The powers of this good man were imparted to his disciples and followers, who, for a period, were also able to perform these marvelous works, but in time these powers seem to have fallen into disuse, and so continued until about the year 1866, when Mary Baker G. Eddy discovered this divine power and its application, and afterwards wrote her wonderful book, "Science and Health with Key to the Scriptures." At first and for a long time thereafter she stood solitary and alone in her belief, and was scoffed at and ridiculed, but Truth was right, and in time was manifest, until now there are thousands of believers in Christian Science in the United States, and the number is constantly increasing day by day.

We have with us, to-night, a Christian Scientist who will expound to you the truths of that grand and noble Science. I take pleasure in introducing to you Dr. F. J. Fluno, member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass.

Selected Articles.

Jesus' Attitude Toward Woman.

Helper, Friend, Sympathizer.

MANY hundreds of millions of women have lived and died happy because of the work that Jesus did for women.

He came to save *all* mankind. While preaching to men, he preached *for* women. He worked for them, talked with them, advised them, strengthened them, defended them.

He was their advocate and their friend.

His love for the disciples who were to carry on his work did not excel his love for the devoted women who followed him and believed in him from the first days of preaching to the last darkened day on Golgotha.

Women owe to Jesus their rank in the world, their mental and physical emancipation.

Jesus first announced his divine mission to a woman. To the woman of Samaria he first declared his Messiahship. (See the fourth chapter of John.)

His last words spoken from the cross placed his mother in the care of his beloved disciple:—

"When Jesus therefore saw his mother, and the disciple standing by, whom he loved, he saith unto his mother, Woman, behold thy son!

"Then saith he to the disciple, Behold thy mother! and from that hour that disciple took her unto his own home."

He said no word thereafter, except "I thirst," and "It is finished."

His last thought in the earthly life had been his mother's welfare.

At his mother's request he performed his *first* miracle, the changing of the water into wine. (See John, second chapter.)

Only to a woman did he promise perpetual remembrance here—to the woman who came to him in the house of Simon the leper, and poured upon his head the box of "ointment of spikenard."

"She hath done what she could: she is come aforehand to anoint my body to the burying.

"Verily I say unto you, Whosoever this gospel shall be preached throughout the whole world, this also that she hath done shall be spoken of for a memorial of her."

The first at the tomb of Jesus was a woman.

The first to see the risen Christ was a woman.

A woman was the first to believe in him and the first to bear witness to his resurrection.

When the men whom he had taught had left him to the Roman soldiers and to his death, the women who loved him did not desert him.

Under the darkened sky his dying eyes looked down upon the kneeling forms of his mother, his mother's sister, Mary the wife of Cleophas, and Mary Magdalen.

Well might they follow him and kneel at his feet. He was dying to save women from injustice and oppression.

In all the words of Jesus there is not one word of harshness for woman.

The sins of *men* are threatened, and with threats that to this day chill guilty hearts that no other word can touch. The selfish rich man, the oppressor of the poor, are promised their punishment hereafter. *But not one word* is uttered against unfortunate sinful women. For them, only kindness, sympathy, compassion. The woman brought before him had committed the crime that meant death by stoning.

He saw beyond the crime, he saw the temptation, and he saw the guilty tempter:—

"He that is without sin among you, let him first cast a stone at her."

The men, eager to stone the victim of man's evil nature, slunk away and Jesus was left alone with the unfortunate

woman. His mild eyes looked compassionately upon her bowed form:—

"Woman, where are they? Hath no man condemned thee? She said, No man, Lord. And Jesus said unto her, Neither do I condemn thee: go, and sin no more."

There is a scene to be studied by the "haters of vice." There is a scene to fill with thought those who think that men can be made better by the punishment of women.

But one man was without sin and it was he who said, "Neither do I condemn thee."

While Jesus lived the British Islands were inhabited by half naked savages living in swamps, gibbering a half animal language.

While Jesus lived an "intellectual" race living in India practised child marriage and the annual burning alive of thousands of widows. The words of Jesus Christianized and civilized Great Britain, and the descendants of woad-painted British savages, carrying out Jesus' orders, have abolished the child marriages and widow burning of India.

All over earth's surface his wonders have been worked, and everywhere his teachings have brought nearer and nearer to realization the perfect equality of woman.

God's *great preacher of equality* was Jesus:—

"There is neither Jew nor Greek, there is neither bond nor free, there is *neither male nor female*: for ye are all one in Christ Jesus."—*New York Journal*.

Worthy of His Hire.

To the Editor of The News and Courier:—Your issue of the 7th inst, gives publicity to certain editorial comments of the *New York Evening Sun* in reference to Christian Science. I hope you will allow me a little of your valuable space for a word in reply to the same.

Referring to the statement of the Rev. Mary Baker Eddy, Discoverer and Founder of Christian Science, "I have always believed that Christian Scientists should be law-abiding," the *Sun* exclaims: "What a concession on the part of Mrs. Eddy!" What concession can the able writer possibly have reference to? I admit that I am somewhat puzzled. Mrs. Eddy simply states what she has "always believed," and surely there is nothing in the history of Christian Science to indicate that its followers have ever been anything but peaceful, law-abiding, Christian people. They believe in doing right under all circumstances, and that it is, most assuredly, right to obey the laws of our land. I fail to see where any "concession," whatever has been made by Mrs. Eddy.

In reference to the proposed legislation in Missouri declaring against Christian Science practitioners receiving pay for their services, the able editor assumes a queer position. Why should not the Christian Scientist be remunerated for his services in healing the sick through prayer, as much so as the physician who heals the sick through material medicine, or the minister who preaches the Gospel? The Christian Scientist does not force his services on any one. No one is compelled to receive them. When, therefore, he is called to treat a case of sickness, it is because the patient prefers the Christian Science treatment to any other, and, as a rule, believes it will help him, or else he would not want it.

Now, suppose a man has given up his profession, or business, in order to devote his whole time and attention to the ministry of Christian Science (and the healing of the sick through Christian Science is truly a ministry), and has thus become entirely free, and enabled better to perform his duties, by what kind of logic do we arrive at the conclusion that he should not be paid for his services by those who request them and receive the benefit of them? Is it because the Christian Scientist claims that "I can of mine own self do nothing," but heals the sick only through

the power of Almighty God? Then the physician stands in the same position, for he only claims to heal his patient through the agency of his medicines. Why, then, should the physician be paid? Because he is devoting his time to his work, and his time is worth something. For this same common-sense reason, if for no other, the Christian Scientist should be remunerated for his services also.

The injustice of passing a law which will prohibit the thousands of honest, sincere Christian men and women, who are devoting their lives to the ministry of Christian Science, from receiving just remuneration for their good services, simply in order to prevent the practice, on the other hand, of a few impostors, is obvious.

In healing the sick, Christian Scientists are obeying the command of Jesus just as certainly as the minister who only preaches the Gospel. If it is right (and I believe it is) for a minister of the Gospel to be paid for his services, then it is right for the Christian Scientist to be paid for his, who both preaches the Gospel and heals the sick. "The laborer is worthy of his hire."

J. C. BATTS.

In *The News and Courier*, Charleston, S. C.

Correspondence.

UNDER the above heading there appears the following interesting article in *The Onlooker*, a publication of London, Eng., devoted to social views of life. This publication is a leading one of its character and has an extensive circulation.

The communication is as follows:—
To the Editor of *The Onlooker*.

Sir:—Your correspondent "M. A." refers to certain States in America deeming it necessary to enact laws with a view to suppressing "Christian Science." I think he will find that most, if not all, the medical bills have been amended, so as not to interfere with its practice.

"M. A." is probably correct in saying that a trained doctor is more likely to succeed than a person who has no medical training, IF (and it is a big "if") they both regard disease from the same standpoint and look to material remedies for help. But if some one is found who appeals to a higher law, and claims that he understands not only the cause of disease, but also the *cure*, and *proves* his understanding by healing the sick, then it is natural enough that the patient should prefer to employ him.

The only satisfactory proof of a theory is the result obtained in practice. The Christian Scientist is willing to abide by this proof, and in croup, diphtheria, and other illnesses, is proving continually that Christian Science does show the true cause of disease, and does teach the one and only *true* cure.

I have proved it to my own satisfaction in bilious attacks, indigestion, etc., which do not appeal much to any one except those who suffer from them; but my wife has received much more striking help, and we and our children have had nothing but Christian Science for some three or four years; this means not only no medicines, but no embrocations, lotions, or applications of any kind, and most excellent results.

In conclusion, I would say that we do both feel most deeply and inexpressibly grateful for the sustaining and abiding help—mental, moral, and physical—that we have received through Christian Science.

Yours truly,

COLONIAL.

Royal Colonial Institute, March 19, 1901.

The Power of the Imagination.

THE following clipping from an exchange, well illustrates how a mere belief may affect bodily conditions. Faith is surely "everything where medicine is concerned."

"The power of imagination," said a New York druggist, "is past comprehension. Not long since a domestic in the employ of a prominent family came into the store in great haste with a prescription which called for two grains of morphine in two ounces of *aqua pura*—that is, distilled water—the accompanying direction reading, 'A teaspoonful every hour until the pain is allayed.' The patient for whom it was intended was the head of the family, who was suffering from a severe attack of nervous neuralgia.

"Now it so happened that the family physician who had written the prescription was behind the counter when the messenger arrived, having dropped in, as was his wont, on the way to his office. While I was putting up the prescription we chatted and laughed and joked and passed the time of day as only professional men are capable of doing. I filled the bottle, corked it carefully and labeled it properly, and when the retreating form of the domestic had disappeared out of the store door returned to my companionable physician visitor. As I did so I saw to my amazement the two grains of morphine reposing upon the prescription scales.

"'Doctor,' I ejaculated, 'I've given that girl nothing but distilled water. The morphine is here; look at it. What shall I do?'

"'Do?' he replied, with admirable *sang froid*. 'Do? Why, nothing at all. I'll wager you that the *aqua pura* will work as well without the opiate as with it.'

"'Agreed,' said I. And do you know," concluded the pharmacist, "the doctor was right, and the patient with the nervous neuralgia—an exceptionally intelligent and college bred man—was sleeping as peacefully as a babe after the second dose of the 'mixture.' Faith is everything where medicine is concerned."

Attention.

WILL subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads June '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for July, August, and September.

The Church Manual.

The Church Manual of The First Church of Christ, Scientist, in Boston, Mass., contains the By-laws of the Mother Church, also a list of members.

Address all orders and make remittances payable to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Applications for Membership.

APPLICATIONS for membership with the Mother Church to be presented at the June meeting for the admission of applicants, must be in the hands of the Clerk on or before May 20, 1901.

A Word to Inviters.

INVITERS of applicants to membership with the Mother Church will confer a favor on the Clerk and save disappointment to the applicants if they will withhold, until after the semi-annual meetings, all applications that have been sent to them for their signature too late to reach the Clerk before the date set for the closing of the entries for admission, and also notify the applicants that their applications have been retained.

All applications should be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Slav in Moral Reform.

As the water lily reveals its matchless beauty upon the surface of the stagnant pool and finds its beginnings in the unsightly mud beneath, so out of the depths of an era of moral debasement has not infrequently sprung the most fragrant blossomings of spiritual aspiration. So Savonarola, Luther, and Wesley rose from a level of religious decadence that seemed well-nigh hopeless, and each stood forth to illumine a period which gave no promise of their coming save that foreshadowed in a universal need.

We have been accustomed to think of the Greek Church as spiritless and torpid because manacled by a venerated and autocratic traditionalism, and lo! from its depths springs a Tolstoi, the prophet of the "New Christianity," whose voice has given religious impulse its new war cry, "Back to Christ," and who with a devotion that is simple, sincere, and unswerving is living as well as preaching again, the Brotherhood of Man. And now comes Markov, a Russian publicist, to plead for a return to a simpler, purer, less luxurious life, and to warn the Christian world against that abandon to amusement which is undermining the character of the young and corrupting society in its every plane.

The votaries of the theatre, the vast multitude of those who are yielding to the appeals of the unrefined, the frivolous, and the bizarre, in their demands for incessant entertainment, may well give heed to this voice from the Northland. Hear what he says of the modern craze for amusement, as quoted in a translation for *The Literary Digest*:—

"Everything which impairs the by no means strong sense of duty, and which surrounds with a false poetic halo and masks with pseudo-innocent carelessness the soulless egoism of man, must be recognized as among the most deleterious factors of modern social education. One fears for the future of mankind. The most ominous sign is the fact that all, all without exception, rich and idle as well as poor and industrious, seek and demand daily amusements, gaiety, excitement, and keen impressions,—demand it all as something without which life is impossible, which may not be denied them. Recreation, pleasure, man always wanted; but even the most fortunate looked upon it as something unusual, with which the ordinary life might be refreshed. To-day pleasure is a constant need; it has become a habit and second nature, while for the man of toil this taste is a fruitful cause of moral degeneracy and of the loss of all the qualities which make us strong and human."

He quotes the Bible as well as modern thinkers, to prove that the cult of riches and luxury is ruinous to character. The man whose wants are modest cannot be easily corrupted; he remains independent and upright. He then continues:—

"The populace which is being taught religion, morals, politics, and art in music halls and operettas, which accepts with characteristic naïveté coarse and indecent jests upon all fundamental principles of life, will not carry away anything fruitful and uplifting. It will carry away nothing

but distrust of everything good, contempt for everything high, and a developed desire for low pleasures."

While there is a growing recognition of the serious drama to which we may not object, it is certainly true that the farcical and the deteriorating command the larger patronage and attention, and in unnumbered Christian homes the discrimination which rules out trashy and debasing literature, is inoperative respecting cheap and debasing amusements; and of this we need to be thus vigorously and unexpectedly reminded.

Another Favorable Decision.

ONE of the most important decisions respecting the legal status of Christian Science practice was handed down April 14 by Judge Eugene S. Elliott of the Circuit Court of Wisconsin. The case was that of the State *v.* Mrs. Crenczia Arries and Miss Emma Nichols, who were brought before Police Justice Neelen of Milwaukee, charged with the violation of the law respecting the practice of medicine. Justice Neelen erroneously declared the defendants guilty, and fined them fifty dollars each. The defendants were represented by W. T. Turner. An appeal from the Police Court was taken, and the case thus brought before Judge Elliott, whose decision is final.

The judge maintains that prayer is not medical treatment, and that if it were so regarded in law, all clergymen would be subject to indictment for fulfilling their unquestioned duty and obligations. He emphasized the fact that Christian Scientists declare their opposition to the use of medicines, and that they are open and undeceiving as to their method of healing the sick.

The contention of the counsel for the state that the hypnotic suggestion often used by physicians is in its nature akin to Christian Science treatment, is *entirely erroneous*. The fact is they are diametrical opposites. This decision adds another to the long list of failures to estop Christian Science practice, and may be considered of great significance. We are glad to republish the judge's able argument and finding, in full, from the columns of *The Evening Wisconsin*.

The decision of the court is as follows:—

On the 20th day of March, 1900, Irma Grossenbach, a child aged about eleven years, was sent home from school in the morning by reason of illness. She complained of nausea and vomited, but her parents were unable to see that anything serious ailed her. She was in no pain and had no fever, but she was put to bed and remained there until some time after midnight, when she died. Mrs. Arries, one of the defendants, was acting as nurse at the time for an infant child of Irma's parents, and at the request of Irma's mother gave her Christian Science treatment, consisting wholly of silent prayer. Shortly after midnight the defendant, Emma Nichols, was sent for and arrived at the house about twenty minutes before the child died. She also treated her by silent prayer, but used no other curative agency. An autopsy held shortly after the child's death assigned the cause of death as diphtheria.

Upon this state of facts the defendants were arrested on a charge of having violated section 1435d of the revised statutes of this state, which provides that,

"Every person who shall hereafter begin the practice of medicine or surgery within this state shall be required to have such license, and any person beginning such practice without having obtained the same, or contrary to law, or having no such license, shall advertise or hold himself out as a physician or surgeon or specialist in medicine or surgery, or who shall use the title of doctor, or append to his name the letters M.D. or M.B., meaning thereby doctor of medicine or bachelor of medicine, shall be punished by a fine of not less than fifty dollars nor more than one hun-

dred dollars for each offence, or by imprisonment in the county jail for three months, or both."

Stated briefly, the defendants are charged with practising medicine without a license. Whether they did so or not is the sole issue in this case, an issue that has nothing whatever to do with their religious belief as Christian Scientists nor with the duty of the parents of the child to place her under competent medical treatment; and these questions should not be permitted to distract attention from the issue, viz., are the defendants guilty of practising medicine without a license.

In arriving at a conclusion upon this question, the meaning of the words "practising medicine" must first be determined, and we find that the statutes themselves furnish the required definition. Section 1435f of the revised statutes provides that,

"Every person shall be regarded as practising medicine within the meaning of this and the six preceding sections, who shall append the letters M.D. or M.B. to his or her name with intent to represent that he or she is a physician or surgeon, or who shall for a fee prescribe drugs or other medical or surgical treatment for the cure or relief of any wound, fracture, bodily injury, infirmity, or disease."

POINTS AT ISSUE.

Our inquiry is limited to the following questions:—

One: Did the defendants append the letters M.D. or M.B. to their names?

Two: Did they for a fee prescribe drugs or other medical or surgical treatment for the cure or relief of any infirmity or disease?

It is acknowledged that defendants had no license to practise medicine, and it is undisputed that they did not assume to be doctors or physicians and surgeons or use the titles M.D. or M.B., and that their treatment consisted wholly of prayer; that they discountenanced the use of drugs or other tangible curative or palliative remedies, and that they used no medicaments or surgical treatment or appliances of any kind; so that the whole question at issue in this case resolves itself to this: Is prayer medical treatment? If it is, then the defendants are guilty of an offence under the laws of this state; if it is not, then they are not guilty and must be discharged. It would seem as if this question answered itself; the act of prayer is so unlike anything that is popularly regarded as medical treatment that it looks like an absurdity to argue the question seriously. But counsel for the state have so ably urged that medical treatment includes everything that doctors use for the purpose of curing or relieving the sick, and that one of their methods very often resorted to is that of "suggestion," by which the mind of the patient is directed to a belief in his cure and which is in its nature akin to prayer, that I will consider, though very briefly, this proposition. It may be and probably is true that suggestion, hypnotic or otherwise, is resorted to by physicians when in their opinion a disease can be cured or palliated thereby, for the wise doctor will not ignore any means likely to effect a recovery of his patient; but I think that such methods are rather incident to than a part of what may be properly called medical treatment.

MEDICINE DEFINED.

A medicine is defined by the Century dictionary as "A substance used as a remedy for disease, a substance having or supposed to have curative properties," and Webster defines it as "Any substance, liquid or solid, that has the property of curing or mitigating disease in animals, or its use for that purpose."

Medical treatment, therefore, may be properly defined as treatment pertaining to the art of healing diseases by the use of medicines. It is, no doubt, wise that the prescription of drugs and medicaments that must be carefully

administered in order to avoid dangerous results, should be restricted to a profession that is especially trained and qualified for their proper administration; but I cannot believe that it was the intention of the law so to restrict curative agencies of an intangible nature as to prevent others, not physicians and not claiming to be, from equally free use thereof. Because some doctors take advantage of such curative agencies as incidents to their general treatment there is no reason why the medical profession should be given the exclusive right to them. Doctors prescribe exercise; does it follow that schools of physical culture should be operated only by physicians? Does it follow that the gymnasium must be suppressed? They frequently use electricity; must, then, the doctors be given a monopoly of its application?

CLERGYMEN PRAY FOR THE SICK.

One of the most cherished functions of the clergy is to minister at the bedside of the sick and there to offer up prayer to Deity in their behalf. The necessities of life render a fee for this and other clerical duties necessary, and that fee is paid by their parishioners either directly or indirectly through the church board of trustees. Not infrequently well-to-do parishioners give direct fee for such special service. Is that service medical, and if so, shall the doctors monopolize it? Such a construction as it is urged should be given to this law would make it necessary to answer all these questions in the affirmative, and would bring to trial every clergyman who does his duty to his faith.

The object of the law under which this prosecution was brought is to protect the public from the frauds of ignorant and unprincipled persons who by assuming the honorable title of doctor of medicine have been able to practise upon the credulity of and extort money from the sick and suffering. Such impostures have thrown great odium upon a most learned and respected profession, which does well to resent the stigma and to demand that no person shall practise medicine, that is, prescribe drugs or other medical or surgical treatment, or use the title of doctor of medicine, who has not been duly licensed to do so.

But the defendants have deceived no one as to their methods or pretensions. They have not claimed to be doctors or to be qualified to act as such. Not only have they not prescribed drugs or other medicaments, but they disclaim, denounce, and oppose the use of such agencies. In fine, the chief basis of criticism against them is that they have not used medical treatment, when, in the opinion of others, medical treatment was needed. The treatment given by them may have been theological; it certainly was not medical; and so believing, I must find the defendants not guilty and order their discharge.

The following regarding the above decision appeared in the editorial columns of the *Chicago Post*, April 16:—

What is denominated "Christian Science" has been attacked recently with unusual vigor and violence. But the campaign is manifestly doomed to failure, all along the line. No legislation aimed at Christian Science will be enacted into law. Public sentiment is potent enough to prevent so unjust an infringement upon individual liberty.

The decision rendered yesterday at Milwaukee by Judge Elliott, discharging two alleged healers indicted for practising medicine without a license, ably and luminously sets forth the reasons for non-interference with the Christian Science movement. The question for the state to determine is very simple: Is prayer medical treatment? The law demands that the administration of drugs and the practice of medicine and surgery shall be limited to certain qualified persons. It seeks to protect the public against quackery and fraud by prohibiting incompetent and uneducated men

from acting as physicians or surgeons. Public opinion approves of this as necessary and proper.

But do mental healers claim to be physicians? Do they in any wise deceive the public as regards their principles and methods? On the contrary, they loudly denounce the use of drugs and repudiate the teachings of the medical schools. Their own treatment is distinctly and notoriously not medical. It is theological, psychological, metaphysical, or whatever you please. It were an absurdity to put them in the category of physicians in spite of themselves. Those who accept their services may be mistaken in dispensing with medical treatment, but with this the state is not concerned.

As Judge Elliott remarks, the real basis of criticism against mental healers and their patrons is that they do not use drugs when, in the opinion of the majority, drugs are necessary or desirable. But is the legislature to tell adults when to call in a physician and when to trust to the efficacy of prayer or suggestion or anything outside the scope of medical treatment? A state socialist government might go to this length, but at present the state refrains from dictating to citizens in the matter of choosing a healer or deciding between the competing systems. Those of us who believe in medical treatment should also believe in personal liberty. How would you like a law compelling all to employ Christian Scientists?

Among the Churches.

An Advance Step for Third Church in Buffalo, N. Y.

Services of the Third Church of Christ, Scientist, were held yesterday (Easter Sunday) in the large assembly hall of the Twentieth Century Club. Hereafter all public services of the church will be held in that hall. The club has recently renovated and redecorated the hall (formerly the Delaware Avenue Baptist Church), and it now presents a very attractive appearance. The platform yesterday was appropriately and profusely decorated with palms and lilies, and the hall was filled with an appreciative congregation which gave the service marked attention.

The opening remarks of the First Reader will be found full of instruction on certain vital characteristics of the faith. Edmund R. Hardy, C.S.D., conducts the services of this church. He spoke as follows:—

On behalf of this church I extend a cordial welcome to our visiting friends who, with us, meet to-day in this beautiful and churchly auditorium for the first time. On a day when every church in our city opens wide its doors, inviting you to enter and participate in the best it has to offer in song as well as sermon, your presence with us indicates a kindly feeling and calls for gratitude to our Father.

We feel that this Easter is one doubly blessed to us. Truly, may each one say, "My cup runneth over."

The Christian world meets to-day in unity—at least, in one thought—the thought of commemorating one of the two greatest events in history. Christmas and Easter have come to be recognized throughout the civilized world as being the greatest festal days in the calendar of time. We, as Scientists, are glad to unite with our Christian friends in this happy custom; but we go far beyond the commemorative aspect of service, for we can rejoice in that he who, over nineteen centuries ago, triumphed over the King of Terrors, has, in this day, fulfilled the Scripture which saith, "And unto them that look for him shall he appear the second time without sin unto salvation." This command, expressed in the terms of Christian Science, means that you and I give no reality to other gods or minds than the one perfect Intelligence.—the Mind that is good, in which "we live, and move, and have our being."

Christian Science rises above symbolism, ceremony, and all the groundwork of ordinary religious beliefs, even as a great tower rises above the base from which it has been built up. In the ascending scale of spiritualization, thought rises, through faith in God, from dependence on matter's illusions to independence—to the liberty of the sons of God.

The first command of the Decalogue is, "Thou shalt have no other gods before Me."

Christian Science points out the method of our Master's metaphysical healing. It separates between Truth and error, it distinguishes between the best and poorest in human qualities and thoughts, teaches us how to put off the false mentality made up of sin and sickness,—whatever seems not to be good or to work for our good,—and to regenerate and perfect all that is worthy and harmonious in human thought and experience.

Christian Scientists are learning many great facts concerning existence, not the least among which is that "All things work together for good to them that love God, to them who are the called according to His purpose."

Evidence accumulates in every church, in every home, and in every individual experience which shows undeniably the power, presence, and utility of love in working out every problem of life.

We who meet here this morning have, as a church, been most phenomenally blessed, not only collectively, but individually. Peace, as a dove, has overshadowed us; prosperity has attended us in our work; while love has protected us and given us light to guide each hesitating step.

We are now entering upon the third year of our church history. The year is pregnant with promise. The radiance of the outlook calls us to renewed diligence and consecration whereby to qualify for added responsibilities and increased usefulness.

Let our watchword ever be, "Pray without ceasing." Let our aim be, "To do good, not evil." Let our constant demonstration of Science be so to live, as to give no place and no power to the ever varying phases of evil; to let our good works bear constant evidence of the presence and control in us of that Christ-idea of which our Saviour saith, "Lo, I am with you alway."

In conclusion, let me impress upon you this profound truth of Scripture: "The place whereon thou standest is holy ground." Brethren, see that your reality is Spirit, not matter, understand this fundamental of divine Science: "Put off thy shoes from thy feet," let your sole dependence be upon the underlying Principle of existence. Then patiently wait for the great Architect to show to you the pattern of His temple. Truth and Love, reflected in love to God and man, will form in your consciousness the temple not made with hands.

Meanwhile, as this individual transition goes on, our church—the visible token of God's presence—will enlarge itself, strengthen its foundations, and upbuild walls more beautiful, more substantial, and consecrated ever to the cause of peace and good-will to men.

The Buffalo Express.

Annual Meeting at Baltimore, Md.

The annual meeting of First Church of Christ, Scientist, Baltimore, Md., Thursday evening, March 28, was one of unusual interest. The meeting was opened by our First Reader, E. H. Hammond, who gave a short sketch of the work in Baltimore since 1893, and the progressive steps from private dwellings for meetings to our present location.

The various reports were interesting, showing advance in all directions. The treasurer's report showed that the subscriptions for the year amounted to \$3,850.86.

The report of the clerk, in a rapid resumé of the year's experiences, told of the complete victory for Christian Science

in the case of Tuttle v. O. C. Nordhoff, E. H. Hammond, C.S.D., and First Church of Christ, Scientist, in Baltimore, already noticed in the *Sentinel*; the establishment of our reading room and the many valuable gifts received, among them, Turkish rugs, pictures, a handsome scroll top desk (the gift of three gentlemen), a beautiful life-size portrait of our Leader, and the anonymous donation of fifty dollars to supply the reading room with copies of Science and Health, and "Miscellaneous Writings" for free circulation. The lecture by Judge Ewing last May under the auspices of both churches, like the former lectures by Carol Norton and Mrs. Mims, was well attended.

The report of the superintendent of the reading room for the past five months (since change of location) showed an increase in the number of visitors, a greater demand for books, and an awakening in many directions. At least one of every book and pamphlet written by our Leader has been sold; Science and Health, of course, in the lead, then "Miscellaneous Writings," "Unity of Good," etc. Including the publications from The Christian Science Publishing Society, the literature sold during the year amounted to \$508.10.

The report of the superintendent of the Sunday School, was as follows:—

Number of children, 31. Cash in bank, \$96.97. "There are three teachers: one for the larger girls, one for the larger boys, and one for the small boys and girls. In the two former classes, the lesson is taken up, with references from Bible and 'Science and Health with Key to the Scriptures.' The smaller children are taught the more simple statements of Christian Science. Sometimes, in the lesson, there is a beautiful account of the Master's healing which is told and explained to the little ones. In this way their interest is held, and they easily catch the Scientific explanation of the Bible texts, and their application to their own little lives. Many beautiful demonstrations at home and at school are given."

A report from our Publishing Committee for Maryland was received, read by our clerk, and listened to with interest.

Two hundred and nineteen periodicals are published in the city and state, whereof eighty-two are in Baltimore. All these papers are looked over and objectionable articles corrected. The press is furnished with news items concerning Christian Science, and the editors are thus posted and gradually instructed into a proper appreciation of and respect for Christian Science.

During the past year, 104 articles and news items were prepared and published, and about four thousand copies of Baltimore papers distributed throughout the state, exclusive of papers sent out containing Judge Ewing's lecture.

The Second Reader gave a sketch of the year's work, and an outlook on that before us, encouraging all to more earnest effort, knowing how every true thought does its work, and that faithfulness in little things will verify always, Isaiah, 55: "For as the rain cometh down, and the snow from heaven, . . . so shall my word be that goeth forth out of my mouth: . . . it shall accomplish that which I please."—S.

Organization at Ouray, Col.

One year ago we organized as a Christian Science Association under the laws of the state of Colorado with a membership of five. Tuesday night, February 5, 1900, we held our first annual meeting. The report of the clerk showing the growth, work, etc., of the Association for the year, proved very gratifying. From the gathering together of three or four students of our text-book, at the home of one of our members in September, 1899, for the purpose of studying the Bible Lessons, we have gradually grown, until to-day we hold our regular Sunday

evening services in a pleasant little room in the Munn Building, which we have lately fitted up to the best of our means. We close our year with a membership of ten. Our Sunday evening meetings are very well attended, varying from twenty to thirty.

During the year we gave the people of Ouray a lecture, delivered by a member of the Board of Lectureship of the Mother Church. This lecture was attended by about three hundred and fifty of Ouray's representative people.

The treasurer of our Association reported that the Sunday evening collections for the year amounted to \$463, and that all debts were paid, and a balance in the treasury. We are all very grateful that we are able to report a prosperous year. Error at times tried to cry out that our advancement seemed slow, but when we look back to the time we started in September, 1899, we feel we have all to be thankful for. We are grateful to our Leader, Mrs. Eddy, for her untiring efforts in our behalf, and we close our year, very happy in the possession of the light of Christian Science.—GEORGE A. BROWN, Clerk.

A Word from San Mateo, Cal.

After holding services in our own home for several years, we organized the Christian Science Society of San Mateo. Last August the society rented a suite of rooms in a centrally located business building. The rooms were tastefully papered and furnished for our Sunday services and the Wednesday evening meetings, besides being open during the week to the public as the reading room of the society and practitioners' office. The result of this step has been a decided increase in interest and enquiry.

Our hearts are full of gratitude to God for the many blessings bestowed upon us through the self-sacrificing life of our Leader, Mary Baker Eddy; for the patient toil and unceasing love of that life.

Loving thanks to the able editors of our dear *Journal* and *Sentinel*, which never come without the message that answers the need of the hour. Kindly greeting to all the busy workers of our Publishing Society and Mother Church. To the committee on Bible Lessons we would say that we are learning more fully to appreciate its efforts on behalf of every student of Christian Science. Each Lesson-Sermon seems more beautiful and helpful than the last.

The twentieth century is truly blest by Christian Science.
M. B.

A New Chapel at Webster City, Ia.

We are nicely settled in a home of our own, in the central part of the town in plain view of nine other churches.

We have a very nice chapel and reading room, which, when thrown together, will seat comfortably, one hundred and fifty people.

The interior woodwork is of cypress, and there is a handsome desk of the same wood for the Readers. The walls are rough finished, painted and decorated in pretty shades of green. The windows are of clipped glass in fancy sashes, excepting one of amber behind the Readers, and in front a very large one of amber colored glass. This has a *fac simile* of our cross and crown in the top. The chapel is heated by furnace, donated by an "outsider," and lighted by electricity.

Our reading room has five large windows with shades and lace curtains; bookshelves, writing desk, library table, etc. The vestibule has an amber window and double doors opening out on a pretty porch with steps down to the street.

We are few in numbers, but we want our strength to be in the Truth as taught by the Bible and "Science and Health with Key to the Scriptures."

MRS. ALICE SOULE.

From Our Contributors.

Love's Work.

BY ANNIE MARIE BLISS.

OURS the sowing and the weeding and the reaping to be done,
God's to send His showers of blessing and His warming sun.

Ours to labor in the field from dawn till set of sun,
God's to cheer the laborers with His sweet "Well done."

Be our words the flowers and our deeds the golden wheat
To feed the hearts so hungry with the bread of life so sweet.

Christian Science in the Schoolroom.

BY L. B. B.

ON Tuesday one of my little girls was bitten by a dog. I do not wish to make a reality of the error, but will describe it slightly, so that you may better understand the proof of the nothingness of matter.

The marks of the dog's teeth were to be seen on the child's cheek from hair to chin, and there were two deep incisions in the cheek where they met. With one cry the child bounded into my arms. I held her closely declaring Truth, scarcely realizing what had happened, it was all so sudden.

Soon blood began to trickle down my waist. Then I washed the wound. My mental work, so far as any fear was concerned, was done, for it seemed absolutely nothing to me. In about an hour I took the child home, explained the matter to her mother, allayed the fear, and left them.

The mother kept the child at home in the afternoon, but the following day she was back in school. Not one tear did she shed, for she declared to every one who inquired that she had no pain.

Wednesday she was in school all day, but the fear of the mother, while the child was away from her, brought on a seeming relapse. Thursday she was not at school. Her brother told me that her face was badly swollen, and had turned black. Then I went to work again, for I had stopped, and worked faithfully, at intervals, until school commenced on Friday morning, when the little girl appeared with the other children. She has attended regularly ever since.

The demonstration was nearly perfect. There was not the least trace of discoloration, no swelling, and only two red marks, where the dog's teeth had penetrated, were visible. These were healed.

I thanked God more than once that day, for my slight understanding of Truth.

Another case, which happened during the same week, was one of discipline. Robert is a restless, irresponsible little boy, five years of age. He does not mean to be naughty, but is the kind of child who never seems to be doing the right thing at the right time.

With forty-six other little people of about the same age, who needed constant attention, Robert proved to be a trial, and one day he seemed to exhaust my patience. I had spoken to him again and again, but his obedience only lasted for a moment.

Finally I arose from my chair and started for the boy. I hardly know what I should have done had I not been a Scientist. Probably I should have put my hand on him firmly, and sternly commanded him to go to work. As it was, I had not decided what to do with him.

As I stepped from the platform, my whole thought seemed to frame itself around the single word, "Love." I went to the boy, and stooping over him, placed my hand gently

on his shoulder, saying as I did so, "Robert wants to be a good boy and do his work, doesn't he?" The little fellow threw both arms around my neck and burst into tears. In a few minutes he resumed his work, finished it quickly and well, and looking up to me with a happy smile, said, "It is all done." He worked very busily the entire afternoon. Love had won the day.

The Bible.

BY JAMES F. RYDER.

IN "Miscellaneous Writings" by Mary Baker G. Eddy, we read, "The Bible is the learned man's masterpiece, the ignorant man's dictionary, the wise man's directory." We know it as the foundation rock and history of the world's Christianity; the spiritual daily bread of mankind.

For some time past I have been trying to make acquaintance with it. It has been like trying to explore a dense wilderness,—a hidden mystery. Many have accepted it more through faith than understanding. It has been as a closed book to the masses. In the silence of the centuries it has been dumb. Its pages of wisdom have been as a locked sanctuary, a casket of jewels left in darkness.

The story of Jesus the Christ and his works had grown dim under the dust of ages. We read of his giving sight to the blind, making the lame to walk, and cleansing the leper, of his instructing his disciples to go out and preach the gospel and heal the sick and sinful, as he had done.

We know that divine healing became a lost art. The lessons of the Bible, however, were not allowed to perish, though they had become obscured. There had been a promise of a "second coming"—a coming of a light of understanding—a better understanding of the Scriptures.

The Bible was the original seed, imperishable and eternal. The spiritual sense of the Bible so illumines the pages of the sacred writings, that all who have eyes to see, can see and understand. The latent treasures of the Bible are brought into light, and humanity recognizes the second coming. The lost is found! The leaven which a woman had hidden in three measures of meal is leavening the whole.

In Christian Science a new meaning is given to the sacred Word. The pages which were obscure and dense, reveal beauty and wisdom hitherto unseen. Some of the lines seem lifted in relief by spiritual meaning. Flakes and dust of gold seem scattered over the pages, making them rich and lustrous with love.

Uncovering and Destroying Sin.

BY BARBARA M. PRINCE.

AT no period in the progress of Christian Science has the earnest student felt more the need of thorough individual work than now.

As its deeper meaning and purpose unfold through the study and practice of its Principle as revealed in Science and Health, they uncover the Judas in each human consciousness which would betray and deny the Christ. Is it not well then that each worker turn the searchlight of Truth within?

Since the standard of Christian Science is *Perfection*, it should not be a matter of wonder, that, in the process of evolution out of material ways and means to spiritual development, the sometimes fearful and inexperienced student mistakes the stir and agitation caused by the declarations of Truth, for the seeming power of evil, and so loses his demonstration through not acknowledging Truth as the only possible factor at work.

The tried soldier is not intimidated by the roar of artillery or the din of battle. He has enlisted to fight to

the end, and the glory of the strife silences fear and self. Neither does the thorough housewife stand aghast because the sunlight has disclosed the dust in a hitherto dark corner; she rather rejoices, and hastens to remove the unsightliness.

Thus should the student of Christian Science deport himself whenever error is uncovered by Truth, and rise into a clearer and higher consciousness of the powerlessness of evil. "For the spirit searcheth all things." The fact that we have enlisted under the banner of Christian Science, whose motto is *Perfection*, does not prove that we can attain its high requirements at a single bound. Note the human characteristics which Jesus' twelve disciples represented,—doubt, fear, pride, ambition, materiality, self-exaltation, unbelief, etc. Jesus practically came "not to call the righteous, but *sinners* to repentance."

Mrs. Eddy says (*Rudimental Divine Science*, p. 9): "Healing physical sickness is but the smallest part of Christian Science. It is only the bugle-call to thought and action, in the higher range of infinite goodness. The emphatic purpose of Christian Science is the healing of sin."

We need not be dismayed by the struggles and sometimes failures incident to this warfare with self and sin. Our Leader says in "Miscellaneous Writings," p. 118, "Be of good cheer; the warfare with one's self is *grand*; it gives one plenty of employment, and the divine Principle worketh with you,—and obedience crowns persistent effort with everlasting victory." Let the vastness of the divine Principle which Christian Science includes and unfolds, make our very failures stepping-stones to more earnest striving to reach the goal, Perfection.

Seeds.

BY C. A. P.

ONE day in passing through our garden we plucked some seeds from a morning glory vine, carried them over to the side of our summer house, and planted them in the ground. At the proper time the seed sprouted, the vine grew, and the blossoms nodded their happiness in the early morning.

Meeting an old friend on the street he commented on our improved appearance, and laughed when Christian Science was given credit for the change. Some weeks after the friend appeared at our meeting and acknowledged that Christian Science had helped him, and he wanted to know more about it. Our work had only been to plant the seed. At the proper time it had sprouted, and the result was good to look upon.

The lessons derived from the above experiences are plain. Seeds are being dropped constantly, and it is the duty of a Christian Scientist to see that Love is the seed he plants and leave the fructification to the Father,—"God giveth the increase."

In time to be
Shall holier altars rise to thee,—
Thy Church our broad humanity!

White flowers of love its walls shall climb,
Soft bells of peace shall ring its chime,
Its days shall all be holy time.

A sweeter song shall then be heard,—
The music of the world's accord
Confessing Christ, the Inward Word!

That song shall swell from shore to shore,
Our hope, our faith, our love, restore
The seamless robe that Jesus wore.

WHITTIER.

Testimonies.

Found Health in Christian Science.

"A Few Suggestions" by F. W., in the *Sentinel* of May 17, 1900, is another gentle reminder that we all have a duty to perform,—one imposed by Love, divine Principle, which requires us to do unto others as we would be done by, and in so doing love our neighbor as ourselves, by sending in our tithes into the storehouses of the Publishing Society. We all look forward to the arrival of the *Journal* and *Sentinel* from week to week and month to month, and are filled with the Truth which is voiced through their pages, but many neglect to do their duty in sending articles for publication from time to time.

That has been the case with me, and F. W.'s article has "aroused afresh the dormant sense of moral obligation."

Often when reading in our publications, the excellent articles sent in by the Field and the various contributions, it has occurred to me that I was not doing my duty, and our Leader's request that we send in our tithes would haunt me, but the error of incompetency held the mists before my gaze and temporarily hindered me.

How truly we should "think not to thwart the spiritual ultimate of all things" (*Science and Health with Key to the Scriptures* by Mary Baker G. Eddy, p. 481). In Genesis, 6 : 3, we read: "My spirit shall not always strive with man, for that he also is flesh: yet his days shall be an hundred and twenty years."

"Giving does not impoverish . . . neither does withholding enrich us" (*Science and Health*, p. 245). Giving blesses humanity and makes man receptive of more good.

I am told that when I was born a brother and sister were ill with the malignant form of scarlet fever, and I was all broken out with the "rash." For six months I was carried around on a pillow, as I have often been told since, and was believed to be dying on numerous occasions, and once was thought to be dead.

Until I was three years old no one expected I could live any length of time. I was ill all my life and scarcely knew what a well day was. When I reached manhood, pulmonary tuberculosis developed. After the family physician had declared he had done all in his power and that nothing was left for me to do but seek a change of climate, as I could not live in Chicago, a specialist was tried with the same result, and about the last of February, 1893, I went to Colorado and New Mexico as a last resort, where I remained until the middle of June, returning for the World's Fair and going back to Colorado again the last of October, in no better condition than the first time I went out there.

We are told in *Science and Health*, p. 490, that "divine Love always has met, and always will meet, every human need," and I know this to be so. It was with much rebellion that I returned to Colorado, and thought my lot a hard one, but God's ways are not our ways, and He is a very present help in time of need. I was led to where I was to find the "bread of Life" for in the February following I was led to Christian Science by a dear, faithful woman, and took my first treatment for the lung trouble, began the study of *Science and Health*, and soon went through a class.

The following May I returned to my home in Chicago, where I have lived with no return of the old trouble. That was over six years ago, and I have been in good health since, with the exception of an occasional difficulty to overcome, which only helps us to realize the omnipotence of Mind.

If it were not for the error which comes up for us to overcome, we should be apt to grow indolent; work brings growth and its blessings. Jesus said, "My Father

worketh hitherto, and I work," and bade his disciples to go and do likewise. We must follow his example in order to attain the kingdom of heaven, for he is the Way.

It is frequently asked: if after being once healed in Science, a person will always be well, etc. As long as we yield to temptation we shall reap as we sow, that is the inevitable law of sin (or error) punishing itself. Verily, "the way of transgressors is hard."

I wish to take this opportunity of thanking God for the blessings He has bestowed upon us through our Leader, Mrs. Eddy, and to thank her and all who have been instrumental in my growth in grace. There is never a day but that I feel more and more grateful and am striving to let my life attest my words and deeds.

C. H. C., Chicago, Ill.

One Year in Christian Science.

It is not always easy to account for mortal mind motives. Selfishness, I presume, prompted me to resolve that I would give no testimony, either written or oral, until I had lived in an atmosphere of Science at least one year.

On the 9th day of May, 1900, in the home of a boyhood friend in Detroit, I listened for the first time to the sacred teachings of Christian Science. For thirty-nine years I had been a believer in nothing. I could not reconcile myself to a belief in a God, who seemed to me more a God of hate than love.

But how different the God of love, as revealed by Christian Science. How that dread of the great beyond seemed to lift itself, like a mantle of darkness, and flee before the effulgent rays of divine Love, in which error and hatred have no place.

Up to that time I had entertained many beliefs in habits of vice; love for the social glass had caused my friends many anxious thoughts and heavy hearts, and worse than that was my habit of profanity.

On the 12th of May I obtained a copy of "Science and Health with Key to the Scriptures" by our Leader, Rev. Mary Baker G. Eddy. Assisted by my friends, I commenced in earnest the sacred and practical study of God, His son Jesus Christ, and man, His image and likeness, the true relationship between God, His spiritual universe, and man. What a buoyant, joyous quest was mine for Truth. One by one the old habits left me. Not only morally, but physically, I was healed.

As soon as my understanding was sufficient, I wrote to my wife upon the subject. She was then living in Colorado on account of the climate. In July I visited her, and together we studied until the truth dawned upon her that Life is God, not dependent upon climate or altitude. In September she joined me in Detroit, where we have remained during the winter, and she has evinced no symptoms of her old trouble.

Our baby girl is nine months old, robust and healthy. While she has passed through some of the complaints peculiar to babyhood, we have employed neither doctor nor material means; divine Love has supplied our every need.

Some of my friends have asked me, "Is Christian Science practical?" My reply has been in all cases, as a business man,—Yes. I say to all, I have the hiring of many men, and I will pay to-day a larger salary, get more consistent, honest, intelligent service, from a Scientist who realizes that God is Intelligence and Love, than from one who clings to a belief in a limited intelligence, and whose idea of the supply of his daily needs rests upon the fickle temperament of a mortal mind employer, instead of on the actual knowledge cited in Luke, 12:30: "Your Father knoweth that ye have need of these things." The business world does not need more materiality to-day, but more spirituality, and the seed of decay is already sown in a business where love

for our fellow-men has no place; for Love is the motive power of the universe, and God is Love.

WATSON V. BABBITT, Detroit, Mich.

A Teacher's Testimony.

For seven years I have been enjoying the benefit of the demonstrations given in the *Journal* without expressing to the Field my sincere gratitude for them and for the helpful articles in both *Journal* and *Sentinel*.

During my college course a little understanding of Christian Science enabled me to do more work and better work than I could have done without it. My friends were continually telling me I should break down through trying to accomplish so much and taking so little rest. I knew God was my strength, and I left school stronger physically than when I entered.

For several years I taught in the public school. First in sixth grade, then as principal of a ward school, and was for three years instructor in algebra in the High School. No one but a teacher can know the difficulties to be met in working with so many different personalities; but a realization that there is but one Mind enabled me to rise above many seeming difficulties without discouragement or great physical weariness. I wish every teacher understood more of the Bible as explained by Science and Health, both for the good of the teacher and the benefit of the students.

In my own home I find Christian Science a constant help in overcoming the fear and anxiety which every housekeeper must meet. The thirtieth of June, 1900, a daughter came to our home. The birth was perfectly harmonious and natural. I slept without waking all night, rose as usual, ate breakfast, and wrote a long letter to my mother. The child was born at 10.40 A.M. I enjoyed my dinner as much as ever, and why should I not? I had not been sick. That afternoon I was up and walked about the room, the following day went about upstairs as I pleased, and the next day dressed and came down to dinner, and after that came down to all my meals. We have not lost an hour's sleep in taking care of the happy little Mary.

MRS. RILLA MEEKER HESS, Englewood, Ill.

A Helpful Experience.

I was very much interested in an article in the *Sentinel* a few weeks ago, in relation to reading the smaller works of Mrs. Eddy. While the writer truly said that our textbook was the "multum in parvo of our blessed faith," yet he thought that we should not neglect to read our Leader's other publications, and study them. That reminded me of an experience that I had after reading "Retrospection and Introspection," which I will relate, hoping it may help some one else.

A few years ago when the grip was prevalent here, I one night seemed suddenly to have a hard cold followed by fever, pain in every bone and in my head. I also had a sense of extreme weakness and breathed with difficulty. I did not mention my feelings to any one, but my refusing to eat anything and my apparently high fever and cough alarmed some of the family.

I denied all thought of the grip. When I was alone I began to read "Retrospection and Introspection," which had come in the evening mail. I did not stop reading until I had finished the book. The seemingly acute symptoms of the grip were all gone. I myself could hardly believe in the quick relief from anything so painful and distressing. When one of the family came in later in the evening, he looked at me in surprise and said, "Why, what has happened to you? You look well and all right and you looked very sick a few hours ago." I handed him the book I had just finished and said, "Reading that book changed my thought, and the Truth has made me free."

N. S., Montpelier, Vt.

Religious Items.

The (Baptist) *Standard* raises its voice in protest against the continuance of the wars which the United States and Great Britain are carrying on. It says: "Tolstoi declares 'the root of the evil' of war and all other abuses of modern society to be the perversion of Christ's teaching by the Church. Perhaps he is not so far wrong as some people imagine. At any rate, the sanction given by organized Christianity to warfare—not merely a toleration but often a glorification—is a most singular example of pagan survival in a religion of peace. But we believe that there are thousands of Christians who protest with their whole hearts against the exaltation of force and violence, and who will sooner or later make their voices heard in other ways than the passing of deprecatory resolutions. The people of Great Britain are facing the same question, and their religious papers echo with the heated controversies of peace advocates and the defenders of a war for the vindication of national pride and the subjugation of territory. In both England and America the stage of calling names is about over, and that substitute for argument which consists in labeling men 'patriots' or 'traitors' is already discredited. There is a profound desire for peace, and the prospect of an early termination of pending wars is welcomed with relief."

"The Apostleship of Love," is the title of a leading editorial in the (Swedenborgian) *New-Church Messenger*, in which it says: "If any man has become free of the pride of life and the pride of intelligence, and if there has been imparted to him the desire, the really earnest love to do the Lord's will, the promise is that the truth of his life shall not be in any doubt. It shall not stand as a mere probability or hope. Such a man shall know. He shall know, not because he has strong, carefully-thought-out arguments, nor yet because he has mastered the question of 'evidences,' but because his will stands in such a friendly relation to this perfect will that he has given it his obedience; and by doing what it teaches he has gained an experience of the blessedness and divine character of the truth which he now feels with all the power of certainty. The apostle John appears to be a shining illustration of that kind of discipleship; and John, we are told, was 'that disciple whom Jesus loved,' from which we infer that in the Lord's sight the apostleship which is so formed, is of all others the surest and the most blessed."

At the election of the Bishop at St. Paul's, last week, the quaintest of the various formalities was the following proclamation of the verger:—

"Oyez! Oyez! Oyez! All and singular the Canons and Prebendaries of the Cathedral Church of St. Paul, in London, having or pretending to have a right, voice, or interest in the election of a Bishop and Pastor of the Episcopal See in London, now vacant, are hereby required to attend at the day, hour, and place, if it concerns them, to proceed and see proceedings had in the said business of the said election, and in all and singular other acts or matters which by law or by the customs of the said Church and of this renowned Kingdom of Great Britain, shall be requisite and necessary touching the said election. God save the King!"—London letter in the (Episcopalian) *Church Standard*.

In an editorial article dealing with the indiscriminating use of the word "Christian" in the application of it to nations and civilizations, *The Congregationalist* says: "So far and so fast as any portion of Christianity has identified itself with the state, or accepted the rule of civil authority in things spiritual, or meddled with the affairs of the world, the spirit of cruelty and the spirit of laxity have come in. It is only by a stretch of terms that any government can be called 'Christian.' The influence of the Church, which shines in Christendom as a halo shines about the lamp on a misty night, is not the direct light of Christ, but a re-

flection of it. Christ expressly and repeatedly repudiated those who took his words upon their lips and refused to do his will, and he repudiates them still."

A writer in the *Universalist Leader*, in an article on "Love and Service," says: "Not all at once may love be ours to give to the forbidding, the unfortunate, and the erring. Humanity, compassion, willing, cheerful service, patient continuance in such service, are the forerunners of affection. And very few are they who will not respond in some measure to these persistent overtures of good-will. Our very gratitude and gladness for blessings received, must be our impulse to love and service for those whose lives are depraved and mean. And as we learn of him who went about doing good, our love shall increase and grow into the likeness of the divine Love."

The (Methodist) *Christian Advocate* says: "It is vain to approach God for the forgiveness of our own sin or for any other good while we indulge in a spirit of revenge and hate. Many heavy-hearted men and women are now crying to God for help, which they shall not receive because they cherish a spirit of resentment against those who have wronged them. O, the bitterness that professing Christians carry with them to the throne of grace! No wonder that the windows of heaven are closed. This bolt must be removed before the showers for which they cry will fall."

The Congregationalist quotes the following from the writings of Newell Dwight Hillis: "Beware of the man who does not become gentler as he goes toward strength, kinder and tenderer as he approaches power. For he who is intoxicated with his own success is essentially a weak man—has five talents but not ten, and belongs not with these sons of strength, whose girthhood is their simplicity, whose crown is humility, whose sweet reasonableness is the pledge of their genius."

In a recent sermon on "Phillips Brooks as a Religious Teacher," the Rev. Charles Gordon Ames of Boston said: "With a roomy mind and heart, he was receptive as the ocean of its rivers. He had rare powers of assimilation, and he was neither cramped by timidity nor deformed by servility. He was not a wholesale and retail dealer in sensation and novelties, but presented familiar truths with new illumination and fresh enforcement."

In one of its editorials the (Unitarian) *Christian Register* says: "Everywhere men and women are longing to believe. They are tempted, they are troubled, they are overworn with grief which has no explanation, and with labor which does not satisfy. They would be content to receive less instruction if they could be more sure that the churches and the ministers themselves believed with all their hearts that which they have to offer."

The *New Church Independent* says: "Truth Divine must ever be virginal, as it is ever fresh from the Master's hand and comes only to the prepared soul. It cannot be defiled. It may be assumed by the world for priestly gain, but it cannot of itself be appropriated for evil. It fleeth from the hands of the hypocrite and liar, and soon exposes his nakedness and shame. Seek ye ever to know, and not to appropriate truth."

The *Christian Advocate* says: "After a period of strict enforcement of the laws regulating public Protestant meetings in Portugal, the bonds have been suddenly loosened, and complete religious liberty has been given. This happy outcome is one of the results of the visit of King Carlos to England to attend the funeral of the queen."

The *Christian Register* says: "The question now before each thoughtful mind is, What is the true explanation of the things that I see, that I experience, and that I know? For the conduct of my life, for comfort, for

strength, for instruction, what can I find in history or experience that will give me the help and guidance that I need?"

The (Baptist) *Watchman* says: "There is reason to believe that the least understood writings in the world are the Old Testament Scriptures. If we had the right insight into them, we should see that there runs through them, like a beam of light, the verifying principle of witness to Christ."

The *New York Observer* says: "Christian faith has no business with funereal display, nor the parading of grief to the common multitude. The extravagance that is associated with the usual advertisement of death ought to have no place in the economy of the true Christian religion."

The *Universalist Leader* says: "The man who lives in constant communion and companionship with God and fellowship with man, needs not to say, 'I believe in God, I believe in Good,' he is a living Gospel."

Alexander MacLaren, D.D., says in the (Baptist) *Examiner*: "Prayer in the highest sense, by which is meant the exercise of aspiration, trust, submission, will fight against and overcome all anxieties."

Archdeacon Farrar once said: "We often do more good by our sympathy than by our labors."

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All remittances should be by express money order, post-office money order, or exchange on *New York* or *Boston*. Exchange on Chicago or cities other than Boston or New York will not be accepted.

All orders for Journals, Sentinels, Quarters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid . .	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the *CHRISTIAN SCIENCE JOURNAL* since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid . .	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.

Political and Governmental Notes.

Minister Conger, on his arrival in Des Moines, Ia., on May 2, was given an enthusiastic public reception which was attended by several thousand of his neighbors and fellow citizens. In a speech he made the following interesting statement regarding the origin of the disturbances in China: "One point in the history of this trouble has not been published, I think, and that is in relation to the origin of Boxers. China is full of secret societies, but it was a Buddhist priest in the province of Shantung who revived the Boxer organization in 1899. This priest claimed supernatural powers. He began in a small way, and did not make much progress until the governor of Shantung saw in this society a weapon to use against foreigners. He encouraged it, gave it funds, and advised in its operations. This priest said he could call down eighty million spirit warriors whenever they were needed to help the Chinese, and that he could make the members of the society invulnerable to swords and bullets."

According to a statement just issued by the United States treasury Bureau of Statistics, the national debts of the world's nations in 1793, at the beginning of the Napoleonic wars, amounted to approximately \$2,500,000,000; in 1900 they were, according to the best information obtainable, \$31,000,000,000. During the nineteenth century population increased 150 per cent, and gold and silver, which form the basis of the money with which debt payments are made, 300 per cent. The wealth of the United Kingdom, France, Spain, and the United States in 1800 is estimated at \$20,244,640,000, while Mulhall in 1895 estimated their wealth at \$195,759,829,000, or practically ten times that at the beginning of the century. The debts of these four nations in 1793 aggregated but \$1,630,279,000, and in 1900 were \$11,764,000,000 or seven times as much as in 1793.

Assemblyman Seymour's bill, which permits New York City to accept the \$5,200,000 gift of Andrew Carnegie for a free library system has been signed by Governor Odell. The bill authorizes the city to purchase, erect, and maintain libraries, also to enter into contract with Mr. Carnegie to accept his gift under the conditions named by him.

The Census Bureau has issued a bulletin announcing that the centre of population of the United States, excluding Alaska and recent territorial accessions, on June 1 last, was six miles southeast of Columbus, Bartholomew County, in southern Indiana.

The Colorado Legislature recently passed a bill restoring the death penalty for murder. Governor Orman allowed the bill to become a law without his signature, the time limit having expired on April 30.

Foreign News.

Reports from Pekin last week indicate that the foreign ministers are approaching an agreement as to the amount of indemnity to be exacted from China, the latest advices being that the total of all claims, including damages to individuals, will be about \$325,000,000. The military commanders are said to be very anxious to have the indemnity question settled, in order to vacate the country.

Russian troops in Manchuria were reported to have had several serious battles with rebellious Chinese soldiers last week, in which both sides lost heavily, but it is suspected that the reports are exaggerated and were circulated for the purpose of giving Russia an excuse for sending more troops into Manchuria.

On May 1, Count von Bülow, chancellor of the German Empire, reported to Emperor William the practical defeat of the canal bill in which the Kaiser has been deeply interested. The canal bill, which the German Government now may abandon for the present session of the Diet, was introduced January 12. It is a revision and extension of the bill of 1899, and carried \$97,250,000; the principal appropriations being \$65,000,000 for the Midland Canal, \$10,250,000 for the Berlin-Stettin Canal, \$5,750,000 for the improvement of the Warthe and a connection with the Vistula, \$10,250,000 for the Oder Tidewater Canal, and for the Havel and Spree Canal \$4,750,000. The bill has met opposition from the Conservative, Clerical, and Agrarian interests.

The census returns show the population of the city of London and twenty-eight metropolitan boroughs, all forming the administrative county of London, is 4,536,034, an increase of 308,717 since 1891. Liverpool returns show an increase of 56,728, Leeds, 61,448; Manchester, 38,582, and Birmingham, 44,069.

Of all the British colonies New Zealand has sent the largest proportion of its strong youth to fight on the African veldt. While Canada has sent one in every 1,228 of its population and Australia one in every 880, New Zealand has sent one in every 335.

Industry and Commerce.

British and German newspapers are taking a very serious view of the American combinations of capital for industrial purposes, and view with alarm the prospect of a competition impossible to resist. The *London Telegraph*, in one of its grave articles, accepts the position created by the American trusts as unalterable. It says the only thing that remains is to learn how to combat them. It thinks the only way is the formation of similar gigantic syndicates in England. Legislation, it says, can do nothing. The battle must be fought on broad economic lines. It would be futile to think of bolstering a bad cause by protective duties, subsidies, and such expedients. It admits that there are certain discouraging points in the British position, not the least of which is the labor question, while the United States has many natural and other advantages. The Englishman, in its view, will have to put more energy and more thought into his work and rid himself of a false sense of security.

In the fourth article of a series on "Christian Ministers and Money Matters," published in the (Methodist) *Christian Advocate*, Professor L. T. Townsend, D.D., gives advice regarding "safe" investments, and rates real estate as among the safest. He cites the following significant testimony: "Says a lawyer, a man of large wealth, who has made a careful study of these matters: 'In the last fifty years ninety per cent of all the merchants and traders in Boston have failed. In the last fifty years ninety per cent of all the business corporations have failed or gone out of business so that their stock has been wiped out. In the last fifty years all the improved real estate, on

the average, has paid its interest and taxes and quadrupled in value.' " It would naturally excite curiosity to know what could cause real estate to be in such demand as to quadruple its value, in a community where ninety per cent of all business resulted in failure.

It is semi-officially reported that J. P. Morgan, organizer of the billion dollar steel corporation, has secured control of the Leyland line of steamships in addition to the Atlantic Transport Company's line, and that he is working to bring about a great combination of trans-Atlantic steamship interests. The project, if carried out, would make the American steel and railroad magnates who are associated with Mr. Morgan in his industrial plans, almost invulnerable to competition, both at home and abroad.

Colorado Springs mine owners are planning an immense drainage tunnel to run under the richest portion of the Cripple Creek district at great depth and carry away water which is now proving a serious problem to many otherwise valuable properties. Surveys indicate that a main tunnel five miles long with about three miles of laterals will effectually drain nearly every large producer as well as give a chance for tapping veins at a much greater depth than can be reached by shafts.

It is stated by representatives of J. P. Morgan & Co. that 35 per cent of the amount of the British loan open to subscription, has been awarded to the American subscribers.

General News.

The New York World has discovered that in a mile of palaces in New York City, on Fifth Avenue, between Fifty-seventh and Seventy-second Streets, there are only fifteen children under twelve years of age. The average is about one child to three of these homes. As a contrast, sixty-three children live in a single crowded tenement on Clinton Street, and this is not an exceptional condition of things.

Jacksonville, Fla., was visited by a destructive fire on May 3, and property to the value of between ten and fifteen million dollars was burned. One hundred and thirty blocks were swept almost clean, involving the destruction of about thirteen hundred buildings, including hotels, business houses, and the principal public buildings. Over ten thousand were rendered homeless.

Two thousand one hundred and seventy-two Scandinavian, Irish, English, Scotch, and Finnish immigrants were landed in Boston on May 2, by the Cunard steamship *Saxonia*. This is said to be the largest number of immigrants ever carried by one boat at a single trip in the entire history of the steamship traffic between the United States and the United Kingdom.

During three days of last week the Northern Pacific and Great Northern railways carried about 7,500 homeseekers out of St. Paul, destined for North Dakota, Washington, Idaho, and Oregon. There is a great movement of settlers into the far western states at present, due to the increase of foreign immigration.

President McKinley and his party started on their long tour across the continent on April 29. The party passed through Virginia and into Tennessee on the first day of the journey, and thence traversed the Southwest, stopping in New Orleans and other important centres of population.

Vice-President Roosevelt paid a visit to Boston last week and was given a hearty welcome. He was entertained at a public dinner given by the Home Market Club.

The Pan-American Exposition at Buffalo, N. Y., opened its gates May 1.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Great Britain and America.

Close Relations between the two Great Nations due to Religious Conditions, Moral Sympathy, and the Ties of Language and Blood.

THE REV. ANSON PHELPS STOKES, JR., of New Haven, Conn., recently delivered a most interesting discourse on Great Britain and America, at St. Paul's P. E. Church of that city. The guests of honor on the occasion were the Sons of St. George.

Rev. Mr. Stokes' discourse was published in full in the *New Haven Evening Register*, of April 22, 1901, and was in part as follows:—

It is my privilege this evening to speak more particularly to the Sons of St. George. The good custom of many years is being continued, and the representatives of the two New Haven branches of this world-wide benevolent society are meeting together under the auspices of a church. It is fitting and proper that those who claim England as the home of their birth should hold to the tradition of giving to these social organizations at least once a year a distinctly religious sanction, for the history of England in the past and the life of England to-day have been profoundly influenced by the Christian religion.

Since you met here last year the whole world has been stirred to its depths by the death of the Queen. The beauty of her character, the loftiness of her purpose, the purity of her life, these have drawn out the admiration of Christendom. Her example as a mother in the home and as a sovereign on the throne had given her a quiet influence for good without parallel in our time. Her spirit was pure, because she drew it from the very bosom of the perfect God; her character was strong, because its foundations were on the immovable rock of Christian faith; her life was always uplifting and helpful, because based on that eternal principle of love supremely manifested by the Saviour.

If I am not greatly mistaken, you Sons of St. George have always admired and loved the sovereign lady of your mother land. It was no surprise to us to find how keen was your grief at her death. Your devotion to her from your earliest years was deep and true.

But I believe that Victoria's death did show you what you never before realized, that the good Queen held a place in American hearts almost as conspicuous as in those of Englishmen. You must have been impressed with the tributes of respect which the people of this republic showed to her memory. The memorial services, thronged with worshipers, held in every city in the land; the adjournment of the House of Representatives, the beautiful prayer of the blind chaplain of the Senate, the flags at half-mast on all the executive buildings in Washington, the sympathetic message of our President, the resolutions of state legislatures, Chambers of Commerce, and other bodies, the pages and pages devoted to accounts of her life and tributes to her character in the daily press, these and a

score of other signs must have brought home to you with new power the strength of the link which binds the land of your adoption to the land of your birth.

It is of this bond of sympathy between England and the United States that I would speak to you this evening. I would try to point out its causes and show its strength (its supreme manifestation has occurred recently), called forth by the death of the good Queen. We have long seen its evidences on every hand, in spite of an inherited hostility to an old-time enemy still shown in certain political circles. The sympathetic tributes of Englishmen to our martyr Presidents, Lincoln and Garfield, and the tender message of Victoria to the widow of the latter, the appreciation in the old country of our American poets and the recognition of some of them, as Lowell and Longfellow, in Westminster Abbey, the position of pre-eminence accorded for a generation to the American Ambassadors at the Court of St. James, the manifest desire of Great Britain to bring about a treaty of arbitration with this country, the successful assistance given to our nation in preventing a European coalition against us during the Spanish War, these may be taken as almost random signs of that kindly feeling towards us and appreciation of us which the England of this generation has manifested.

That we of America are, on the other hand, supremely interested in England, among foreign powers, must be granted. The fitting out of the American hospital ship for English soldiers in the Boer war, the sending of wheat for the relief of the famine victims of British India, the hospitality universally shown distinguished Englishmen visiting this country, the handing over of our consular interests in hostile nations to British representatives—these are straws pointing unmistakably in the same way. England is more interested in America and Americans than in any other country or people, and the United States returns the compliment. This interest, too, has little by little developed into sympathy as supremely shown at the time of the Queen's death. To-day there are no two nations each more interested in the other's welfare than they who a hundred years ago twice showed themselves mortal enemies, and fifty years later had not turned acquaintance into friendship.

The fact of this friendship, then, we shall discuss no longer. It has, I think, been shown. But what of its cause? What brings about this sympathy, this feeling of unabated interest? Wherein do our common interests show themselves? Primarily, it seems to me, in four ways:—

England and the United States have the same language, the same literature, the same moral ideas, and the same religious ideals.

The English language is our common tongue, and herein is a strong bond of sympathy. We express thought in the same words, and thought itself is influenced by the medium of expression. The language may not be a consistent one, but that it is rich and full of vitality, no one denies.

Again, we add to our common language a common literature. Milton, Shakespeare, Wordsworth, Tennyson,

Copyright, 1901, by Mary Baker G. Eddy.

Scott, Lowell, Longfellow, Kingsley, Brooks—these belong to Englishmen and Americans alike. We read the same books as well as speak the same language.

Again, we have the same moral ideals—I use the phrase in a broad way—our conceptions of liberty and justice, our ideals of the marriage tie and the sacredness of the home, our ethical standards, are the same.

Again, our religious ideals are one. They centre in the person and the teachings of the historic Christ, and stand primarily for the truth of divine worship and the possibility of immediate communion of the individual with God.

These are the four things, then, that constitute the links in the chain which binds together our two great nations. They may, I believe, be rightly expressed in one great symbol, the King James version of the Bible. It is the acknowledged standard of the English language. It contains the most classic passages in English literature. It is the source of those moral ideals and religious truths which give our two nations their unity of purpose. Let us consider briefly these four Anglo-American bonds as based supremely on our English Bible.

First, as to language. The King James version is the recognized standard. Green, in his great work, "The History of the English People," makes this weighty utterance: "As a mere literary monument the English version of the Bible remains the noblest example of the English tongue, while its perpetual use made it from the instant of its appearance the standard of our language. To explain the simple, vigorous English of a Lincoln, or the beauty and power of Phillips Brooks' phrases, without the English Bible, which was the daily food of their youth and manhood, is a sheer impossibility. In Harvard College the students in English composition have the study of the Bible set as a daily task, not with the purpose of stimulating religion, or morals, or thought, but as a training in the use of the mother tongue.

The historian already quoted says that the power of the book "showed itself in a thousand superficial ways, and in none more conspicuously than in the influence it exerted on ordinary speech." The King James version stands for the highest expression of our common tongue. And so my first point is that the bond of language which unites us with England is supremely manifested by the English Bible.

The second of the ties to which I referred is that of a common literature. Englishmen and Americans read the same Shakespeare, and Milton, and Tennyson, and Kipling, and Lowell, and Cooper, and Scott. And this constant reading of the same books gives us a mutual sympathy, a community of interests of infinitely greater and more enduring value than any treaty or other formal international agreement. But there is no book which can compare with the English Bible as a literary classic. Most educated men and women know Tennyson's "In Memoriam," but all know the thirteenth chapter of First Corinthians, of which the summary is in those beautiful words: "Now abideth faith, hope, charity, these three; but the greatest of these is charity." The masterpieces of English literature cannot compare in the extent of their circulation or the depth of their influence with the literary productions of the Bible. To one who reads the orations of Burke or Webster, a dozen read the great speeches of Peter and Paul recorded in the book of Acts. To one who reads the sermons of Robertson or Brooks, scores read the Sermon on the Mount. To one who reads the impassioned appeals of Garrison or Wendell Phillips, a multitude can be counted who are stirred by the denunciations of an Isaiah or an Amos. To one who studies Blackstone, a hundred study the laws of Moses. Even books of travel must yield to St. Paul—with his thrilling adventures told with such

stirring power. Or take history. We read Macaulay, we read Fiske, we read Gibbon, but the history of the Jewish people as given in the Old Testament is infinitely more familiar to us. Or take poetry. One of us reads Browning, another Coleridge, another Longfellow, but every one of us reads the book of Psalms. Or take biography. Some of you have read Lockhart's "Walter Scott," others Boswell's "Johnson," still others Allen's "Life of Brooks;" but for one of us who reads these books or any of them, a thousand men and women—and I use the number deliberately—read the life of Christ as given by St. Mark or St. John.

Yes, my friends, a common literature is a great bond between England and this country; but put your Shakespeares and Miltons and all the rest together, and they do not compare in their influence with the literary masterpieces of the Bible.

We pass from the bonds of language and literature to those of common moral and religious ideals. I use the phrase moral ideals in the largest sense as including the moral idea brought to bear upon the nation, the school, the family, the individual.

But where do we get these and other similar moral ideals? We get them partly from inheritance, partly from reading ethical works, partly from contact with men of high moral standards. But back of inheritance, and current works, and living men, stands that greatest of ethical teachers, the English Bible. The "thou shalt nots" of Exodus, the two "thou shalt" of the Gospels, the conception of the kingdom of God given by Jesus, the parables of the good Samaritan and the lost sheep—these give us the sources of our moral ideas. If England and the United States are one in standing for freedom, it is primarily because of devotion to a common thought, the keynote of which is, "Ye shall know the truth, and the truth shall make you free." If both stand for democratic principles it is because of the same intimate knowledge with the New Testament teaching of the brotherhood of man. If both emphasize the virtues of the home,—purity and chastity and thoughtfulness,—it is mainly because these form the essence of the moral teachings given in that English Bible which is the precious inheritance of the two peoples. Our third point, then, is that common moral ideals, based on the teachings of the Bible, do much to create a community of interests between England and this country.

My fourth and last point is that the two nations are drawn together by the same religion. It is the strongest of the links that bind us together, for religion, broadly conceived, is the greatest force in the life of man. We are both Protestant nations—Protestant to the core. The two nations are far from being truly Christian as yet, but the faith of Jesus is the most powerful force at work in them. We can get glimpses of this religion from current books, and from the lives of men, and from the services of the churches, but our ultimate source for knowledge of the religion, the faith of it, is the Bible. And in the King James version the phraseology is so beautiful, the images so familiar, that the common religion based upon the same record of the great revelation has become a controlling force.

And so we name our four bands of unity between the land of our fathers' birth and the land of our adoption. A common language, a common literature, the same moral ideals, the same religion. And these four we believe to be manifested supremely in and through the English Bible. The good old version of the Scriptures made under the auspices of King James in 1611 is the symbol I present to you to stand for the common interests and aspirations of England and the United States. It is the root, the source, the origin of many of those intangible ties which

create that unmistakable spiritual sympathy between us, and never more markedly manifested than in America's grief at the death of England's Queen.

May we all—Sons of St. George and other worshipers in St. Paul's Church—English born and American born, continue to show that devotion to the English Bible which has proved such a mighty factor in the world's life, and may we, whether we reconstruct our theories about the Bible or not, ever derive from its reading that spiritual comfort, that moral stimulus, which it has given to generations of pious folk. Let the friendship of old England and New England, conscious of the source of its highest common inspiration in the English Bible, grow stronger and stronger as the years go by.

New East River Bridge.

WHEN the Brooklyn Bridge was opened for traffic eighteen years ago, an epoch in the history of New York and Brooklyn was marked. The structure was a marvel, and continues to this day to be one of the sights of this great metropolis. But it will have to divide the honors now with what is called the New East River Bridge, which crosses the river a short distance north of the first bridge; and in a few years these two structures will be overshadowed, so to speak, by the greater bridge which is to cross the river at Blackwell's Island. These three in time and turn will be small and insignificant indeed when the proposed Hudson River Bridge connects New Jersey and New York and is open for business.

A few weeks ago three steel cables, the first to connect the towers of the New East River Bridge, were stretched and secured, and now the vast undertaking will be pushed rapidly to completion. Although by no means the handsomest among notable suspension bridges of this country, the new East River structure will at least be the largest and stiffest. The span from tower to tower is 1,600 feet, the length from terminal to terminal 7,200 feet, and the width 118 feet, providing for four trolley tracks and two each of elevated railroad tracks, roadways, bicycle paths, and promenades.

The suspended structure will weigh 7,500 tons, and 45,000 tons of steel will be used all told. Besides this enormous amount of steel material, the bridge will require 60,000 cubic feet of cement, 130,000 cubic feet of masonry, and 6,500,000 feet of timber. More than five hundred houses in New York and Brooklyn will have been destroyed before the approaches and plazas are completed.

For eighteen hundred feet the central span will hang 135 feet above mean high water. The tower foundations are built on solid rock, standing twenty feet out of the water, and upon them the massive, curiously shaped steel towers rise to a height of 310 feet. For one hundred feet at each tower the span will be supported on the cantilever principle. Unlike the span of the present bridge, which is joined in the centre, the span of the new bridge will be unbroken throughout its entire length.

The cost of the new bridge has been estimated at \$8,000,000, but it may largely exceed that sum when provision has been made for the purchase of the necessary real estate.

New York Christian Advocate.

Divine Hunger for Growth.

Whenever you see a youth yearning for more education, for a fuller life; when you see him devoting every spare moment to acquiring information which may help him in his business or occupation, or enlarge his mental horizon; when you see him cheerful and prompt, always trying to do everything he touches to a finish, you may be very certain that that boy will succeed.—*Success for May.*

The Lectures.

At Malden, Mass.

There was a very large and deeply interested audience at the Malden Auditorium last evening (Tuesday, April 23), when Rev. Irving C. Tomlinson, C.S.B., of Concord, N. H., delivered a lecture on the subject, "Christian Science, the Christianity of Christ," under the auspices of First Church of Christ, Scientist, of this city.

Before eight o'clock, the time of the opening of the lecture, the seats on the lower floor and first balcony of the beautiful theatre were all filled, and as the curtain rose Mr. Arthur H. Pope, First Reader of First Church of Christ, Scientist, of this city, introduced ex-Representative Harvey L. Boutwell, who had accepted the invitation to preside over the meeting. He stepped forward and in a few opening remarks, he declared that the sincerity and earnestness of the believers in Christian Science had almost persuaded him to believe. He then introduced Rev. Mr. Tomlinson, who was received with marked applause.

The lecturer spoke in a very easy and pleasing way. Every one seemed to listen most attentively throughout his interesting treatment of his subject, and it was evident that he had given many in the audience some thoughts for consideration. Among the gathering were noticed many of the most prominent ladies and gentlemen of our city. Even though one did not fully agree with the speaker, one could not but feel drawn towards him by his frank manner and kindly way of addressing all who held a different view.

Malden Evening News.

Mr. Boutwell's introductory address was as follows:—

Ladies and Gentlemen:—On the fly-leaf of "Science and Health with Key to the Scriptures," I found this sentiment: "Ye shall know the truth, and the truth shall make you free." The great fundamental purpose of Christian Science, as I understand it, is to know the truth, and the great aim and object of the Christian Scientists is the establishment of truth and the dissipation of error. Certainly they have a high purpose and a noble aim. Every true citizen, be he Jew or Gentile, Protestant or Catholic, believer or unbeliever, may unhesitatingly subscribe to the sentiment which I have quoted, and may well join hands with the Scientists in ascertaining the truth, and in the establishment of that which is for the welfare of mankind on earth and in the realm beyond the river.

We are here to-night to hear truth and error discussed from the standpoint of Christian Science. As one who owes allegiance to no denomination, no creed, no sect, but who finds good in all; believing thoroughly in a government which guarantees free speech and guards zealously the right to worship God according to the dictates of one's own conscience, I am glad to listen to-night to the truth as the Christian Scientists see it.

I am free to say that if Christian Science points out the only true line of demarcation between truth and error, I want it for myself and my family, we all want it, and want everybody else to have it, in order that the world may roll on through the coming centuries as one harmonious whole. Being without the pale, I am not expected to give testimony to-night, and yet, I feel impelled to say that I have looked upon the work of the Scientists in wonder and amazement. Among my friends in the faith, I have seen a zeal, an unselfish devotion to duty, a consistency, an honesty of purpose and sincerity of heart equalled by few and surpassed by none. I am convinced that the tortures of the Spanish Inquisition, or burning at the stake, would not deter some of my friends from following the teachings of Christian Science.

When I see the exemplary lives of the followers of Christian Science, and learn that their methods of casting out

error produces not only pure minds and hearts but better bodies as well,—when men of standing and veracity say to me, "Whereas once I was blind, now I see," when the palsied rise and the lame walk, I am inclined to say, "Almost thou persuadest me to be a Christian Scientist."

The lecture to-night will be given by the Rev. Irving C. Tomlinson of Concord, N. H., a graduate of the Massachusetts Metaphysical College, a member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., a duly authorized lecturer of New England, and one thoroughly qualified to tell us the truth as Christian Science interprets it. I have the pleasure of presenting Mr. Tomlinson.—*Correspondence.*

At San Francisco, Cal.

Sunday afternoon (April 14) at three o'clock a large audience gathered at Metropolitan Temple to hear an interesting exposition of the theories and practices of Christian Science as expounded by Dr. Abraham A. Sulcer, C.S.B., of Riverside, Cal. The doctor had for twenty-seven years practised medicine in the regular school at Riverside. Seven years ago he abandoned the regular practice of medicine and began the study and practice of Christian Science.

The people began to fill the building at two o'clock. The platform was decorated with callas, roses, smilax, and palms. Dr. Sulcer is a model of punctuality, stepping on the platform at exactly three o'clock. He was accompanied by Miss Sue Ella Bradshaw, C.S.D., the First Reader of First Church of Christ, Scientist, in this city, who introduced the lecturer in a brief address, saying:—

Ladies and Gentlemen:—It is generally conceded that the Christian Scientist has added a new element to his consciousness and with good results to himself and others. This is, indeed, true. When a great spiritual need has been supplied, when a longing to gain some definite knowledge of the mysteries of being is answered and the light is dawning concerning the solution of what has seemed an unsolvable problem; when the satisfying fruits of this experience have been proved beyond question, it is with unceasing joy and gratitude that we commend this blessing to our friends.

The tireless love and devotion of woman's faith has been rewarded by more faith, even an understanding of that omnipresent divine Love which heals the sick and sinful. Those who have been touched by this living faith, shown by works, can but return heartfelt acknowledgment of the debt that we owe to the Founder of Christian Science, who, with self-sacrificing patience, has prepared anew the Christ-way for us and taught us to walk in it.

Christian Science is not a new subject in this community. The works which have resulted from its quiet ministration the past few years, have awakened a widespread, active interest, of which the large audience this afternoon is an evidence. The lecture to-day is the fourth public lecture given under the auspices of First Church of Christ, Scientist, in this city.

It may seem strange that a physician, well established in practice for many years, should abandon that profession and take up the study and practice of Christian Science. The reason for this change I am sure will be of interest to you, as well as the view he will give you of "Christian Science Applied." I have the pleasure of introducing to you a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., Abraham A. Sulcer, M.D., C.S.B., of Riverside, Cal., who will now address you.

Dr. Sulcer, who is, in appearance, one's beau ideal of the old family physician, tall, grave, with calm, pleasant face and long, white beard, possesses every characteristic likely to inspire confidence.—*San Francisco Bulletin.*

At Portland, Ore.

The Marquam Grand Theatre was crowded, yesterday afternoon (Sunday, April 21) with an audience that listened with attention to the exposition of the doctrines of Christian Science by Dr. A. A. Sulcer, M.D., C.S.B., of Riverside, Cal. Dr. Sulcer was for years a practising physician under *materia medica*, and is now a member of the Board of Lectureship established by The First Church of Christ, Scientist, of Boston. Mayor H. S. Rowe introduced the speaker, saying in part:—

A belief in a superior power, a desire to worship God or some object to be endowed with Godlike attributes, a belief by civilized man in the immortal life, are among the most elemental conceptions of life, and far antedate all human history. Everywhere we find evidence of the struggle of the mind to search out the knowledge of God. Nothing arrests the mind so quickly or shows the evolution of men so powerfully. It is, therefore, with a serious and attentive mood that we give ear to each new doctrine. If we do not believe, we at least approach a new shrine with a simple reverence. Men are ever on the alert for messages from the Great Unknown, and, therefore, he who claims to have received an inspired word, or a fuller interpretation of the divine law is certain of attention. Christianity is the religion of progress; it has supplied more and more bountifully the needs of the heart. Every form of religion has been closely identified with the healing of the sick. In this practical work, as well as in the truth of religious teaching, our Christian Science friends have gone further than all others. This doctrine, then, is not new, but it contains truths not yet fully expanded. To hear these doctrines more fully explained we have gathered here to-day.

Dr. Sulcer was heard with interest.

Portland Morning Oregonian.

At Kalamazoo, Mich.

Men and women of many faiths filled the lower floor of the Academy of Music Sunday afternoon (April 21) to hear Judge William G. Ewing, C.S.B., on Christian Science. The gathering was a representative one and much interest was manifested when the speaker was introduced by Judge Henry F. Severens of this city, an old friend. The two gentlemen were alone on the stage, which was handsomely and effectively decorated with potted plants and long-stemmed American Beauty roses.

Judge Ewing is perhaps best known as a member of the Board of Lectureship of The First Church of Christ, Scientist, Boston, and in that capacity he has left a marked influence from one ocean to another. He is recognized everywhere as an authoritative exponent of the doctrines for which he stands, and his great ability as a speaker and logical reasoner were never more clearly portrayed than in his lecture of Sunday afternoon.

Kalamazoo Daily Telegraph.

A Tribute to Lincoln.

To Lincoln may be applied the words which a Chinese historian uses in describing the character of Yao, the most revered and honored of the ancient rulers of China. Thus it is written: "His benevolence was boundless, his wisdom was profound; to any one approaching, he had the genial warmth of the sun; when reviewed at a distance, he seemed to have the mysterious ways of the clouds; though occupying the highest station, he was not haughty; though controlling the resources of the whole nation, he was not lavish; justice was the guiding principle of his motives; nobleness was written on every lineament of his face."

WU TING FANG.

First Exposition Afloat.

THE suggestion for a floating exposition, to enable American manufacturers and exporters to exhibit their goods at the doors of the people to whom they desire to sell them, recently made by the chief of the Bureau of Statistics of the Treasury Department, is resulting in much discussion of the subject, not only throughout the United States, but in other parts of the world. Letters are being received from various countries in Europe and elsewhere, making inquiries regarding the proposed enterprise, and many inquiries from manufacturers and merchants in the United States desiring to participate in an undertaking of this character.

The proposition as originally presented suggested that it would be much easier to induce those whom we would make our customers to examine our goods if carried to their doors, than if the goods were set up in an exposition in the middle of the United States and the world invited to cross the oceans to examine them, and that greater proportionate results in the enlargement of our foreign commerce would accrue from investments in exhibitions carried to the doors of the would-be customers rather than large expenditure in creating sufficiently great attractions to bring the would-be customers to our own doors.

To this end it was suggested that an exposition association might be formed by manufacturers and exporters, which could create a guarantee fund which would entitle the subscribers to a proportionate amount of space in the vessel or vessels carrying the exhibit, this exhibit when completed to pass from port to port along the coast of South America, thence to the principal cities of Asia, Oceanica, Africa, and Europe, and thence returning to the United States, occupying perhaps two years in the trip and visiting the principal cities and countries of the world.

This suggestion has been followed by the announcement that a floating exhibition to visit the cities bordering upon the Gulf of Mexico and Caribbean Sea has been organized at Buffalo, and will be made ready during the summer, and leave in the autumn of the present year for that field, and a number of other enterprises of this character have been suggested.

The latest practical bit of information on this subject, and one which will interest all those who have given the matter serious attention, has just reached the Bureau of Statistics in a statement published in the *Moniteur Officiel du Commerce*, Paris, on March 28, regarding a floating exposition, recently organized in Hamburg, Germany, as follows:—

"The earliest exhibition of this kind was organized about two years ago, and it must be said that the results of the enterprise were in excess of the most sanguine expectations: Total value of transactions, 22,000,000 marks (\$5,236,000), at a cost of about 800,000 marks (or about \$200,000). The details of operation are stated by the correspondent as follows:—

"The syndicate addresses to manufacturing and commercial firms circulars explaining the purpose of the exhibition and the terms of participation. As soon as the number of would-be participants is large enough to permit the loading of a vessel, the exhibitors send their samples to the port of departure. These samples are then mounted and exhibited on board the vessel, especially fitted for this purpose.

"Alongside of each exhibit there is an advertisement giving prices and terms of sale. Sales agents, representing either the syndicate or the individual exhibitors, furnish all desired information to the visitors at the various ports where the vessel stops. These sales agents are chosen from among the young men and women who are graduated from commercial schools, and speak at least two languages.

Interpreters are hired on the spot in each country of a new language. The sales agents, besides seeing visitors aboard the ship, visit also with their samples the towns in the interior of the country. In such manner the cost of transportation is greatly reduced.

"The exhibitors pay to the syndicate a commission to be deducted from the realized sales and in proportion to the value of the product. In addition to this commission the participants pay a proportionate share of the cost of chartering and loading the vessel and the general expenditures of the undertaking, such as the hire of clerks, interpreters, etc."

The report concludes with the expression of the hope that French commercial circles would appreciate this novel idea, and try to achieve even more splendid results.

Boston Herald.

Attention.

WILL subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads June '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for July, August, and September.

Remittances.

REMITTANCES should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

The Church Manual.

The Church Manual of The First Church of Christ, Scientist, in Boston, Mass., contains the By-laws of the Mother Church, also a list of members.

Address all orders and make remittances payable to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Applications for Membership.

APPLICATIONS for membership with the Mother Church to be presented at the June meeting for the admission of applicants, must be in the hands of the Clerk on or before May 20, 1901.

A Word to Inviters.

INVITERS of applicants to membership with the Mother Church will confer a favor on the Clerk and save disappointment to the applicants if they will withhold, until after the semi-annual meetings, all applications that have been sent to them for their signature too late to reach the Clerk before the date set for the closing of the entries for admission, and also notify the applicants that their applications have been retained.

All applications should be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

Heaven is as present now as ever it will be. God is here in His magnificence to-day, as He is in the courts of the angels. We must not dream of postponing our heaven. We must prepare to enter in now by loyal service of God every instant.—W. H. CHANNING.

The Golden Rule is the most popular precept in the world, and the most violated. Everybody wants all the other fellows to begin keeping it first.—Z. GRENELL, D.D.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Mrs. Eddy Talks.

THE following account of an interview with the Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science, appeared in the *New York Herald*, May 1, 1901. The report will be read with interest by the many readers of the *Sentinel*, and the honest investigator of Christian Science will find that the many false rumors which have come to his ears are without foundation.

The *Herald's* report of the interview was as follows:—

CONCORD, N. H., Tuesday, April 30, 1901.—Christian Science has been so much to the fore of late that unusual public interest centres in the personality of Mrs. Mary Baker Eddy, the Founder of the cult, and in her opinions on the matters which have brought her followers in opposition to state laws and the public opinion behind those laws. More than that, unkind rumors, started doubtless by the unfriendly, have made Mrs. Eddy a myth. She died long ago, said some; she is living but bedridden, said others, and her place is taken by another woman whenever it is a question of a public appearance.

To settle both these rumors at one stroke was the object of a call at Pleasant View, her handsome home near here. The granting of interviews is not usual. Mrs. Eddy's house would be overrun with reporters, and the followers of Christian Science itself would be present in growing numbers. Hence it was a special favor that Mrs. Eddy received the *Herald* correspondent. It had been raining all day and was damp without. The change from the misty air outside to the pleasant warmth within the ample, richly furnished house was agreeable. The house represents only a part of Mrs. Eddy's wealth, resulting from the sale of her books. It contains hundreds of costly objects, sent to her with heartfelt good wishes by her "children in Christ."

Seated in the large parlor, I became aware of a white-haired lady slowly descending the stairs. She entered with a gracious smile, walking uprightly and with light step, and after a kindly greeting took a seat on a sofa. It was Mrs. Eddy.

While the lady in a clear but not loud voice was telling how she had sought light upon the matter of seeing me, and what had induced her at last to reach a favorable conclusion, let me say first of all that the lady was Mrs. Eddy indeed. There was no mistaking that. Older in years, white haired and frailer, but Mrs. Eddy herself. The likeness to the portraits of twenty years ago, so often seen in reproductions, was unmistakable. There is no mistaking certain lines that depend upon the osseous structure; there is no mistaking the eyes—those eyes the shade of which is so hard to catch, whether blue gray or grayish brown, and which are always bright. And when I say frail, let it not be understood that I mean weak, for weak she was not. Well preserved age is not uncommon now, and Mrs. Eddy seemed very well preserved.

Later, when we were snugly seated in the other smaller parlor across the hall, which serves as a library, Mrs. Eddy sat back to be questioned. She seemed to think that I

would want to know about her lawsuit with the Messrs. Woodbury of Boston, but was not anxious to discuss it. It would come on in a couple of weeks, and it had occupied some of her attention, but would we not talk of more fundamental matter?

FORETELLS ABSORPTION OF CHURCHES.

"The continuity of the Church of Christ, Scientist," she said, in her clear voice, "is assured. It is growing wonderfully. It will embrace all the churches, one by one because in it alone is the simplicity of the oneness of God; the oneness of Christ and the perfecting of man stated Scientifically."

"How will it be governed after all now concerned in its government shall have passed on?"

"It will evolve Scientifically. Its essence is evangelical. Its government will develop as it progresses."

"Will there be a hierarchy, or will it be directed by a single earthly ruler?"

"In time its present rules of service and present rulership will advance nearer perfection."

It was plain that the answers to questions would be in Mrs. Eddy's own spirit. She has a rapt way of talking, looking large-eyed into space, and works around a question in her own way, reaching an answer often unexpectedly after a prolonged exordium. She explained: "No present change is contemplated in the rulership. You would ask, perhaps, whether my successor will be a woman or a man. I can answer that. It will be a man."

"Can you name the man?"

"I cannot answer that now."

Here, then, was the definite statement that Mrs. Eddy's immediate successor would, like herself, be the ruler.

NOT A POPE OR A CHRIST.

"I have been called a Pope, but surely I have sought no such distinction. I have simply taught as I learned while healing the sick. It was in 1866 that the light of the Science came first to me. In 1875 I wrote my book. It brought down a shower of abuse upon my head, but it won converts from the first. I followed it up, teaching and organizing, and trust in me grew. I was the mother, but of course the term Pope is used figuratively.

"A position of authority," she went on, "became necessary. Rules were necessary and I made a code of by-laws, but each one was the fruit of experience and the result of prayer. Intrusting their enforcement to others, I found at one time that they had five churches under discipline. I intervened. Dissensions are dangerous in an infant church. I wrote to each church in tenderness, in exhortation, and in rebuke, and so brought all back to union and love again. If that is to be Pope, then you can judge for yourself. I have even been spoken of as a Christ, but to my understanding of Christ that is impossible. If we say that the sun stands for God, then all his rays collectively stand for Christ, and each separate ray for men and women. God the Father is greater than Christ, but Christ is 'one with the Father,' and so the mystery is Scientifically explained. There can be but one Christ."

"And the soul of man?"

"It is not the spirit of God, inhabiting clay and withdrawn from it—but God preserving individuality and personality to the end. I hold it absurd to say that when a man dies, the man will be at once better than he was before death. How can it be? The individuality of him must make gradual approaches to Soul's perfection."

"Do you reject utterly the bacteria theory of the propagation of disease?"

"Oh," with a prolonged inflection, "entirely. If I harbored that idea about a disease, I should think myself in danger of catching it."

ABOUT INFECTIOUS DISEASES.

"Then as to the laws—the health laws of the states on the question of infectious and contagious diseases. How does Christian Science stand as to them?"

"I say render unto Cæsar the things which are Cæsar's. We cannot force perfection on the world. Were vaccination of any avail I should tremble for mankind, but knowing it is not and that the fear of catching smallpox is more dangerous than any material infection, I say where vaccination is compulsory let your children be vaccinated and see that your mind is in such a state that by your prayers it will do the children no harm.

"So long as Christian Scientists obey the laws I don't suppose their mental reservations will be thought to matter much. But every thought tells, and Christian Science will overthrow false knowledge in the end."

"What is your attitude to science in general? Do you oppose it?"

"Not," with a smile, "if it is really science."

"Well, electricity, engineering, the telephone, the steam engine—are these too material for Christian Science?"

"No, only false science—healing by drugs. I was a sickly child. I was dosed with drugs until they had no effect on me. The doctors said I would live if the drugs could be made to act on me. Then homœopathy came like blessed relief to me, but I found that when I prescribed pellets without any medication they acted just the same and healed the sick. How could I believe in the science of drugs?"

"But surgery?"

"The work done by the surgeon is the last healing that will be vouchsafed to us or rather attained by us as we near a state of spiritual perfection. At present I am conservative about advice on surgical cases."

"But the pursuit of modern material inventions?"

"Oh, we cannot oppose them. They all tend to newer, finer, more etherealized ways of living. They seek the finer essences. They light the way to the Church of Christ. We use them, we make them our figures of speech. They are preparing the way for us."

We talked on many subjects, some only of which are here touched upon, and her views, strictly and always from the standpoint of Christian Science, were continually surprising. She talks as one who has lived with her subject for a lifetime—an ordinary lifetime—and so far from being puzzled by any question, welcomes it as another opportunity for presenting another view of her religion.

Those who have been anticipating nature and declaring Mrs. Eddy non-existent, may learn authoritatively from the *Herald* that she is in the flesh and in health. Soon after I reached Concord on my return from Pleasant View, Mrs. Eddy's carriage drove into town and made several turns about the court house before returning. She was inside, and as she passed the same expression of looking forward, thinking, thinking, was on her face.

A Manly Protest.

THE following appeal to Christian ideals and Christian charity by Rev. De Witt T. Van Doren of New York, is but an expression of that inevitable reaction which, among thinking people, always follows the harsh, unwarranted criticism characteristic of religious prejudice.

Its most gratifying paragraph is that which bears witness to the fact that the spirit manifested by Christian Scientists is worthy of their profession, "Being defamed they still entreat their critics to deal kindly and candidly with them, since they desire nought but the furtherance of the truth." If all Scientists will at all times prove worthy of this encomium, and pursue the even tenor of their way, undisturbed and unresentful, manifesting only pa-

tience, brotherly kindness, and love, they will not only honor their high calling of God, but they will have the satisfaction of seeing that the evil which is spoken of them, through ignorance and misapprehension, is not only failing of its purpose, but that it is opening doors everywhere for the coming of the Truth of Christian Science. Truth is uncompromising and intolerant of all error, it cannot be otherwise; but love is kind, considerate, patient, meek, and in the true Christian Scientist truth and love are never separated in manifestation. One of the assuring evidences of the presence of truth is the stir and turmoil it awakens. Criticism both kind and unkind, just and unjust, is incidental to truth's advance through imperfect media, and it should simply prompt all to increased thoughtfulness, humility, discretion, and above all, love. Every faithful Scientist will be mindful ever that the *only* way to overcome evil is with good.

We are thankful for our brother's truly Christian spirit and for his earnest, loving words. We are indebted to the *New York Journal* for the copy of the address, from which we make these excerpts.

The address was in part as follows:—

The criticisms of New York clergymen of different denominational views, concerning Christian Science as a religion, are not nearly so damaging to that cult as to the Christian churches, if it be true that these criticisms represent the spirit of evangelical Christianity. I am not in any sense a follower of Mrs. Eddy; yet there is much in her teaching that must command the respect and admiration of every candid and unprejudiced mind.

These criticisms may be well meant. Nevertheless they are unwise, as they must inevitably react upon the churches represented by these critics. "They that take the sword shall perish with the sword." "For with what judgment ye judge, ye shall be judged: and with what measure ye mete, it shall be measured to you again." "Whatsoever a man soweth, that shall he also reap." There is no escape from this law. "Be not deceived; God is not mocked."

These criticisms are untimely, since they disclose a temper inimical to the spirit and teaching of Jesus Christ, whose servants all ministers are supposed to be, and whose spirit they are supposed to imitate. They reveal a sensitiveness, amounting to almost irritability, toward an institution which seems to them to threaten the "traditions of the elders."

THEY ANSWER WITH MEEKNESS.

On the other hand, the spirit manifested by the Christian Science advocates is in strange and happy contrast to the spirit of these theological archers. Being defamed, they still entreat their critics to deal kindly and candidly with them, since they desire nought but the furtherance of the truth. The world at large will not be slow to discern the Spirit of Christ in the attitude of this church.

Why should clergymen think it a wrong thing, and contrary to the preaching of Christ, that a church should believe in and practise bodily healing? Certainly in the teaching of Christ, as in the atonement of Christ, there is a foundation laid for faith in the healing of disease. Christ was the sickness-bearer as well as the sin-bearer of his people. "Himself took our infirmities, and bare our sicknesses." Sanctification of the spirit, redemption of the body, this is the atonement of Christ. Sanctification is a progressive, continuous work, from the cross to the crown, so also is the redemption of the body. Christ never divorced these: "Thy sins be forgiven thee," and "Be whole of thy plague."

The ministry of the Apostles, under the leadership of the Spirit, is the exact model of the Master's. Nor did this commission end with the death of the apostles, for Mark says: "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with

new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." "He that believeth and is baptized shall be saved," in any and every age of the Christian church. And these signs shall follow them that believe—not the immediate apostles of Christ only, but all believers, in every generation of the church's history.

GIVEN TO ALL FOR ALL TIME.

This guarantee of miraculous signs is given to the church in its corporate capacity. Not all, as individuals, have gifts of healing; but this gift was to the church as a whole—included in it as an organic function of faith, and for all time. This promise is all the more significant when you consider that it was given just previous to the ascension of Christ. "Greater works than these shall ye do; because I go unto my Father." What other interpretation can be given to the statement of St. James, recorded in his Epistle, than that he refers to an established and perpetual usage in the church?

If the practice of healing the sick is the basis of suspicion against the Christian Science Church, it can well afford to rest under the suspicion, since it has the sanction of Jesus Christ, and also that of the Christian church of all ages, for there has never been a period in the history of the church when there were not found these signs and wonders in response to faith.

These brethren, and especially the Baptist brethren would do well to read Dr. A. J. Gordon's book on the "Ministry of Healing." For twenty-four years Dr. Gordon was an honored pastor of the Clarendon Street Baptist Church of Boston, and a man and scholar pre-eminent in the denomination, respected and beloved by the entire Church of America. I recall an address delivered before the Baptist Ministers' Conference of New York City by Dr. Faunce, who was at that time pastor of the Fifth Avenue Baptist Church, now president of Brown University, in which he said (I quote only from memory): "The evangelical churches would do well to accept whatever truth may be found in the teachings of Christian Science. All that they hold of truth as special belongs of right to all the churches; no organization has a monopoly of truth; it is the common heritage of all and belongs to none in particular; it is the duty of all, as it is the privilege of all, to appropriate and utilize truth wherever found or by whomsoever held."

According to the statements of the different ministers, none of the evangelical churches seem to have suffered by the growth of Christian Science; at least, they have lost no members in consequence of it. It is a question whether the adherents of that church would ever have identified themselves with the evangelical churches, and, if so, it is still a question whether they would have grown more spiritual, more beautiful in character, more Christlike, trained in these communions.

APPEAL TO INTELLIGENT FOLK.

It is admitted that Christian Scientists represent the wealth and intelligence of the communities wherein they flourish. This fact ought to have some weight in any just estimate of motive and character. If the Christian Science Church has been instrumental in healing one million cases of sickness, or one thousand, ought not this to be taken into consideration by those who profess to believe in the healing power of Christ, and in the great commission, "Go, preach the Gospel and heal the sick"?

The only class of people for whom Christ had words of biting sarcasm and censure were the Pharisees, who could not see any good in anything outside of Judaism. Are we not in danger of falling into the spirit of Phariseeism and of the Pharisee when we grow intolerant of the

methods and beliefs of those who conscientiously differ from us, and who still are putting forth noblest effort for the physical and moral salvation of humanity?

I have not the pleasure of Mrs. Eddy's acquaintance, but from all the evidence at hand I am obliged to think of her as a woman of remarkable ability and spotless character. I am not in sympathy with her views of Christian doctrine; but, as a minister of Christ and a Christian, I am bound to concede and respect her virtues of character, her intellectual ability, her right to worship God according to the dictates of her conscience and to build up a great church if she can—and evidently she can.

I have met and known personally quite a number of Mrs. Eddy's followers, and in every way they compared favorably with the highest type of Christians found in my own churches. How shall we judge the merits of a church if not by the type of Christian it turns out? I conclude that that is the best church which makes the best men and women, regardless of name or doctrinal tenets. "By their fruits shall ye know them." The victory of Christianity is to be found in the holiness of its professors. When it is understood by the whole people that the objective point of the churches is character rather than numbers, worth rather than wealth, harsh criticism will cease, confidence will be restored, and the problem how to reach "the better class" will be solved, for the world is not slow to distinguish between an Orthodox Christian and an Orthodox Pharisee. While it loves and honors the one, it has only abhorrence and detestation for the other.

"IF IT BE OF GOD"—

If the Christian Science Church, or any other church, no matter what its name, generates the most of the spirit of Christ in feeling and in conduct, that church will triumph in the end.

We do not need, Christian brethren, to feel alarm because of the apparent success of Christian Science. If it ought to succeed it will succeed. "And now I say unto you, Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

God forbid that it should be truthfully said of the Christianity of the twentieth century, that it is just as conceited and arrogant in its day as were the Pharisees in their day. They despised the Gentiles. Shall we despise men because they are not of our sect? Shall we feel toward people outside of our church as the Jews did toward people outside of Jewry? What can be said for the Christian religion if after two thousand years it expresses nothing better, nothing higher than the spirit of a Pharisee? Dismal indeed must be the outlook for the future of mankind if the righteousness of Christ's followers to-day exceeds not the righteousness of the Scribes and of the Pharisees.

"In Jesus Christ neither circumcision availeth anything, nor uncircumcision; but faith which worketh by love." It is a question in the minds of many thoughtful men, who to-day are recognized leaders in the churches, if any of the creeds will survive the changes which growth in knowledge and the evolution of the human race will inevitably produce. If this young and thriving organization, known to orthodox Christianity by an unfamiliar, and, to it, harsh sounding name, bears the fruits of the spirit, "Love, joy, peace, long suffering, gentleness, goodness, faith, meekness, temperance," it comes within the intention and spirit of Jesus Christ, and is entitled to recognition as a Church of Christ.

And whether it does or does not, has nothing to do with the evident duty of Christian churches centuries old. It is our duty to set an example of toleration, of goodness, of kindness, of forbearance, of love, to all the world. It is our duty to manifest the spirit of Jesus Christ:

"Peace on earth, good will toward men," until we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ.

Wednesday Evening Meeting at Jacksonville, Fla.

THE members of First Church of Christ, Scientist, Jacksonville, Fla., looked forward with much pleasure to the first Wednesday evening meeting in their new place of worship. Although there had been a severe storm for several hours before the time of service, there was a good attendance, and the meeting lasted a hour and three quarters.

A letter from the daughter of one of our members now attending school at Washington, Ga., was read, telling of the healing of a case of grip.

Another member wrote saying that when he was asked to read Science and Health some five years ago, he was afraid to do so, as he thought it would take his Bible away from him, but at last he did read, and since then spinal disease, neuralgia, sick headache, and many other troubles have been met, and he feels better now than in thirty years. He says, "I am satisfied this is the true religion of Jesus Christ."

Then two letters were read that were written especially for this first Wednesday evening service in the new church. One was from Brooklyn and the other from Grand Rapids; both extended hearty congratulations and gave instances of the healing of colds, sore throat, depression, grip, diphtheria, burns and shock resulting from the explosion of a gas stove which threw a lady of over seventy across the room, and, more than all else, of the spiritual healing, the replacing of hatred by love, selfishness by selflessness.

A man present spoke of the mastering of a cold and grip in less than twenty-four hours by treatment from one of his family, when a similar case before he knew of Christian Science would last two weeks, and he would not be able to do any work at all.

A man spoke of a swelling in his jaw, which had been very painful, running down into his neck, so that he could not turn his head either way or laugh without great suffering. He tried for a time to meet it, but did not seem to make much headway, until in studying the Sunday lesson he came to the Bible reference, "The Lord shall take the yoke off thy jaw," he felt at once that this passage was for him. In a short time the pain began to abate and he was finally entirely healed. He said he was very thankful that the healing was slow, as he knew that he had gotten more out of the passage than he would if it had been instantaneous.

Another said that he thought he had cause for special thanksgiving and praise at this first meeting in the new church home. He said that an almost endless number of troubles had been overcome during his four years' experience in Christian Science, among which were neuralgia, weak lungs, fevers of different types, and headache.

A letter from a lady who could not be present was read, in which she said that before she studied Science and Health she was in bed with sick headache two days every two or three weeks, shut up in a closed, darkened room, suffering great pain if any one even walked across the floor. Chapped lips and hands were healed permanently, but the spiritual uplifting was the best of all.

Another lady, who knew nothing of Science but seeing her brother healed, overcame a high fever by simply memorizing, at his suggestion, the Scientific Statement of Being and the Lord's Prayer with its spiritual interpretation as given in Science and Health.

A lady spoke of her former sensitiveness to drafts and exposure of any kind. She also spoke of the healing of

an unusually severe case of headaches of some years' standing. The attacks were so severe that the strength of two men could not prevent the contraction of the muscles in her body from bending her almost double. This trouble was healed simply by the reading of Science and Health.

A man spoke of overcoming, in one week's treatment, a case of rupture, brought on by heavy lifting. He has had no return of this trouble, although he has done the same work ever since.

A lady told of laying aside her glasses, which she had worn for seven years. She is now able to read everything but the finest print. Another lady was healed of astigmatism of both eyes. A third lady said she had laid her glasses aside after eight years' use and can now do her work without discomfort.

Several spoke of the way they had been helped with their knowledge of the Bible, which had been a sealed book before reading Science and Health. They are now able to find much help and comfort and are gaining more of an understanding of it all the time, and now love to study it, where before, if they read it at all, it was only through a sense of duty.

A gentleman said that thirty days' reading of Science and Health healed him of sick headache and biliousness, which had troubled him ever since boyhood.

Another man said that he was thankful for Christian Science, not only because it heals but because it is the Christ way, showing that God is with His people, guiding, teaching, and healing them. He also said that the better we become and the more nearly we approach the Nazarene in our daily lives, the more free we shall be from the claims of error.

A man spoke of the value of Christian Science in the controlling and handling of animals, saying that he had been saved much trouble and expense by the use of Science. He gave several cases of the healing of a horse from cuts, bruises, and sunstroke.—ELWYN N. MOSES.

The Bible an Every-day Guide.

The best test is experience, and this test the Bible meets perfectly. Ever since its successive books began to be read by men the mass of testimony in support of its aptness and value in relation to human needs has been accumulating. Regarded from no matter what point of view, it is found to fit the ever-varying conditions of life with a pertinence far surpassing that of any other volume or library, and this fact alone proves its divine origin.

Its value is exhibited conspicuously in its discriminations between details and principles, for one thing. It deals with some details of conduct. Certain things, falsehood, for instance, always are wrong, and it prohibits them positively. Certain other things, the love of one's neighbor, for example, always are right, and it inculcates them with similar definiteness. But there is a long list of possible actions which may be either right or wrong according to circumstances, and in regard to these it contents itself with laying down principles, the application of which is left to, and constitutes the moral education of, the individual conscience. Indeed, it often is necessary to use one's own judgment in a secondary sense in reference to matters of an unmistakable moral quality. Thus it guards human freedom, and its fitness is as elastic as it is unalterable.

The Bible is intended for ordinary men and women. It therefore deals with every-day life, common motives, and familiar emergencies. It is meant for the culture of the soul, and it fits the round of ever-recurring tasks and emotions of the commonplace career not less exactly than the loftiest moods and the most exalted actions of the genius or the hero. It never can be outgrown, and it always is a safe and inspiring guide.—*Helpful Thoughts.*

From our Contributors.

The Shadows that Attend Us.

BY CLARENCE A. BUSKIRK.

THE shadows that attend us
By ourselves are cast;
The sunbeams that befriend us,
From the heavens vast,
Shine as free gifts to all as long as time shall last.

It is thine own strange folly
That thy steps abide
In dark melancholy
Where vile shapes reside,
And where thou wearest chains of self-degrading pride.

Halt, O weary mortal,
Stumbling through the night!
Knock upon the portal
Leading unto Light,
And it shall open to thy prayer if thou dost ask aright.

Seek the joyous fountains
Of abounding Love,
Where the heaven-kiss'd mountains
Lift their heads above
The clouds and storms and fogs that through the valleys
move.

Greed and lust and malice!—
Fling them all aside,
And a gracious palace
Then shall open wide
Its gates, within whose halls thenceforth thou canst abide.

"Work out your own Salvation."

BY EVA J. COX.

It has often been said, and truly, that every statement of Truth made, either through our publications or at the testimonial meetings, is sure to appeal to some one in some way.

A speaker in one of the meetings at the Mother Church made the statement that a student of music does not study musicians but the principle of music, a student of art does not study artists but the principle of art, and a student of Christian Science does not study Christian Scientists but the Principle of Christianity.

Thus it is that only as we cease to rely upon human theories and doctrines, cease to look for aid from any other source than the true source of all Being—God—cease to measure and compare human capabilities, and with earnest hearts seek to gain an understanding of that Principle which enables us to "act as possessing all power from Him in whom we have our Being" (Science and Health, p. 160), are we able to prove for ourselves that a right understanding of God, the divine Principle, restores harmony where our ignorance of Him has produced seeming discord.

Mrs. Eddy says in "Unity of Good," p. 6: "Every one should be encouraged not to accept any personal opinion on so great a matter, but to seek the divinity of this question of Truth, by following upward individual convictions, undisturbed by the frightened sense of any need of attempting to solve every life-problem in a day." Also, in Science and Health, p. 66, "Nothing is able to do so much for man as he can do for himself, with omnipotent aid."

We cannot work out another's salvation, but we can ever retain within our own consciousness the perfect ideal, and with patient, self-sacrificing love strive so to live as to

awaken others to a realization of the joyous privilege which is theirs in working out their own salvation in the way that Jesus taught.

A thought in this direction came to me while passing in a steam train through a congested district in the outskirts of one of our large cities one dark winter evening. As I sat watching the lights shining brightly along the narrow streets I thought how, standing erect in their allotted place in that humble locality, they were guiding the wayfarers and illuminating the pathway to their homes; and as there is a lesson to be learned from all things which come under our observation, so there seemed to me to be a lesson shining forth from those rows of street lights.

We cannot all, like the sun, illumine the whole world, but if in our allotted place we keep our lamps so trimmed that the light of Truth and Love may shine forth in our daily lives, we can brighten the pathway of those whose lives mingle with ours, and help them to reach the heavenly home of our Father and Mother God, the portals of which are ever open to all, and wherein reigns harmony, peace, and Love.

How to Overcome Error.

BY E. W.

ONE of the most subtle errors that forces itself into human experience is that of first listening to a suggestion of something wrong and then saying, "Oh, it's nothing!" without proving its nothingness, through the immediate supplanting of the suggestion of error by the statement of Truth, when the error must and will disappear. This I have learned through the most bitter experience.

The absolute power of Truth over error was proved to me, when in defiance of all material laws and evidence of the senses, a complete restoration of harmony in a home was effected by silently declaring the omniscience, omnipotence, and omnipresence of Love. The most abject poverty, and mental agony, with threatened desertion, had to be overcome; a separation of husband and wife seemed imminent, and to human sense no power existed strong enough to restore harmony; but, thank God! through the prayer of Christian Science, the very walls that had grown dark and that echoed only discord, have been beautified and transformed into reflectors of love. Laughter resounds throughout the house, happy faces surround the table, eager footsteps hurry home after the day's work to find rest and peace in the conscious presence of God.

Had the first little suggestion of error been met, the writer would have escaped the bitter experience; but the tempters, human pride and self-will, were admitted and brought their own punishment. Nevertheless, I cannot regret any experience which has helped to teach me the Truth. This lesson learned through tears and striving, I desire to give to the Field, hoping that it may help others to see that a suggestion of disharmony is all that error ever was, or can be, and when met by Truth it vanishes instantly.

Some had Ears to Hear.

BY JAMES HIGHTOWER.

AN article was prepared on Christian Science by one of the leading ministers of this place, and it was read before the ministers of the Orthodox Churches who had met to hear it and to discuss Christian Science.

I had an invitation to attend the meeting and took with me the thought that mortal mind has no power, and that God is all powerful. In walking down the aisle I picked up the Bible from a seat, and as I opened the book my eyes rested upon these words: "And in this place again, If they shall enter into my rest. Seeing therefore it re-

maineth that some must enter therein, and they to whom it was first preached entered not in because of unbelief: again, he limiteth a certain day, saying in David, To-day, after so long a time; as it is said, To-day if ye will hear his voice, harden not your hearts."

The article on Christian Science was read, and I have never heard anything so dark against it. The first minister of the eleven who were there, arose and spoke in favor of the article. And five others followed, all in the same vein. The seventh was a young minister, scarcely twenty-five years old. He spoke very freely to the effect that he did not see Christian Science as they did, and that there was certainly some good in it. He said he had a relative who had enjoyed the best opportunities to secure a thorough education, and when she became acquainted with Christian Science, though all possible was done, they could not change her mind.

Another minister spoke favorably, and then it was voted that I should have three minutes to testify of Christian Science. The chairman arose at three minutes to motion me down, but two others rose at the same time and moved that my time be extended. This was granted, and I was given five minutes more. After speaking the next five minutes, the meeting assumed a conversational tone which gave me a chance to speak very freely. If I had lost my love at any time the result would probably have been very different. One said, "You held your peace well, and made a strong argument for Christian Science." In less than ten minutes after the adjournment one of the ministers asked for treatment in Christian Science.

The Religion of the Infidel.

BY MAX JAGERHUBER.

REV. DR. DONALD, rector of Trinity Church, Boston, in an address delivered before the Episcopal Congress, asked the question: "Is Christian Science leading men out of the darkness of unbelief into the light of God?" and answered, "*Yes, it is; there can be no doubt about that.*"

What a revelation even in this enlightened age of intellectualism! Does Dr. Donald realize what a great Truth he utters? Think of the great sensation, if every minister of the Gospel would search for this Truth and then preach the result to his following.

As one who came from an orthodox faith in a personal God through all stages of beliefs, and who was an arch infidel as extreme as Voltaire, Feuerbach, and Paine, groping in the darkness for thirty years, deep down in materialism, worshipping the text-books of every known philosophy, I am most happy to record in the *Sentinel* that I find in Christian Science the Truth that makes us free. It is the only religion which reclaims the infidel, holds him fast because he learns of God what he formerly rejected; because he learns that Love is not an idle dream; because he knows that man is spiritual, not material, hence, a reflection of God, and not of clay or dust.

Verily the time is at hand when both preachers and doctors will be liberated as the infidel is delivered from his bondage, and intellectualism will seem like a mist,—a dense wall.

I cannot find language to express what I feel for this great Truth as revealed to us by our Leader. Often I feel that my newspaper career has been one grand failure when I behold the heavenly beauty, the harmony, the love which now guides us.

Adore God. Reverence and cherish your parents. Love your neighbor as yourself, and your country more than yourself. Be just. Be true. Murmur not at the ways of Providence.—THOMAS JEFFERSON'S advice to the young.

Testimonies.

From Invalidism to a Life of Usefulness.

In gratitude for what Christian Science has done for me, and with the hope of encouraging some one who may be investigating this great Truth, I will relate a little of my experience. Five years ago my husband attended one of the Friday evening meetings at the Mother Church to ascertain what Christian Science could do for the sick.

He had left me at home and in bed, where I had been for four months. For years I had been an invalid, spending a great part of the time in bed or in an easy chair, with occasional seasons of seemingly fair health.

My husband was so impressed with what he heard, that he soon engaged a Christian Science healer to take my case, and I improved from the first treatment. The doctors (and I had several) said I was suffering from neuralgia, rectal trouble, tumor, other internal troubles which medicine could not relieve, and indigestion to the extent that morphine had to be injected after taking a small quantity of liquid food, until finally nourishment could not be taken in the natural way. I had lain in one position propped up and surrounded with hot water bottles for over three months.

After the first treatment I discarded all these, slept in any position I chose, something I had not done for over a year, and ate whatever I wanted. The physicians had told my parents there was nothing to build upon, I had wasted away so much. They had so filled me with fear that I was slowly but surely passing away. All I needed was to be awakened and told the Truth, that God was my life, that Life was not in this body therefore disease could not kill it. I heard the words gladly and took courage, while the Scientist worked faithfully to bring me into a clearer understanding of the Truth.

In five weeks' time I was able to attend a service in the Mother Church, and at the end of nine weeks I needed no further treatment. One former physician acknowledged it was a miracle.

Hearing of this, could any one scoff at a method or religion that could bring one out of such a pitiable condition—such darkness—into health and harmony? Can you wonder that I am grateful for the blessings I have received? God's word is becoming clearer to me, and as new truths unfold from day to day, I am learning to say, "Thy will be done," and am praying that I may be humble and obedient,—

Till freed from art
And quiet in heart
I become "as a little child."

Now to all who are strangers to this Truth let me say, Do not be afraid to investigate it. It offers you health, happiness, and holiness, and is there anything in this world that offers you as much?—MRS. C., Boston, Mass.

Healed by Reading Science and Health.

When I came in contact with Christian Science I was hopelessly miserable. I felt as if life were a failure and there were more sin and suffering than anything else. Afflictions of many kinds had fallen thick and fast around us. Some were such as could be put down with a brave heart but those which struck at me through my children were more than I could bear. I lost courage, my health failed, and I was so miserable and cross that I wonder at my husband's patience with me.

About this time I had occasion to spend several months in New York City, and there I was thrown with Christian Scientists. I was at once impressed with their cheerful, happy, loving ways. This was so unusual that I knew there must be some power back of Christian Science, and when in the course of conversation they told me that right thinking

was the basis of right acting, and if one's thoughts were filled with good there would be no room for evil, it at least made me think. I attended the church three times, and it never failed to bring a sweet sense of peace and cheer.

After I left New York I studied the Bible closely and soon found that Christian Scientists put the proper interpretation on it, and I wrote to New York for Science and Health.

Strange to say, at this time I had a great desire to read this book. Drugs had failed to help me, but I did not suppose Christian Science would heal me physically. I only hoped it would bind up my broken heart and show me how to be better, and how to help others. It did more than this, far more, it healed me of sick headaches, indigestion, internal trouble, terrible colds and coughs, and many other things, but the sweetest thing and the one I am most thankful for, was, it taught me how to *love*.

What more do we want? for to love is to have heaven always with us. From the time I began reading "Science and Health with Key to the Scriptures," the whole earth became more beautiful, the flowers were more fragrant, the sky was bluer, the sun shone brighter, the air was fresher, the grass was greener, and there was Life and Love everywhere, for heaven had come to me. I went forth with a song of gladness, and it has never ceased these four years. It only grows more melodious.

Out of my heart of hearts I thank and love Mrs. Eddy, not only for my own healing and saving, but for those whom I have helped. It may bring joy to them, but it brings more to me. I have had difficulties to overcome, but "His grace is sufficient."

All my children and my husband are now Christian Scientists. I am a member of the Mother Church in Boston, and the branch church at Macon, Ga.

MRS. ANNIE C. BRIDGERS, Macon, Ga.

Chronic Disease Healed.

I have been in Science a little over a year. At first I could not see the benefit of the testimony meetings; but soon after having felt the power of Truth over error, I realized that there was something to tell, and now, I never tire of telling what it has done for me, and what it can do for others.

For years I was a sufferer from a supposed chronic ailment, and my only hope of release was the grave. The world indeed looked very dark to me. For about eight years I had lived on medicine of every description, but grew worse. However, I kept my troubles to myself, knowing that it would not help me to tell others what I was going through. About this time I was advised to try Science. After some little persuasion I decided to take treatment that very day, not with a feeling, however, that it would do me any good; results were not speedy, but the more I read Science and Health the more I believed that it was practicable. During my treatment I was called from the city. I had never taken such a trip without my material remedies, but in this case I left them behind.

During my absence my case did not seem to respond quickly. However, I kept faith, and after some days of patient waiting I had my reward, for I was agreeably surprised to find myself entirely free. My thanks went out to God and to our Leader, also to the patient practitioner who helped me to gain the understanding of the Truth which makes us free.

I have had several beautiful demonstrations in my home, and I find that any error which presents itself is more easily overcome than the preceding one: showing that the more implicit faith we place in the Almighty, the greater will be our reward.

I thank God for Christian Science, as I have been enabled, through knowing something of it, to send literature

to a dear relative in England who, the doctors had said, would live about a month more, and helped her to the "strait and narrow way." To-day she is a living testimony of what Science can do for all, if they will only come to the fountain and drink.—W. H. TEASDALE, Savannah, Ga.

Spiritually and Physically Helped.

The following letter was sent us by the Christian Scientist to whom it was addressed. It witnesses to the value of personal testimony for Truth.

My Dear Friend in the Truth:—It is with heartfelt gratitude that I write to inform you that I have united with the Fourth Church of Christ, Scientist, at Englewood, which was organized last February and now has two hundred members.

I wish to express my gratitude to you all there in the Christian Science Church in Albert Lea for guiding me into the Truth by your testimonies. Please do not hesitate to speak the Truth in the Wednesday evening meetings, as your testimonies at first impressed me more than anything else. As I said to my friend, "Surely this must be the Truth, as your neighbors, people who live here, would not get up before the public and tell falsehoods." So by your testimonies you have lifted me out of error into the glorious Truth which makes us free.

Christian Science, oh how beautiful it is, what a help in all our walks of life!

I wish to add my testimony to yours in regard to what Christian Science has done for me. About one year ago I had the most severe attack of rheumatism that I had ever had. I had suffered from that disease since before the World's Fair. I could scarcely get up and down stairs, sit down, or get up when I was sitting. But I praise God and return many thanks to the Discoverer of Christian Science, that through the understanding of her teachings I seldom have the slightest appearance of that trouble, and enjoy perfect health. "Praise God from whom all blessings flow." Again thanking you all for your testimonies for Truth, and hoping and praying that the seed sown by your faithful workers may take root and return a rich harvest among my immediate own as well as all others, I am,

Yours in Truth,

Mrs. N. A. R., Chicago, Ill.

A Little Child Quickly Healed.

I wish to tell how the seed of Truth has sprung up in Richland, Kan., and is bringing forth fruit. Last July a lady friend and myself met on Sunday at our house to study the Lesson-Sermon. There are now sixteen of us who meet every Sunday.

We have had some good demonstrations in cases of sickness and sin. One, of which I will speak, was a case of pneumonia. I was called to treat the case after the doctor had said there was no hope of recovery. It was a child nine months old.

When I was called to treat the case something seemed to say, It is no use of your going, you cannot meet the case, your understanding is not sufficient. The sense of fear almost overwhelmed me for a few moments; but I turned to the one Mind—God—for help. In a short time the answer came, "My grace is sufficient for thee." The fear was all gone. In two treatments the child was healed, although to mortal sense it seemed to be passing away.

I wish to express my gratitude for our literature, which comes bringing such helpful and uplifting thoughts weekly and monthly.—AMANDA J. DINSMORE.

It is not even a question of how *much* we are to do, but of how it is to be done; it is not a question of doing more, but of doing better.—RUSKIN.

Religious Items.

In an article in the (Unitarian) *Christian Register* headed, "About Righting Things," the Rev. Dr. Samuel A. Eliot says: "One of the oldest Aryan words that has come down to us is *rita*; that is, the root of right, rightness, and righteousness, as well as rites. The primitive meaning was straightness, 'with whom is no variableness, neither shadow of turning.' As the stars went straight ahead, so should man move in his career. Crookedness was held to be the soul of wrong-doing. It was also symbolized by the serpent. Truth, on the contrary, was straightness, and allowed no prevarication. The first moral distinction was crystallized in the word 'upward-looker,' as distinguished from the man who simply saw the earth. Straightforwardness with upward looking became the core of religion. The narrower interpretation of *rita* into rite, or ceremonial, soon followed. But the glory of the old Hebrew prophets was their constant exaltation of spirit rightness as superior to formal riteness. Prayers are held to be inferior to a pure heart. The ways of the Lord were always right ways; that is, straight and true."

After having had charge of the chapel services at Harvard University recently for a few weeks, the Rev. Dr. Lyman Abbott gave expression to the following opinion based on his observation of the students: "I have come away with two previous convictions greatly deepened and intensified. First, that this is pre-eminently a religious age; that especially thoughtful young men are thinking on the problems of the religious life; that if they are sceptical it is because they are too serious-minded and too true to accept convictions ready made, traditional creeds for personal beliefs, or Church formularies for a life of devotion. Modern scepticism is not indifference; it is not the product of a scoffing spirit or a careless indifference. Such scepticism there doubtless is. But the questioning characteristic of our age is that of souls profoundly alive to the realities of life and determinedly discontented with aught but verified and assured truth."

The *Congregationalist* publishes the following: "President Angell of the University of Michigan, formerly United States minister to China, in the course of a recent address on China and its future, said this, which must be taken as suggestive of the evil always wrought by excessive emphasis on theology. While hairs are being split the opportunity goes by. He said: 'Two hundred years ago the Chinese empire came within an ace of becoming a Roman Catholic nation. One of its prime ministers was a Roman Catholic. The Christian ideal, the promise of a future, the whole spirit of advancement was at the point of acceptance by the Celestials. The culmination of that triumph in behalf of a great people failed because of a theological dispute which disrupted the work—the incomparable work—of the European churchmen.'"

In a recent lecture on "The Place of the Individual in Good Government," delivered before the Harvard Civil Service Reform Club, Bishop Potter of New York said: "It is undoubtedly true that there is in Berlin or in Paris or in London, in Birmingham or in Manchester, nothing that even remotely approaches the condition of things which exists in the way of municipal corruption in the great cities of America to-day. The city of London, I was informed, distributed last year for the administration of its local government some £7,000,000 sterling, upon no single penny of which rested, as to the absolute integrity of that administration, the slightest cloud."

The *New-Church Messenger* says: "Religion is markedly absent from the outward customs of the life of the modern man. It is less a characterizing peculiarity of his external habits than it has been in some ages especially religious. It is shown less in man's dress, in his recreations, in his meth-

ods of language, and in the other outer features of life that have so often distinguished the religious from the secular man. . . . The religious state of the world to-day is exhibited in a reverent feeling toward the conception of God. It is shown in the renunciation of what is flippant in what is said and thought by those who are not religious."

The (Episcopalian) *Church Standard* has the following: "At Harvard College, Professor Peabody made very striking and pertinent remarks, which will bear quoting again and again. He said: 'Sometimes we want immortality proved to us by philosophy and history, but more often we enter it by first practising it. It is hard to picture the life of our departed friend as immortal, but it is still harder to picture it as not so. To many a life heaven has seemed like a home, because first the home seemed like Heaven. Everywhere to-day the dynamic power of immortality is changing the winter of our unbelief to the spring of faith.'"

The *Congregationalist* says: "Dr. H. K. Carroll, whose rank as a church statistician is high, contributes . . . the result of his collection of the statistics of 1900 relative to Christian activity and strength in the United States. The net gain of communicants, the country over, in 1900 is put at 344,846, of which the Methodists are credited with 106,472, the Catholics with 80,432, the Lutherans with 62,269, the Baptists with 32,439, the Disciples of Christ with 31,586, Presbyterians with 22,194, Protestant Episcopalians with 17,296, and Congregationalists with only 1,486."

In an article describing the work of the Baptist Publishing Society, the *Watchman* says: "The Baptist denomination is proprietor of what, on good authority, is said to be the finest book store in the world, occupying the lower story of one of the most elegant business blocks in the city of Philadelphia, and having as an adjunct a few blocks away a large building wholly devoted to the printing business of the society, and ranking in equipment and capacity first in the United States next to the government printing establishment at Washington."

A writer in the *Christian Register* says: "From the sometimes arid plains of duty to the heights where faith and hope prevail, the way is revealed, not to him who too carefully estimates the cost and counts the dangers, but to him who lifts his face to the light, till, 'for the joy that is set before him,' he must turn his back upon the quiet fields of content, and breast the rugged steeps that lie between him and his vision, counting all crosses and perils, possible and actual, as of comparatively little account. To such come ever larger revelations."

The (Boston) *Examiner* says: "It is an old proverb, and a true one, that a man is known by the company he keeps. Especially and markedly true is this of one who keeps company with Jesus Christ. Close and intimate companionship and communion with him reveal themselves not only in the character and conduct, but in the very countenance, so that the face of one who lives thus near to the Saviour shines with an inward light, as the face of Moses shone after his converse with Jehovah in the Mount."

In an editorial entitled "The Most Needed Thing," the *Universalist Leader* says: "Members one of another" is the Scriptural phrase in which the interdependence of men is expressed. The truth which these words of St. Paul set forth could not be more fitly or forcibly asserted. To help men see this truth and act upon it is one of the great objects of the Gospel."

General Booth-Tucker, commander of the Salvation Army in the United States, is said to be negotiating with the officials of the great steel trust to take over the work of caring for its injured and pensioned employees on the agricultural colonies which the Army now supports in the Southwest.

The (Baptist) *Examiner* says: "If our life is really shining, it will help to make the spot in which we move a little heavenlier, a place in which it will be easier for men to do right and harder for them to do wrong."

The (Swedenborgian) *New Church Independent* says: "As the heavens declare the glory of God, even so the illumination within the mind of man becomes the heavens of glory within him."

"The ultimate success of this world as a world depends upon the application of Gospel principles to every phase of human life," says the *Universalist Leader*.

The (Baptist) *Watchman* says: "One cannot be generous until he has rights of his own to sacrifice. You cannot be generous with the rights of other people."

"Very much of the misery of this world would be avoided if no one wished to fill a place not properly his own," says the *New-Church Messenger*.

Notices.

Literature for Distribution.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies two cents each, post-paid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Theory vs. Realization. Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Per Capita Taxes.

Per Capita Taxes and Contributions to The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

- Cloth binding, each \$3.18
- Two to Twelve books to one address, each, prepaid 3.00
- Twelve or more books to one address, each, prepaid 2.75
- Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
- Twelve or more to one address, each, prepaid 3.75
- Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/4 x 6 1/2 inches, narrow margins, each, prepaid 5.00
- Twelve or more to one address, each, prepaid 4.75
- Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
- Twelve or more to one address, each, prepaid 5.75
- Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS.

- A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
- Price (cloth) each, prepaid \$2.25
- Twelve or more books to one address, each, prepaid 2.00
- Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/4 x 6 1/2 inches, narrow margins, each, prepaid 4.00
- Twelve or more to one address, each, prepaid 3.75
- Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
- Twelve or more to one address, each, prepaid 4.75
- Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
- No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS.

- An illustrated poem,
- Single book, prepaid \$3.00
- Twelve or more books to one address, each, prepaid 2.50
- RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12 1/2 cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp. **SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.**

Political and Governmental Notes.

A Charleston, S. C., dispatch of May 9 says: "A negro who was arrested for having violated the 'slavery' contract in Anderson County, where the recent system of convict slavery was broken up by the courts, has been released by a magistrate on the ground that a man can no longer sell himself as a slave. The negro was leased for one year to work off a debt of \$150, and practically held in slavery by his creditor. The negro agreed to be shackled, locked up in a stockade at night, and to accept whippings when the owners deemed it necessary. An appeal has been taken to a higher court."

The people of Philadelphia are congratulating themselves over the abolition by the legislature of the public building commission, which has been in existence nearly thirty years for the purpose of building the new city hall and has not yet completed it. The Philadelphia City Hall was designed to cost \$3,000,000, and was to be completed within ten years, an extraordinary allowance of time. It has cost \$25,000,000, and after nearly thirty years is yet incomplete.

President McKinley and his party stopped at El Paso, Tex., on May 6, and there exchanged greetings with General Hernandez the personal representative of President Diaz of Mexico, and with the governor of Chihuahua. In the public parade at El Paso in honor of the President, there were four companies of Mexican infantry and three Mexican bands. The President was received with great enthusiasm on his arrival in California.

Foreign News.

The United States cavalry and artillery has left Peking to march to Tong Ku. Imposing farewell ceremonies attended their departure. Sir Alfred Gaselee and the other British generals, with their staffs, were present, and the British commander sent a detachment of Baluchis, who escorted the Americans outside the city wall. General Chaffee publicly thanked the cavalry and artillery for their services in the international relief expedition, and for their behavior since, which has been, he said, a credit to themselves and their nation. The infantry and headquarters staff will leave by rail as soon as the transports arrive at Taku.

The foreign ministers on May 8, decided to address a collective note to the Chinese Government, informing it that a joint claim for indemnity of 450,000,000 taels (which figured on the basis of a Tien Tsin tael would be \$318,150,000) would be made, and asking what method of payment is proposed. It is expected that the Chinese Government will reply to the representatives of the

Powers that the amount claimed for indemnities is excessive, and the question will then arise whether the Powers shall insist upon that amount in a demand which shall be an ultimatum.

A special dispatch from Washington to the *Boston Herald* last week said: "China, in the desire to prevent the exaction of indemnities which would lead to the appropriation of territory, has intimated that it would gladly, in lieu of such indemnities, grant to all the Powers commercial freedom in all the cities of the empire. There is opposition to this proposition on the part of Russia and of several other Powers, which hope to monopolize the trade of districts in China over which they exercise more or less influence."

The first recapitulation of the British census gives the population of England and Wales as 32,525,716, a gain of 3,523,191 in the last decade, or 12.14 per cent. From the census of 1801 to the one just taken is an even hundred years. At the earlier date the population of England and Wales was 8,892,536. Fifty years later it had more than doubled, and stood at 17,927,600, and now, after another fifty year period, it has almost doubled again.

According to the official figures of the War Office, the total number of deaths in the South African war is 714 officers and 14,264 men. Four officers and 314 men had been invalided home and subsequently died; 2,493 non-commissioned officers and men have left the service unfit for duty.

There was a heavy fall of snow in North Devonshire and South Devonshire, England, on May 7. It came after weeks of almost tropical weather.

Industry and Commerce.

After a prolonged upward movement on the New York Stock Exchange, during which the prices of all leading shares were recklessly inflated far beyond their values, the market "broke" on May 8th and 9th, plunging Wall Street into what the newspapers described as the "wildest stock gamblers' panic" that had ever been known in the history of the "Street." At the lowest plane which the shares reached, the shrinkage in the prices of 41 principal stocks was estimated to have been \$698,388,407.

For days before the break, the public as well as the manipulators knew that prices had so far outrun values that a reaction was inevitable, but owing to the peculiar condition of the market, speculators were stimulated to continue buying. The most important element in the situation was a struggle to secure the "control" of the Northern Pacific railway property, which was waged between two powerful syndicates. The recent consolidations of railways in the West have been planned on so large a scale as to threaten such important eastern systems as the "New York Central" and the "Pennsylvania" with all but exclusion from far western territory. The Northern Pacific, on account of its important alliances, became a bone of contention, which each of two powerful syndicates was determined to have. Northern Pacific stock, which sold at \$110 on May 4, on a market that had been on the rise for weeks, sold on the New York Stock Exchange on May 9, for \$1,000 a share. The price of Northern Pacific soaring to such startling heights brought speculators who were "short" on the stock face to face with financial ruin, and, to cover their shortage, these speculators were forced to sacrifice their other holdings at any price in order to get money to buy Northern Pacific. This caused the prices of all shares except Northern Pacific to sink far below their values, and between those two extremes thousands of men would have met disaster but for a very remarkable manifestation of mercy on the part of financiers and bankers who had it in their power to crush smaller dealers and rival houses with fabulous profits on the operation. Instead of using their power to ruin their

rivals, they used it to save them. The two interests at the head of the opposing syndicates gave notice that they would not exact delivery of Northern Pacific stock, and further, that they would help out the "short" interests by supplying the stock at \$150 a share. Then J. P. Morgan & Co., and other great banking houses poured millions into the market to stem the tide of depression of other stocks, thus saving the day. This manifestation of unselfishness is the more remarkable in view of the fact that it is subversive to the very foundation of Wall Street speculation, which foundation is admitted to be selfishness. If this spirit of compassion be allowed to extend its sway over the hearts and minds of Stock Exchange speculators, the character of Wall Street will be radically changed.

It is stated in railroad circles that President Hays of the Southern Pacific is about to inaugurate a radical change in the management of the system. He will form a cabinet of advisers, to be composed of the heads of practically all the principal departments of the road, with the single exception of the law department. The object of this cabinet arrangement is to centralize the authority and responsibility. President Hays will by this means have a firmer grasp on the details of operation of the vast system, and all orders will be issued directly by him, after consideration by the cabinet. It is understood that the cabinet will have no authority to interfere with the president in any way, but the members will, in reality, be advisers to the president, who will be responsible only to the board of directors."

A Colorado Springs press dispatch of April 28, says: "The gold production of the Cripple Creek district up to the close of the present month aggregates over \$100,000,000. The yellow metal was first discovered in this camp in 1889."

General News.

The largest tree in the world is to be seen at Mascali, near the foot of Mt. Etna, and is called "The Chestnut Tree of a Hundred Horses." Its name arose from the report that Queen Jane, of Aragon, with her principal nobility, took refuge from a violent storm under its branches. The trunk is 204 feet in circumference. The largest tree in the United States, it is said, stands near Bear Creek, on the north fork of the Tule River, in California. It measures 140 feet in circumference. The giant redwood tree in Nevada is 119 feet in circumference.

Northern Indiana farmers are experimenting in the domestication of quail, and the results are reported as highly gratifying. Nearly every farmer in that section has from one to three coveys on his farm, and is giving them kind and careful attention. During the snow season the birds are fed regularly, and on some of the farms they have become so tame that they roost with the barnyard fowls.

Hypnotism is now a forbidden art in Hungary. The secretary of the interior, after consultation with the highest medical authorities, has issued an ordinance forbidding its practice unless special permission, specifying the purpose, has been obtained from the Sanitary Department.

J. P. Morgan has bought the recovered Gainsborough painting for \$150,000. Mr. Morgan stipulated that the authenticity of the picture must be established beyond a shadow of doubt. It is apparent that this has been done.

George Q. Cannon, late president of the Mormon Church, left property valued at \$1,000,000 to his heirs, consisting of four surviving polygamous wives, thirty-three children, and his nephew.

On May 8, the board of overseers of Harvard University voted to concur with the president and fellows in their vote to confer upon President McKinley the degree of doctor of laws.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

The Solar Motor.

BELOW will be found extracts from an article which recently appeared in the *Imperial Farmer* of Los Angeles, Cal., describing the solar motor now in use near Pasadena in that state. It says:—

The editor of the *Imperial Farmer* has seen many very wonderful things in Southern California in the space of a generation. He has seen Riverside translated from the most barren and hopeless of deserts into one of the most famous orchards and gardens in the world. He has seen a dry slope of wheat-stubble become, in the Redlands of to-day, the winter home of wealth and fashion. He has seen seeds of industry and society, humbly planted in the heart of the San Bernardino valley, wax beautiful and prosperous and blossom into Ontarios and Pomonas. He has seen the rising tide of development not only submerge the vacant valleys, but creep up along the foothills; and even upon the stern tops of the mountains he has seen the energy and genius of man plant railroads and hotels.

The editor of the *Farmer* has seen so much accomplished that he has cultivated the habit of not being surprised at anything. He was not surprised when he found that the irrigated area of Southern California had practically been doubled by water development as the result of the drouth. He was not surprised when it was suggested that the great Colorado desert be moistened by the river of the same name and that a district of something like a million acres was to be wrested from the hand of aridity. Nor was he surprised when an old friend recently invited him to visit the ostrich farm at South Pasadena and behold how inventive genius had succeeded at last in hitching an engine to the sun.

The solar motor is a success. It operates a compound engine and centrifugal pump by means of steam, and that steam is generated with no other fuel than the heat of the sun concentrated upon a boiler, which is the focal point in the centre of a large reflector lined with many small mirrors. We have no idea that this device, which thus eliminates all cost of fuel at a single stroke, has reached the limit of its possibilities. But already it has recorded the following performance: developed a steam pressure of 210 pounds; evaporated 192 pounds of water per hour under 150 pounds of steam pressure; driven a ten-horse power engine and centrifugal pump; elevated fourteen hundred gallons of water per minute (equal to a flow of 155 miners' inches) twelve feet from an underground tank.

We do not know why, if this can be done with a single reflector, ten times as much cannot be done when several reflectors are grouped about a central engine, since it is patent that the efficiency of steam increases with the size of the engine. Nor do we see any reason why steam power generated by solar heat will not serve all other industrial uses as readily as it will pump water. Apparently there are no insuperable obstacles to the storage of this power so that it can be used nights and cloudy days, though this would necessitate the generation of electricity and use of storage batteries until other and cheaper methods shall have been devised. It is easy to spin a web of possibilities

to come from this new invention, and if there are doubters they need only be reminded of the fate of all the other pessimists who have been run over by the swift wheels of events in the west.

The prohibitive cost of fuel has greatly retarded the growth of mining districts in many places, compelled communities of considerable size to do without ice-plants, and deprived small towns of domestic water and of electric lighting systems. But most important of all, the cost of pumping has kept millions of acres barren which could not well be irrigated from reservoirs or streams. If the solar motor can be constructed cheaply enough to meet these conditions there is certainly a wide field for it, and it may be one of the most potent influences in the development of the west during the new century.

The reflector measures thirty-three feet six inches across the top, and fifteen feet across the bottom. It is lined with 1,788 mirrors, each measuring 14x3½ inches, made of common commercial glass. The familiar principle of the burning-glass, known to every boy who has had a hole burned in his trousers with the assistance of a mischievous neighbor, is not used in this case. The mirrors reflect the solar rays so that they are concentrated upon the boiler. This boiler looks innocent enough in the picture, but it is the business end of the machine. It is thirteen feet six inches long, and made of fire-box steel. The pipe which conducts the steam from the little dome at the top of the boiler to the engine-house, close at hand, is flexible and entirely metallic, being made of phosphor-bronze.

The operation of the solar motor is quite simple. The effort has been to make it entirely automatic, so that the saving in the item of labor might be as complete as the saving in the item of fuel. In the morning the reflector must be brought into focus. A boy can do this by turning a hand lever. In an hour the engine is ready to start, with one hundred and fifty pounds of steam showing on the gauge. A turn of the throttle-valve starts the engine and the pump is soon in full operation. "But," says some one, "the sun is traveling all day." Yes, and the reflector travels with it. This is accomplished by means of a clock-work arrangement which releases the reflector once each minute, so that it keeps in true focus all day long, driving the engine from within an hour and a half of sunrise to half an hour of sunset. This means about eight hours' work in winter and about thirteen in summer. It is expected that the motor will be good for fifteen horse power in the summer when the sun falls vertically and is therefore more effective. Difference in atmospheric temperature makes no appreciable difference in the heat of the boiler, but with a low winter sun the solar rays must penetrate a greater depth of atmosphere about the earth. This reduces the efficiency of the motor somewhat. Its present trial is under conditions by no means the best. It will be interesting to see what it will do in the Salt River valley of Arizona in a long summer day when the sun comes down like—well, like a thousand of brick, to put it mildly!

To describe the manner in which the large reflector is

mounted, how it is balanced, and how secured so that it is practically beyond danger of high winds, and to tell how everything has been arranged and adjusted to enable the device to take the utmost advantage of our western sunshine, would be a very long story, involving a lecture not only on practical mechanics, but solar physics as well. But it should be said that this wonderful machine is no pretty toy or childish experiment. It is the triumphant result of many years of earnest effort on the part of scientific men. From the day of Archimedes, who was said to have fired the ships in the harbor of Syracuse by using a reflector to concentrate the sun's rays upon them, to the days of Ericsson, who bestowed his thought on solar engines long before and long after he gave us the Monitor, eminent physicists have wrestled with this problem. The inventor of the present device has familiarized himself with all the learning on the subject and has himself contributed much of value to its data. The fact that his name is not yet known to the public in this connection is pretty good evidence that he is no bombastic seeker of foolish notoriety.

The old saying, "Make hay while the sun shines," is now to be practically illustrated in another way from the original thought. After the solar motor is used to pump water to irrigate alfalfa no diagram will be necessary to illustrate this new application of an old adage.

If continued experiment demonstrates the practicability of the invention, it is destined to work a revolution in the matter of motive power.

If the rays of the sun can by means of this motor be converted into electricity and stored up during the day for use at night, it will be possible for small towns and villages to do their own lighting at small expense. With the improvement in the storage battery there is scarcely a limit to be placed upon the possibilities of this invention. It is already used for pumping water, but its capabilities are so nearly infinite that it is attracting widespread attention.

The Commoner.

Mr. Sheldon's Christian Daily.

REV. CHARLES M. SHELDON, writing in the *Christian Endeavor World*, gives the first statement he has ever made regarding the positive results of his famous week, in editing a daily paper as he thought Christ would have it edited. He says:—

In the first place, very many of your readers, I infer from the hundreds of letters of inquiry received, do not know that the demand for the paper necessitated over 360,000 copies a day for six days. It is also not generally known that as a direct result of articles printed in the paper on the first page, which was commonly derided as lacking in news, several permanent institutions have already been established for the betterment of mankind.

It is simply a statement of fact that some of the articles that were criticised most severely, as being religious, commonplace, or old, as news, have produced results in certain directions which justified their publication. It is also a fact, which I have not published anywhere before, that for the last twelve months I have been in receipt of thousands of letters from all over the United States, expressing a great desire that papers of like purpose might be established in every large city in the Union. And letters have been received from nearly every state, from newspaper men representing every department of newspaper work, from editor-in-chief to the boys in the office, saying that, if such a paper should be permanently established, the writers would be glad to be identified with it, even at a loss of financial compensation.

My mail for three months averaged over three hundred letters a day, one gathering alone containing 998 letters,

and the overwhelming majority of them expressed the keenest desire for a journalism which would embody the teachings of Christ, and take a decided stand on the questions of temperance, brotherhood, righteousness in business, and clean, wholesome, powerful Christian living every day.

May I add that enough offers were made, through individual letters to me personally, of money to establish a daily paper? and if I had been at liberty to step out of my own chosen life-work into journalism, I could have been supplied with a sufficient amount to make a beginning. It was not simply an impulsive sympathy with the movement, but a belief in it which was willing to go to the extent of putting the money down in order to see it permanently established.

May I be allowed to correct a general misunderstanding and also misrepresentation of the paper which I edited for a week with the intention of illustrating, so far as I could, the use of a Christian daily, with other things, to give people the news? I have learned from friends, more than from my own reading of criticisms, that the commonest criticism brought against the paper I issued that week was that it did not contain the news of the day, and that it was only a religious daily. The friends who kept tally with other papers that week found that all items of real news in the world, with one or two unimportant exceptions, were chronicled in the columns of the *Topeka Capital*. There are several facts concerning the week which are not generally known. It was a most remarkable week in the history of human happenings for an actual dearth of great human events. A careful study of the papers printed that week all over the country disclosed in many of them a remarkably large use of "time copy," more than the usual quantity, on account of scarcity of general news.

May I be allowed to say, also, as I have so far made no reply in print to any criticisms, that what news there was was condensed purposely, and, being printed without noticeable "scare-heads," upon the third page, inside of the paper, did not attract attention, and in a great many cases persons actually came to the conclusion that there was no news in the paper, because they did not find it in the usual place, or in an exaggerated form?

It is also true that the paper did not depart from its local conditions. It was not a metropolitan sheet, but remained a local publication, and there was no attempt to change it from that condition.

I have said this much at length, because one of the most important contentions for a Christian daily would necessarily be the contention that it print the news of the world. A failure to do this would be fatal to the success of such a paper, and it could have no right to the name of Christian newspaper. There is room in America to-day for a Christian daily paper, which we do not yet possess. That it will be evolved in the course of no very long time I most firmly believe. The signs of the times point toward it; the public demand for it is growing with great rapidity, as the old century has gone its way and the new century has come in.

You will find it less easy to uproot faults than to choke them by gaining virtues. Do not think of your faults; still less of others' faults; in every person that comes near you look for what is good and strong; honor that, rejoice in it; and as you can try to imitate it, and your faults will drop off like dead leaves when their time comes.

JOHN RUSKIN.

I will stop at no point so long as clear reasoning will carry me further.—HUXLEY.

Selected Articles.

What is Christian Science?

THE lecture delivered on Friday evening at the Opera House by Judge Ewing was scholarly, eloquent, earnest, and impressive; and excited comment, discussion, and interest. *The Herald* is a secular paper and does not meddle with things religious and spiritual except so far as they may be matters of news or of public interest, or as related to secular matters. But this lecture comes within all three of these classifications: it is a matter of news, of public interest, and is related closely to secular interests. The subject of Christian Science, as a belief and as a practice, has become of much interest and is exciting wide discussion in the secular newspapers; and those who believe in it and some who practise it, or pretend to practise it, are under criticism, and a few under judicial examination.

"What is Christian Science?" is a question we are not prepared to answer. This phrase has, of course, two very distinct meanings. In its broad sense it may mean whatever system of scientific philosophy, or concatenated and formal statement Christians have promulgated, or that represent the views and doctrines of Christ and his Church. And in this sense this phrase is used as the phrase "Political Science," "Social Science." But in the narrower sense it means that system of doctrine, teaching, and practice promulgated by Mrs. Mary Baker Eddy, and accepted, held, and followed by those who agree with her and believe in her teachings. And even in that narrow sense it stands with those who accept this system as representing the truths, the teachings, and the promises of Christ, and is founded wholly upon the Bible, and in accordance entirely with its utterances and spirit.

To those who declare their inability to understand this Christian Science, the answer sometimes given is that famous passage from Paul's letter to the Corinthians: "But we preach Christ crucified, unto the Jews a stumbling-block, and unto the Greeks foolishness; but unto them which are called, both Jews and Greeks, Christ the power of God, and the wisdom of God." The keenness of this response and its aptness require no explanation. To those who can believe in the incarnation, the crucifixion, the resurrection, the ascension and the continued sovereignty of the Christ—and in his office, work, and power as Saviour, Mediator, and Judge, it ought not to be hard to believe in Christian Science, say its followers—to those who cannot thus believe, of course all written and taught in the Bible is foolishness or worse. If there was a Christ and he was the Son of God with power to give up his life and take it again, and that for the love he bore mankind; if this Christ did raise the dead, heal the sick, make the blind to see and the cripple to walk; and did promise that those who had faith in him should have like power—why should those who thus believe refuse to believe that in fact those promises are being honestly and fairly kept, and that those who take him at his word do what he promised they might do. In this demand they only do what Peter and John did to him who laid at the Gate Beautiful; and repeat what Paul declared he did in the same name and by the same power.

To this reasoning they add, however, a potent declaration; they say as a fact, This has been done—is being done. **They testify as witnesses in court—that august and universal court of human thought and human investigation—that they have seen, nay, experienced, the fulfilment of these promises, even as the blind man answered, "One thing I know, that, whereas I was blind, now I see."**

How far this human testimony is sufficient to build upon is one of the most interesting subjects of inquiry known to thoughtful students of human nature. The miraculous cures at Lourdes; the wondrous cures at numerous celebrated holy places and by holy men, in many countries and

in all the ages; the miracles in all ages attested by human testimony; are among the mysterious problems of our race and its inner nature. The power of superstition, of imagination, of faith, is certainly a tremendous power; and as a mere therapeutic agent is of remarkable efficiency. Two of the most intensely interesting lectures we ever heard were by a brilliant professor in one of our medical colleges on "Faith as a Therapeutic Agent." If we reject this testimony we place perilous conditions upon the historical sufficiency of that testimony upon which rests the belief of the resurrection; if we accept it we make it extremely difficult to reject much which the thoughtful Christian world does reject.

In all ages the organized church fails to satisfy thousands of sincere, earnest seekers after the truth and after higher ideals. In every country and against every form of formulated creed the reformer is found ready to antagonize the received with declarations of new revelations or new constructions of the old. This may be laid down as a universal proposition. For us it is only necessary to call attention to the historic reform by Jesus of the Jewish Church; by Luther, Calvin, Knox of the Universal Catholic Church; of the Wesleys of the Established Church; and in our own state and during almost this present generation of Alexander Campbell, Barton Stone, and others.

This dissatisfied element is composed in large part of very intense and extremely earnest people who yearn for higher things and cannot be satisfied with what the organized church offers. It is folly to denounce such; it is harsh to laugh at them; it is unwise to deride them; it is un-Christian to persecute them. We may not agree with them; we may not understand them; we may not approve of them or their beliefs; but there is always something of truth in what they find as comfort. The human soul and the human mind are never satisfied with what is wholly a lie—what is entirely false. There must be something of truth, something of the supernatural, something divine in whatever creed, cult, doctrine, dogma or belief satisfies the human brain and evokes the passionate love of the human soul.

Man has within him an immortal desire to know the truth, an unquenchable yearning to believe the truth, an insatiable thirst for the truth; this is the hope of the race; this is the cause of his upward progress. He may not be capable of separating the truth from falsehood; he has accepted much falsehood to obtain small truth; he has died for strange misconceptions because they had meagre truth wrapped within their folds. Progress means greater capacity to recognize the truth and separate therefrom and reject the false. Civilization is putting the truth into actual and ordinary life—living the truth.

Christian Science comes in this new century with the claim that it is the broader, ampler, clearer, more potent truth of the Bible—whereby man can more certainly and practically realize what Jesus meant when he said he was the Life, the Way, and the Truth. Truth is never new and never old; it has no age; its discovery may be new; its acceptance may be recent; its practical rule may be of modern times, and the close yesterday. Men may not have seen it, not recognized it—may have rejected it, believing it to be a lie; but if it be truth it always was and always will be. There was a profound philosophy in the advice of Gamaliel: "If this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it."

It is said that thousands of earnest men and women have enrolled themselves as open believers in this system; perhaps more are secretly but eagerly studying it and watching to see if indeed it be of God; and perhaps still more with less eagerness and in a different spirit are investigating its claims to verity and power. Among this latter class, perhaps, *The Herald* might range itself.

To all who love their race there is a sweet attractiveness in every promise of alleviation of pain, of surcease of sorrow, of a dearer and nearer brotherhood, and the uplifting of men. He who comes in the name of the Ruler of men and angels with an evangel of peace, health, happiness, love, finds heavy hearts who thirst for his message, broken hearts who turn to his proffered remedy; sad, sorrowing, suffering ones who need and pray for relief. In all love for man there is some truth, as perfect love is supreme truth.

Editorial in *The Morning Herald*, Lexington, Ky.

A Reply to "Enquirer."

To the Editor of *The Onlooker*.

Sir:—As you were good enough to insert in your valuable paper of the 2nd inst. my last communication, I take the liberty of replying to a few remarks on "Christian Science" by "Enquirer" in your issue of the 9th inst. He remarks, "As far as I can understand its methods, the patient is subjected to a long course of prayer and fasting, in the course of which the body is exhausted and the mind becomes impressionable, consequently the patient is subject to hallucinations suggested by the operating Scientists." It is evident from this remark that your correspondent has not carefully studied Christian Science, as it works, in fact, on exactly the opposite method—the basis being moral and intellectual, not emotional. The mental attitude of Christian Science is, in fact, precisely the same as that of physical Science, only working through spiritual or mental, instead of physical, laws. It tests as it advances. It stands by results—i.e., demonstrated truth: "Not creed but deed, not theory but practice, says its author. It courts fair and impartial, but not prejudiced, investigation. When understood it can be demonstrated. By adhering to the Principle of Christian Science one can obtain definite and assured results. Christian Science is certainly absorbing the attention of some of the best and keenest minds of the day.

As regards medical testimony, J. Clarke Whittier, M.D., expresses himself as follows: "My investigations have proven to my entire satisfaction that Christian Science is not a mere system of healing, but I have found, as one gains the understanding of its Principle, and lives it, the healing of physical, mental, and moral ills necessarily follows. With me the truth of Christian Science is not a matter of belief, but of understanding; not of faith, but of works; not of theory, but of demonstration. I have tried it and found it not wanting. I have seen it stand the test in so many instances that my certainty that it is founded on unchanging Principle has reached the condition of absolute conviction."

It is not to be expected that the full recognition of this attitude of spiritual monism will be altogether accepted in this material age, but seeing that the leadership of modern thought is all trending in this direction, in opposition to the unsatisfying materialism of Huxley and Herbert Spencer, worked to its final development by Professor Ray Lankester and others, I am more than ever convinced that this attitude will be eventually more or less assimilated, and in time adopted by the various schools of Christianity.

If any of your readers wish to follow out the matter for themselves, they have only to apply to the library of the Society, where they can obtain the monthly *Journal*, in which they will find fully expressed the views of those who have accepted the new standpoint. Apologizing, Mr. Editor, for the space I am taking up, and in the hope that these few remarks may throw a ray of light on this complicated and many-sided question,—I am yours faithfully,

EDWARD W. LAMBERT, F.R.G.S.

Grand Hotel, Birmingham, March 6th, 1901.

In *The Onlooker*.

An Interesting Interview.

THE following report of an interview with Mrs. Sue H. Mims, C.S.B., of Atlanta, Ga., appeared in a recent issue of *The Constitution*.

Even the casual observer of the trend of the times, cannot fail to see that there is a vigilant, concerted, determined action on the part of the medical fraternity to legislate against Christianity as a healing power. Why does the medical fraternity need this legislative support that is not asked for nor given to other professions? Is not this very strenuous and persistent effort that is being made in every state of this union the very highest possible compliment to the healing work that is being done by Christian Scientists?

Christian Scientists have no quarrel with medical practice nor with any other means of alleviating human ills. They believe in and ask for individual freedom, both in religion and healing. I myself have had a life-long habit of being most friendly to the physicians, for I was, until healed in Christian Science, almost constantly under the care of some one of them. As a class they are scholarly, cultured, and refined, and I like those qualities, but I also like liberality and justice.

Is it just that for nearly twenty years I should have given yearly handsome sums for medical attention, as much several times as five and six hundred dollars for surgical operations—seventeen hundred at one time for the rest cure—and when all these had failed and a gentle, Christian woman did what all these had failed to do—restored me to health and strength by making me a better woman through the understanding of my relation to God, at a cost of twenty dollars for four weeks' treatment; is it just, I say, that she should be counted a criminal for taking this meagre compensation for an inestimable blessing—a blessing that irradiates my life and being through all these twelve years? During this time I have taken no medicine and have been better in health, holier in life, more useful to myself, to humanity, and to the cause of Christ.

A close and unbiased study of Jesus' words and works will show clearly that he taught that sin was the cause of sickness and death; that if you cast out one you cast out the other. They go hand in hand. He said to the palsied man: Thy sins are forgiven thee: rise up and walk. Whether is it easier to say, Thy sins are forgiven thee, or to say, Rise up and walk? This certainly unites the theology and the healing—they are inseparable. It is the theology that heals. When he said, Go into all the world and preach the gospel, he also said, Heal the sick. He revealed the healing power of Spirit which had always, from Moses, Elijah, and David, to Jesus, been somewhat a part of Jewish theology. The healing work was not confined to the twelve, for the seventy also healed, and Paul, who never saw the personal Jesus, boasted that he had given proofs of his discipleship by signs and wonders.

Jesus proved that there was a spiritual law which annulled the material. When he said of his disciples, "They shall handle serpents, and if they drink any deadly thing it shall not hurt them; they shall lay hands on the sick and they shall recover," he said pointedly and positively that these should be the signs that would follow those that believed in or understood him. Paul said: "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." It is this understanding of the supremacy of spiritual law that heals the sick,—the understanding of the naturalness of good, of health, harmony, and immortality, and the consequent unnaturalness of evil and disease, if God is omnipresent Good.

Not until the fourth century did this unity of theology and healing cease, and not entirely then, although at that time the world and materialism seemed to take possession of the church instead of the church dominating them.

Christian Science is restoring this lost characteristic of early Christianity, and as it destroys sin and heals the sick it becomes the greatest ethical as well as health-giving movement on earth.

I have as a reflector of this divine understanding given many proofs in this community that this Christ-power has been demonstrated in your midst.

I will tell of one. An old Confederate soldier who does not reside here, came to me for this Christ-healing. He had been wounded in our Civil War and had been on crutches for twenty-three years, the wound in the calf of the leg never having healed, although he had tried every available means in a material way (being a man of fair competency); nothing from patent medicines to mineral springs, as well as the other recognized methods, but had been tried. The muscles and sinews were wasted—almost gone; the limb was bent and shrunken, and he was thin and worn. In one week the change for the better was very marked. In less than two months the wound was healed, the lost substance restored, and he was well, all by the power of Spirit and prayer. This case is one of the many which have been healed by the practitioners of this church. Cancers have been healed, tumors removed, the blind have been made to see, the lame to walk, the bed-ridden to rise from their bondage, and God, as the “very present help in trouble,” has been proven in this city. Any of these cases can be verified.

Every other science in the world is rising out of its grosser elements into invisible and immaterial force, and shall we be pinned down by medical legislation to herbs and plasters, when the Scriptures declare that Spirit is the only power, and utters its sublime denunciations on those who go down to Egypt (or materialism) for help. Is not that having other gods than Spirit? Paul declares that he comes to the Corinthians “not with enticing words of man’s wisdom, but in demonstration of the Spirit and of power.” He teaches that our reasonable service is to bring the body into subjection to Spirit; to be transformed by the renewing of our minds; to put on the Christ-Mind. He taught and practised divine metaphysics.

I believe that the Christian world is awakening rapidly to the fact that healing is an essential element in Christianity, and I believe and know that the enlightened sense of this country is also awakening to the dangers and unconstitutionality of class legislation against this spiritual form of healing. Its absurdity cannot more happily be expressed than by Mark Twain’s humorous complaint, that the New York medical bill even deprived his grandmother of her joy in experimenting on him. The fallibility of medicine cannot be so forcibly expressed by any outsider as by members of their own ranks.

Victoria’s Scrap-Books.

There are two questions in connection with Queen Victoria’s will which are exciting no little speculation among people at court. It is with regard to the disposition which Queen Victoria has made of her private diaries, which were kept with the utmost regularity from the time of her accession until her last illness, and likewise of an extraordinary collection of scrap-books kept under careful lock and key in the royal library at Windsor Castle, and to which no one, not even the members of the royal family, was permitted to have access, save by the express permission of the Queen herself. These scrap-books contained the originals of all the letters addressed to Victoria throughout her long reign by her various premiers and cabinet ministers, including the autograph summary of the proceedings in the House of Commons which the member of the cabinet who acts as the leader of the house is required to write every night when Parliament is in session for the personal information of the sovereign.—*Washington Post*.

Communion Service.

THE Communion services of the Mother Church will be held Sunday, June 16, 1901.

Reading Room Removed.

THE Reading Room of The First Church of Christ, Scientist, in Boston, formerly at 194 Boylston Street, is now located in the Pierce Building, Huntington Avenue, opposite Public Library.

Attention.

WILL subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads June '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for July, August, and September.

Remittances.

REMITTANCES should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

The Church Manual.

THE Church Manual of The First Church of Christ, Scientist, in Boston, Mass., contains the By-laws of the Mother Church, also a list of members.

Address all orders and make remittances payable to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Applications for Membership.

APPLICATIONS for membership with the Mother Church to be presented at the June meeting for the admission of applicants, must be in the hands of the Clerk on or before May 20, 1901.

A Word to Inviters.

INVITERS of applicants to membership with the Mother Church will confer a favor on the Clerk and save disappointment to the applicants if they will withhold, until after the semi-annual meetings, all applications that have been sent to them for their signature too late to reach the Clerk before the date for the closing of the entries for admission, and also notify the applicants that their applications have been retained.

All applications should be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

Often the love of God is hid, passes behind the cloud, and leaves us with a cold shudder of alarm, as if it were not there. But the divine realities do not depend on our apprehension of them; the eclipse of our vision makes no difference in their shining, except to us. The Infinite Love abides behind and waits till we return to it, and the intercepting veil falls away.—JAMES MARTINEAU.

Thank God, there are some men and women full of the power of the Gospel who cannot rest satisfied till they have opened their very hearts, and given the poor, wayfaring man the only thing which is really their own—their faith, their energy, their hope of God.

PHILLIPS BROOKS.

CHRISTIAN SCIENCE SENTINEL.

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Religion and Health.

IN a recent sermon on the above subject a minister in a western city said:—

"The relation of the mind to the body is very great, and often a willingness on the part of a person relieves him from a supposed illness, which in reality was only an hallucination. Back of this lies the fact that God acts through the mind upon the body. Therefore, there can be no higher purpose for the church than to help men to help themselves. The physician who renders the most good for his community is the one who goes about his work scientifically and religiously."

If it be true that "the physician who renders the most good for his community is the one who goes about his work scientifically and religiously," what shall be said of that teaching and practice which seeks to impress upon sick and sinful humanity, the eternal fact that God—divine Mind—is able to save to the uttermost? Is it not readily apparent that the greatest need of the world to-day, individually and collectively, is a more definite idea of what are to be regarded as the legitimate results of Christian living upon the health and morals of men?

In this age, when in every department of life the theoretical is giving place to the practical, and men and things are being judged by their works, man has a right to ask, Of what advantage would Christianity be to me in the affairs of every-day life? The religious world is awaking to the fact that this question must be answered in a manner that will appeal to man's practical, common-sense view of things, instead of taxing his credulity. All honest efforts are commendable and the broadest charity should be manifested toward those who are making these efforts, even though they may not be working in accordance with the views of others. If all who have "named the name of Christ" should in their own way strive to give the much needed proof of the practical workings of Christianity, and in no way seek to interfere with the honest endeavors of others, how much more rapid would be the progress of the world Spiritward.

The subject of the sermon referred to suggests a relation between religion and health, and the declaration, "Back of this lies the fact that God acts through the mind upon the body," very naturally causes the thinking man and woman to ask, "If this be true, cannot God heal all manner of diseases without the use of material remedies?"

It is evident that that which answers his question in the affirmative, and also gives positive proof of its declaration, will appeal to such a person and assure him that Christianity is not only sound in theory but also successful in practice. That God can and does heal the sick is demonstrated in Christian Science. This is but one of the many proofs to be found in Christian Science, that Christianity is practical in its application, and meets the requirements of every-day life.

No man has less faith in God when he learns that Christianity means health as well as holiness, neither does it limit thought or endeavor in any direction that will result in good to humanity. On the contrary it will have the

opposite effect. When man learns that he can rely upon God to restore him to health he will begin to realize that he can trust all things to God's keeping. Thus the man who desires to know of what practical use Christianity will be to him, will find that there are no limits to what it can and will do for him and for all men.

The Child as a Thinker.

IN a recent number of *Nature* there appeared an article by G. E. Mudge, in which the writer protests against some of our modern educational methods and theories. He argues that the child naturally possesses the power to think and reason logically, and that true education retains and develops the thinking powers the child naturally possesses.

We make the following most suggestive and helpful excerpt from the article:—

"Are we not on the wrong track when we talk of 'making thinkers' or of 'training men to think'? Remembering the nature of the child, it rather seems to me that we should be nearer a successful issue if we turned our energies in the direction of retaining and developing the thinking powers it naturally possesses. Any one who chooses to observe the development of a child's mind will, if he does not suppress its natural bent, convince himself that a child from three to five years of age possesses thinking powers of greater capacity than we are in the habit of crediting to it. One of the external evidences of a thoughtful mind is the asking of questions which bear definite and logical relations to each other; and this is precisely what an average child of that age, when talking to a person in sympathy with it, is persistently doing. It is not content with a flimsy and evasive answer, and how strong is its intellectual craving is manifested by its evident disappointment or display of temper when its ignorant parents impatiently curb its curiosity. It is very seldom that one finds a mother who has endeavored to retain her child's thinking capacities.

"I was once present when the little four-year-old daughter of such a mother was making inquiries about the planet Venus, and after she had been informed that both Venus and the earth traveled round the sun and were illuminated by it, she put the query, 'Then if there were people on Venus our earth would look to them as Venus looks to us?' This question demonstrates that a child possesses thinking powers sufficiently vigorous to enable it to see the logical relationships of bodies to each other, that would certainly do credit to many of its superiors in point of years. This is not an isolated instance, and my impression, derived from observation and from conversation with observant persons, is that the average child, if not suppressed, is capable of a quality of thinking that leads its elders, when they try to follow it, into an intellectual quagmire of inconsistency and absurdity from which they beat an inglorious retreat by bidding it not to 'ask silly questions.' If they bade themselves not to give silly answers, the request would be just."

If what our writer says is true in the material world, how much more so is it true as pertains to the world of Spirit? The child's ready acceptance and application of spiritual truth often causes one to marvel and exclaim, "How can these things be?" The child is naturally disposed to apply what it knows, for it has not learned to regard things merely from a theoretical standpoint. Spiritual truth appears to him to be as practical as anything with which he has to do in the world of sense. May it not be that it was this pure and practical sense on the part of the child that caused the Master to say, "Except ye become as a little child"?

It must be admitted that much of what is called material education leads mortals away from God rather than to Him, or at least causes them to leave Him out of the

affairs of daily life. Jesus called the world back to the simple, natural sense of life which recognizes God in all things. The child possesses this sense, and his education should be of such a character as will cause his faith and trust in God to develop in a natural way.

Many of us who are "older grown" have time and again felt the force of the Scriptural statement, "and a little child shall lead them." The simple and natural reasoning of the child has led to a clearer perception and acceptance of Truth. We fully realize that the world greatly needs that child-like faith and trust in God which takes Him at His word, and trusts all things to His keeping.

Contagion.

It certainly is rather discouraging! For years humanity has been definitely instructed that the spread of contagious disease was effected through the bacteria of the sputum, the spores of the atmosphere, tainted water, clothing, etc., and elaborate regulations for quarantine and disinfection have been rigorously imposed upon all who were exposed by contact or otherwise. These scientific dicta have assumed the authority of law, and man's obedience or disobedience to its mandate has determined his fate. And now they have found out that all this simply isn't so! The microbe is innocent as can be, and the guilty party is none other than the mosquito.

Surgeon-General Sternberg is reported to have announced the fact, and to have issued his orders to the sanitary authorities of Havana in keeping with the same.

In the war against yellow fever, disinfectants and fumigation are to be replaced with an entirely new weapon; viz., mosquito netting! and the fight is made correspondingly less interesting, while the anxieties of the fearful are vastly increased.

The microbe was sly and subtle, and his habit of keeping out of sight gave zest to the chase, but the mosquito is so plebeian, so ubiquitous, so loud; it seems rather commonplace and humiliating to enter the lists with him; there is nothing chivalric or high born about it; and yet if he's to blame he must be punished, and that without delay or consideration.

Poor humanity! driven into the ranks by baseless fear and officered by the high authorities of science, so-called, it has to mark time in a ceaseless struggle against unnumbered and augmenting foes, and it goes to its defeat with an obedience and determination that is heroic and worthy of a more inspiring cause. The multiplicity of these discoveries (?) respecting the cause of disease is only equalled by the multiplicity of the changes in the means and methods of the cure of disease, and so will "the knowledge of good and evil" register its ebb and flow, until men come to realize that all that is real, all that manifests the divine Life and Law, is good; that the knowledge of Good, of God and His manifestation, has no evil in it, and that this knowledge brings immunity from all contagion and harm, for it is present and "eternal life."

Doctor of Laws.

IN view of the fact that the authorities of Harvard College have voted to confer the degree of LL.D. upon President McKinley, the following contribution to the *Boston Transcript*, by William De Witt Hyde, D.D., LL.D., President of Bowdoin College, setting forth the significance of the degree, will be read with interest. President McKinley has been invited to attend the commencement exercises at Harvard next month, and it is thought the degree will be conferred at that time. It is interesting to recall that the first President of the United States re-

ceived the degree of LL.D. from Harvard College one hundred and twenty-five years ago.

President Hyde's paper is as follows:—

Some years ago I received a petition from the supporters of a country academy, in which the petitioners set forth the fact that the academy was declining, and needed something to bring it into prominence. They had finally concluded that the best thing they could do for the academy would be to secure an honorary degree for the principal. Accordingly they respectfully petitioned the trustees and overseers of Bowdoin College to grant to their principal the degree of LL.D. In order to make more explicit the precise thing they wanted, they added in brackets, after the letters LL.D. the explanatory clause "Doctor of Legal Laws." The Bowdoin trustees did not see their way clear to help out the academy in the manner proposed by the petitioners. Nevertheless, the candidate did not remain long unconsolated; for at that same commencement season, a week later, he received from a sister university the degree of Ph.D., which doubtless both he and his supporters regarded "equally as good."

While historically the degree of LL.D. undoubtedly goes back to the time when it represented sufficient attainments in jurisprudence to entitle the recipient to receive a doctorate of "Legal Laws," it long since ceased to have direct connection with it, and has come to signify proficiency in law in a broader and profounder sense. Whoever has reflected deeply on nature and human life has discovered that underneath phenomena there are certain spiritual principles, of which all phenomena are expressions. These deeper principles Plato called "ideas;" the Hebrew proverbs grouped them together, under the single name of "wisdom."

"I was set up from everlasting, from the beginning, or ever the earth was. When there were no depths, I was brought forth; when there were no fountains abounding with water. Before the mountains were settled, before the hills were I brought forth."

"By me kings reign, and princes decree justice. By me princes rule, and nobles, even all the judges of the earth."

The modern world, however, has agreed to call these principles, whether in the sphere of nature or of human society, by the name of laws. The Doctor of Laws, therefore, is a person in whose speech or action these laws have come to clear and definite expression. Such persons are comparatively rare. The majority of college graduates never get beyond that acquaintance with truth which comes through the thought and deed of others. They never attain original insight and independent initiative. They deserve merely the Bachelor's Degree, which signifies that they have apprehended the laws of nature and human life at second hand.

Originally this Bachelor's Degree carried with it the right of teaching from a text-book, but not the right to teach out of the accumulated stores of one's own information. The Master's Degree implied longer study and closer familiarity with a subject, and carried with it the right to give lectures of one's own. With us the degree of Doctor of Philosophy has come to mark this stage of intellectual independence, and the corresponding authority to teach. The degree of Doctor of Laws marks not merely the ability to make some little contribution to the sum of human knowledge, and on the basis of the ability shown in doing that, to give lectures on a subject, but has been reserved to indicate some substantial contribution either to science, if one is pre-eminently a scholar, or to public welfare, if one is a man of affairs.

Such achievement obviously cannot be measured by a formal examination, for it may well happen that the recipient of a degree is more competent to examine the body which confers it, than is this body to examine him. A man proves his worthiness to receive this degree by the acceptance of his work among those who are competent to judge.

His investigations if he is a scientist, his researches if he is a historian, his writings if he is a literary man, his decisions if he is a judge, his achievements if he is a statesman, are the basis on which the degree is conferred. Membership in learned societies and official position in the state may be indications of fitness for this degree, but they are merely indications. The real basis on which the degree rests is the fact that some department of human knowledge, or of human affairs, has come to individual expression through this man's words or deeds.

There are certain high positions, such as that of president of one of the leading universities, or the head of a department in such a university; such as the president or prime minister of a great nation; or the chief justice of the Supreme Court of a nation or a great state, which it is almost inconceivable that a man should hold without having proved himself to the public as a man through whom the laws of nature or of human society have found expression. Exceptions, indeed, there may be to this rule; yet even in such extreme cases the valid ground for withholding it is not that the authorities of the universities differ from the policy of the man who holds the important office, but rather that they judge him to have no principle or policy at all.

Difference of opinion is no ground for withholding a degree, for the laws which govern nature and human life are many and subtle. No individual is likely to grasp them all in due proportion. The question which a board of trustees must ask with reference to a candidate for the degree of Doctor of Laws is not whether they approve his opinions and policy, or not. It is the deeper question whether his opinions are the result of scholarly thought; whether his policy is the fruit of intelligent and conscientious action. John C. Calhoun and Daniel Webster held very different opinions; yet each of them had reached his opinions by a careful study of history and political science, and each was able to commend his opinions by scholarly and able argument. Both of these men, in their day, were worthy of the highest academic honor.

In the same way, Darwin and Agassiz differed as to the principles of classification of species; but both had reached their conclusions through patient and laborious investigation. Both were worthy of the doctorate of laws. Professor Müller and Professor Whitney differed respecting the origin of language; but both were men through whom the science of philology was carried forward. In our own day certain groups of laws have pointed in the direction of free trade; other groups of laws have pointed in the direction of a high protective tariff. One group of laws have pointed toward the enlargement of the volume of our currency; another group of laws have pointed to the maintenance of a gold standard as the condition of our economic prosperity.

Still more recently one group of historic precedents and principles points toward the limitation of the territory of the United States to this continent; another group of tendencies and ideals point to the expansion of the country as the condition of our highest national influence and prosperity. Whoever has apprehended either of these groups of laws, and is able to give them their historic and philosophic setting; still more, whoever has been able to make either of these groups of principles effective in the determination of national policy, is justly entitled to the honor of the degree of Doctor of Laws. If agreement with the opinions of a man is to be the test of fitness for an honorary degree, the sooner college and university authorities cease to confer such degrees the better; for the inevitable outcome of granting degrees on such a basis would be not to crown scholars and men of action with the deliberate approval of learned bodies, but to bring the strife and jealousy and animosity of the market-place and the lobby into our academic halls.

Among the first to receive the degree of LL.D. from Harvard College, was George Washington; who received the degree in 1776, at a time when there was no little difference of opinion as to the merits of the position which he occupied. The proper disregard of opinion as a basis for a degree has been happily illustrated in recent years in the college with which I am connected. The policy of Senator Hale just before the outbreak of the Spanish War was even less popular with the rank and file of Maine Republicans than has been that of Senator Hoar with the administration Republicans of Massachusetts. Yet, although probably at the time a considerable majority of the trustees and overseers of Bowdoin College were not in personal sympathy with the attitude taken by Senator Hale, they seized that very time as most appropriate for conferring upon him the degree of LL.D. For he was at the time the most conspicuous example of a man who was maintaining a difficult and prominent public position with ability, and courage, and conscientiousness. Last year, although the trustees and overseers of Bowdoin College include scarcely half a dozen Unitarians among their fifty or more members, yet they recognized the great service to religious thought which Unitarianism has rendered; and took the opportunity to confer the degree of Doctor of Divinity upon the president of the American Unitarian Association, who is doing so much to conserve and increase the effectiveness of Unitarian influence in the community.

Such is the true significance of honorary academic degrees. The newspaper discussion of the fitness of particular individuals to receive such a degree is discourteous to the individuals concerned; and most of it is as wide of the mark as was the ignorant attempt of the petitioners above referred to, to define the significance of the two Ls in the LL.D.

Among the Churches.

Progress in the Queen City.

The dedication and opening in different cities of three Christian Science Churches in one day, and the great outpouring and manifest interest of those attending, added to the constant evidence of good works through Christian Science everywhere, is fast creating a spirit of toleration and interest. It is with gratitude that we see the local press seeking the facts concerning Science and meeting the demands of their readers for correct information concerning a great religious movement. This increased interest in our Cause has been very marked of late, and is indicated somewhat in *The Enquirer* of April 15, which had the following to say about the churches in the Queen City:—

"There are three Christian Science Churches and about four hundred and forty members in Cincinnati. About eight hundred people in the city testify to having been benefited by believing in Christian Science.

"Christian Science was introduced into Cincinnati in 1887. In that year an institute was opened here for the application of the Science.

"The churches in this city are known as 'Church of Christ, Scientist,' which *The Enquirer* has been informed was the first Scientist Church organized in the city and the second in the state; 'First Church of Christ, Scientist,' which was chartered in 1892, and Third Church of Christ, Scientist,' which was organized in August of 1899.

"All these churches maintain reading rooms that are constantly open to the public.

"To sit and talk with a woman of well-attested truth and honor, and plainly of much culture; a woman who is the picture of robust health; to have her tell you that she has always been a woman of the world to the extent of never knowing or believing anything about God or the Christian

religion; to have this woman tell you soberly and in all seriousness that simply and solely by reading a certain book she was immediately and perfectly cured of a not less than horrible affliction, one that eminent specialists had told her and told her friends would shortly result in her death, and that not a particle of hope existed for her,—to hear this may be the experience of any one who may choose to call at these Christian Science rooms.

"Any one may call at these rooms for any number of days in a year, and at every call hear a different person relate a similar experience. To look sharply into the character of the people who claim to have these experiences is to find they are worthy of belief.

The public libraries here have recently been supplied with Christian Science literature, and those in charge report a great demand for this reading matter. The following acknowledgments have of late been received:—

Young Men's Mercantile Library.

Cincinnati, April 17, 1901.

The Library Committee have received from you *The Christian Science Journal* and *Sentinel*, a gift to the library, for which they return grateful acknowledgment.

J. M. NEWTON, *Librarian*.

Public Library of Cincinnati.

Cincinnati, April 2, 1901.

The library is receiving two copies *Christian Science Journal*, and two copies *Christian Science Sentinel*, one in main hall and one in periodical room, for which the Board of Trustees return a grateful acknowledgment.

N. D. C. HODGES, *Librarian*.

W.

Reading Rooms at Toronto, Can.

Second Church of Christ, Scientist, which holds Sunday services at Christian Science Hall, northeast corner Yonge and Alexander Streets, has opened a reading room at No. 7 Toronto Chambers, corner of King and Toronto Street. The room is an attractive one, being furnished in a very pretty and artistic manner, and impresses one at once with the sense of a home and home comforts, which is a very essential feature in a room of this description. Thursday and Friday of this week were opening days, and many availed themselves of the opportunity of calling, and had only good words for the room and the work it is designed to accomplish.

The room will be open each day from ten to five, and Friday evenings from eight until half-past nine, and there will always be those in attendance who will deem it a pleasure to converse with callers on the subject of Christian Science. All the works of Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, also those of The Christian Science Publishing Society of Boston, will be on sale. The public are cordially invited to this room to read the literature and learn what Christian Science teaches from those able to give the information.

Toronto Star, April 6, 1901.

Larger Quarters at Rockford, Ill.

Within the widening circle of Christian Scientists in Rockford, and of those interested through the physical healing and otherwise, the opening of a larger and much better located reading room is a mark of the steady growth of the cause here. The reading room, which is for public use, is supplied with the Bible, the works of Mrs. Eddy, and all other authorized Christian Science literature, for perusal and for sale. It is located in the Henry Block, 119 North Main Street, and is open week days from two to five and Tuesday and Friday evenings from seven to nine.—*The Rockford Daily Register-Gazette*.

The Lectures.

At Chicago, Ill.

Former Judge William G. Ewing delivered an address on Christian Science last night (Tuesday, April 30) to an audience which filled the Auditorium Theatre. His hearers included hosts of followers of the faith and others who were invited under an "open-house" arrangement.

The speaker was presented by John H. Cameron, First Reader of First Church of Christ, Scientist, of Chicago, under whose auspices the meeting was held.

"In this hour, when controversy and argument upon this subject are rife," said Mr. Cameron, "it is eminently fitting that we should have an opportunity to hear the case presented by a lecturer duly authorized to speak on behalf of the Christian Scientists." Mr. Ewing is a member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston.

Mr. Ewing addressed himself, as he said, in beginning, "in perfect simplicity, without theological veiling or shadow of mysticism," to those who were willing to hear the truth, but especially to the prejudiced, and particularly to the medical schools and scientists.

He discussed Christian Science in the two-fold phase, "incidentally as a curative agent, and primarily as a religion not to be believed simply, but to be lived and practised."

Taking up first the phase of mental therapeutics, he submitted that in the practice of *materia medica* the use of drugs is purely a matter of experiments and tests, whereby rules as to what certain drugs will do under given conditions are deduced. The mystery of the action, "the why," he declared, had never been solved.

Then he asked that the same rule and test by which material medical practice had been judged successful be applied to "the medicinal virtues, or healing power, of Christian Science."—*Record-Herald*.

At Lexington, Ky.

Judge William G. Ewing, the Christian Science lecturer, had no reason or cause to complain of the audience that greeted him at the Opera House last night (Friday, April 26) to listen to him upon the subject of Christian Science.

The house was well filled by a fashionable audience, and the many bits of bright and glowing color bespoke the presence of a large number of ladies. If one may judge from the assembly last night, it is evident that a wide and growing interest is being had in the subject discussed by the lecturer last night.

The lecturer was very happily introduced by Judge Morton, and without any further preliminary the speaker plunged into his subject. He is an easy and fluent speaker, and his plain reasoning on the most abstruse questions of modern scientific thought and religion, clearly demonstrated the legal training of his mind. There was no attempt at wit, sarcasm, or humor. It was a thoroughly didactic discourse. He has a clear and penetrating voice and every syllable was well and clearly emphasized. He showed himself to be master of his subject and never hesitated for the want of a word wherewith to express his thoughts.

He is a lecturer of a new school, and can keep his audience well interested without resorting to dramatic effect.

Morning Democrat.

Lectures at Other Places.

Vancouver, B. C.—A. A. Sulzer, April 28.

The weapons which your hands have found
Are those which Heaven itself has wrought,
Life, Truth, and Love; your battle-ground
The free, broad field of Thought.

WHITTIER.

From Our Contributors.

Peace.

BY HELEN SUTHERLAND.

SKIES may lower and lightnings flash,
The thunders o'er us roll;
Truth lifts her promised bow aloft,
And thought ascends to Soul.

Enfolded in Truth's loving arms
All fear and turmoil cease;
No lightnings flash, no thunders roll,
In Truth and Love is peace.

Individual Experience.

BY T. B. W.

THERE is no doubt but that the majority of those who have taken up the study of Christian Science were driven to it by a longing desire for peace and health, to satisfy the craving of the human consciousness for the *something* that is above and beyond the plane of material sense.

All have no doubt been greatly shocked by the startling claim of man's power and right to overcome every adverse circumstance; and that this is an individual work which must be commenced either here or hereafter in order to destroy the belief that man is material, sinful, sick, and dying,—the fateful error which humanity accepts as real and divinely ordained.

Being, from childhood, dissatisfied with this life and its so-called pleasures, I experienced a feeling of unspeakable loneliness and sorrow which so increased as time passed, that I felt utterly lost and without hope; while dark forebodings of the future were added to the daily burden. At times I tried to banish the sense of gloom and despair; but with each effort it seemed to increase and to become so real that the climax of endurance was well-nigh reached. The thought that evil with its myriad manifestations was fore-ordained and pre-arranged, would continually come, and at the same time the opposite thought was contending for the reality and supremacy of good, and that freedom and peace would be gained. The Truth of Christian Science has wrought such a transformation in me as is impossible to describe or apprehend save through kindred experience. When I think of the long and painful struggle, my gratitude is beyond expression. How real the evil did seem! but I have learned that it was but a dream of the senses.

The way I became interested in Science and took up its study may be helpful. On going to a certain village I met a friend who was interested in the subject, and he invited me to his home. I hadn't the least thought of Christian Science then, or that my going to the house was to be productive of spiritual benefit; but I was given employment by my friend and made my abode with him, which placed me in a better position for the investigation and study of Science.

I inquired if it would be of any use for me to try Science, and on being assured that it would, I commenced taking treatment of a local practitioner, and began to read what now seems to me, next to the Bible, the greatest of all books—"Science and Health with Key to the Scriptures." This effort was attended with great doubt and fear, but the effort was made. After a few treatments the old conditions seemed to vanish almost entirely, which led me to study with a deeper and more concentrated thought, hoping for an early obliteration of all false beliefs; but I was doomed to disappointment. Some days afterward the old errors returned with renewed force, the Truth became obnoxious, and I ceased taking treatment and

dropped the study of Science and Health. The sense that it was utter folly to hope or strive for freedom, now seemed more overwhelming than ever before. After a few days this feeling subsided somewhat, and the ever-recurring thought of Truth *compelled* me to return to the study of our text-book.

This may catch the eye of some who would resist the thought of being thus *compelled* to read the book. It is the common boast of the human sense, that it can do as it pleases, regardless of Truth's demands. This conflict of the human and the divine continued with me in a more or less aggravated state for about fifteen months, when there was a cessation of the strife. Good seemed more real and present than formerly, and there was more of a settled and peaceful thought, which I hoped was the finale of the battle between Truth and error; but I was again disappointed. Shortly after this, one night I continued reading till about three o'clock in the morning, having become quite oblivious of time. Upon retiring I felt that the conflict had surely come to a close, and that if there were future struggles, good would be more present than evil. Upon awakening about two hours afterwards, I experienced an inexplicable dazed mental condition, and soon found that the thought of a few hours before had been reversed. Evil had returned with redoubled force for its final destruction. To say that the combat this time was furious and distracting, is putting it mildly. I had copies of Science and Health, "Miscellaneous Writings," and several other of Mrs. Eddy's works, which I was determined to burn, as Science now seemed absurd and foolish beyond expression; but I was persuaded not to do so, and was assured that I was experiencing but a belief of chemicalization, which would soon pass away. This irritated mortal mind more than ever, but after a few hours the intensity of the conflict subsided, though the combat between the flesh and the spirit continued for many months with more or less fierceness. After this the deep, spiritual meaning of Science gradually came to my consciousness; the story of the children of Israel being in Egyptian bondage, and their departure therefrom, their passage through the Red Sea, their sojourn in the wilderness, and the trials which attended the journey which heretofore I could conceive of as being naught but the fantasy of a visionary mind, now became very plain. The mysticism which surrounded the account of creation, as being both spiritual and material, was swept away, and the Apocalypse became indeed a Revelation, which is beyond the power of human thought to express; it can only be spiritually discerned through actual experience. How true it is that "God is a consuming fire!" The dross of human consciousness is consumed, and all is to be obliterated that is unlike Christ-Truth.

My only object in relating my experience, is the hope that it may be a benefit to others who may be having a like struggle. Said Jesus, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

The Chastening Hand of Love.

BY MERCY NUTTER DAVIS.

"WHOM the Lord loveth He chasteneth." So we read in the epistle to the Hebrews. If this be true, why do we complain when we meet with conditions which demand of us increased watchfulness and more thorough and conscientious work? It can be only our own errors that punish us, and this through our indifference to the Truth, so plainly given us. It is true that some unkind thought may touch us, and so bring discord, but this also is made our own before it can afflict us.

We can prove that we understand the Truth in no other way than through overcoming. Discord only proves that

we are approaching a position that demands the forsaking of some error which we have, perhaps unwittingly, held. It reminds us that the perfect for which we long is still distant, and causes us to struggle for the clearer vision that will enable us to reach a more spiritual vantage-ground. This cannot be the result of evil; therefore we rejoice as we recall the words, now become so dear, "Whom the Lord loveth."

Only in proportion to our loss of the material sense of things can we rise to apprehend, or lay hold of, that which is spiritual and lasting. Then is it not the ever dear hand of Love which leads and directs the straying thought, until it rests upon a sure foundation?

Paul says, "Most gladly therefore will I rather glory in my infirmities, that the power of Christ may rest upon me. Therefore I take pleasure in infirmities, . . . for Christ's sake: for when I am weak, then am I strong." Mrs. Eddy, thus interprets the words of Paul: "I enjoy the touch of weakness, pain, and all suffering of the flesh, *because* it compels me to seek the remedy for it, and to find happiness, apart from the personal senses" (Miscellaneous Writings, p. 200).

Is there power in any evil, or in the aggregate of evil, to hinder the Christian Scientist from going straight forward and demonstrating what he knows to be true? Most assuredly not! Glimpses of the fadeless real, spur us on, and we could not halt, if we would, and would not, if we could. Our feet are indeed upon the Rock. Divine Love is ever saying to us, "Turn you at my reproof:"—note the assuring words which follow—"Behold, I will pour out my spirit unto you; I will *make known my words unto you*." Could one desire a more perfect reward for simply turning from that which defiles and destroys?

How unutterably sweet and refreshing are the words of Truth after overcoming the error that has seemed to veil their tender but life-giving meaning! We can say from the heart, Whom Truth chasteneth, is blessed indeed!

With Thoughts Turned Godward.

BY FLORENCE KIPER.

MAKE yourself clean and pure for the light of God to shine through. Drink in the divine Love eagerly; keep your heart open and sensitive to the highest impressions of beauty, of sympathy, of high thought. Give freely of the light and the love that are in you; radiate your tenderness. See that you allow no shadow of your discontent to fall on others, and if the blackness of doubt and restlessness submerges you, lean on God, wait, be patient, know that whatever darkness surrounds you, He is unstained, untouched, a sweet, pure, tender, enveloping Presence. And for the rest, know that whatever is good in you, whatever is helpful and high, whatever is lovely and loving, so far is God shining through you; and that the end and beginning of all things, and the one great duty of all men is to place themselves simply and humbly for that transmission. If you ever despair at the slowness of the result, remember these words of Epictetus, "What then! Can a man make this resolve and so stand up faultless? He cannot, but this much he can,—be ever striving towards faultlessness."

Chastity.

BY EVELYN SYLVESTER.

THINK chastely, and the thought shall be
A wall of armor unto thee;
Speak chastely, and thy words shall grow
To noble deeds. Live chastely, so
Thy life, the purest pearl, may shine
In Love's immortal crown divine.

Testimonies.

Many Reasons for Gratitude.

Eagerly we watch for the messengers of love which come to us each month and each week, namely, the *Journal* and the *Sentinel*; and after feasting upon all the good treasure in the last numbers of both, the thought presents itself, that those in the Field might be interested to know that the work is progressing here in Montclair, N. J.

Our meetings were first held in a private residence, then we moved to a hall, but were obliged to climb two long flights of stairs. Recently we have secured Herald Hall, which is bright and new, tinted in light shades, and is on the main floor of the Herald Building, centrally and pleasantly located.

For all this we are very grateful. But far more than this have we to be grateful for, blessings which, if we could begin to enumerate, would be like the fountain, whose waters are ever flowing.

Each Sunday lesson is filled with food for thought, each *Journal* and *Sentinel* is filled with messages of love, for which our hearts overflow with gratitude to the Bible Lesson Committee, to the able editors, and to the dear brothers and sisters in the Field, respectively.

And our dear Leader's works are like a great storehouse filled with treasures, to which we always have access. There we can go to find the light, the path, the way to health, holiness, happiness; the way "from sense to Soul." Like Paul, we can say, "We glory in tribulations also;" for through these the power and presence of God is demonstrated.

Our Master endured trials for the sake of others, and "the servant is not greater than his lord." Our daily demonstrations are always of interest to those who are inquiring as to our manner of serving God. We have had many opportunities to prove the power and presence, the nearness and goodness of God, by healing the sick, casting out error, and binding up the broken-hearted. And we remember that "whom the Lord loveth he chasteneth." But it is only the mortal sense that suffers through this chastening or through being "put off;" then, as we open our eyes to behold the spiritual, the "Peace of God, which passeth all understanding," gently comes to us and lovingly leads us to behold the risen Christ.

SUSAN B. FRITZ, Montclair, N. J.

Help in Time of Need.

Allow me to acknowledge what Christian Science has done for me. I am now forty-one years of age, and since childhood I have been afflicted with what the most eminent physicians of this state pronounced hay fever; asthma troubling me for about six months of the year. During the most severe attacks I could not lie down or sit up, only lean forward, resting my head on a chair back, and gasping for breath. These attacks would last from one to six weeks.

I have tried many physicians, among them those who are said to be the best in the State of Wisconsin. After paying them everything I had earned and all that my wife possessed, they pronounced my case incurable.

About the first of last November I was taken with the most severe attack I ever had. I had heard of Christian Science in the spring of 1900, and being completely discouraged, and thinking I could not live until morning, I finally consented to have my wife go for a healer who is located at New London. I had treatment three days and received no benefit. The evening of the third day the healer said she could do no more for me because I rebelled against the Truth. I did fight against it until I thought I would choke to death. Then I promised the Lord that if He would show me the Truth, I would serve Him the

rest of my life. This was a few moments past 11 P.M. I dropped to sleep and before twelve I awoke. I was breathing naturally. I called for the healer again and received four days further treatment; at the end of that time I was entirely healed and went to my work, and I have been in perfect health ever since.

HENRY W. LA RUE, New London, Wis.

Willing to Know the Truth.

I was led to investigate Christian Science by my willingness to know the Truth. I spent my evenings in reading, and after a time of severe criticism, mortal mind was conquered and the spiritual sense of things became real to me. When my thought was centred on spiritual things I saw clearly that nothing else existed, that Life is God, and God is Life. I have experienced some grand demonstrations, one of which I shall relate. One holiday when at home doing some repair work, with the hammer, an attempt was made to pull a long, rusty nail from a piece of wood. As it did not yield at first, I redoubled my efforts, and suddenly it loosened, and the hammer landed with great force on the side of my knee cap. I continued my work and in about an hour the leg was stiff and continued to grow quite serious. In the evening my wife and I went to a healer and I limped all the way. Within an hour the fear entirely disappeared, and when we were about to start on our return trip, it was suggested that a carriage be called. The healer, on being appealed to, said he would not advise against it, but recommended that Truth be depended on. So again I proved Love to be All-in-all by a return walk of nearly two miles. I was not kept at home from work an hour and lost no time. In about three days I walked without limping.—A. D., Mt. Vernon, N. Y.

Christian Science Restores Harmony.

I was first attracted to Christian Science by the physical healing. For more than ten years I had been very sickly. I had been to all the best doctors in London, and they were most sympathetic and kind, but never did me the least good. One said my lungs were bad, another my heart, and a third that I was very anæmic. I was more dead than alive. I had constant fainting attacks, coughs, neuralgia, backache, and was *always* tired. The last doctor that I went to told me that I never would be well, and that I must therefore realize this and not attempt to do what others did. I was then sent abroad for the fourth time, and on my return, not being any better, was persuaded to try Christian Science. After being treated for six weeks, I saw enough of the Truth to know that I ought to take my own case, and before long I got my reward by knowing that I was healed.

That was more than three years ago, and every day convinces me more and more that Christian Science brings, not only the blessing of health, but harmony under all circumstances, and the peace which passeth all understanding. I am truly thankful to say that my husband is also a Scientist, and several members of our household. We have a sense of the presence of God, the All-Good, which *nothing* can take from us, and which has helped us to overcome all kinds of evils for ourselves and others.

M. H. B., Yorkshire, Eng.

Christian Science Effectual in Acute Cases.

A few months ago, my little boy (scarcely six years old) was suddenly taken with intense pain in the head and stomach. The pain seemed so severe that the child was prostrated, and after intermittent spells of vomiting would lapse into a comatose condition. Fear came up like a mountain, and I seemed unable to demonstrate until the little one asked me to sing all the hymns I knew. I sang

for several minutes, and the child asked to be put to bed. "Now, mamma," he said, "I will say my little prayer," and he repeated over and over:—

Father, Mother, God
Loving me,—(your own little boy)
Guard me when I sleep;
Guide my little feet
Up to Thee.

I went into the next room and tried to realize that divine Love was the only Healer, the only physician. In a short time he called out, "I'm getting better, mamma." Then again, after still repeating the prayer, "Mamma, I can feel God so close to me! I'm getting stronger and stronger." Then, in a happy, joyous voice, "I'm all well now, and I will be able to treat you when you get sick." He got up and ate a hearty meal, and the joy of that demonstration seemed to remain with him for days afterwards. Surely "A little child shall lead them."—A. M. J., Denver, Col.

Found the Truth in Christian Science.

I did not come to Christian Science for physical healing. I had been a member of an Orthodox Church for a number of years but was not satisfied, and was always looking and searching for something different, something I could understand. I attended a Christian Science service more out of curiosity than anything else. It did not make any special impression upon me at first, only I felt that I wanted to go again. After attending the services a few times I became interested enough to visit the reading room and talk with those in charge. I soon felt it was the Truth and what I wanted. I procured a copy of "Science and Health with Key to the Scriptures," and at once became deeply interested in it. Before I had read it through the first time I was healed of hernia which had been a great trouble and annoyance to me for sixteen years. I have since been healed of many ills, among them sick headache and indigestion which I had had from childhood. I have also laid aside glasses which I had worn for eight years; I have not had them on for nearly two years and I read and sew and do anything I need to do without them. I feel that I cannot begin to express the benefit that Christian Science has been to me both physically and spiritually. I know my whole life has been made happier by it. I certainly feel very grateful to our Leader for showing us this blessed Truth.—A. H. SMITH, Jacksonville, Fla.

Grateful to the Giver of all Good.

In thinking over the Lesson Sermon just past, "Are Sin, Disease, and Death Real?" my heart goes out in loving gratitude to the Giver of all good, who has so wondrously taught us through Science and Health that this triad of error is unreal, powerless, mindless, non-existent. It is revealed in our text-book, that the useless corporeal self, or human will must be sacrificed; after its death and burial comes the affiliation with divine Love and a willingness to follow whithersoever it leadeth. This is the resurrection or the understanding that perceives the power, presence, and potency of Love, the quick intuition that sees error only as an erroneous thought and casts it out.

MRS. LILLIE FRY FISHER, Cincinnati, O.

So long as a man seeketh his own will and his own highest good because it is his and for his own sake, he will never find it; for, so long as he doeth this, he is not seeking his own highest good, and how, then, should he find it?

"Theologia Germania."

Now this love of our brethren is not another from the love of God; it is but the streaming forth of it or the reflection of it.—ROBERT LEIGHTON.

Religious Items.

Among its religious notes, the *Boston Transcript* publishes the following concerning young people's societies in the churches: "There is a general recognition of the fact that young people's societies in the churches have passed their high-water mark. More advanced religious leaders are beginning to ask, What next? Claims of these society officials are as buoyant as ever, except in the case of the Baptist Young People's Union and the Brotherhood of St. Andrew. These two recognize changed conditions; the others make claims of progress, and give figures of growth which apparently substantiate the same. Almost all organizations are changing their convention dates from annual to biennial, and giving every reason except the true one, which is that crowds can no longer be commanded every year.

"Young people's movements in the churches were waves which swept over all religious bodies, the Roman Catholic and Jew included, and like all waves, they pass by. Nobody among the leaders denies that they accomplish great good. Nobody denies either that some form of young people's activity will continue. The situation at the moment is that the old organizations are, without exception, waning, some perhaps more than others, and leaders in the religious world are watching out for something to take their places, or for a development to do the work they set out, with so much of flourish, to do."

The *Universalist Leader* has the following: "That will be a great and notable day, a real day of the Lord, when more people are busy with their own affairs than with other people's affairs. When the rule shall be for people to take so good care of themselves, as to their health, their wealth, and their duties, that no one else will be justified in interference; when that government will truly be best that governs least; when the whole tribe of meddlers, from those who are merely busybodies in other men's matters to those that insist on impressing their knowledge and virtue on an unwilling world, shall find their occupation gone; when, in short, a hint shall be taken from solar harmony, and it is perceived that each body in the social as in the stellar realm, does then most effectually contribute to the harmony of the whole when it keeps to its own path and revolves regularly in its own orbit—then no one will have to go out of business, all will still be employed and needed, because each will have found business enough in minding his own business."

The *Congregationalist* publishes the following extract from a private letter written by a missionary who had just spent a fortnight in Massachusetts: "I think we shall have to go back to Christ's way to win a twentieth-century world. I often wonder how he could have been satisfied to be so slow and old-fashioned—no steam preaching, no fire and thunder oratory, no huge congregations, no quartets, no oratorios. As all forsook him and fled, he didn't seem to deserve the credit of 'many conversions.' But somehow his method lasted. It won the prodigals of that day, and its sphere was large enough for the Lord of glory. He convinced doubters by loving them. Moreover he didn't tell them he loved them, but he lived it out and did it. Jesus' method is just as good to-day. But aren't we quite surprised if any one tries his method?"

The (Baptist) *Standard* says: "For the aged John the essence of discipleship was love. Tradition says that when the beloved apostle was an old man, too feeble to walk or to preach, he used to be carried into the church at Ephesus and repeated over and over the words 'Little children, love one another.' In his epistle he declares that love toward the brethren is the test of discipleship. 'He that loveth not his brother abideth in death.' No matter how much theoretical belief one may have as to the genuineness of the gospel story, no matter how orthodox he may be in his conception of the trinity, the atonement, inspiration, if he does not show love in his life he is not living the Christian life."

A writer in the (Methodist) *Christian Advocate* says: "Fear and terror torment the race of men. This is one of the bitter fruits of sin. This it is that drives peace from the human heart. Fear of pain, of sickness, of loss, of death, holds humanity in bitter bondage. Jesus came to deliver us from fear. His message and the message of the angels to men is, 'Fear not!' 'Perfect love casteth out fear.' Yet many Christians are subject to bondage through fear. They are not yet free. . . . Let fear depart. Be of good courage. There can be no real failure to him who sincerely seeks to do the will of God."

"Dr. Mutchmore, formerly editor of the *Presbyterian*, told once of a good colored man who was engaged in blasting a rock that obstructed the progress of some well-diggers very near his residence in Kentucky. After a fierce explosion that shook the house, the doctor went out to remonstrate against earth-shaking charges, and said to the colored man, 'What are you about? At this rate you will blow us all into the air.' 'Well, boss,' said he, 'I rammed down on that powder a piece of the *Presbyterian*. I wanted to show the folks around yer what Calvinism could do.'"—*The Evangelist*.

In the column devoted to "Young People's Work," the (Baptist) *Watchman* says: "Indifference is an evidence of weakness of character. Strong people have minds of their own. It is possible to win over a strong enemy, but a person of moderation is difficult to deal with. The hardest people to win to Christ are those who are neither very good nor very bad. When you strike a rock you strike fire, but indecision is like a bog. You think you have made some impression, but when pressure is removed the hole is filled up, and everything is the same as before. Do not be a bog."

The (Baptist) *Standard* says: "God has a plan for every life. We are not here to drift through our few years as circumstances may carry us. We are here on a divine errand, with a work to do for God and humanity. The true life is the one which finds what God's thought is for us, and works it out. No better prayer can be offered day by day than that we may be enabled to fulfil God's purpose for our life. Success is not a splendid career in the eyes of the world; success is being and doing what God sent us here to be and do."

The (Baptist) *Watchman* says: "No act has a more decided influence on the formation of character than resistance to temptation. Yielding to temptation has a double effect. The one who yields to evil becomes both worse and weaker. His sin becomes a part of him and he sins more easily the next time, while the one who resists temptation becomes both purer and stronger. Every solicitation to evil successfully resisted raises us into a higher moral atmosphere and makes us to live on a more exalted plane."

Alexander McLaren, D.D., says in the (Baptist) *Examiner*: "If we are really in touch with God, and if our days are passed in any real sense in communion with Him, whether upon the mountain top, as Christ and the three were, or down in the valley trying to cure demons, as was much more permanently the disciples' place and duty, we cannot but be made fair, noble, refined, pure, and have something of celestial light raying out from us."

A writer in the (Baptist) *Standard* says: "There are other graves besides those in which we bury our dead. There are sepulchres in which our hearts' hopes are buried away. But in Christ nothing that is good and lovely can be really lost. The visions of beauty which once hung above your soul, and which you strove to grasp, but which now seem to have vanished and to have been lost—they are not lost; they are in the depths of your soul—yours forever, part of your own being."

In an article on "Dead to Sin: Alive to

Christ," *The Congregationalist* says: "Christ alone furnishes a new interest and a new motive and a new ideal; most of all his own life steals into ours and subtly transforms it. The oak-tree keeps its leaves throughout all the wintry storms and no blast of the north wind can detach them; but let the new sap of the springtime begin to creep up through the trunk and the branches and the faded leaves fall off of themselves."

The Rev. Dr. Cuyler is quoted as saying: "Christ never promises smooth water to his followers. Nor is his church a vast assemblage of tow-boats pulled along by the sheer power of the divine will. Each Christian has his own oar of personal responsibility to pull, and his own rudder of conscience to steer with, and must 'work his passage' as a free agent."

In the following paragraph the (Baptist) *Examiner* asks and answers an important question: "What is involved in the decision to follow Christ? Difficulties in the way. Blessings promised. Dangers from following 'afar off.'"

"Denominational barriers have dwindled till they distinguish rather than divide bodies of Christians of different names, who work side by side to advance the power of God in all His world," says *The Congregationalist*.

Notices.

Rules to be Observed.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

We especially request our contributors to write plainly, and only on one side of the paper.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.	

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTIAS. An illustrated poem,
Single book, prepaid, \$3.00
Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.

MR. KIMBALL'S LECTURE. 33 pp.

HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

THE BUSWELL TRIAL. 24 pp.

THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.

HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna. One copy or more, each, 6 cents; 12 copies to one address, 60cts. Twenty-five copies to one address \$1.15; 50 copies to one address, \$2.25.

Political and Governmental Notes.

General Pearson, formerly an officer in the Boer army, has made an appeal direct to the President in an effort to stop further shipments of horses and mules and munitions of war from American ports to South Africa for the use of the British army. General Pearson recently petitioned the Federal courts at New Orleans to enjoin these shipments on the ground that the use of the port at New Orleans for that purpose was in violation of the laws of neutrality. The court refused to consider the petition on the ground of lack of jurisdiction. The petition was referred to the State Department.

The Cuban constitutional convention met on May 13 to consider the report of the commission that was sent to Washington to obtain more definite information regarding the intentions of the United States government. The report was non-committal, but the members of the commission let it be understood that they favored accepting the "Platt amendment." The report was referred to the committee on foreign relations, a majority of the members of which favor the acceptance of the terms of independence offered by the "Platt amendment."

Minister Wu and Minister Conger have had an agreeable exchange of visits since the arrival in Washington of the American representative. The meetings were purely social. There was no discussion of the political aspect of the present situation in China except in general comment on the difficulties attending an agreement when so many divergent interests were concerned.

Foreign News.

Lieutenant Winston Churchill, the daring young war correspondent who recently made a tour of the United States lecturing on his experiences in South Africa, is now a member of Parliament. On May 13, he made a speech in the House of Commons opposing the proposal to enlarge the army, which was a very able effort. The comment was made by the London *Daily News* that nothing like Mr. Churchill's speech has been heard in Parliament since Gladstone's time, and that the young statesman will one day be premier of Great Britain. Mr. Churchill's father was Lord Randolph Churchill. His mother is an American woman, one of the most popular of the many American wives of Englishmen in London society.

The America's cup challenger, Shamrock II., in its first trial of speed against Shamrock I., the challenger which was defeated by the American yacht Columbia two years ago, failed to equal the speed of the old boat in a good breeze, greatly disappointing the British yachtsmen. The new boat was immediately docked, and the designer set

men to work making alterations in her hull. Unless she can be made to beat the old Shamrock it is not believed that she has any chance against either of the American yachts which aspire to defend the cup.

The historic Plains of Abraham in Quebec are to be preserved for all time as a public reservation. This famous battle-ground was held as part of the estate of a convent, and the city having grown up around the Plains, the nuns had decided to divide part of the plot up into building lots. This decision becoming known, aroused much protest all over the Dominion and resulted in the purchase of the property by the Canadian Government.

It is understood that King Leopold of Belgium has been negotiating with the French Government and financiers for the formation of a project with a capital of \$200,000,000 for creating a vast Belgian and international network of electric railways. The first electric train will run from Brussels to Antwerp, the second from Brussels to Ostend, and a third from Brussels to Paris.

King Edward of England (who was born November 9, 1841), has decided that his birthday shall be celebrated May 24 each year, thus perpetuating the holiday hitherto observed by all the public departments—Queen Victoria's birthday—and giving an impetus to the colonial movement to observe the date as empire day.

The population of the outer ring of the suburbs of London is 2,042,750, as against 1,405,480 in 1891, 950,957 in 1881, and 631,831 in 1871. The total population of greater London, including the outer ring of suburbs, is now 6,578,784.

China has replied to the demand of the foreign powers for \$327,000,000 indemnity, defining the fiscal conditions of the country and proposing to pay \$10,000,000 annually until the whole indemnity is wiped out.

Andrew Carnegie has given \$500,000 to establish district libraries in Glasgow.

Industry and Commerce.

A London newspaper ascribes to a member of the Hardware Club of New York the statement that sixty American iron and coal dealers are interested in a project with a capital of \$50,000,000, to supply all the districts of France, except to the north, with coal. It is intended to improve the port of Pauillac, the mouth of the Garonne, near Bordeaux, and engineers are now engaged in sounding to learn whether the channel will admit vessels of from ten to fifteen thousand tons. Freightage is the chief obstacle, but it is hoped to reduce it by taking back to the United States iron ore from Spanish ports.

The conductors and motormen employed by the company operating the street car lines of Albany and Troy, N. Y., recently struck, and last week there was serious rioting. The State National Guard was called out, and on May 16, a squad of ten soldiers, at the command of Lieutenant J. W. Wilson, fired into a crowd of people that had closed in upon a car they were guarding. Two prominent business men were shot and died later. Neither of them was participating in the demonstration against the soldiers. The strike has since been amicably settled.

Immense quantities of cement are being used nowadays in various ways. In the single instance of Pittsburgh the figures are astonishing. For railway improvements alone more than two hundred thousand barrels have been used there recently. The new union station will need fifty thousand barrels. Lake Erie station used thirty thousand, and the Frick Building will use the same quantity. These with other work will require a total of more than 338,000 barrels.

About \$12,000,000 in dividends will be distributed by the Standard Oil Company to stockholders of record at the close of

business on June 15 next. The declaration of this twelve per cent dividend occurred at a meeting of the directors May 7. So far this year the company has declared a total dividend of thirty-two per cent. The last dividend was declared in March, and meant a distribution of \$20,000,000 of the syndicate's earnings.

The street cars of Oakland, Cal., are now moved by electricity generated on the Yuba River, one hundred and forty miles distant, a current of forty thousand volts being transmitted with a loss of not more than five per cent. This fact is symbolical of a new era in the history of the race, which bids fair to make the age of steam seem to future generations as the age of stone does to us now.

It is reported from Duluth, Minn., that steel manufacturers outside the Morgan combination have awakened to the fact that nearly all the best Bessemer ore mines around Lake Superior have been monopolized, and there is a scramble for the remaining properties which has stimulated prospecting and development to a degree never known before.

Conservative wheat growers estimate that the wheat yield in Kansas this year will be 100,000,000 bushels, an increase of 23,404,557 bushels over last year. The conditions are better than they were a year ago, and the wheat averages twenty per cent better. The farmers expect to receive at least fifty cents a bushel.

General News.

A New York mechanical and electrical engineer has perfected and now has patents pending for an apparatus for the transmission of optical images in colors. The device will be known as the teloptoscope. The alleged principle on which it works is this: The transmitter is focused upon the optical image to be sent. The luminous rays are transformed into electric currents and sent to the receiving machine over an ordinary electric circuit. The variations of the beam of light at the receiving station correspond to the light and shadow at the transmitting station. The picture so received will be in one color, but by an arrangement of three colored screens the apparatus will be made to reproduce the proper tints. If it is desired to photograph the view reproduced all that is necessary is the placing of a dry plate on the receiver. By this means photographs may be taken in any part of the world of objects in any other part.

The most remarkable hotel in the world is that situated in the Parisian sewers, almost immediately beneath the Madeline Church, and which is patronized exclusively by the municipal scavengers. Entrance to it can only be had dry-shod at certain hours. At all other times a boat has to be employed. The interior is singularly neat and clean, despite the noisomeness of the surroundings, and between sixty and seventy breakfasts and dinners are served therein daily. There are also provided three beds for the use of the night watchmen who patrol the great main drain which runs tunnel-wise beneath the gay city. The hotel constitutes a sort of annex to this monster drain pipe, and has been excavated, at infinite labor, out of the solid limestone rock which here constitutes Paris' foundations.

It was announced last week that the America's cup committee of the New York Yacht Club had decided that the Boston yacht Independence, built by Thomas W. Lawson at an expense of nearly \$250,000, is ineligible to compete in the trial races in July for the privilege of defending the cup against the British challenging yacht Shamrock II. The reason for barring out the Independence is said to be the fact that Mr. Lawson is not a member of the New York Yacht Club.

The degree of doctor of laws was conferred upon President McKinley by the University of California during his recent visit to the Pacific coast.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, WATCH." *Jesus.*

Natural Time Teller.

Primitive Methods Adopted by the Ancients.

THE well-known words, "The shadows lengthening as the vapors rise," probably express man's earliest notion of measuring time, says the *London Standard*. They indicate the germinal idea of the sundial. The subject is full of interest, and leads into many curious by-paths of learning. Who made the first sundial is lost in the mists of antiquity. Charles Lamb, perhaps, went too far in saying that "Adam could scarce have missed it in Paradise;" but men must soon have found out how to use the sun as a kind of time-keeper. But the sundial was known to the two most civilized races of ancient times, the Chaldean and the Egyptian. Herodotus tells us that the Greeks obtained their knowledge of the gnomon; viz., of the principle of the dial, from the former people. That, of course, is little help in fixing an exact date, for recent discoveries tend to put the origin of Greek civilization several centuries earlier than used to be supposed.

The dial of Ahaz was probably copied from Assyria, for wise men of the East doubtless watched the stars many a long century before the Christian era, and there is no reason why they should not have discovered the principle of the sundial, even when the elder Sargon reigned in Agade, some fifty-seven centuries ago. Egyptian monuments and hieroglyphics, so far as they have been deciphered, are not much more helpful than the monuments of Chaldea. The earliest dials found in the Nile valley are of Greek work, and little more than nineteen centuries old, but we may feel sure that the "wisdom of the Egyptians" included a fair amount of practical astronomy, and that the men who could build the Pyramids would be capable of devising some kind of sundial.

The dial may be made after more than one pattern. The Arab, when he sticks his spear upright in the sand to learn the time of day from its shadow, illustrates the rudimentary idea. But that, though a ready, is an inexact method. In dials of more scientific construction, the majority may be subdivided into those where the shadow of the gnomon falls either on a curved surface or on a plane.

How the dials are mounted, provided the position be rightly ascertained, is a secondary matter. Sometimes they are quite small, and can be carried about like a watch; though, of course, they are much less easily consulted, and only accurate in a particular latitude. More commonly they are fixed and often large. To some, a monumental character is given by mounting them on pedestals, often elaborately designed, but very many are simply attached to the face of a wall.

Many are mounted on pillars—appropriately when we remember the ancient relation of these to sun-worship—and one is on the slope of a buttress. Some like this, and a small cylindrical one carved on the face of a tombstone, are hollowed out; "facet-headed" dials where several plane surfaces are cut on a block of stone, each of which is fitted with a gnomon, are also known; others are shaped as crosses

or stars. In fact, while the principle is one, the construction admits of many modifications.

These complicated sundials seem specially characteristic of Scotland and the northern parts of England. In the former country they are, comparatively speaking, frequent. Indeed, the Scotch dials are so remarkable as to have already received attention from Messrs. McGibbon and Ross, who have described no less than two hundred and thirty instances in their book on "The Castellated Architecture of Scotland." The latter authority makes four independent types of detached dials—the obelisk, the lectern or sloping dial, the horizontal, and the facet-headed.

In towns the dials are often supported by tapering shafts, mounted on steps—taking the place of the old market cross, some of them, perhaps, constructed from it when the "idolatrous" emblem had been removed. The more ornate specimens belong often to the seventeenth or earlier part of the eighteenth century, and great ingenuity is displayed in varying the designs. One from Haddington might be taken for a font. At Lee Castle, in Lanarkshire, and at Mount Melville, near St. Andrews, faceted dials are mounted on ornamental pedestals, but the richest of all is at Glamis Castle. Standing over seven yards in height, with its pedestal adorned by upright lions, bearing shields, it supports a great block of stone cut into many projecting pyramids, and from it rise ribs forming an open crown, on which rests a coronet. The monument fairly bristles with dials—they are fitted on each shield and facet, which can serve the purpose, so that if a multitude of counsellors is any good, the time should be truly told. This "perhaps the most beautiful dial which the world can show," was set up between 1647 and 1695.

Some even of the vertical dials are more ornamental than usual. These are two-faced, and as they project from the wall are supported by brackets. Heriot's Hospital is well provided, for there are eight on its exterior walls and three inside the courtyard. These were constructed soon after 1630. An ornate one at Alloa is dated in 1695. But the making of dials went on much later, though it is being expelled by cheap clocks and watches, as flint and steel have been by lucifer matches.

The schoolmasters often taught "dialing"—Robert Burns learned it in his boyhood—and the stonemasons carried the lessons into practice. A dial made by Hugh Miller still stands at Cromarty. There is a famous one at Chartres Cathedral, held by an angel figure; another at Laon, a third probably existed at Rheims. They are not, however, confined to cathedrals or cities, for they exist on humble churches in tiny villages, even in the remotest parts of the high Alps of Dauphiné. The inscription of one placed on the Chateau of Nevers during the Revolution may be read stating that the sun moved by order of the Convention. Dials are also abundant in Italy; they are less frequent in Spain, but are common in all parts of Germany, where Nuremberg was once noted for portable examples, and in Scandinavia. They exist in Asia, and the great equatorial dial at Delhi constructed in 1724 is one of the most famous in the world.

A dial frequently bears a motto to point a moral. Of those not in the vernacular, many are in Latin. Greek is but rarely, Hebrew almost never, laid under contribution. Now and again the inscription forms a kind of cryptogram, giving the date by certain of its letters, which are made larger than the rest. Time is flying, death is approaching, is, in some form or other, a favorite and obvious maxim. Now it is conveyed by a single word, "Adevesperascit," "Evening draweth nigh;" now by two, "Appropinquet Hora," "The hour cometh;" now by three, "Aspice, Respice, Prospice," "Look at, look back, look forward;" now by words enforcing the general truth, "As a shadowe so man speedeth," "Make use of the day, for the night cometh."

Once or twice the terms are curt, as when it is simply "Allez-vous," or at High Lane, near Disley, "Begone about your business," or slightly pessimistic, as is the noted inscription at Ashcott, in Somerset,—

Be the day weary, be the day long,
Soon shall it ring to even-song.

Leighton Buzzard Church echoes a similar note, "Brevis zetas, vita fugax." More hopeful is "Crescit in horas doctrina," and "Crepusculum mens nesciat" expresses a wish that every one will echo. Not infrequently the dial draws a moral from its own dependency. "Datam do nego negatam," probably is intended in more than one sense. "Deficit sol, nemo respicit" certainly is so; "Deus movet, umbra docet" has a far-reaching significance; so, too, has "Ho la vita nella luce, la morte nelle tenebre," or that at Uppingham, "Non rego nisi regar." Did space allow, many striking phrases might be quoted from the mottoes, nearly seventeen hundred in number, which the authors have collected. Rarely sarcastic or Epicurean, often pathetic, most of them enforce a lesson similar to the one given by this translation:—

Never returning
Hours glide away.
Thou, through much yearning
Canst not delay.
Laboring learning,
Spend thou the day.
Indulgence spurning
Watch thou and pray.

Boston Transcript.

Pan American Stamps.

IN a recent number of the official *Postal Guide* the third assistant postmaster general gives notice that the Pan-American series of postage stamps will be ready for delivery to postmasters, "the latter part of April." These stamps were ordered by the postmaster-general at the instance of the authorities of the Pan-American Exposition, to be held in Buffalo from May to November, 1901. These series will include six stamps, and these will be, according to the statement of Edwin C. Madden, the third assistant postmaster-general, "the most artistic series ever issued from the department."

The denomination, subject, color, etc., of each stamp are officially described as follows:—

- One cent, lake steamer, green, fast lake navigation.
- Two cent, railway train, red, fast express.
- Four cent, automobile, red brown, automobile.
- Five cent, steel arch bridge, blue, bridge at Niagara Falls.
- Eight cent, ship canal locks, lilac, canal locks at Sault Ste. Marie.
- Ten cent, ocean steamship, light brown, fast ocean navigation.

The stamps are of uniform dimensions, .76 by 1.06 of an inch, the longer side being horizontal. The borders take the colors of the regular series on the same denominations at this date. The words "Commemorative series, 1901," and "United States of America" next below appear,

above the vignette; the legend in a line next below the central opening, with the denomination in a line at the bottom, appears in the same order on all stamps of the series. All the lettering is in white Roman capitals. The numerals are all white-faced Arabic in the Roman type except the ten cent, which is the block letter type of figure condensed to secure space for the two figures. The borders are well separated from the central pictures, and the words of denomination at the bottom are preceded on the same line by the word "Postage." All the central illustrations are from photographs as the objects represented appear to-day, and are to be printed in black.

One Cent—The lake steamer presents the port bow, the pilot house is well forward, and it is propelled by side wheels.

Two Cent—The train of four cars is drawn by a locomotive with four drivers; four parallel tracks are shown.

Four Cent—The automobile is of the closed coach order, with two men on the box and a part of the United States Capitol at Washington as a background.

Five Cent—This presents the largest single span steel bridge in the world; two trolley cars are seen upon it, and a full view of Niagara Falls is shown under, beyond, and up the river, with the graceful springing arch as a frame.

Eight Cent—The great ship canal locks at Sault Ste. Marie, Mich., are given in a view from a higher point, including the immediate surroundings.

Ten Cent—An ocean steamship of the American Line, with two smokestacks and masts, presents its starboard bow lapped by a rising wave.

Wonders of Watchmaking.

Among the treasures of a Swiss museum, inserted in the top of an old-fashioned pencil case, is the tiniest watch ever constructed. It is only three-sixteenths of an inch in diameter, and its little dial not only indicates hours, minutes, and seconds, but also the days of the months. So perfectly formed is this liliputian watch that it keeps excellent time and is a marvelous piece of mechanical workmanship.

Two of the most elaborate and curious watches which the world has ever seen belonged to Queen Elizabeth and her unfortunate contemporary, Mary, Queen of Scots. Good Queen Bess had a watch made for her in the form of a duck, with beautifully chased feathers, the lower part of which opened. The face was of silver, with an elaborate gilt design, and the whole was kept in a case of brass, covered with black leather thickly studded with big silver knobs.

The ill-fated Mary was the possessor of a watch in the form of a skull. The dial was introduced where the palate should have been, and the works occupied the place of brains in the cranium. In the hollow of the skull, moreover, was a bell which had works of its own and by means of which a hammer struck the hours upon it.

One of the choicest rarities of the Bernal collection was a book shaped watch. This curious time indicator was made by order of Bogislaus XIV., Duke of Pomerania, in the time of Gustavus Adolphus. On the face of the book, where the dial of the watch is set, there is an engraved inscription of the duke and his titles and armorial bearings, together with the date, 1627. On the back the engravings are also very finely and skilfully executed, among them being the portraits of two gentlemen of the seventeenth century. The dial plate is of silver, chased in relief, while the insides are beautifully chased with figures of birds and foliage. The watch has two separate movements and a large, sweet-toned bell. At the back, over this bell, the metal is ornamentally pierced in a circle, with a dragon and other devices, while the sides are pierced and engraved with a complicated design of beautiful scroll work.

London Tit-Bits.

The Lectures.

At Spokane, Wash.

Dr. A. A. Sulcer, C.S.B., lectured at the Auditorium Sunday afternoon, May 5, before a large and interested audience, his subject being "Christian Science Applied." Very close attention was given the speaker who delivers his lecture in a most convincing manner.

Dr. Sulcer was introduced to the audience by Ex-Judge Eugene Miller of this city, who spoke in part as follows:—

Ladies and Gentlemen:—The committee has asked me to make some remarks and introduce the lecturer you have come to hear, Dr. Sulcer of California, whom the Christian Science Church of Spokane has invited here to lecture upon Christian Science.

You and I have probably heard unkind criticisms of Christian Scientists, that should not have been made, that prejudiced us against them, and that may have been uttered through ignorance and without intent to be unjust; and it is well for you and me that we may hear of Christian Science from one who is authorized to speak, so that we may not again be unfair, even in our thoughts.

Dr. Sulcer, the lecturer you have come to hear, whose home is in California, is one of the twelve official lecturers of the Mother Church of Scientists in Boston, and you can depend upon what he says being in harmony with the principles of Christian Science. He was for more than a quarter of a century a practising physician of the old school, or regulars, and I understand that he enjoyed a large practice. For seven years past he has been a Christian Science healer, and he may give you a chapter from his interesting experiences.

What is man? Why is he? Whence came he? Whither goes he? What is matter? What is Mind? What is Soul or Spirit? What are the relations of Mind, Soul, and matter to each other? What is life? How can we make the most of it?

These questions are of more importance than any that have engaged the attention of the mind of man since the morning stars first sang together for joy over this newly created world. And if this esteemed lecturer can give us light upon any one of these questions, you and I will be under obligation to him, and to the Christian Science Church for inviting him here to lecture.

It has been said by some one, who must have been misinformed, that Christian Scientists do not read the Bible. I know only a little of Christian Science, but from that little, I am satisfied that no one can be a good Christian Scientist without being a reader of the Bible, if not, indeed, without being a constant student of the Bible. The Christian Scientists believe in the Ten Commandments, and in the two new commandments of Jesus the Christ, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, . . . and the second is like unto it, Thou shalt love thy neighbor as thyself." These last two are enough for the foundation of a good religion. A good Christian Scientist constantly strives to harmonize his life with the Ten Commandments and with these last two commandments, on which hang all the law and the prophets.

You remember that beautiful thirteenth chapter of First Corinthians, where Paul speaks of charity, meaning love. That short chapter of thirteen verses is enough to form the basis of a good religion. The Christian Scientist believes in that kind of love, and tries to harmonize his life with the teachings of that chapter. You remember that beautiful Sermon on the Mount, containing the Beatitudes. That sermon is enough for the foundation of a good religion. A good Christian Scientist strives continually to harmonize his life with the teaching of that sermon. I understand the Christian Scientists believe the entire Bible, from

the first of Genesis to the last of Revelation. Of course they put their own construction on the Bible, as do the Methodists, the Baptists, the Episcopalians, the Presbyterians, and about every other church.

For several months I lived in a home where one of the household was a Christian Scientist, and I assure you that no harm came to that home from the Christian Science teaching or influence, but on the contrary, the influence was only for good, and helped to make the home better and happier.

I intended to say a word of the Christian Scientist Church in Spokane. The church proper was organized about five years ago, but nine or ten years ago a nucleus was formed of a small band, a faithful few, who with deep faith and strong courage met together. To-day the church has ninety-nine members. They have services every Sabbath, with an attendance of about two hundred and fifty. They have a Sunday School, and in mid-week they have an evening meeting.

From what I have seen and heard I can say that the lives and characters of the Christian Scientists of Spokane commend their Christian teachings. Some of the sweetest, purest, noblest characters, both men and women, in the intelligent city of Spokane, are Christian Scientists, striving earnestly and sincerely to make life brighter, better, happier, and more holy.

I do not say to you that their system is true. I do not know the A B C of Christian Science. I do not say to you that Mrs. Eddy's book, "Science and Health with Key to the Scriptures," is true; I have read only a part of it. But if their beliefs are true, they form the most beautiful, and the sweetest flower and fruit of the nineteenth century,—yes, the most beautiful and the sweetest that has blessed humanity since the advent of Christianity, ushered in by the lowly birth of the Babe of Bethlehem.

But you must pardon me for saying too much; I am for a moment only the forerunner of the eminent lecturer upon Christian Science whom you have come to hear. Ladies and gentlemen, I have the honor and the pleasure of introducing to you Dr. Sulcer of California.

Correspondence.

At Minneapolis, Minn.

A large audience gathered at the Lyceum Theatre last night (Thursday, April 11) to hear Judge William G. Ewing of Chicago deliver his lecture on Christian Science under the auspices of Second Church of Christ, Scientist.

Judge Ewing was introduced by Abbot Edes Smith, who said:—

In the eighth century before the Christian era, the greatest of the Hebrew prophets proclaimed: "He will destroy in this mountain the face of the covering cast over all people, and the vail that is spread over all nations." In fulfilment of this prophecy, Jesus came to tear down the veil which had long darkened the spiritual perception of mankind, to pour the light of Truth upon God's Word revealed in the Old Testament, and to show the way to that understanding of God's law—the supremacy of Good and the powerlessness of evil—which, as our Master expressly taught, always enables any one who understands this law and who lives a life of purity and self-sacrifice, to destroy evil, whether it be mental, moral, or physical—to heal the sick and to reform the sinner. Jesus' command "Preach the gospel," was always accompanied by his other command, "Heal the sick."

During the persecution of the early Christians which continued for many generations after the crucifixion of Jesus, his followers of necessity forgot self entirely, and joyfully sacrificed even life on the altar of Truth. They followed closely both the letter and the spirit of Christ's teachings, and their preaching and their healing went hand

in hand. Their only test of fellowship was Jesus' test: "He that believeth on me, the works that I do shall he do also." When Christianity became the established religion, this simple and practical test of the inspired word was found too severe, and in its place was substituted the intellectual acceptance of a man-made creed. The same veil as of old had again come between God's Word and the people.

After centuries of spiritual darkness, arising from a merely partial acceptance of Christ's Gospel, the prophecy of Isaiah has been fulfilled a second time by the Discoverer and Founder of Christian Science. The mission of this new messenger from God has been to lead men back to the primitive Christianity of Jesus in all its simplicity and in all its complete and practical efficiency. To-day Christian Science repeats and emphasizes Christ's double command, "Preach the gospel. Heal the sick."

The lecturer of the evening is a member of the official Board of Lectureship and speaks under the auspices of Second Church of Christ, Scientist, of this city. Although an introduction is not necessary for one who has once before, under similar circumstances, ably addressed a Minneapolis audience from this platform, and who is well and favorably known as formerly United States district attorney for Illinois and as judge of the Superior Court of Cook County in that state, I take great pleasure in presenting to you William G. Ewing of Chicago.

The Minneapolis Journal.

At Beloit, Wis.

Several hundred people went to the Opera House Sunday afternoon (May 5) and listened attentively for an hour and a half to Judge William G. Ewing of Chicago, member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston. Among his hearers were gathered people of many religious beliefs, but all gave a respectful and interested hearing to what he had to say.

The speaker was introduced by Prof. E. G. Smith who, as he said, was not of the Christian Science faith, but had accepted the invitation to introduce Judge Ewing because of his reputation as a lawyer and a Christian.

Beloit Daily News.

Professor Smith's introductory remarks were as follows:

Friends:—I was asked a short time since by one of the representatives of the Church of Christ, Scientist, of Beloit, if I would come here this afternoon and present the distinguished Judge Ewing, who is to address this audience. I am very glad of the opportunity which has thus come to me, though I am not a member of the congregation of this Church.

I am, I trust, while not a member of this congregation, a scientist, and one who is a Christian; one who has devoted his life to science work, engaged along one of the various lines of investigation in which God is revealing His great and glorious truth to us; and who is doing that work with the spirit of one who looks not alone to the work from day to day, of carrying out the investigation of truth, but also as one who endeavors from the heart to interpret the law of God as revealed to us in the light and in the greatness of Christ.

It is to me a matter of deep regret that there are lines and differences between men; differences of opinion which may lead us, some one way and some another, in the understanding and in the interpretation of divine truth. But all truth is one, and all interpretation should be one, and what slight differences do exist here upon earth are differences of human interpretation.

I therefore come, my friends and citizens and members of the Church of Christ, Scientist, and members of our different congregations, I therefore come here gladly this afternoon, to sit with you at the feet of the teacher that

he may unfold to us the thought and purpose of the society which he represents. Knowing him by reputation as a man so distinguished in the life which he has led, which life he left to become a teacher of Christ to men, I feel that nothing could be more appropriate than to come to this place on a Sunday afternoon and learn of Christ.

I have the pleasure of presenting to you, this afternoon, our distinguished friend, Judge William G. Ewing.

Correspondence.

At Peoria, Ill.

There was an interesting and instructive lecture delivered in the Grand Opera House last evening (Friday, May 10). The speaker was Mrs. Annie M. Knott of Detroit, and her subject was Christian Science. Mrs. Knott is an official representative of the Board of Lectureship of the Christian Science denomination. Her address was a very able and well delivered one. The lady was introduced by Prof. N. C. Dougherty, city superintendent of schools, who said:—

The American people in commercial life believe in an open door for commerce, and the American government is ready to support at any time the belief of the people. The American people also believe in an open mind, a mind which is ready at any and all times to receive the truth from whatever source. The true American realizes that only the growing man is a happy man, that when physical growth of stature stops, if the individual be happy he must continue to grow intellectually and spiritually, hence the true American ever lives in the hope of knowing more to-morrow than he does to-day. He believes that new ideas of truth and new conceptions of duty will come to him whose mind is ever open to their coming.

We meet to-night to hear an exposition of that new school of philosophy known as Christian Science. I say new, because it has been emphasized recently, but I suppose it is as old as Christianity itself. All of us believe in science, and most of us wish to be Christians. Doubtless there are many of us who do not understand the teachings of this church, and who are doubting Thomases, among whom I must class myself.

We wish to put our fingers into the prints of the nails before saying "My Lord and my God," but we all have open minds and hearts, anxious to know the truth, and we are especially favored in having the truth, as seen by these people, presented to us by a member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., Mrs. Annie M. Knott.

Mrs. Knott was fair and liberal to those who do not agree with her, and her estimate of medical men was generous from the standpoint of those who do not accept the medical ethics of the day. There was a fair attendance, and the keenest interest was manifested. The lecture was one of the most instructive ever delivered on the subject of Christian Science in this city or section of the state.

The Peoria Journal.

At Freeport, Ill.

Judge William G. Ewing, the well-known Chicago jurist, delivered a very interesting and instructive lecture last night (Monday, May 6) at the Grand Opera House, his subject being Christian Science. The threatening weather, we presume, prevented many from attending, but those who were there were more than compensated for the effort.

Judge Ewing is a pleasing speaker, and there can be no question of the man's absolute sincerity. If his words did not carry conviction it was not for any lack of frankness, or any attempt on the part of the speaker to be other than perfectly fair in the treatment of his subject. He spoke without the aid of manuscript, and in an easy, conversa-

tional style. A wide vocabulary and a comprehensive grasp of his subject were apparent throughout his discourse.

The speaker was introduced by General Smith D. Atkins, editor of the *Journal*, who spoke as follows:—

It is not for me to speak of Christian Science. The distinguished gentleman whom I will soon introduce will do that. Without specifically endorsing, and by no manner of means in the slightest degree condemning Christian Science, the latest, most modern development of Christian faith and practice, I can, and I do, most cordially endorse the many ladies and gentlemen of my acquaintance who believe in it as sincerely as any Christians in any age of the world have believed in the Holy Bible. Christian tolerance is also a development of modern times. There should be, and there is, plenty of it in Freeport, where thirty church spires, Catholic and Protestant, all point in the same direction. Years and years ago, when the banner of the Crescent went down before the banner of the Cross in the holy wars in Europe, the soldiers of the Cross captured a Turk, a soldier of the Crescent, and besought him to renounce his own religious faith, and adopt that of his captors, but the Turk replied,—

Oh, love thy faith, but hate not me for mine,
Which had, had'st thou been born a Turk, been thine.

I am so tolerant of the religious faith of others that I believe the followers of the Crescent, equally with the followers of the Cross, may rest securely in the hope of happy immortality beyond the shining stars. Judge William G. Ewing of Chicago, is an earnest, intelligent gentleman, who has made a critical study of Christian Science. He sincerely believes in it. He will tell you why. I have the pleasure of introducing Judge Ewing.

Freeport Daily Journal.

At Richmond, Ky.

The citizens of Richmond, or such of them as chose to embrace the opportunity of hearing the eloquent and fluent speaker, enjoyed a rare treat Sunday afternoon (April 28) in hearing Judge Ewing of Chicago in his talk of an hour and thirty minutes on the subject of Christian Science. The Judge was introduced to his large and appreciative audience by Hon. W. B. Smith, who in his most felicitous manner brought distinctly before the assembled multitude the subject of the lecture and the speaker.

Richmond Register.

Mr. Smith's introductory address was as follows:—

My Friends:—We have had the pleasure of hearing many lectures in this house on all subjects: political, scientific, and literary; but we are here this afternoon to listen to a distinguished lecturer on a subject greater than all of these, in fact it includes them all. Some propositions advanced, we agreed to, some we did not accept, and I am glad we live in a country where we can differ, and where we can meet as we have met here to-day, and listen to what can be said on the subject presented. We must not judge without hearing, and we must not only hear, we must listen.

Judge Ewing comes to-day on a mission worthy of the clearest and best thought, and he advocates that in which we are all deeply interested, and if he is right, we should accept what he says, and then act; if he is in error, then we can reject, and let it go. We should not, and we cannot afford to be careless and indifferent to what he advocates. He is the representative of a large and intelligent body of people, and he is one of the ablest and best expounders of their views. I believe he will now give us a full and fair presentation of the belief of the Christian Scientists. Hear him for his cause. "Prove all things; hold fast that which is good." I take pleasure in introducing to you Judge Ewing of Chicago.—*Correspondence.*

Notices.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads June '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for July, August, and September.

Remittances

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

The Church Manual.

The Church Manual of The First Church of Christ, Scientist, in Boston, Mass., contains the By-laws of the Mother Church, also a list of members.

Address all orders and make remittances payable to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Applications for Membership.

Applications for membership with the Mother Church to be presented at the June meeting for the admission of applicants, must be in the hands of the Clerk on or before May 20, 1901.

A Word to Inviters.

Inviters of applicants to membership with the Mother Church will confer a favor on the Clerk and save disappointment to the applicants if they will withhold, until after the semi-annual meetings, all applications that have been sent to them for their signature too late to reach the Clerk before the date for the closing of the entries for admission, and also notify the applicants that their applications have been retained.

All applications should be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

It is not correctness of opinion that constitutes rightness, but that condition of soul which, as a matter of course, causes it to move along the lines of truth and duty—the life going forth in motion according to the law of light: this alone places a nature in harmony with the central Truth. It was in the doing of the will of his Father that Jesus was the son of God—yea, the eternal son of the eternal Father.

Nor is this to make little of the Truth intellectually considered—of the *fact* of things. The greatest fact of all is that we are bound to obey the truth, and that to the full extent of our knowledge thereof, however *little* that may be. This obligation acknowledged and *obeyed*, the road is open to all truth—and the *only* road. The way to know is to do the known.—GEORGE MACDONALD.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Mrs. Eddy's Successor.

In a recent interview which appeared in the columns of the *New York Herald*, the Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science, stated that her successor would be a man. Various conjectures having arisen as to whether she had in mind any particular person when the statement was made, Mrs. Eddy gave the following to the Associated Press, May 16, 1901:—

"I did say that a man would be my future successor. By this I did not mean Mr. Alfred Farlow nor any other man to-day on earth.

"Science and Health makes it plain to all Christian Scientists that the manhood and womanhood of God have already been revealed in a degree through Christ Jesus and Christian Science, his two witnesses. What remains to lead on the centuries and reveal my successor, is man in the image and likeness of the Father-Mother God, man the generic term for mankind."

Pertinent Testimony.

It is very gratifying to all Christian Scientists, to note the number of competent witnesses who are voluntarily offering their testimony in refutation of mis-statements and misrepresentations which, through ignorance or prejudice, have been made of our faith.

That ignorance, so dense as to seem quite inexplicable, is for the most part responsible for this unfavorable criticism, appears in the fact that much of it emanates from good, well-meaning men, ministers and others, who very largely stand for opinions and convictions which, in their beginnings, suffered the same kind of contumely and opprobrium at the hands of the then dominant conventional faith.

Christian men whose fathers were called to endure misjudgment and aspersion, if not persecution, are not likely to speak ill of the sacred convictions of those whom they know to be honest and sincere, nor will they misrepresent and calumniate a faith or movement which they know to be unselfish and philanthropic, even though they cannot give it their personal endorsement.

They often do *misjudge*, however, because they entirely misapprehend the facts, and their great mistake is manifest in their failure to fully acquaint themselves with these facts, through personal touch with those who are entirely competent to instruct them.

It is altogether safe to say that the concept of Christian Science entertained by the majority of its critics, is entirely worthy of the condemnation to which they subject it, and if they would but open their eyes and understanding to the facts, they would discover that Christian Science stands for the antipodes of what they have thought it to be. Provision has been made in our publications, the Board of Lectureship, etc., for a dignified response to all candid and

honest inquiry respecting Christian Science, its faith, its endeavor, its aspiration; and we are fortunately relieved from the necessity of replying to not a little caviling and denunciatory criticism by the fact that public indictment which is unjust and unkind is invariably self-defeating. Whenever and wherever it is expressed, there at once arises a protest which will be heard, and in the end the Truth will be learned and the right maintained.

All Christian Scientists will appreciate and be thankful for the kind corrective word, the appeal to a true ethical standard, which is not infrequently made by those who may place themselves under a recognized, though temporary, disadvantage thereby.

Mr. Van Doren's address which appeared in a late number of the *Sentinel*, and the following earnest appeal for fair judgment, from the pen of B. O. Flower, illustrate our thought.

Mr. Flower is one of the editors of the *Arena*, and in a review of "Christianity in the Nineteenth Century" by Rev. George C. Lorimer, which appeared in the May number of that journal, he says:—

"In order justly to judge or criticise a system or theory, it is necessary to study not only its teachings but also the influence it exerts on the lives of its adherents. This fact was admirably emphasized by the distinguished rector of Trinity Church, Boston, the Rev. E. Winchester Donald, at a recent Episcopal Church Congress, when he insisted that in order properly to judge Christian Science one must know something of the work that the new belief was actively accomplishing and of its influence upon the people who accepted its tenets. And this is very true. One need not be a Christian Scientist to appreciate the wonderful work for righteousness now being wrought by the new religious fellowship that is so rapidly spreading throughout the English-speaking world. I am thoroughly convinced that in the city of Boston there is no Christian church where there is more of the enthusiasm for humanity, more of the love spirit that Jesus laid so much emphasis upon, more of the earnest striving to live the Christ life, and more of vital faith in the power of God than in this church.

"There are to-day hundreds, if not thousands, of men who were drunkards and libertines, but who under the influence of Christian Science have been completely turned from their evil ways and who are now evincing much of the enthusiasm manifested by the early Christians in working for the salvation of others. Christian Science lays its chief stress on the life. The healing of disease it teaches, as did Jesus Christ teach, is a sign of the power of the truth. Now, it is probable that at least seventy per cent of the several hundred thousand members [adherents] of Christian Science Churches to-day in America were cured of diseases after the regular profession had given them up as hopeless, or at least had failed to cure them; and through the restoration of health these persons have become interested in a vital way in religious thought and truth. Like the blind man in the Bible, they are unable to sympathize with the wrath of the Pharisees at the unorthodox cure, and they turn to the new belief with the enthusiasm that marked the early Christians, before the church became rich, conservative, and corrupt. Healing, as taught by Christian Scientists, occupies a place quite subordinate to that of man's right relation to God and to his fellow-men. Indeed, they teach that health is incidental to the right thinking and living born of the understanding of the Truth. The fact that through the materialism and corruption of the Christian Church she has lost the gift of healing, however, makes it necessary to lay more emphasis on this than would otherwise be necessary. This much I say in common fairness to Christian Science—a belief whose tenets I do not hold, but of whose work I am cognizant through actual knowledge and personal investigation."

What Christian Science Means.

CHRISTIAN SCIENCE does not mean that we shall lead lives of indolence and ease. It means that we are called to *work* in the Master's vineyard. "Work out your own salvation" was the apostle's injunction, and this means much to the man who has learned *how* to work, how to apply the Truth of being to the many and varied experiences of daily life. The joy of working, the satisfaction of work well done, is a sufficient reward, and he who has caught but the faintest glimpse of his real identity as a child of God, is content to labor and to wait.

Christian Science does not mean that we shall have no battles to fight, no temptations to meet, no burdens to carry. But it does mean that by reason of our higher and more spiritual thought of God and man, we shall be able to wage a more successful warfare, and that, in every experience, we shall come off more than conquerors if we are faithful to the divine Principle of our being and consistent in the application of the rules of Christian Science. We shall not only master the error that confronts us, but we shall also gain a higher and broader thought of life and its joys as well as a clearer sense of its responsibilities.

Christian Science means that we shall be able to speak to error with authority because we understand its nature and origin. We shall be able to say, Get thee behind me, Satan; thus overcoming temptation instead of yielding to it. We shall demonstrate that sin has no power over the man whom God created in His own image and likeness, and to whom was given dominion over all the earth. Christian Science means that we shall know that God's grace is sufficient for us at all times and under all circumstances. We shall not be tempted, or tried, above that we are able, but in the darkest hour the sunlight of God's love will burst upon us, revealing the way of escape. Strong in the strength which God supplies, we shall be able to bear our burdens, heavy though they may seem at times, until we are able to lay them down through the understanding of Truth and Love.

Christian Science means that we shall know in whom we have believed. Because blind faith is not sufficient to meet the demands of the present, we shall receive an enlightened understanding which will point out the right path and enable us to walk therein.

Christian Science, then, is a call to action. It requires that we put on the whole armor of God; the girdle of Truth, the breastplate of righteousness, the sandals of peace, the shield of faith, the helmet of salvation, and the "sword of the Spirit, which is the word of God." Protected by our heavenly armor and equipped with the weapons which God has provided, we must "fight the good fight of faith, and lay hold on eternal life."

Among the Churches.

Pleasant Reading Rooms at Minneapolis, Minn.

The need of more suitable quarters for the literature of Christian Science and a commodious place in which it may be investigated and studied has resulted in the admirably arranged and attractive rooms of First Church of Christ, Scientist, in the Andrus Building. These rooms are planned primarily for reading purposes, but also serve as social and business headquarters for the church. They are in charge of Albert P. Myer and Miss Ella Shaser.

Although the rooms have been occupied for several weeks, they were not formally opened until yesterday (Friday, May 3), when a large general housewarming reception was held, both afternoon and evening. Hundreds of guests passed through the rooms, admiring their handsome appointments, fine location, and conveniences. The purpose of the reception was to make known to all the members

of the church and their friends the advantages of the rooms, and to promote acquaintance and pleasant social relations among the members.

The suite consists of four rooms. The principal entrance is into the reception-room, which is in mahogany and green. The rugs and draperies are in cool, restful green tones, and the large mahogany davenport is upholstered in a soft green figured brocade. Terra cotta is the prevailing color of the reading room, and the furnishings are in plain and massive Flemish oak, the long reading table piled with books being the chief feature. Each of the chairs is of an individual pattern, and a large coat rack is decorated by pyrography in a bold and effective design. The rugs of this room and the two small retiring rooms adjoining are in a deep red. Several of the chairs are upholstered in red leather, and the curtains are terra cotta and green madras. A portrait of Mrs. Eddy occupies a prominent place in this room, and other pictures on the walls are a Sistine Madonna, Hoffman's "Christ in the Temple," "Christ in Gethsemane," and "Christ at the Home of Mary and Martha." Several of the pictures in this and the other rooms are gifts.

One retiring room is connected with the reading room by an archway in which are hung heavy draperies. It is flanked by mahogany pillars with elaborately carved capitals. One side of the room is filled with a high Flemish oak settle, upholstered in green and filled with bright cushions. Green silk and net curtains soften the light. Above the settle hang several religious pictures; a reading table and chairs complete the furnishings. The other small room is furnished in golden oak and has on its walls two pastel pictures of Mrs. Eddy's home, and a finely illuminated copy of the 91st Psalm.

For the reception the rooms were further adorned with a profusion of fragrant flowers. The chandeliers, pictures, and walls were draped with smilax, and in the reception room were vases and jardinières filled with pink and white roses. Red roses glowed from many points in the reading room, and the retiring rooms had marguerites.

The rooms are open every day but Sunday from 9 A.M. to 5 P.M., and are for the use of all who desire to read, investigate, or study Christian Science publications.

The pioneer effort in connection with the establishment of a Christian Science reading room in Minneapolis was inaugurated by the Minneapolis Students' Christian Scientist Association in September, 1889. Pleasant quarters were secured in the McDonnell Block on S. Eighth Street, and for fifteen months the work was carried on by this Association. In December, 1890, when a Christian Science Church organization was formed under the name of Church of Christ, Scientist, the care and maintenance of the reading room was transferred to that body, and the work was carried on at the room occupied by the church, 820 Nicollet Avenue. Two years later this church was dissolved to give place to the more permanent organization of an incorporated church, known as First Church of Christ, Scientist. The reading room was then taken under the charge of the newly established church and has so continued ever since.

In 1895, room 218 Medical Block became the downtown home of the Christian Science reading room and continued the same until July, 1897, when larger and better rooms were leased in the New York Life Building. These quarters soon proved inadequate, and the result was the leasing of and occupancy in February last of the present suite of rooms in the new Andrus Building.

From the inception of this reading room work until 1899, the word "dispensary" was associated with it, but since then that term has not been used in connection with Christian Science work.

As indicating somewhat the rapid growth of Christian Science in this community and the multiplication of its

adherents here during these years, it is noted that the first year's sale of literature at these rooms amounted to about one hundred dollars, whereas the last year's sales aggregated two thousand dollars, and at present the average number of visitors to these rooms monthly is five hundred.

These reading rooms are designed to provide the public with a restful place in which to read and meditate. All the published works of Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, and all the authorized Christian Science publications issued by The Christian Science Publishing Society of Boston, Mass., are kept on sale at the rooms, and copies of these are placed upon the reading tables for the free use of any who desire to use them in their studies.

Minneapolis Evening Journal.

Encouraging Word from Asheville, N. C.

Wednesday evening, March 27, was the most delightful meeting in the history of our little church. Besides the earnest workers in the cause, there were some present who came seeking to learn more of this religion that heals the sick as well as the sinful.

A lady testified to being healed of inherited consumption after having been for years under the constant care of the kindest doctors. When everything else seemed to fail she heard of Christian Science and was freed from the bondage of disease and suffering, for which she felt unbounded gratitude and love to God.

A woman told of a beautiful demonstration in the case of an accident. She missed the nail that she was driving in the wall and received the full force of the blow on her thumb, crushing the nail and the bone. She held firmly to the ever-present help of divine Love, realizing that accidents are not from God, and the next day she did a large washing without experiencing any inconvenience whatever.

A lady told of overcoming a severe scald. A vessel of boiling water was overturned, scalding the hand, limbs, and foot badly, but going promptly to work in Science, the pain was overcome in a few minutes, and in about twelve hours all signs of the burn had vanished.

Another testified that six years ago she lost her voice, but through the power of Truth, it has been restored to its natural sweetness and strength.

MRS. RUTH BROWN, Asheville, N. C.

Whence Comes the Spring?

Look, love, how the woods are all misty
With purple and gray!
And the soft mellow wind has a touch
Of enchantment to-day.

There is rain in the air, and a magic
Unloosing of bonds—
A glad putting forth of new life,
An unfolding of fronds.

Whence come these old exquisite ardors
In crimson and green,
That walk through the valley and quicken
The life that has been?

Whence come these old exquisite fervors
In yellow and blue,
That touch the frail flowers, and waken
Their beauty anew?

Whence come these old passionate raptures
In whistle and trill,
That open the gates of the morning
By meadow and hill?

Selected Articles.

Christian Science Definitions.

Christian Science is so imperfectly understood by many of those who oppose it as to make their criticisms valueless to those people who have learned even a little of the teachings of this new-old doctrine. Perhaps a few statements in explanation of some points of its teachings may be of interest in the present discussion of the merits and demerits of the new faith.

Most of the adverse criticisms of Christian Science are based upon erroneous conceptions of the new idea. An understanding of these would have stopped the publication of many newspaper articles that have (in the minds of the writers) so crushingly disposed of the new "fad." May I be permitted to express some thoughts for the benefit of honest inquirers after Truth, in definition of a few expressions that perhaps need explanation before they can properly be aligned with the old-time terminology of theologic thought?

Faith in Christian Science is not synonymous with belief. It is not a mere acceptance of an idea and a trust in Deity. On the contrary, it is an actual knowledge of the truth of the idea acquired by as logical a course of reasoning and demonstration as is demanded in solving a mathematical problem. The new "faith" is absolute knowledge. Knowing this change of definition, one can easily see that the statements and ridicule, in reference to "faith-cure" as applied to Christian Science, fall to the ground as misconceptions.

Prayer, in Christian Science, goes beyond the asking for gifts or favors and demonstrates that the asking must be accompanied by the reaching for and taking. It is not only Montgomery's idea,—

Prayer is the soul's sincere desire,
Uttered or unexpressed,—
The motion of a hidden fire
That trembles in the breast,

but also a reaching for and a grasping of the desired answer as the logical second part or conclusion of the petition. How to do this is taught in the elementary lessons of Christian Science. Nothing is so hard to grapple with or understand as a new idea. Some people fail to comprehend and so sneer at the statement of the Christian Scientists that "Thoughts are things." And yet that this is simple truth can easily be shown.

Let us analyze briefly a few of the giant "things" of twentieth-century civilization. What is a man's "business"? Certainly not his shops, his machinery, his workmen, his offices, office furniture, massive vaults, or his books of credit and debit and other documents. These are but the paraphernalia of his business. The business itself is in the mind of the proprietor, and without his thought and without that thought-centre around which all the above mentioned and other accessories cluster and crystallize there can exist no business. Practical men will, in analyzing the terms "corporations" and "trusts," acknowledge that these important and mighty factors in the life of our century have only a mental existence. Their articles of agreement and charters of incorporation are only the tangible evidences and expressions of the thoughts constituting the forces which move the commercial world. The intangible and invisible mental movements of gifted individuals form and compose these mighty aggregations of power. One more analysis and I close.

What is a "home"? Not a palatial residence with gorgeously furnished apartments and a magnificent retinue of servants, nor a humble cottage with rustic endowments. Neither of these makes or constitutes a home until the home thought crowns these accessories with content and

love. Are not the Scientists right in saying "Thoughts are things"?—W. A. FERGUSON.

In the *Elmira* (N. Y.) *Telegram*.

Testimonies given at Marshall, Mich.

Perhaps few people realize the character of the Wednesday evening meetings that are held by the Christian Scientists in their hall in the Hughes Block. The service consists in singing hymns, reading selections from the Bible and Christian Science text-book, silent prayer followed by the Lord's Prayer, and interesting personal testimonies of healing and spiritual benefit that had been gained through Christian Science.

Among the first to speak at a recent meeting was a lady who told how the understanding of Christian Science had enabled her to overcome the sense of anger and injustice in herself and others. Another expressed her gratitude for Christian Science. It had not only healed her physically, but brought harmony into her home and been a constant help in bringing up her children. Another told of a case of brain fever having been healed by its power.

A lady, a former resident of Marshall now living in Boston, a Presbyterian clergyman's wife and an ardent Christian Scientist, told of her wonderful healing after years of suffering. Sight was restored after almost total blindness, indigestion of many years' standing was swept away, and two operations rendered unnecessary, all by the same treatment. She also spoke most lovingly of the woman who had by her purity of life and thought been enabled to give again to the world that sense of God which heals sickness as well as sin.

Another lady said that words could not express her gratitude for Christian Science, which had brought her back to health after the doctors had said "no hope," and to a sense of peace and happiness never before known.

Another said, "Three doctors said it was an imposition to think God would heal one so far gone as I, but God is no respecter of persons and I am healed, and for sixteen years have been among you entirely free. Whereas I was blind, now I see; whereas I was lame, now I walk; whereas I was dumb spiritually, now I speak."

Several other good testimonies were given as proof of the sincere earnestness of these people and their firm belief that they have found a religion that will meet and overcome every trouble.—*The Daily Chronicle*.

A Definition of Religion.

So many people have tried their hands at a definition of religion that I will also attempt it. Religion is the perpetual realization of God, the spiritualization of daily life. Religion is not a means of escape from this miserable world, but a way of living better in it and of making it less miserable. Religion is something to live by, not merely to die by. It is primarily for this world; for a great deal of what we call our religion will be useless in the next world. The New Jerusalem is a city without a church. Christ would not pray that his disciples be taken from the world, but that they might be sanctified in the world, working each at daily trivial tasks, to the end that His kingdom should come and His will be done on earth as it is in heaven:

Till daily life becomes divine,
And every land a Palestine.

PROFESSOR E. E. SLOSSON, in the *Independent*.

Christian Science is growing rapidly both in this country and in England. And the more it is attacked the faster it spreads. We have never taken the pains to examine into it very closely, but we do know that there are some mighty fine people who are believers in it, and so long as it makes good men and women there must be something in it worthy of attention. Whatever good there is in it ought to be preserved, not destroyed.—*Sandusky* (O.) *Star*.

From our Contributors.

Heredity.

BY I. F. M.

IN daily traveling to and from the city I have been impressed, by bits of conversation dropped near me, with the strong hold which the belief in material heredity has upon mankind.

"How much he resembles his father!" "Is she not the image of her mother?" and not only of trick of form and feature have I heard, but of mental qualities and peculiarities of sin and disease.

"A chip from the old block" often means a very poor "chip."

Of the claim of inheritance of disease there seems no end. Even we ourselves who have gained a little knowledge of the Truth, "even we ourselves groan within ourselves, waiting for the adoption, to wit, the redemption of our body" from this false claim, which, if we were to judge from appearances, would force itself upon our notice at every turn. But "we are saved by hope: but hope that is seen is not hope: for what a man seeth, why doth he yet hope for? But if we hope for that we see not, then do we with patience wait for it."

This hope has been given to us in the Scriptures and is practically interpreted by our text-book, "Science and Health with Key to the Scriptures," a book that has thrown a marvelous light upon the sacred writings, so that he who runs in harmony with its progressive thought may read, with pleasure and profit, from Genesis to Revelation, and constantly find new beauties to enhance, and new applications to make practical, the way of Truth and Life.

We may have been somewhat held in this bondage of material heredity by a wrong interpretation of the verses in Exodus which read, "I . . . am a jealous God, visiting the iniquities of the fathers upon the children unto the third and fourth generation of *them that hate me*; and showing mercy unto thousands of *them that love me*, and *keep* my commandments." Now, is it not blasphemy to think of the God who is Love as of a mortal man, but with so much stronger emotions of revenge and vindictiveness that the worst of human parents would appear better by comparison? For what human parent would knowingly visit his hatred upon the innocent children of him that hated him, even *one* generation removed? If he were capable of this, should we not look upon him as a monster, rather than a man?

The very first commandment is "Thou shalt have no other gods before me,"—no other Creator, no other Source of existence or life. Therefore do not these verses rather imply that those who do not *keep* his commandments, who *hate* the Truth, are really those who believe in this very law of material heredity; a law which results from a belief in a material source of life and existence, separate and apart from God—Good? Are they not those who are opposed to the Truth that "God made *all* that was made," and "it was very good"? Are they not those who believe Him capable of creating evil or of becoming accessory to the crime by permitting it? those who fail to perceive that "a good tree cannot bring forth evil fruit"? And is it not inevitable that all should suffer from this false belief until they know God as He really is, and love Him because He is Love, because "He *first* loved us" and always?

When we begin to understand that great and mighty Love, we shall begin also to realize that material heredity is a false claim; without any foundation in fact—a claim that we can meet and overcome in the degree that we outgrow these wrong ideas of God and of "the work of His hands"?

Ezekiel, the ancient prophet, foresaw that the time would come when it should no longer be said in Israel, "The

fathers have eaten sour grapes, and the children's teeth are set on edge." "As I live," the Lord said unto him, "Ye shall not have occasion any more to use this proverb in Israel . . . the son shall *not* bear the iniquity of the father, neither shall the father bear the iniquity of the son."

Jesus of Nazareth told us just how to meet this false claim. Said he, "Call no man your father upon the earth: for one is your Father, which is in heaven." Now, if we would accept this as sound advice, absolute Truth, and release our hold on the material idea of life and creation with all its false claims and laws,—if we would constantly reject it from our thought, never failing to supplant it with the true idea of man which Jesus gave us,—if we would cease to cling to the earthly Adam as the source of our existence and acknowledge God as the Father and Mother of all creation, we should begin to understand that as in Adam all die, so in the Truth which Jesus declared unto us "all shall be made alive."

We read in the New Testament that "*now*, are we the sons of God," also, that we are "joint heirs with Jesus Christ." Then it follows that our only heritage is *good*, and we *cannot* inherit evils. Even the good we inherit comes not "of the will of the flesh, nor of the will of man," but of God. Let us never accept or acknowledge the claim of material heredity for good or evil, but let us acknowledge God in all our ways.

Separating the True from the False.

BY EDWARD H. CARMAN.

CHRISTIAN SCIENCE has come to the world as a mirror wherein man may behold his true image and reflection and learn his true relation to God. Here is the one and only scientific explanation of Jesus, and his teachings. Here he is revealed as the only perfect man who was "the only begotten of the Father."

The first lesson learned in Christian Science is that *God* is omnipotence (*all* power), omnipresence (everywhere), omniscience (all Science and Truth); that He is infinite and eternal Mind, divine Principle, Love, the one and only Power and Presence, the one Will. It also teaches that there is a counterfeit of this one infinite Mind or Will, calling itself, carnal mind, mortal mind, or human will.

Jesus the first great teacher and demonstrator of scientific Christianity knew that thoughts came to his consciousness from the father Mind or God, to guide him in his good works and deeds of love; or they came as mental suggestions from the carnal mind, or human will to tempt him to believe in evil or commit evil deeds. Having the desire to do good and be good only, he was enabled to separate quickly for himself the true from the false, as well as to discern whether truth or error was influencing the thoughts and words of those with whom he came in contact.

He was always able to see Truth or error as absolutely impersonal, and nowhere in the Gospels is his quick perception better illustrated than in the sixteenth chapter of Matthew. Peter as the avenue or spokesman, in one instance is made to declare the Truth; in another he voices error. In the first instance, when Jesus came to his disciples with the question: "Whom do men say that I, the Son of man, am?" Peter became the mouthpiece of infinite Mind, God, when he said, "Thou art the Christ [the Messiah], the Son of the Living God;" Jesus' reply proves beyond peradventure that the human mind is not capable of reaching, alone, such altitudes of thought, for, said he, "Flesh and blood hath not revealed it unto thee, but my Father [infinite Mind] which is in heaven." After Jesus had told the disciples that he must suffer many things of the chief priests, the scribes, and elders at Jerusalem, Peter, again the spokesman, boldly rebuked him, appearing in a

very different role from that which had elicited from Jesus commendation and approval. What was it but the human will that embodies self-love, selfishness and self-will, conceit and egotism, that could prompt Peter to rebuke the Master, saying, "This shall not be unto thee." Jesus' reply to this suggestion of evil, was the same with which he met the temptation on the Mount, "Get thee behind me, Satan: . . . thou savorest not the things that be of God, but those that be of men." Jesus here stamps the human will or carnal mind as the one evil—Devil or Satan—impersonal evil.

This scientific understanding through which Jesus said in one instance, "Thou art Peter, and upon this rock I will build my church," and in another said, seemingly to the same person, "Get thee behind me, Satan," sets forever at rest the idea that any personality could be entrusted with the keys of heaven, and establishes the fact that the Truth, the Christ idea, was to be forever the foundation upon which the true Church should be *revealed*.

Jesus taught his disciples how Truth separates the real from the unreal. He said: "If *any* man will come after me, let him deny himself, and take up his cross, and follow me." His followers in Christian Science are to-day proving the truth of his teachings. The rules for demonstration are laid down in "Science and Health with Key to the Scriptures," and are so plain that a wayfaring man, though a fool, need not err therein.

A Little Child shall Lead Them.

BY MARY A. PACKARD.

IN the message to the Mother Church, June, 1900, our Leader says, "A child can measurably understand Christian Science, for, through his simple faith and purity, he takes in its spiritual sense that puzzles the man. The child not only accepts Christian Science more readily than the adult, but he practises it."

Teachers in Christian Science Sunday Schools can tell of questions answered in a marvelously clear and scientific way. Who could give a better answer to the question of "What is Truth?" than "Always the real thing." Well may we stop and consider this definition of Christian Science: "Doing the things that Jesus did." This answer will make the most of us ponder if we are, or if we are trying to be, Christian Scientists. At one time the Golden Rule was under discussion, not only the doing unto others, as we would that they should do unto us, but the thinking unto others. A mighty sermon was preached in the remark, "We should think of others as God thinks of us." Should not this be published abroad to show how the little child thought is leading, as well as teaching us? In one of our lessons the superintendent of a Christian Science Sunday School asked if any one could tell her what this passage of Scripture meant: "having done all, to stand." A little hand was lifted, and with the voice of Wisdom, a child made answer, "If you know how to do, do it." Farther on in the lesson the expression was brought out, that having on the breastplate of righteousness, meant having God with you every instant.

These children use their Science not only in illness and accidents, but in their play and school work, thus proving all that Mrs. Eddy says of them. Should not great gratitude be felt and expressed to her who has revealed this Way so simple that His little ones are first to follow? Jesus said, "Except ye turn, and become as little children, ye shall in no wise enter into the kingdom of heaven" (Matthew, 18 : 3, R. V.). In the next verse we are told to humble ourselves as a little child. Our Leader says in "Miscellaneous Writings," p. 110, "Beloved children: The world has need of you,—and more as children than as men and women: it needs your innocence, unselfishness, faithful

affection, uncontaminated lives. You need also to watch and pray that you preserve these virtues unstained, and lose them not through contact with the world. What grander ambition is there than to maintain in yourselves what Jesus loved, and to know that your example, more than words, makes morals for mankind!"

Unveiling the Statue.

BY G. ST. L. P.

"In the image of God created he him."

A FEW months ago I found myself comparing the process of work in treating a patient to the unveiling of a statue. As this comparison grew it brought me a sense of rest, and I give it here, hoping it may bring a helpful thought to some young student of Christian Science.

In the unveiling of the statue, I could plainly see that the statue itself was not changed. Moulded and chiseled this statue stood before as after its unveiling, just as the artist had left it, and the unveiling only revealed its beauty to human sight. In Genesis, 1 : 27, we are told that God created man "in his own image." We have learned through the teachings of Christian Science that, as God is Spirit, His image and likeness, man, must be spiritual and must be found in the individual spiritual consciousness, never in matter. This consciousness as the image and likeness of God must be a consciousness of perfect health, holiness, and harmony.

When a patient comes to Christian Science for treatment, he comes with what seems to be a consciousness of sickness or discord of some kind. As the real man has but one consciousness and that one perfect, this sense of sickness must be a false sense, which hides his true individuality and corresponds to the veil which covers the statue. It becomes then the work of the Christian Science healer to remove the veil or false sense and reveal the consciousness of harmony. Never does the healer change this image, for, like the statue, it stands before as after, just as the Creator, God, has left it.

In the unveiling of a statue in New York, I remember that the person chosen for this work was a little child. This would suggest to us that it needs the childlike purity and gentleness to unveil God's image. These qualities can remove the web woven by false education, ignorance, and fear; and Truth, understanding, and faith will destroy it.

Time.

BY A. C. S.

"If I had time!" This exclamation is one frequently made. It occurs to me that a demonstration over a sense of lack of time may be helpful to some one. I am a teacher, and at the beginning of the school year there seemed to be a burden of work that was almost unbearable; there was no leisure, and the constant feeling of hurry was very trying. I finally realized that this was one of my problems, and that in Christian Science I had my rules for the solution of all problems. This thought aroused me, and I at once saw the error of my position. I realized that we are now in eternity, and that time is but a human concept; in reality, there is no time, so there should be no haste. In Mind all action is harmonious, deliberate, and there are no burdens. As an idea of God, reflecting His attributes, I found that I was free from all sense of burden, haste, and anxiety. Realizing this, and resting in the thought, brought freedom. My work is done with less effort than ever before and with more harmonious results. There is no feeling of hurry and the burden has vanished, so I feel that my problem is solved, and I am grateful to our Leader who has given us a practical knowledge of the Truth that indeed liberates.

Testimonies.

A Postal Clerk's Testimony.

Something over three years ago I was a resident of Beaumont, Tex., situated eighty-three miles east of the city of Houston, Tex. I was an employee of the United States Railway Mail Service, which position I still hold. At the time I speak of my run extended from Beaumont, Tex., to Rockport, Tex., a distance of one hundred and forty-four miles the round trip, which I made daily. In order to get at the true cause of my trouble it is necessary to give you an idea of the duties imposed on a postal clerk. Besides having to make this trip daily, I was expected to make out two reports on my arrival at Beaumont. Then in order to be able to distribute mail correctly, it was necessary for me to put in the remainder of my time in hard study so as to be posted on all the new roads and offices, and all other changes that were being made every day.

All this drew heavily on my time, and I had little else to think of; in fact, I had no time for anything else. I was beginning to realize that my health was failing under the strain, but the responsibility that rested on me would not permit of my losing a single day from my labor, as I could not spare the money that I would lose by my laying off; but alas! the time came when I was forced to lay off many months, and had it not been for Christian Science my lay off would have been forever.

Just previous to my breaking down, my attention was called to a little incident that was transpiring in Houston. Some of my relatives were investigating what was to them a new teaching. They wrote me of the things that they had discovered. I had great confidence in them, and as I had never heard of Christian Science, I accepted what they wrote me.

I was already overworked, but this new doctrine was so mysterious that I gave my whole life up to trying to solve it. I neither ate nor slept, and in a short time I found myself in great mental distress. I discovered my condition in the early morning, and before I lost control of myself, I called a friend and told him of my condition, and advised him to telegraph for my father. My father came that night and physicians attended me and gave me something to put me to sleep. After a while I awoke, and the medicine they gave me left its effect on my already shattered nerves. My father kept his hand on me all the time for fear that I would run away and perhaps jump into the river, for I would have done so, had the so-called "spirit" suggested it to me. I was laboring under the belief that I was controlled by relatives that were long since departed, and I was afraid not to obey them.

I was taken to Houston and physicians there pronounced it insanity, but did not know how to cure my case. I was growing more violent every day until I lost all hope; then the trial came. I saw death just ahead. I went out on the porch and sat on the steps and my sister came and sat by me. I saw the world fading away, my mind began to wander, when my faithful sister, putting her arm around me said, "Don't give up, brother; you will get well." "Never," said I; "nothing but the power of God can save me," meaning every word. "Well," she said, "if you think so, how would you like Christian Science treatment?" This remark brought me the first ray of hope I had experienced since I came to Houston.

I shall never forget that beautiful spring morning when my healer gave me my first treatment. I truly saw that all was of God. When she told me that God was everywhere, and filled all space; that God was Spirit, Love, Life, and Truth; that I was controlled and governed by the one Good, which we call God, I saw clearly that sin, sickness, and death was a manifestation of mortal mind, and that mortal mind was not real, for if all was of God, then all must be

immortal Mind and its manifestations. I remember how calmly she looked at me when the thought of insanity seemed to govern, and especially do I remember the first day, when we stood alone, face to face, I shaking and trembling with fear of an unseen enemy, which I thought was ready to spring on me at the first sound. I shall never forget the words she quoted from the Scripture: "He saw the Spirit of God descending like a dove from heaven and lighting upon him: and lo a voice from heaven saying, This is my beloved Son, in whom I am well pleased." I listened, and again I heard: "You are God's son, and the dove is a symbol of Divine Science, heaven is here, and we are both standing under the shadow of His wing." The peace that passeth all understanding came upon me. I did not fear, but listened gladly to the words of our textbook, Science and Health.

After the fourth day I went to the home of my healer for treatment. She asked me when I expected to go back to work. At her suggestion I wrote to the superintendent of Railway Service. He said that if I could stand an examination he would give me my place again. I stood a most rigid examination, my score was 99 out of a possible 100, and I have held my position since that time.

My wife and child have been healed through Christian Science treatment. I am earnestly trying to have one God, and to love my neighbor as myself. My heart goes out in gratitude and love for the one who gave us Science and Health.—ALLEN T. NIBBS, Houston, Tex.

Effects of Accident Quickly Overcome.

I enclose an interesting account of a case of healing, as related by the mother of the little girl referred to.

Extract from Letter.

"I must tell you of another experience that is calling out stronger faith and purer love. Last Saturday, as Jessie jumped from the porch, she turned her ankle, resulting in a sprain and possibly broken bones. The pain seemed intense at first, and she screamed several times that she had broken her ankle. Her papa and I assured her, and I treated her for some time before we tried to get her into the house. She was very brave, got rid of fear in a short time, and worked with me as would any good Scientist to realize the perfection and completeness of God's child, who could not by any means be hurt. As we read and declared the Truth, her face expressed her perfect trust and confidence in the power of divine Love. She declared that her ankle was being straightened, and the bones put in place as consciously as if actual hands were handling it. She was radiant with delight and gratitude, and never thought of entertaining a doubt or fear but that Truth was sufficient for any emergency. The swelling and pain grew less very rapidly.

"She has lost but one meal and but part of one night's rest on account of the injury. She swings the foot about so easily to-day that she thinks it will not be long before she can use it again."

A later letter read as follows:—

"It was surely a very encouraging experience to us. You would never think she ever had a hurt to see her run and jump and walk any distance she chooses with no inconvenience whatever.

"We are not sure, of course, as to the exact nature of the injury, as I saw as little of it as possible; but the foot was crooked at first as if partially dislocated, and one or more of the ankle bones either broken or torn loose, because it was loose and slipped about, and was badly swollen and discolored for some time.

"She walked in three weeks, and started to school in four, and has not missed a day since. She walks with perfect ease, has no limp at all."—C. W. C., Omaha, Neb.

Astigmatism and other Troubles Healed.

It is now almost four years since I came into Christian Science through the healing of my eyes of astigmatism, for which I had worn glasses for seven or eight years. I commenced treatment and took off my glasses on Saturday evening. On the following Tuesday I went home and in the afternoon of the same day resumed my work as a stenographer, never missing the glasses in the least. I have not worn them since, and can now read finer print than I ever could, with them or without them, since I was quite young. Before I put on glasses I was troubled with severe headaches and sharp pains through the eyeballs, and could read but a short time before the letters and lines seemed to run together. The oculists told me that I was probably born with a slight defect of the eye which had been aggravated by the scarlet fever which I had had twelve or thirteen years previous to that time, and that I would always have to wear glasses.

I began the daily reading of "Science and Health with Key to the Scriptures," that I might learn how the healing had been accomplished, and as I read old troubles that had been manifested in the flesh for years disappeared; among them weakness of the back, constipation, nervous headaches, and a cough of two years' standing, the result of the grip. These all vanished as I progressed in the understanding of God and man's relation to Him. I was not conscious of the healing until I awakened to a knowledge of the fact that I was well and strong, and then I fully realized the force of Jesus' saying, "Ye shall know the truth, and the truth shall make you free." In what better way can we who have been made free show our gratitude and appreciation of what our faithful Leader has done for us in opening up the way to freedom, than by a constant denial of error, in whatever form it may appear to us, and the realization of the ever-presence and allness of divine Love.—MAE BLANCHARD, Ottawa, Ill.

Found the Pearl of Great Price.

To me, Christian Science is truly the pearl of great price. Every day I learn more of its value, not only in sickness but in sin, sorrow, and worry as well. I could write pages telling of demonstrations I have had and seen in my family, but I will tell of one only. Seven months ago, my youngest child was born under Christian Science treatment. The birth took place Saturday afternoon at four o'clock with very little inconvenience, and the next day, Sunday, I dressed, ate a hearty dinner, and remained up all day. When the baby was a week old I took a drive of several miles. Of course mortal mind tried to assert its seeming power in many ways, but all was faithfully met and overcome by the healer, and Truth prevailed. My baby is a very healthy child, and I am stronger than I have ever been before. I am very thankful to God for such a Leader as Mrs. Eddy. My dearest companions are the Bible and "Science and Health with Key to the Scriptures." My most earnest wish is that I may be worthy of the name Christian Scientist.—E. M. W., Verona, Neb.

EVERY minute is a to-morrow to the minute that goes before it, and is bound to it by the same duty-roots that make every moment one with eternity; but there is no more occasion to bind minute to minute with the knot-grass of anxiety, than to ruin both to-day and the grand future with the cares of a poor imaginary to-morrow. To-day's duty is the only true provision for to-morrow; and those who are careful about the morrow are but the more likely to bring its troubles upon them by the neglect of duty which care brings. Some say that care for the morrow is what distinguishes the man from the beast; certainly it is one of the many things that distinguish the slave of nature from the child of God.—GEORGE MACDONALD.

Religious Items.

The *Boston Transcript* says: "There is in Havana a church that cost above \$50,000, in which religious services have never been held. It was built twenty-five years ago by the Marquesa de Pinar del Rio, for the accommodation of Protestant residents of Havana. To the dismay of the donor and her friends the King of Spain issued in 1876, a few months before the church was completed, a decree forbidding the holding of religious services in any building solely set apart for that purpose and showing from its outward appearance to be other than Roman Catholic church. The church is in the Vedado or fashionable residence section of the city. It has never been used. It was not mentioned in the king's decree, but so carefully described that public officials enforced the law against it. Some years ago it was acquired along with other property at a judicial sale, and is now offered for rent or sale at a nominal price. Several religious bodies in this country, projecting work in Cuba are negotiating for it; for whatever the outcome of the controversy over the Platt amendment, there is no longer any doubt of religious liberty in the island."

A writer in the (Unitarian) *Christian Register* says: "When David told his son to be a man the doctrine of total depravity was not in fashion. He had never heard of it; and, besides, that doctrine would make such heroic counsel quite absurd. The more a man was a man, the worse and worse would he be; but now it is not so. It is the highest and wisest and best counsel you can give. Man, manly, humanity,—these are the greatest words in the language. They mean, first, that kind of being that is of the same nature with God; and they mean that kind of action and character that is all honorable and all good, Godlike. When we talk of man in the highest sense, we mean his being and his character. We do not mean the accidental facts or circumstances that may belong to him: we do not mean rich man, poor man, tall man, short man, handsome man, or homely man, nor even good man or bad man. We mean that which is deeper and more profound than all or any of these, and includes all that excellence of which his nature is capable in this sphere of being."

In an article concerning the Episcopalians, in *The Congregationalist's* department devoted to sister denominations, Rev. Edward Abbott, D.D., says: "A renewed effort is likely to be made at the General Convention in San Francisco, to allow in the Episcopal Church in this country the same liberty as is now allowed in England with respect to the use of the Revised Version of the Bible in public worship. Traditionally there is a 'Standard Bible,' appointed to be read in churches, but historically and as a fact there is no such Bible. The English bishops and archbishops are gradually permitting the alternative use of the Revised Version for the King James Version wherever the desire of the minister so to use it has the concurrence of his congregation, or its authorities, and the feeling is growing that the same liberty might be and ought to be granted in this country."

A writer in the *New-Church Messenger* says: "He who is clear-visioned from the removal of the beam of self-righteousness from his own eye knows the source of evil; he knows that it is from hell; he knows that he who is subject to it is not condemned by it until in freedom he has accepted it. Such a one treats the evil of his neighbor as not his. He does not think of his neighbor as being the evil which is now dominating his life. Thus it is not in a condemnatory way that he helps the other from his wrong. In his thought he is helping him to put away not that which is really his, but that which is infesting him. Thus he confirms in the mind of him whom he would help, not the thought that he is the evil that possesses him, but that he is its victim. He comes to help, not to criticize or to blame."

Amory H. Bradford, D.D., says in *The Congregationalist*: "Jesus wished to make

men understand how they are related to things unseen. He entered into no argument, indulged in no process of speculation, but simply and directly said, Your true relation to the Great Spirit is the same as your relation to other spiritual beings. You ask from them first of all love, and are sure that where that is genuine and abiding all other relations and duties will be properly adjusted. The great God loves as other beings love, only as much more abundantly and unselfishly as He is greater than they. Here is a truth whose wonder grows the more it is pondered."

The (Methodist) *Christian Advocate* says: "The word God teems with explicit statements as to His ability, willingness, and readiness to succor and sustain His children, but we often act toward them as if they were mere words or bits of rhetoric, and far from being valid and potential promises made and given by God, the all-loving Father, and capable of complete fulfilment. We need to get a new grip on the vitality of these promises of God, as well as a 'realizing sense' of the fact that when God pledges His word to men He will fulfil that pledge whenever the conditions, on the human side, are met."

In its "London Letter" the (Episcopalian) *Church Standard* prints the following note regarding the newly appointed Bishop of London: "Mr. Booth, head of the Salvation Army, has written to Bishop Winnington Ingram expressing his thankfulness that 'so young and yet so experienced a servant of the poorest should be chosen for so great an appointment.' The bishop responded as follows: 'Thank you for your very warm-hearted welcome to the difficult post to which I have been called. It is a great strength to me to know that I shall have your prayers and the prayers of your people.'"

Philip S. Moxom, D.D., writing on "The Duty of Cheerfulness" in the (Baptist) *Standard*, says: "Other things being equal, a cheerful person is always the best worker. A cheerful person always helps us. That is, not merely the always gay. Cheerfulness is not frivolousness. The perpetual grimace and giggle mark a weak and deficient nature. Cheerfulness more often accompanies a radical earnestness and strength of nature. It is entirely consistent with quick and deep sympathy. We go for help neither to the frivolous nor to the habitually despondent and sad, but to the habitually cheerful."

In an editorial on "Home" the *Universalist Leader* says: "Home is where the heart is, where the affections are active. The Christian home, the highest type of home on earth, is one in which the home relations are uplifted and sanctified by a living faith in the Father over all, in the teachings of His Son, and in the ceaseless life of the spirit. This faith energizes the mind, quickens the affections, broadens the sympathies, moves the heart to loving ministries to kindred and to fellow-men, makes the home heaven's, and demonstrates how the world is to become so."

The Moscow correspondent of the *London Standard* says he learns that the Holy Synod since the excommunication of Count Tolstoi has been inundated with petitions asking that similar treatment be accorded to the petitioners. The requests are made in good faith, the petitioners desiring to escape the trammels of the Orthodox Church, which otherwise they cannot leave without incurring the penalties of the criminal law.

He reads and hears God's Word well who seeks to realize it in his life. More knowledge of God's word will be gained by a single effort to live one of its commands than by a year of reading with no effort to keep the Word of God. Trusting a promise will enable one to know its sweetness far better than to commit it to memory.

Exchange.

The *Advance* states that the number of

students in the theological seminaries of the United States is nearly two hundred less than last year. Dr. William W. Fenn attributes the decline largely to the fact that there is not freedom enough, either of thought or action, in the profession to appeal to the young men of to-day.

"The more I read the New Testament the more the wonder grows how the Christian religion could have been interpreted by either its professors or its foes, as meaning anything short of practical righteousness," says the Rev. H. A. Bridgman.

The (Baptist) *Examiner* quotes Professor Lyell as follows: "In the year 1806 the French Institute enumerated no less than eighty geological theories which were hostile to the Scriptures, but not one of these theories is held to-day."

The *Churchman* has the following: "Whole systems of theology have passed away; but that which truly constitutes religion, that in which good men are like one another, that in which they chiefly resemble Christ, remains the same."

"The light of life—truth tested by experience—the great commandments enthroned within—this is the greatest need of every man and woman of the great world. Let us earnestly seek that light," says the *Universalist Leader*.

LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Theory vs. Realization. Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid	3.00
Twelve or more books to one address, each, prepaid	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS.

A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.	
Price (cloth) each, prepaid	\$3.25
Twelve or more books to one address, each, prepaid	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.	
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.	

CHRIST AND CHRISTMAS.

An illustrated poem,
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid 2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 83 pp. **SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.**

MR. KIMBALL'S LECTURE. 33 pp.

HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

THE BUSWELL TRIAL. 24 pp.

THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.

HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 6 cents; 12 copies to one address, 60 cents. Twenty-five copies to one address \$1.15; 50 copies to one address, \$2.25.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.
Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

Political and Governmental Notes.

Under a court decision confirming the right of a city built on mineral land, to exercise control over the earth below its streets, alleys, and public grounds, the city of Leadville, Col., expects to collect about \$2,000,000 in royalties from mining corporations for the gold and silver that is being taken from mines under the city. With this source of revenue there will be no need to levy taxes, and the result will be watched with much interest by economists.

General MacArthur celebrated the surrenders of the insurgent generals, Mascardo and Lacuna, by releasing one thousand Filipino prisoners.

Foreign News.

Andrew Carnegie has given £2,000,000 to establish free education in the Scotch universities of Edinburgh, Glasgow, Aberdeen, and St. Andrews. He stipulates that the beneficiaries be his "Scottish fellow-countrymen" only, no English, Irish, colonials, or foreigners. The fund will produce an income of £50,000. Mr. Carnegie considers that his gift will provide free university education for every boy and girl in Scotland capable of passing the entrance examinations. He desires that all Scotch men and Scotch women shall enter the universities on an equal footing, rich and poor alike, hence the money is not given to the students but to the universities themselves. The system is made perpetually free, and will probably be under government auspices.

An official statement received at Dawson from Ottawa says that up to the first of this year the total royalty collected from the Klondike placer mines by the Canadian government amounts to \$2,040,192. The statement also contains the information that the total revenues received by the Canadian Government from Yukon territory since 1896 amounts to \$4,376,673. This includes receipts from royalties, customs, public works, fisheries, fees in various departments, land sales, rentals, timber dues, placer grants, sales of miners' certificates, and the like.

Shamrock II., the British challenger for America's cup, was dismantled and suffered the almost complete wreckage of her spars and rigging in a trial race with Shamrock I. on May 22, and the race with the American yacht, whichever one may be selected to defend the cup, will have to be delayed. King Edward was on board Shamrock II. at the time of the accident and was standing on deck in a position which seemingly offered no escape from the falling spars, but he was untouched and not at all disconcerted.

The partition of Africa, which has been

going on for the past fifteen years, has at last been accomplished with the following results: France receives 3,804,974 square miles; Germany, 933,380; Portugal, 730,124; Italy, 188,500; Spain, 169,150; Turkey, 398,000. and Great Britain and Egypt, which are practically one in this matter, 3,723,910. The separate States, like the Congo Free States, Liberia, Morocco, and Abyssinia, contain all together about 1,491,000 square miles.

According to the programmes of naval increase for this year by all the leading powers, Great Britain continues to lead the world in extent of her building programme, and has voted nearly \$150,000,000 for her navy this year. She is building more battle-ships than the United States has in commission.

It is again reported in the dispatches from South Africa that the Boers are invading Cape Colony, and that two British patrols in the northwestern part of the colony were attacked, one being captured.

Dispatches from Seoul state that the Korean government has leased to Japan four hundred and fifty acres of land to form a settlement at Masanpho. The land was formerly sought by Russia.

Industry and Commerce.

The coffee bill of the United States is over a million dollars a week. During the nine months ending last March the United States imported 617,344,000 pounds, valued at \$45,218,000, a sum nearly \$5,000,000 in excess of the value of the coffee imports of the same months of the preceding fiscal year. At this rate the total value of the coffee consumed in the United States this year will not fall below \$60,000,000. It is claimed that all this coffee could be produced in Porto Rico, Hawaii, and the Philippines, the soil and climate of which are similar to that of Java. Coffee raised on these islands, in fact, already commands the highest prices in the European markets.

A strike of machinists, national in its scope, was begun last week, some fifty thousand men quitting their work. The men demanded that a day's work be limited to nine hours. There were other less important demands as well. When the strike had been in force two days, about fifteen thousand men had gone back to work, their employers granting the demands. Throughout the country there seemed to be no great resistance to the men's demands.

Mutual concessions on the part of the street railway company and its employees resulted in a settlement of the Albany strike, and the cars began running on May 19. The State troops began to leave as soon as the terms of peace were agreed to.

General News.

The trustees of the John Carter Brown Library, acting under the provisions of the will of the late Mr. John Nicholas Brown, have decided to present the library with its \$650,000 endowment to Brown University. Papers are now being drawn up, and the formal offer will be made to the corporation of the university at their annual meeting on the twentieth of June. Brown University will receive the library as a sacred trust, never to be merged in the general university library, but to be preserved as a family memorial and used by properly qualified students. The university will then possess the finest collection of Americana in existence, and historical students will be drawn from all parts of the country to avail themselves of this rare opportunity. In addition to the books, whose value it is difficult to estimate, there will come to the university \$150,000 for a library building and \$500,000 of permanent endowment. The library will thus be amply supported and can be constantly enlarged.

It is unofficially stated that the net earnings of the United States Steel Company in April were around \$9,000,000, about equal-

ing the net March, which were \$9,210,000. Earnings of \$9,000,000 a month, or at the rate of \$108,000,000 for the year, are about what was estimated when the corporation was formed. The interest on the \$304,000,000 bonds outstanding requires \$15,200,000, and the seven per cent dividend on the \$508,480,300 preferred stock outstanding, \$35,594,000 more, or a total of \$50,794,000. The earnings after fixed charges and preferred dividend would therefore, at the present rate, be around \$57,200,000; \$57,200,000 is over 11 per cent on the \$506,473,400 common stock outstanding. It is understood that it was planned to allow about \$30,000,000 per year for expenditures on the various plants, deducting which figure leaves \$27,200,000 applicable to the common stock dividend. Twenty-seven million two hundred thousand dollars is about 5.4 per cent on \$506,473,000 common stock outstanding.

"Strike-anywhere" matches are in eminent danger of expulsion from the face of the earth. They have come into disfavor in nearly every country in Europe. Holland, Belgium, France, Germany, Austria-Hungary, Switzerland, Russia, and England have taken measures to minimize the evils arising from their manufacture and use; the Danish Government forbade both their production and consumption in the country thirty years ago, but the most severe blow has been struck by the Swedish Government, which represents one of the largest match manufacturing companies in the world. Following the example of Denmark, the Swedish Parliament has, after years of hard fighting, prohibited the production, importation, consumption, or exportation of this ordinary phosphorus match, and that prohibitory law goes into effect next June.

On June 22, 1879, when General Grant was in Japan, at the request of Governor Witsuni Toda Katsu, he and Mrs. Grant each planted a tree in the park at Nagasaki, with the hope, as inscribed upon a tablet, that both trees might prosper, grow large, live long, and in their growth, prosperity, and long life be emblematic of the future of Japan. General Young, of the United States Army, returning from the Philippines, touched at Nagasaki, and reports that the tree planted by General Grant has died, while the one planted by Mrs. Grant is still in a flourishing condition.

R. G. Dun & Co.'s review of the trade conditions last week contained the following: "The labor situation is the cloud hovering over the business world, but the difficulties are not sufficiently widespread at present to interfere seriously with the progress of manufacture and distribution. Meanwhile prices hold firm, the capacity of producing plants in the leading industries is well employed, and the crop advices are satisfactory. Railroad earnings continue to show remarkable gains: 9.6 per cent over last year and 29.8 per cent over 1899 for half of May."

J. Pierpont Morgan has bought outright the celebrated collection of art curiosities gathered together during the last twenty-three years by M. Mannheim of Paris. The collection is composed of antiques, works of art, and specimens of the middle ages and renaissance. Owing to the enormous custom duties levied by the United States, Mr. Morgan is not going to send the collection home. He is sending it to South Kensington Museum, London, where it will remain until it can clear the United States customs without too heavy an imposition.

The plans of President McKinley and party for a tour of the West had to be changed owing to the sudden illness of Mrs. McKinley, about whom there was the deepest concern for several days, but happily she got better rapidly to the great surprise of her physicians and was able to leave California for home on May 25.

Rudyard Kipling has lost his suit against an American publishing firm for infringement of his copyright. The United States court decided the question last week.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

The New West.

Remarkable Changes in the Last Decade.

THERE is a new West, and one need not be a St. John in order to behold it. It is not a place of jasper walls and golden pavements, to be sure; instead, it has barbed wire fences and broad expanses of upturned black earth. It is not the iridescent creation of an ecstatic vision, but a brave reality. Within ten years the old West of romance has succumbed to the inevitable logic of events. The six-shooter has given place to the plow and the reaper; the knight-errantry of the plains and mountains has been dominated by cosmopolitan men of affairs; the primeval chaos of wild woolliness has yielded to the cosmos of apt achievement. The cowboy, the bandit, the "terror," the horse thief, and all such as these have become as breathless shadows; their tale is ancient history; the literary craftsman who would now make use of the traditional border types must work with straw-stuffed lay figures or borrow his models from Eastern studios. Though you scour the country from Omaha to San Francisco, you will hardly find a living specimen of the Bret Harte style of border man. Far be it from me to deny that he once lived, and moved, and had his being, as the writers of tales have hinted; indeed, the half of his story has not yet been told. He is gone now, and with him has disappeared the line of the Western frontier—wiped away by progressive enterprise as a chalk mark is obliterated by a damp sponge. All the ingenuous lawlessness of other days has been succeeded by the subtler lawlessness of twentieth-century super-civilization.

Truly there is now no frontier, in the long accepted sense of the word. The broad trans-Mississippi territory, instead of offering a free range for the unbridled elemental passions of the human soul, is governed by the conventional rules of Anglo-Saxon decency. Everywhere you may see the signs and tokens of this change, in manners, morals, and the conduct of affairs. The old stage-coach has been relegated to the museum, and the Western plainsman has his modish English turnout or his automobile; instead of going mad with the loneliness of isolation, he talks with the world over his own long-distance telephone, following the state of the markets, the latest news concerning politics and war, and the current gossip of the club and the theatre.

It may be difficult to impress the fact that such things as this are not mere surface signs of no value. It is quite true, however, that the West of to-day has been born again in almost every item of its life and conduct. If we think of it sanely, we have no right to be surprised by this regeneration. It was to be expected; it has had no occult cause; it proves merely that the men of East and West are of one blood and one faith. In the beginning, Western folk adapted themselves to the rude conditions of time and place; but they hungered and thirsted after the righteousness of polite manners; and when the time and opportunity came they were quick and eager to return to the enjoyment of their birthright, which was decency.

I cannot find words too strong for framing this declara-

tion: The pioneers of the great West were never a class of small-souled, bloody-minded adventurers, short-sighted, and with no care beyond the needs of the present day.

The makers of the West were from the beginning of their work actuated by high motives; they desired the best things. But orderly social institutions do not spring up overnight; nor are constitutions and codes the product of a day. They must be slowly shaped by the ebb and flow of many tides of sentiment. The world has demanded too much of the West—demanded final effects before causes were well conceived. Surely fifty years is not too long a time for the development of mature social vigor and integrity. Remember, if you please, that concerted Anglo-Saxon effort in the Trans-Mississippi country had its beginning less than fifty years ago. There were scattered and isolated settlements before that time, but nothing like a common purpose.

For the pioneering of the West, the East gave of its best and readiest and strongest men. The hearts of the pioneers suffered no radical change in the migration; the Western movement was not a revolt against Eastern life and thought, but grew from the same root, took the same fair forms as it developed, and is destined to bear the same fruit.

The West is now ready to confess that it has deserved censure for the youthful excesses born of impatience. The people saw what was before them in opportunities for achievement, and burned with desire to achieve by virtue of a mystic "Presto! Change!" That was folly, of course; but what can you expect of men who are thrown suddenly upon their own resources in a land of fabulous breadth and wealth, and whose nerves grow all at once tense as drawn bowstrings? They misjudged their powers of endurance; they essayed to sprint when they should have been content to trudge; they sought to accomplish in a day the task of years. That was the sum-total of their error.

The tendency found expression in many ways—in the real estate "boom," in the mad career of town-building in the wilderness, in the crazed passion for inflating census returns, in railroad extension over unprofitable miles and leagues of unsettled territory, in borrowing millions of money at ruinous rates of interest, and staking it all upon a single turn of the wheel. It was intoxication pure and simple. There was too much ozone in the air. No normal man willingly spoils the pleasure of to-day's excess by indulging forebodings of to-morrow's reaction. That was true of the West in its excited days. There would be time enough for doctoring the headache when it came.

Now the West has come to itself. The sooner that is understood the better it will be for all concerned. The last decade of the century marked the real crisis in Western affairs; the close of the first decade of the new century will find a full recovery from all those little ills which attended social and industrial infancy.

For many years "the West" was a vague term; Western folk themselves were uncertain as to the logical bounds of their domain; the effort to fix an artificial geographical line

of separation from the East resulted in confusion. That confusion is dissolving. The question, "Where is the West?" can now be answered with something like precision. The line may not be marked by surveyor's monuments; it depends upon the drift of commerce. While the products of the Western farms and ranges had no market save on the Atlantic seaboard, and no outlet save by the old East and West lines of railway, the West was nothing more than a province tributary to New York, Boston, and Baltimore; the fictitious dividing line was ever moving toward the Pacific. Even Denver was in some degree an Eastern city; the closing of traffic by way of Chicago and the lakes would have severed the arteries through which its life-blood flowed. It is different now.

The West is doing for itself many of the things that were formerly done abroad. Manufacturing enterprise has gained a footing; flour mills are rising in the heart of the vast wheat fields of Kansas and Nebraska; tanneries are being established near the cattle ranges, where hides can be handled at the minimum of expense, and soon the West will make its own shoes; capital is engaging itself in building woolen mills and in spinning Texas cotton for home consumption. More significant than all, the West is finding the proper outlet for its surplus products through the ports of the Gulf. Western corn and wheat goes less and less to Chicago, more and more to New Orleans, for European export. The cornfields of Illinois have benefited by this change, along with those of Iowa, Nebraska, and Kansas; the state's pride in its mighty commercial capital gave way before the advantages of the dollar. Chicago is realizing a thinning of the current of grain traffic. Lines of railway are opening from all points toward the South. Besides, the last three years have witnessed a new tendency of shipments from the grain fields direct to the Pacific, to supply the Oriental markets. The opening of an Isthmian canal will give certainty to this movement. To put it in few words, there is now a real West, which begins where commercial dependence upon the Atlantic ports ends.

The West is gaining financial independence also; it is financing its own operations. The pioneers were practically destitute of money, without which development must move at a snail's pace. Unfortunately it was quite easy to borrow money and for many years mortgages lay three deep from the Missouri to the Rocky Mountains. The borrowers were over-sanguine, and the lenders were over-greedy; both deservedly suffered. Extravagant rates of interest were pledged to carry forward enterprises that had no substantial foundation. Dishonest intention played an infinitely little part in the matter; but the whole West lay for ten years under evil suspicion. That too has been dispelled. The debt has been paid. It came about quite naturally, as Western folk gained experience with the legitimate bounds of their efforts, and as the speculative temper gave place to a veritable passion for hard, honest work.

In some communities, like Colorado, where mining was once thought to be the only large source of wealth, agricultural pursuits are now dominant, outdoing the mines many fold; in other places, like Western Kansas and the North Platte country in Nebraska, where the first comers worked themselves into paresis while trying to raise corn and wheat, cattle and sheep now hold undisputed possession. With this readjustment there came a change in earning capacity. It was not heralded to the world, for the people were at last too busy to boast; they settled to their work, paid their debts, built banks, and in this year of grace they have money to lend. The matter calls for little explanation: it was part of the inevitable sequence of events.

It must be apparent even to the casual visitor that the new West is alert, vital. Institutions are not yet fixed; social, political, and industrial life is still fluid, so that little

things may turn the current into new channels. The Western man's place in the estimation of his fellows is never assured, save as he wins it afresh each day by the strenuous process of "keeping everlastingly at it." There is here as yet no such thing as resting securely upon laurels won. The very idea of abating effort is repugnant, because it means that one must step aside and let a fresh-winded man take his place.

From their environment and from the character of their labors, the men of the West have gained a fine, strong self-reliance, which is now their chief power. This reliance, abused, has brought upon them some sorry troubles; rightly used, it will compel for them the world's respect and admiration. It does any man good to be cut away from conventionalities, from the gregarious habits of a society whose usages are growing more and more inelastic, constricting free originality of movement in one whose genius is apart from the genius of the whole body. The work of home-making in Nature's wildernesses is rich in many blessings. The pioneer is brought face to face with the fundamentals of life, and his manners are simplified; he learns to stand with both feet firmly planted upon the earth, and to look unabashed into the face of circumstances; he gets command of himself, and a supreme confidence against emergencies. If there is any native strength in a man, there is no surer way to bring it out than to throw him upon his own resources, to work out his salvation in a wilderness. Western men have a large reserve stock of this sort of strength, developed within the last generation. If the West has a distinguishing trait, it lies, as I have hinted, in its ready adaptability, in its adroit quickness in executing its designs. No task can appear too large; no Philistine voice of mountain or plain can bellow a challenge which the new West will hesitate to accept.

WILLIAM R. LIGHTON.

Determining Exact Time.

THE determination of the real and exact time is one of the most important functions of an astronomical observatory. In former days each observatory supplied standard time to the country immediately surrounding it. In eastern Massachusetts the Harvard observatory had an important standard time plant, owning its own wires, which fairly criss-crossed Boston and its suburbs.

A few years ago the corporation voted it expedient to abandon the outside service, especially in view of the fact that the naval observatory at Washington had begun furnishing time free to all comers, so that the telegraph companies were able to distribute it generally throughout the country.

In spite of this change, however, each observatory still finds it necessary to determine its own time.

The determination of the time at the Harvard observatory, which is typical of the work at the others, is with the eight-inch visual meridian circle, a telescope on mighty masonry piers that swings ever in the meridian of Cambridge, but which can swing so as to follow that meridian from one horizon to the other. The middle vertical thread of spider web in its field follows the meridian as the operator moves the telescope, and when a star crosses that vertical thread he knows that it crosses the meridian.

While for ordinary purposes a single vertical thread in the meridian circle would suffice, it is not accurate enough for science, and so seven vertical cross hairs are set on each side of the one which represents the meridian, the mean or average time of a star crossing them being taken as its time of crossing the meridian, reducing the possible error to a very small amount.

As a given "clock star" passes each cross hair, the ob-

server touches the key, which is connected with a chronograph or time register. This is an instrument with a cylinder which revolves once every minute, and carries a sheet of paper on which a fountain pen rests, making, normally, parallel straight spirals around the paper, for as the cylinder turns, it automatically moves to a barely perceptible degree toward one end. When the key at the meridian circle is pressed, an electrical connection is broken which operates a miniature magnet, thus moving the pen, which is drawn aside for an instant.

If the touch on a key is momentary, the pen moves aside and then right back, leaving an inverted V-shaped mark. If the key should be held down, the top of the inverted V would be flattened, the length of the flatness measuring the time the key was held down. Meanwhile, the standard clock also has been sending in its record to the chronograph, operating the pen. As the clock's pendulum swings back and forth it makes and breaks a circuit, which causes the pen to move back and forth so that an inverted V representing the pendulum beat appears at regular intervals. When a star crosses a thread at the same time as a beat the marks coincide, but where one is just before or just after the other the top of the V is flattened. •

On the rod of each pendulum is a little shelf on which are placed small brass scale weights, an ingenious device of astronomers to raise or lower the centre of gravity of the pendulum. A clock is first approximately regulated by the nut and then exactly regulated by the weights to suit whatever instrument it is used to control.

On the bottom of each pendulum rod is fastened a little device which is nothing more or less than a child's horseshoe or permanent magnet, with its familiar red paint and all. Below it is a fixed armature of soft iron on the end of a spring, and, as the magnet goes back and forth in passing, it attracts the armature, which in rising is arrested in a little apparatus similar to a Morse telegraph relay, thus making a circuit, which is broken as the magnet moves on and the spring pulls down the armature. Each of these clocks operates an instrument; that is to say, regulates the clock-work which drives a visual, photographic, or photometric telescope, as the case may be, keep it fixed on a star.

Beside these clocks, there is also a "commutator," a clock-work device with a horizontal shaft carrying brass discs, which make a complete revolution in one hour, moving every minute, and regulated by one of the clocks. Resting against the edge of each disc is a little lever with a miniature rubber wheel to reduce friction.

Where the disc is solid the lever does no work, but where it is cut away the lever drops forward and establishes an electrical connection, taking the place of the finger in the key in taking sidereal time. Thus the ten discs simultaneously control ten different pieces of apparatus, scattered all over the grounds, and yet, with far greater accuracy than any person could pretend to secure.

Another disc keeps a telescope pointed for ten minutes on a star, then releases it for a minute, in which period there is not time for the star to make an impression on the plate, and then arrests the camera for another ten minutes and so on all night, making a series of photographs, like successive dots, of a star. It is by these plates that variable stars, where the light is cut off by a revolving dark companion, are photographed.

Other discs move the plate instead of the telescope, producing the same effect, and each disc does its own work on time and without failure. All the instruments, from the five-inch transit photometer to the eight-inch and eleven-inch Draper photographic telescopes, are photographing the sky every night at Cambridge, and the same methods are applied to the same kind of work the year round under the Southern Cross in far-distant Peru, and just now in half-way Jamaica.—*Boston Herald*.

A Rival of the Silkworm.

ONE of the most interesting features of the Paris Exposition was a bed-canopy woven of spider's silk, to be found in the Madagascar Palace, on the square of the Trocadero. "This masterpiece of strength, lightness, and elegance," says the *Magazin Pittoresque*, "comes from the looms of Tananarivo, and thousands of spiders of a certain species, called the *halabes*, have contributed to its production." The writer continues as follows:—

"This new industry, created in our colonies . . . has taken the name of *aranciculture*. Although still in its infancy, it has a very interesting history which has been recently narrated by one of its most ardent promoters, Lieutenant J. Maroix, from whose work upon the subject the following information is derived: Various attempts have been made at different times to utilize the thread of the spider, but to Father Camboné, a French missionary to Madagascar, is due the credit of having first brought these attempts to a successful issue. . . . The spinning *halabe*, whose superiority over the rest of his tribe was soon recognized by Father Camboné, is a large black insect of very unattractive appearance.

"These spiders are very plentiful in Imerina, where they live upon trees and feed upon raw flesh. Hundreds of thousands are found in the environs of Tananarivo, where they multiply with extreme rapidity. The first experiments of Father Camboné were made in the simplest manner. The spiders were imprisoned in match-boxes, and by slightly compressing the abdomen he managed to extract and wind upon a little reel turned by hand a thread that sometimes attained a length of five hundred yards. He was soon able to reach two conclusions: that the spiders gave out the longest threads soon after laying their eggs, and that in a month they can undergo two or three windings without inconvenience, producing about two thousand yards of thread.

"These experiments were continued by M. Jolly, director of the professional school at Tananarivo, but it is to the ingenuity of M. Nogué, one of the sub-directors, that we owe the apparatus which permits the thread to be wound mechanically, and to be twisted and doubled in the quickest and most practical manner. This is done by means of a curious little machine not easy to describe, in which the spiders are imprisoned by the throat while undergoing the operation. Young Malagasy girls go daily to a park near the school to gather three or four hundred spiders, which they carry in osier baskets with wooden covers, to be divested of their webs. M. Nogué has at present a supply of two hundred and twenty thousand yards of thread. The average production of the workshops of Tananarivo is forty thousand yards a month. Generally, after having submitted to the reeling operation, the spiders are put back in the park for a couple of weeks. Each one of them, before it is exhausted, spins six or eight times what an ordinary silkworm can give, and at every operation furnishes a thread about three hundred and fifty yards in length. Although the silk of the *halabe* is fifty-two times finer than that of the *bombyx*, its strength is much superior. Its color when first spun is a beautiful gold, and it requires no carding or preparation of any sort before being woven. Will this be the silk of the future?"

Translation made for *The Literary Digest*.

Largest Watch in the World.

The largest watch in the world has just been finished by a watch manufacturing company of Boston. The mammoth timepiece was built for a watch company in Manhattan, which will place it in front of its Fulton Street store for advertising purposes. Work has been in progress for some time on the foundation, and it is expected that the watch will be in place and indicating the time of day in about a week. It is not an advertising watch in the sense

that such instruments usually are, but it is a timepiece of the highest order. The works are equal to any that have ever been made, and the unusual size of them makes it possible to employ adjustments and error-correcting devices that could not be used in an ordinary watch. Besides the usual adjustments for heat and cold, etc., that are to be found in all good works, this watch contains adjustments for correcting astronomical variations and changes of cycles. In addition to this, the case is plated with 22-carat gold.

When placed upon its seven-foot pedestal the top of the timepiece will be fifteen feet above the sidewalk. To the pedestal will be affixed several long rods that will extend through the sidewalk, and will be bolted to the cellar foundation. The watch has no back, but is a double dial, so that the time may be distinguished from both directions. At night the interior will be illuminated with electric lights, so that the dials can be seen at a distance of several blocks. The faces of the watch are more than four feet across. The watch, including the stem and ring, is about six feet high. The timepiece had to be made unusually thick in proportion to the diameter, as the lights inside could not be brought into close contact with the dials and works. But its thickness of two feet will not appear to be so great, as it is surmounted by an immense stem ten inches in diameter. The crystals are three feet in diameter, and will produce a telescopic effect to the distant observer, so that the hands can be readily distinguished for blocks away.

Several thousand dollars' worth of 22-carat gold will be used in the case, and this will stand upon the sidewalk night and day every day in the year. As the whole affair weighs two and a half tons, it is not feared that any one will carry it away surreptitiously. It has taken nearly a year to build the watch, and by the time it is placed the whole thing will have cost about \$5,000.

Brooklyn Eagle.

The Character of a Gentleman.

It is almost the definition of a gentleman to say he is one who never gives pain. . . . He carefully avoids whatever may cause a jar or a jolt in the minds of those with whom he is cast, all clashing of opinion or collision of feeling, all restraint or suspicion or gloom or resentment, his great object being to make every one at ease and at home. He has his eyes on all his company. He is tender toward the bashful, gentle toward the distant, and merciful toward the absurd; he can recollect to whom he is speaking; he guards against unreasonable allusions or topics that may irritate; he is seldom prominent in conversation and never wearisome. He makes light of favors while he does them, and seems to be receiving when he is conferring. He never speaks of himself except when compelled, never defends himself by mere retort. He has no ears for slander or gossip, is scrupulous in imputing motives to those who interfere with him, and interprets everything for the best. He is never mean or little in his disputes, never takes an unfair advantage, never mistakes personalities or sharp sayings for arguments, or insinuates evil which he dare not say out. . . . He has too much sense to be affronted at insult. He is too busy to remember injuries and too indolent to bear malice. . . . If he engages in controversy of any kind, his disciplined intellect preserves him from the blundering discourtesy of better though less educated minds, who, like blunt weapons, tear and hack instead of cutting clean. He may be right or wrong in his opinion, but he is too clear headed to be unjust. He is as simple as he is forcible, and as brief as he is decisive. Nowhere shall we find greater candor, consideration, and indulgence. He throws himself into the minds of his opponents, he accounts for their mistakes. He knows the weakness of human nature as well as its strength, its province, and its limits.

JOHN HENRY NEWMAN.

The Lectures.

At Kansas City, Mo.

Mrs. Annie M. Knott, C.S.D., of Detroit, lectured yesterday (Sunday, May 12) at First Church of Christ, Scientist, Ninth Street and Forest Avenue, on "Christian Science, the True Ideal." Mrs. Knott is a member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass. People came in yesterday to hear her lecture, from St. Joseph, Leavenworth, Atchison, Topeka, Lawrence, and other nearby cities and towns. The church seats sixteen hundred people, and all the seats were filled as well as the aisles and all available standing room.

Mrs. Knott was introduced by Adam H. Dickey, First Reader of First Church of Christ, Scientist. In presenting her Mr. Dickey said:—

Ladies and Gentlemen:—It is with a great deal of pleasure that I welcome to our church this magnificent audience: knowing, as I do, that you have been drawn together by a desire to hear more of that most instructive and vitally important question, Christian Science.

The Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., has been organized for the purpose of giving to the public a fair and impartial idea of what Christian Science is, and what it does for mankind.

Every scientific and religious truth that has ever been presented to the world has been met with the scorn and antagonism of the worldly-wise men of the day and age in which it was presented. The opposition that has been directed against Christian Science has served only to stimulate its growth and accelerate its progress, until to-day many thousands of our most intelligent and cultured people have come to look upon it as their only means of relief from sin, sickness, and all the trials of this life.

We have no evidence that Jesus employed argument to convince his hearers of the truth of his doctrine. It is related that when the disciples of John the Baptist began to follow Jesus, he turned to them and asked, "What seek ye?" They replied, "Master, where dwellest thou?" and his answer was, "Come and see." When Nathaniel inquired of Philip, "Can any good thing come out of Nazareth?" Philip said, "Come and see." When John, who was in prison, sent his disciples to Jesus with the question, "Art thou he that should come, or do we look for another?" Jesus sent them back to tell John what they had seen and what they had heard. Seeing and hearing are always far more convincing than any argument we can offer; and so to-day when scepticism and unbelief question the divine nature and origin of Christian Science, we can offer no more convincing argument than to point to the number of its beneficiaries and the healing work that has been accomplished in its name.

There can be only one true way in which to serve God, and when that way is understood and accepted, it will not only save from sin, but must necessarily heal the sick and supply every need of mankind.

Based upon a principle that is infinite, governed by a rule that is unfailing, Christian Science is sustained by unmistakable proof, and is to-day forming the most important chapter in all the world's history.

We have with us to-day an honored member of our Board of Lectureship, who for sixteen years has held the banner of Christian Science aloft; preaching the gospel and healing the sick, according to the word of our Master, as taught in Christian Science; and who, by reason of her practical experience and studious application, is ably qualified to address you upon this subject. I bespeak for her your careful and undivided attention. It gives me great

pleasure to present to you Mrs. Annie M. Knott, C.S.D., of Detroit, Mich.—*Kansas City Times*.

At Plymouth, Wis.

The lecture of Judge Ewing, Friday evening (May 3), attracted an audience which Turner Hall could not accommodate. A special train brought a large delegation from Sheboygan, and fifty or more came from Milwaukee. The lecture was given under the auspices of First Church of Christ, Scientist, of Plymouth. The speaker was introduced by Attorney A. C. Shaw of this city.

Judge Ewing's language and method of presenting his subject betoken him a scholar. His subject was "Christian Science, the Religion of Jesus Christ." Whatever one may think of Christian Science, he must concede that the lecture was an able and eloquent exposition of the subject. That Judge Ewing spoke from a rational conviction, and that he was profoundly sincere, could hardly be doubted.

The editor of the *Review* has long been of the opinion that it is unworthy of a fair-minded person to condemn another because he professes this or that faith. He believes with Emerson that man is more important than any creed. And so it matters little what Judge Ewing calls himself, his teachings are pure and ennobling, and such lectures as his must have a most wholesome influence.

Plymouth Review.

The introductory remarks by Attorney A. C. Shaw, were as follows:—

Ladies and Gentlemen:—We have in our city another and new church. Its relation to us is, in many respects, the same as our other and older churches. It is incorporated as First Church of Christ, Scientist, of the city of Plymouth, Wis.

Among its members are people long recognized as some of our best citizens. It is your duty and mine to extend to them, and to others who may adopt their religious belief, the same privilege we possess: to worship God according to the dictates of our conscience. It is our duty to aid them in the good work they are doing, that the world may thereby be made better. Their basis of religious belief, the Bible, is the same as many of yours, for it is not a new religion but an old religion revealed and restored to the world by Mary Baker Eddy. It numbers among its members, doctors, lawyers, judges, and many eminent persons. I am not familiar with its principles or teaching; but must concede, and you should acknowledge, that by and through it many have received aid, assistance, relief, comfort, and satisfaction which they could realize through no other religion.

I am not here to deliver a lecture on the subject of Christian Science, but have been requested to introduce to you a gentleman of the legal profession, a distinguished citizen of our neighbor state of Illinois, a gentleman who has been intrusted with several places of public confidence under our national and his own state government. He was released from the grasp of man's silent visitor through this religion, and being conscious of a moral obligation to God, refused man's offer, a nomination for, virtually a re-election to, a remunerative judicial position, that to-night he might explain to you and to me the benefits to be derived from and through the principles and teachings of the Christian Science religion.

The gentleman to whom I refer is the Honorable and Ex-Judge William G. Ewing of Chicago, Ill., whom I take great pleasure in introducing to you this evening.

Correspondence.

Lectures at Other Places.

Constantine, Mich.—William G. Ewing, April 19.

June.

Joy comes, grief goes, we know not how;
Everything is happy now,

Everything is upward striving;
'Tis as easy now for the heart to be true
As for grass to be green or skies to be blue,—
'Tis the natural way of living:

Who knows whither the clouds have fled?
In the unscarred heaven they leave no wake;
And the eyes forget the tears they have shed,
The heart forgets its sorrow and ache;
The soul partakes of the season's youth,
And the sulphurous rifts of passion and woe
Lie deep 'neath a silence pure and smooth,
Like burnt-out craters healed with snow.

James Russell Lowell.

Notices.

Communion Service at the Mother Church.

OWING to circumstances the Communion Service and Annual Meeting of the Mother Church have been postponed until further notice which will be given in our periodicals.

The First Readers of all our churches are requested to read this notice at the services next Sunday.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

A Word to Inviters.

Inviters of applicants to membership with the Mother Church will confer a favor on the Clerk and save dis-appointment to the applicants if they will withhold, until after the semi-annual meetings, all applications that have been sent to them for their signature too late to reach the Clerk before the date for the closing of the entries for admission, and also notify the applicants that their applications have been retained.

All applications should be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

It is not learning, nor eloquence, nor generosity, nor insight, nor the tidal rush of impassioned feeling which will most effectually turn the dark places in men's hearts to light, but that enkindling and transforming temper which forever sees in humanity not that which is bad and hateful, but that which is lovable and improvable; which can both discern and effectually speak to that nobler longing of the soul which is the indestructible image of its maker. It is this—this enduring belief in the redeemable qualities of the vilest manhood—which is the most potent spell in the ministry of Christ.—FRANCES E. WILLARD.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Aching Amputated Arm.

THE *Poughkeepsie* (N. Y.) *Evening Enterprise* published the following despatch from Binghamton, N. Y., some time since:—

The seemingly impossible fact that a man's arm can convey sensation to the brain after it has been amputated was demonstrated at Norwich Thursday, in the case of A. B. Knapp, a prominent resident of that village, who was injured on the railroad.

After the amputation Thursday evening, Knapp recovered rapidly from the shock until suddenly he complained that the arm was cold.

It grew worse, and, though the surgeons and his friends laughed, Knapp insisted that his arm was freezing and aching with the cold.

The severed arm was taken from an adjoining room and placed under a stove without Knapp's knowledge, but he at once expressed relief, saying the arm was getting warm.

Later Knapp again complained that something tied about the wrist was making the arm ache. It was found that a bandage had been tied tightly just above the hand. This was loosened without Knapp's knowledge, and again he felt the removal of the pressure.

The surgeons are puzzled over these indisputable facts, arguing that there is a psychological connection between each part of the body and the brain which cannot be severed by a knife.

The above incident is a clear illustration of the fact that sensation is in mind and not in matter; also that the cause of sensation is mental and not physical. All physical connection with the arm had been severed, and yet the patient, without knowing where the arm was, complained that it was freezing and aching with the cold. It is evident that the arm did not feel for there was no mind in the arm to feel pain and no brain to which the amputated member could convey sensation. Yet the patient's sense of suffering was just as real as any sensation he had ever felt in the arm before the accident took place and the amputation was performed.

The commonly accepted explanation in such instances (which are by no means limited in number) where one has suffered pain which seemed to be located in a severed member, is to the effect that nerves extend, like telegraph wires, from all parts of the body to the brain, and the sensations of pain and pleasure are transmitted thereby. In the case of a severed member, if the nerve which extended to that member is in any manner irritated it reports the sensation, not at the point of irritation but at the end of the nerve, or at that place where the nerve ended before it was severed.

In this instance, however, the explanation does not suffice, for when the severed arm was placed under a stove, without the patient's knowledge, he at once expressed relief. He likewise experienced relief when the bandage was loosened. Thus it was demonstrated that irritation of the nerves which had extended to the arm was not the cause of the sensation, for nothing was done that would, in a material way, remove any such irritation, and yet the sensa-

tion of cold and of pressure disappeared when those conditions were complied with which, according to the general law of mortal belief, would have afforded relief before the arm was amputated.

Is it not clear that the suffering was entirely mental, and that relief came through mental and not material means? While the patient was ignorant of what was done with the severed arm, yet there were those who did know, and their thoughts acting in accord with the general law of mortal belief, sufficed to change the patient's mental condition and the suffering disappeared.

Then the question arises, If the suffering after the arm was amputated was entirely mental, was not the suffering before the arm was amputated also mental, since matter without mind cannot feel?

A correspondent of the *Philadelphia Press*, who has had an experience similar to that related above, writes as follows:—

"My right leg was taken off at the middle third of the thigh nearly thirty years ago, but since that time the sensation of the presence of the toes, instep, heel, foot, or knee is stronger than in the other leg, or stronger than it was before amputation. To me it seems that when the leg is at rest normally there is no consciousness of any sensation at all in it, whereas there is always more or less sensation in the stump. My leg was amputated in such a position that it seems, when I stand, to be flexed with the foot behind me. I have often tried to get it out of the way of a closing door or of persons passing me on the street. To this day I often fall in trying to put my foot on the floor when springing quickly from a sitting position. Year by year, also, there is a sensation of shortening, the foot seeming to come nearer the body. If I make an effort as if to extend the knee a sensation of heat occurs in the stump, although the rest of my body may be freezing."

Professor Gilbert on Biblical Interpretation.

THE recent resignation of Prof. G. H. Gilbert from the Chicago Theological Seminary, is a fact of special interest. To the praise and credit of all concerned, his retirement was effected without the precipitation of a heresy trial, and without the exhibition, by any one concerned, of aught but Christian courtesy and consideration.

The issue presented by Professor Gilbert, in his letter of resignation, is so important in itself and so impending in the minds of the world's religious teachers as to command general attention and stimulate much "silent hour meditation."

This is but one of many events which indicate a world-wide reaction against the restraints of traditionalism.

The recognition of the value of the scientific method in the study of the Scripture is becoming more definite, and beyond all question the teaching of Jesus and the spiritual import of the Scripture is finding a more authoritative place, a larger freedom, every day, and through Christian Science its healing and redemptive power is coming to the people as comes the dawn to a weary watcher.

The following excerpts from Professor Gilbert's letter are taken from the columns of *The Congregationalist*:—

"The demand of the times, which in this case is, I think, a demand of Providence, is that the minister shall be scientific in his methods, and this means, among other things, that he shall be an independent interpreter of the Bible. But when one begins to investigate the Bible scientifically, one becomes conscious of a difference between its teachings and the current traditional theology.

"Hence the embarrassment of many a religious teacher. He must be loyal, on the one hand, to the documents on which his religion rests—his conscience and manhood require this, whatever befall—and he would fain be at peace,

on the other hand, with the doctrines of the church and with their champions.

"Thus the church is divided into two parts, one of which would forever read the Bible in the light of the past, while the other would read the past and the Bible also in the light which the living God gives in the present. The difference between these positions is sufficiently broad and far-reaching to constitute a serious and trying feature of the church life of our day.

"My conviction and sympathy are with those who exalt the Bible far above all traditions and creeds of men, and who seek to interpret the Bible in the modern scientific spirit.

"The Bible, moreover, culminates in the Lord Jesus, who is the full and final revelation of God. To him, not to the church, it is our privilege and our bounden duty to appeal. A creed which was right fifty years ago, because it embodied the best knowledge of the Bible of that day, may be wrong now. The only standard which does not sooner or later become obsolete, the only standard of doctrine and life which God recognizes either for individuals or institutions, is the living Christ. The only heresy to be feared is falling away from him; the only orthodoxy to be desired is loyalty to his teaching. This has been my position in all the years of my connection with the Seminary."

Doctors Need not Go.

"THE Supreme Court of Indiana has decided that a licensed practising physician is not legally bound to attend any patient for whom he is called, although he may have served as family physician for the sick person's family in the past, and he is not liable for damages for refusing to answer calls.

"The case came up from Montgomery County, where Dr. George Weddingfield refused to attend the wife of George D. Hurley, although called three times, the last time by a preacher, who offered to pay the fees in advance. It was charged that the woman's death was due to the lack of a physician's aid, and the doctor was sued for \$10,000 damages."

The above is a clipping from a late number of the *Boston Herald*. Since it is now illegal, according to state enactment, for any but licensed physicians to ask or receive compensation for relieving the sick in Indiana, and since the Supreme Court of that state has decided that a physician need not attend a patient unless he so desires, it is pertinent to inquire what provision the state intends to make for those patients who, for any cause, *cannot* procure the services of a licensed physician?

The incongruity, class interest, and unconstitutionality of all this legislation is so manifest as to call for no comment.

Among the Churches.

Interesting Testimonies at Dayton, O.

The following testimonies were given at First Church of Christ, Scientist, Dayton, O.:—

A lady said: I had been under the doctor's care some three years ago for nervous prostration and other complaints, and finding no relief gave up treatment with them for a time. In September, 1899, I was in such misery that I again concluded to place myself under the care of some eminent physician. My former home was in Kentucky, but I am now living in Dayton. I sought one of the leading physicians of this city, and he assured me if I would be patient he would do all he could to cure me. I

was under his care three months when he thought it advisable to perform a surgical operation, to which I consented, being desirous of regaining my health. I was taken to the hospital where the operation was performed, and returned in December, not very much better. My physician did all in his power for me, was exceedingly kind and patient, and I fully appreciate his untiring effort to relieve my suffering. I remained under his care until June, 1900. As I had a very stubborn disease, for which he could do nothing, and as I felt I must have relief from some source, I turned to Christian Science. I commenced to take treatment and began the study of Science and Health in the latter part of June. The disease which the doctor said he could not cure, and which he admitted, if not relieved, would send me to an asylum, was permanently healed in one week. Other troubles I had were slow in yielding, but I began to see the light at last, and can never be grateful enough to my kind, patient healer for bringing me into Christian Science.

For the benefit of those seeking the Truth, I will relate my condition to prove that Christian Science can heal the most stubborn case. I could not walk one square alone, not on account of weakness, but because of fear. The sweet strains of a band of music would cause intense suffering, resulting in a mental collapse. It was impossible to ride in a street car on account of heart palpitation. In robing and disrobing myself, I would become so nervous that it was necessary for some member of the family to be present with me. My suffering during a storm was almost indescribable.

I called on my physician the other day to tell him that I was now well and had been healed through Christian Science. He admitted that he could do nothing more for me than he had done, as medicine would not reach the case, and the only hope I had was to submit to a second operation. I am convinced that I could never have lived through another ordeal of that kind. He was very courteous, and seemed greatly rejoiced that I had regained my health, and spoke very well of Christian Science. I am extremely grateful that divine Love has led me thus far, and brought such great change and happiness in my home.

A gentleman spoke of an instance of healing of rheumatism in the case of a little girl. Her knee and ankles were badly swollen. She suffered intense pain in the shoulders and hips, and especially in the limbs and joints. She could not lie in bed, hence was made as comfortable as possible in a rocking chair. The suffering was so great that she could not bear the touch of a cover on her foot, and to move her limb or body brought excruciating pain. Under Christian Science treatment, in about one week she was able to be on her feet, assisting her mother with the housework, and in a few days more, started to school. Words cannot describe the gratitude of her parents in having their little one brought out of such intense suffering in so short a time. When a young man, her father lay three months with this same disease under medical treatment.

A young lady spoke out of the fulness of her heart of her great gratitude to Christian Science for the many blessings it had brought to their family. Christian Science had freed her from a severe attack of indigestion, had overcome an attack of grip, and had been of inestimable value to her in dentistry.

The First Reader spoke of a case of healing that came under his observation. He was called to see a little girl five years old. Her mother stated that the child had never been well from birth. The physician had dosed the child with calomel until her mouth was in a terrible condition. There was an abscess on the gum which protruded over the lip, also a large lump on her neck. In a week or ten days' treatment, the little girl was healed, and now is the very picture of health. This is the first time her mother could say she was well.—*Dayton (O.) Herald*.

Christian Science in Dresden.

Christian Science first began to be known in Dresden in January, 1898, when a loyal student from New York came to establish the work. English Sunday services and weekly meetings were first held in a private apartment on the Reichstrasse. In April the increasing number of visitors caused these meetings to be moved to larger rooms in Luttichaustrasse 26. The attendance increased so rapidly, that a first German meeting could be held in the month of June, and in September, 1898, regular German Sunday services and week-day meetings were established, besides the English ones. In the autumn of 1899 our teacher removed to Berlin. Having taught two classes during her stay in our town, she could leave the Dresden work to the care of students. Two Readers, one English and the other German, each thoroughly conversant with both languages, took charge of the services.

As the number of adherents of Christian Science kept steadily increasing, the rooms in Luttichaustrasse 26 after a year were too small, and the time came for our services to leave private apartments and to be established in a home of their own. We secured an apartment in the centre of the town that was meant for business purposes and had a wall taken out, making one large room and leaving two small rooms; the church room being used also as a reading room.

The room has five large windows with pretty yellow draperies covered with white lace curtains. Nice pictures, presents from friends, adorn the walls. The selection from our text-book, "Divine Love always has met, and always will meet, every human need," occupies a conspicuous place. An American organ, a reading desk in white and gold, and comfortable chairs, complete the furnishings.

We held our first service on February 17, the room was beautifully decorated with palms and various other plants, and was entirely filled for the opening services. We had the pleasure of having our teacher and some other Berlin Scientists with us on this day. A small number of us came together on the following day and organized Erste Kirche Christi des Scientisten zu Dresden (First Church of Christ, Scientist, in Dresden).

Our work is steadily growing, and there is more demand for healing than can be met by the Scientists that are at work. Our hearts are filled with gratitude to God and to Mary Baker G. Eddy for the spiritual blessings, the harmony and health we have obtained through Christ, in Science, and to the faithful pioneer who left her native land and has brought the Truth to so many Germans for her patient, untiring labors in showing us the way, in establishing the work among us, and in teaching us how to work.—OLGA BARONESS VON BESCHWITZ, *Clerk*.

Christian Science Chapel at Oneonta, N. Y.

The new home of First Church of Christ, Scientist, on Chestnut Street, is completed and services were held there for the first time, Sunday morning, May 19, 1901, at half past ten o'clock. The property has been greatly improved since it came into the possession of the church, and no other society of that denomination in this section of the state is so well equipped.

The auditorium is thirty-three feet square, and is entered from a vestibule. The walls are artistically decorated, the design of the frescoing being appropriate to the purpose of the room, and rich rugs cover the aisles and open spaces of the floor. A recess is occupied by the platform, upon which are two lecturns. The room will seat three hundred and fifty persons and is supplied with opera chairs. It is heated by a furnace and lighted by gas. To the left of the vestibule, upon entering, is the reading room, made attractive by a grate and mantel, pictures, rugs, and suitable

furniture. This room will be open every day from 2 to 5 P.M. In the rear of the auditorium is a parlor, also well furnished.

The appointments throughout are complete and the rooms are admirably suited to the use of the church.

Christian Science Chapel is the name given the building. First Church of Christ, Scientist, was organized in Oneonta six years ago, and its growth has been constant.

Oneonta Daily Star.

Christian Science in Mississippi.

March 3, 1901, about sixty Scientists congregated at the residence of Mr. H., for the purpose of organizing First Church of Christ, Scientist, Hattiesburg. There were eighteen charter members and two have united with us since. All officers were duly elected.

Twenty-six months ago the writer became a resident of this thriving city. The only Scientist and a stranger in a town of about five thousand inhabitants, imagine the hunger for some one with whom to converse about this beautiful life. God supplies every need. In a few months a little band of us were holding our regular services in the parlor of a devoted Scientist.

The charter is being prepared which will meet all the demands of the state laws and which will give us that protection with which the grand old State of Mississippi lovingly envelops all her religious, educational, and charitable institutions.—MRS. NANNIE C. GATLIN, *Clerk*.

Reading Rooms at Portland, Ore.

The First Church of Christ, Scientist, has opened free reading rooms at 131 Third Street, Hamilton Building. These apartments on the second floor, are sunny, commodious, and charmingly furnished. They consist of three rooms, the walls of which are delicately tinted, harmonizing with the dainty appointments and furnishings. The largest room of the group is the reception room, to the right of which is a cozy reading room where all the latest literature on Christian Science may be found, and is visited each day by many men and women. To the left is a private room, furnished with couches, where one may discuss Christian Science with members of the church, who are always in attendance, or may receive advice and help. Potted plants and fragrant garden blossoms are placed in the nooks and corners, and on table or stand, and pictures of Mrs. Eddy, of the Mother Church at Boston, and Mrs. Eddy's home at Concord, N. H., adorn the walls. The rooms are open daily from 10 A.M. to 5 P.M., and every evening except Wednesday and Sunday from 7.30 to 9. All visitors will receive a cordial welcome.

Portland Evening Telegram, May 18, 1901.

Organization at Greenville, Mich.

First Church of Christ, Scientist of Greenville, Mich., was organized under our state law. Articles of association were filed and charter granted in January, 1901. Our work commenced in 1895, in the home of our First Reader, where we remained about three years.

Seeing the need of larger quarters, we removed to Grand Army Hall, where we organized and worked as a society for nearly two years with very satisfactory results.

When Truth urged us to take an advanced step, by organizing as a church, "They helped every one his neighbor; and every one said to his brother, Be of good courage. So the carpenter encouraged the goldsmith, and he that smootheth with the hammer him that smote the anvil, saying, It is ready for the soldering: and he fastened it with nails, that it should not be moved" (Isaiah, 41:6, 7). Truly we can say that divine Love supplies all our needs.

ROBERT DOLLEY, *Clerk*.

From Our Contributors.

Forbear, Forgive, Forget.

BY WILLIAM BRADFORD DICKSON.

FORBEAR, strong heart, forbear;
Let not the arrow dart
Which wounds the trusting heart;
Forbear, strong heart, forbear.

Forgive, dear heart, forgive;
Let not the tide of strife
Mar thy sweet inner Life;
Forgive, dear heart, forgive.

Face upward to the stars;
Let Love heal all thy scars;
Face upward to the stars;
Forget, true heart, forget.

Reply to a Clergyman's Inquiries.

THE following letter from a clergyman seeking light on the subject of Christian Science and the answers to the questions asked, will be interesting and instructive to our readers.

Mrs. Harriet L. Betts.

Dear Madam:—I have just received a copy of "the tenets to be signed by those uniting with the Church of Christ, Scientist," for which please accept my thanks. And now, as I am anxious to know just what is held by Christian Scientists, I shall be glad to have you answer a few questions, if this be not asking too much.

First. What is meant by "Scriptures" in the first article? Are Mrs. Eddy's writings included in the above title?

Second. In the second article it is said, "We acknowledge one Christ, the Holy Ghost." Are these terms in apposition and identical in meaning?

Third. Does man have any part to play in the forgiveness of sin, or does God act arbitrarily, destroying it simply by His will to destroy it?

Fourth. Does the "atonement" involve the necessary death of Jesus Christ, the Son of God, so that without the shedding of blood, there is no remission of sins?

Fifth. What is meant by the resurrection of human faith and understanding? Is it a resurrection from the dead? And how can a resurrection *seize* great possibilities and living energies of the divine Life?

I ask these questions in order that I may have an authoritative answer to some perplexities which the form of statement in the circular you sent me, has aroused in my mind. An answer will be greatly appreciated. If we are really working for the same end, I see no reason why the herdman of Lot should have followed him in departing from Abraham, and taking another cattle ranch in the plain of Jordan.

Very sincerely yours,

T. P. S.

Rev. T. P. S., D.D.

Dear Sir:—It gives me great pleasure to answer your thoughtful questions to the best of my ability. A letter does not always convey the exact meaning that conversation does, yet the written words are often even more correct.

First:—"The Scriptures" means to Christian Scientists, the Bible alone. They believe in its inspiration; that it is written to convey spiritual truths, and that it must be interpreted by a spiritual consciousness. Often the letter seems as crude and repellent as the burr that encloses the chestnut. Mrs. Eddy's writings are not included in the Scriptures; all that is claimed is that her book, "Science and Health," includes a "Key to the Scriptures."

Second:—Christ and the Holy Ghost are no more identical in meaning to the Christian Scientist than to the Presbyterian. The Unity or Triunity includes Father, Son, and Holy Ghost.

Third:—This question requires careful answering. The point of view greatly changes the conclusion. In the same manner that light destroys darkness, heat destroys cold, and love destroys hate, so God, infinite Good, destroys sin, and therefore may be said to "forgive" it. It is scientifically impossible for opposites to dwell together; meaning, in the same place at the same time. Infinite Good forbids and annihilates evil.

On the other hand, mortals who are believing in the reality of sin and its allies have a great work to do before mortality can be laid off, and sin be disbelieved. Only in this way can they realize its destruction; which is the only pardon that justice can approve. Simply asserting the unreality of evil will not cause mortals to experience goodness. By following the Master, obeying his precepts as set forth in the Sermon on the Mount, as far as they apprehend it; through trial, self-denial, and suffering, they must grow to practically understand the unreality of all that is unlike God, and win pardon. I cannot understand how God, who is All-in-all, "with whom is no variable-ness, neither shadow of turning," who is "of purer eyes than to behold evil," can sometimes will to allow evil, and sometimes will to destroy it. His presence and power annihilate His supposed opposite. When mortals become conscious of this they are pardoned—forgiven.

Fourth:—To Christian Scientists "atonement" means at-one-ment, or the perfect unity of God and man in purpose and achievement. It is not necessary to reconcile the unchanging Father to His child; the child alone needs to become reconciled to his Father. To demonstrate harmony, to convince his brethren that God is Love and gives eternal life to as many as believe on Him; to change the sinning, rebellious, suffering, and unhappy consciousness of man, was the mission of the great Teacher. He saw the vital need of proving that there is an eternal, scientific rule, given by the Father, by which even the "last enemy," death, can be vanquished. This was his highest test. Without it his life-work would have been incomplete. Then, since such a rule exists and its mighty demonstration has been made, all who learn the rule and correctly work the example, must win the glorious result, and become partakers of his resurrection.

Fifth:—Paul spoke of mortal man as being "dead in trespasses and sins." To Jesus this was the awful death. That which is called death is but its outward, visible manifestation. Resurrection from the dead involves spiritualization of thought, word, and deed. This present resurrection is making this old world all over anew. It is sweeping away dogma and human opinion, and revivifying God's own people with a hope and glory before unknown. This resurrection lifts the veil, and reveals a glimpse of human possibilities, inspires faith, illumines the present and glorifies the future. It changes despair to hope, hate to love, and sin to holiness.

The final and complete demonstration over physical death is in the Father's own time and power.

Finally:—No doubt Abraham and Lot separated in order to gain "elbow-room." There was a time when Presbyterians believed there would be more harmony and better results if they separated themselves from the Church of England; yet each body aimed to worship and serve God, though their methods were dissimilar.

The Christian Science system is built on the Scientific declaration that man was "created in God's image and likeness," as taught in the first chapter of Genesis; many other systems are founded on Adam as made from dust, as recorded in the second chapter of Genesis. Christian Science boldly declares the scientific unreality of evil, and

hopes some time to overcome all evil, while other systems bow in submission to calamity and suffering as the will of God. Is it not well that we separate; that each be free to work out the problem, whose successful solution is our highest aim; viz., the eternal and glorious salvation of all mankind?

I trust you will pardon my lengthy reply. It was a great temptation, for seldom will clergymen seriously regard our doctrines. I believe they reveal the absolute truths taught by the Nazarene Prophet. I daily pray that the more spiritual sense of God and man may permeate all human consciousness and revivify all our churches.

Sincerely yours,
HARRIET L. BETTS.

Some First Fruits.

BY C. A. PILLARS.

WHEN Christian Science was first presented to me, I had not attended church for nearly ten years, and never enjoyed reading my Bible. It seemed to me a mass of contradictions. I believed there was a God, but that He took no interest in our petty affairs, seemed evident. The word Christian was a synonym for hypocrite.

But in Christian Science I have found God, and know that He can and does help "all that call upon Him in Truth;" and that at last I have found Christians who are not hypocrites. The manifestation of love in our gathering, was a revelation to me.

Christian Science has proved the Bible consistent, and an endless mine of wealth. It enables me to find happiness in everything: the trees, birds, clouds, and all nature have the freshness and pleasure of childhood's enjoyment. It is indeed true, "If any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new."

Before taking up the study of Christian Science I had attacks of biliousness every three or four weeks, and rheumatism and cramps frequently. I had been in Science for six months before I remembered that the bilious attacks had disappeared, neither have they ever returned. The attacks of rheumatism and cramps have also been totally destroyed.

I consider my almost absolute freedom from physical ills, one of the great demonstrations of the power of Truth, although I have had many other beautiful ones, and have been benefited in every way.

There have been many cases of wonderful healing accomplished in our little church, for people with whom I am personally acquainted. I am young in Science yet, but give a part of my experience hoping that it may benefit some one.

Above the Clouds.

BY G. E. M.

I, too, with the baby lark, know the joy when he sang, "The sun has come out after the rain."

Through a very stormy month, when morning after morning nothing but gloomy clouds and rain greeted our sight, making it almost seem that the sun had gone forever or that we had forgotten its warmth and light, patiently and sometimes impatiently we waited, knowing with scientific certainty that it was there behind the grayness and dampness,—unchanging, still the same.

At last late one afternoon the sun burst out between dark clouds while the air was yet moist with tear drops, and across the eastern sky, from mountain to mountain, glowed the rainbow, that "bright bow of promise."

Oh, the glory of it all! the sweet scent of growing things, the budding trees, the freshness of the spring. I looked

and looked to take my fill, I could not leave the sight, with mortal eyes I gazed on the radiant things of earth. It was indeed a foretaste of things to come,—of Harmony and Heaven.

It held its little lesson. We, laboring under the clouds of sense, impatiently and sometimes patiently waiting, sometimes discouraged and then again catching a ray of light when we look up, and, nearer its source, have learned through the certainty of Divine Science that God is here amid the seeming clouds and darkness, God is here and God is Love.

Let us live in the warmth and shelter of Truth, knowing not the storms, but clearing away the clouds of error in this life, "We all, with open face beholding as in a glass the glory of the Lord, are changed into the same image from glory to glory, even as by the Spirit of the Lord."

Reasons for Accepting the Statement that Matter is Unreal.

BY GEORGE D. KELLER.

1. BECAUSE it makes for righteousness and those who accept it are made better physically and spiritually.

2. Because Christ taught the unreality of matter, when he multiplied the loaves and fishes, and destroyed the material manifestation of disease by the power of immortal Mind.

3. Because some of the wisest philosophers for the past two thousand years have taught this truth.

4. Because many of the great natural Scientists of this age, through many years of patient investigation in the realm of matter, have come to the conclusion, "that the entire universe, as known to them, is mind," and "that matter is but the name for the unknown cause of states of their own consciousness."

5. Because Christian Science makes a practical application of this truth, and in thousands of instances has healed all kinds of disease and restored the sick and the sinner to a living faith in God.

6. Because it is the only adequate theory, for the salvation of the human race and the unification of all God's creation. Upon this theory alone can the law of Spirit become universal and the declaration of the Apostle Paul be realized: "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death."

A Business Incident.

BY WALDO P. WARREN.

Not long ago I arranged to take an evening course of lessons in Christian Science; but as the time drew near it seemed almost impossible for me to count on having my evenings, as my business had kept me at my desk almost every night for several weeks. The day before the class was to begin I went to my teacher and told her how impossible it seemed for me to find time to take the teaching. She swept the matter aside with perfect assurance that it would be all right, and smiled, as if to say, "Oh ye of little faith." I left her feeling greatly uplifted with the thought that Christian Science can do anything.

That afternoon, Saturday, the busiest day of the week for me, I was through with my work at half past four, and left the office an hour early,—something I had not done for months. The Saturday before that I had worked till midnight. I hastened to my teacher with the good news, and she took it as such a matter of course that I seemed to see more clearly than ever that it was not a mere chance, but was a demonstration of the wonderful power of Christian Science to solve all the problems of every-day life. The demonstration was complete, for though months have passed since then I have scarce found it necessary to work evenings, even through a far busier period of business.

Testimonies.

Why I became a Christian Scientist.

Christian Science was brought to my notice some four years ago, by the healing of a little girl in my neighborhood (cousin to my wife), who had been confined to her bed for twenty months with what the doctors pronounced chronic dyspepsia. I had gone one day with our best physician to see her, and in coming away I asked him what he thought of the case. He answered that she was a pitiful object and must die. That her lower bowel was entirely paralyzed and the lining of her stomach completely gone. She was a living skeleton. She was fed wholly with fluids, and even these she was able only partly to retain.

After trying all material medicine and every available physician, her parents turned to Christian Science as the last resort, and without having any faith in that. In two weeks' treatment she was completely healed, and has never had any return of the trouble since. Her healing was a miracle to the people of this community and many believed at first, but soon fell away, because they did not understand the Principle that healed her, and Truth demanded more than they were willing to give.

As my wife had been of a sickly and delicate nature from childhood, and at the time of which I am writing was helpless, entirely unable to attend to her duties, and suffering with what the doctors pronounced an incurable disease, I applied to the same Christian Science practitioner for treatment for her. The healing was not instantaneous, but gradual; and by the understanding that we have gained through the study of Science and Health we have since then been able to overcome many troubles.

My wife has been confined to her bed but one day in four years, except at the birth of two children; and she suffered but very little, as she had Science treatment. At the birth of the last child, January 7, 1900, I alone was with her until after the birth. I then went for one of our neighbors to come and dress the child.

Another case was that of my oldest child, a boy of six who had been sickly ever since his birth. I had tried doctors and medicine without avail. I sent him to Newbern, N. C., for present treatment. He was entirely healed and has remained well ever since. I could tell of many beautiful experiences. In a former letter to the *Journal* I have related my own healing—solely through study of Science and Health—of tobacco habit of many years' standing. Christian Science is all in all to me.

J. R. M., Duck Creek, N. C.

The following letters were written by the little girl above mentioned just after her healing. She is now a young lady and has been a firm believer in Christian Science ever since. The entire family are members of the Christian Science Church in their town.

Dear Miss S.:—I cannot wait to get another letter from you before I write. I am so full of joy and gratitude. I am well. I can walk all about the yard and am so happy that I feel I love everybody on earth. Day before yesterday morning, suddenly, such a strong feeling came over me that I called mamma out of the kitchen and told her I wanted to get up. She got my shoes and I put them on myself. Before she knew it I was walking to the chair she placed in front of me. She just held up her hands and cried: "Praise the Lord! Praise the Lord!" I ate some turkey for my supper that night, went to bed, and never even felt it. Oh! I am so happy I want to see you and tell you all about it. I think I do not need any more treatment. Mamma sends her love and says words cannot express her gratitude for her little afflicted child's recovery.

Your loving and grateful,

N. R.

SECOND LETTER.

I received your kind and welcome letter last night and was glad to hear from you. I am getting along all right; feel as well as I ever did in my life. I stuck a knife in my hand the other day while I was visiting one of my aunts. She ran for turpentine and balsam and wanted me to put it on. But I told her to take her idols away, that I would put nothing on it at all. It never hurt me a bit and it is all healed up now and well. The whole neighborhood thinks my healing miraculous. I am going to have the book "Science and Health with Key to the Scriptures."

With much love,
N. R.

Blessings we have Enjoyed.

In June, 1884, I went to Colorado with my husband and two children, each of us with the name invalid plainly stamped on his face. We spent the first summer in a tent at Manitou Springs; but at the close of the camping season we found ourselves no better, if anything still losing strength and courage, so much so that my husband gave up his position as a teacher.

Each succeeding summer was spent in some of the canyons or at some mineral springs, until, in the fall of 1887, after a camping tour of four months, we returned to our home at Colorado Springs with faith in climate all gone, money most gone, but a little courage left. We knew there must be help for us in some way, but wondered what we should do next.

In November of the same year, we went to visit relatives and friends near Kansas City. Love was leading us but we could not then see it. I was visiting a sister, and one morning, after she had prepared a breakfast that would tempt almost any one, but that was scarcely touched, she said, in a half-petulant tone, "Why don't you folks go to a Christian Scientist and be healed and stop this foolishness?" Many times we have in our hearts thanked that sister for those words. She was not a Christian Scientist and is not to-day; but Love was still leading us.

This was the first time we ever heard the words Christian Science. After having a few questions answered, my husband left the house and called to see a lady who my sister told us had been healed in some marvelous way by a Christian Scientist. The lady made it very clear that it was not mesmerism, but that it was God who healed. She gave my husband the address of a healer in Kansas City. As this seemed the only thing left for us, we began at once with the treatment, and immediately saw great improvement. In a few weeks we had the opportunity of receiving class instruction from one of our Leader's loyal students.

My healing was not one of those instantaneous demonstrations; for months, yes, for years, after I first heard of Christian Science, I would sometimes find myself sorely condemning the doctors who last treated me. When I began to see the error as impersonal, and to know that the doctors each and all had done the very best they knew, and that my healing depended upon my forgiving just such errors as that, and in coming out of the past, then I began to be healed. It is Love that heals, and where Love is there can be no hate, or malice, or revenge.

After our class was finished we returned to our home in Colorado; remaining there but a few months, we came on to Salt Lake City, but in the hurry of business found in a booming town, we forgot Science and Health and like Jonah we did not wish to go to Nineveh, and of course, we paid the penalty of mental darkness. We seemed almost to lose interest for nearly three years.

Since 1891 we have been doing what we could to lead others to Christian Science that they may learn that God is very near to all; a present help in trouble.

I have seen the dark shadows of diphtheria, and scarlet

fever, and many other evils, melt away under the sunlight of Truth.—L. R. C., Salt Lake City, Utah.

Health and Happiness due to Christian Science.

All the health and happiness that I enjoy to-day, is due to the Truth as taught us in "Science and Health with Key to the Scriptures." The Bible was a sealed book to me previous to entering Christian Science. To mortal sense, I was the victim of many troubles, one being the fear of death; but that fear has been entirely destroyed.

I have had many beautiful demonstrations, some of which I will relate. Before I speak of them, I wish to say to those who feel a sense of discouragement when errors do not readily yield, Press on, trust in God, and know that He is an ever-present help.

A case that was brought to me seemed a mountain to remove, and as I thought I was too young a student, I gave it to another. But after a number of treatments, with no seeming improvement, the case came to me again, and with the first treatment the diseases began to disappear. Then it was made plain to me, that I should try at least, whenever asked, no matter how difficult the error might seem.

On returning from our outing last summer, my son complained that something was in his eye. As the roads were very dusty, I concluded a little dust had gotten in, and thought very little about it. Next day he was no better, but my material work seemed to occupy so much of my time, and I also had company in the house, that I was not so persistent as I should have been, and not until both eyes were affected did I get right down to hard work. My husband suggested that some one else treat him, but I continued with the case, although the thought came to me that I must give up soon, as the inflammation seemed so great, and he could scarcely use the eyes, although he suffered no pain to speak of. In a few days the trouble began very slowly to yield, and in about a week, it was entirely gone.

For the first few weeks after entering Science (almost three years ago) the thought often came to me, "Why does not this one and that one rid themselves of error, it seems so easy? as several of my troubles had disappeared with reading Science and Health. I was up on the mountain-top, but soon I had to go down in the valley and begin to work, climbing step by step very slowly, it seems at times, and often the steps must be retraced again and again. Words cannot express my thankfulness for Christian Science, and no amount of money could buy my text-book, could I not get another.

CORA L. SCHWEIGART, Tacoma, Wash.

Proofs of the Power of Divine Mind.

A few months ago while walking in the woods, on the shore of the beautiful lake Okoboji, I plucked what appeared to me to be a common weed, and began brushing away the mosquitoes, which were unusually annoying. Soon after, symptoms of poison appeared on my face, ears, and neck. I began to work at once, and in a short time all fear of results disappeared. Under one eye the skin was puffed up like a bubble, and I had to hold my head down to see over it. The second day the burning and itching sensation was gone, and on the third day the swelling had almost disappeared.

I had met a gentleman some time before, who had lost the sight of both his eyes from being poisoned with ivy. The second night on going to bed, the fear that it would settle in my eyes, caused me to declare vehemently, "God is my sight." In a few minutes the fear was gone and I was sleeping.

Another proof of the power of divine Mind to heal and to help, came to me a short time after the foregoing experience. I was walking swiftly along the railroad track,

and in my hurry did not notice that I was stepping on a network of iron bars, until my left foot slipped between them and I was thrown violently down, twisting my foot badly. I saw that I could not get up unless something was done. I realized the Truth, got to my feet slowly and with difficulty, and extricated my foot, which was tightly wedged between the bars. After freeing my foot from the bars, it began to pain me terribly, but I felt that I *must* go on, so I started declaring: "There is no sensation in matter," and after a few steps the foot was as if it had never touched iron bars.

I can only prove my gratitude by striving to bring out in my life more of that love that "hopeth all things, beareth all things" for the sake of our fellow-beings.

ELSIE KELSO, Storm Lake, Ia.

Christian Science an Effectual Remedy.

It is about a year since I took up Science, and then on account of my wife, who had been suffering for over a year with the asthma. For a time our struggles were hard and when they seemed the hardest I fell and broke a bone in my foot. We were alone at home, but our appeal was to God whom we had learned had all power. Help came from the one all present help in every time of need. My sufferings were over in thirty minutes and I was resting easily. On the third day I walked all of a mile without pain, although my foot was black and blue and swollen. Later I met with a similar accident, and in about thirty minutes was relieved of my sufferings. The mists have not all cleared away, but we are striving to learn how to overcome the evil.

On the night of January 28, 1901, we had a call for help from a sufferer taken with a severe attack of grip, high fever, and headache. The request for help came at midnight; at three in the morning he was sleeping and resting nicely. He arose early, ate a fair breakfast and walked out through the day to look after things on the farm. He has since taken a twenty mile ride and is still getting along nicely. I am a reader of the *Sentinel* and am trying to do all I can for the Cause.

J. STEWART, Lima, O.

Rejoicing in Health and Strength.

In December of last year I was a wretched being, suffering from rheumatism, with gout in my feet and ankles which swelled to an enormous size, so much so, that I could get no ordinary boots or shoes on. I had been ill for months, suffering great pain. I consulted several of the best doctors, who stated that I was suffering from acute neuritis, and ordered me all sorts of cures and medicines to no good end. I got no relief.

My guardian angel brought me in contact with a lady whom I knew to be a Christian Science healer. I asked her to treat me, which she kindly consented to do. I read the book and tried to realize the eternal truth, that God is Love, and with Him can be no sickness, sin, or death. In less than three weeks I was a changed being. I am well and rejoice in my strength and health. From a really sick woman I am restored, and know that Life is Good and that I live in God's presence; and I only hope I may of myself, through God, be enabled to help and heal those in sickness and sorrow.

My child, seven years old, has been completely healed of asthma and bronchitis since I came into Science.

A. C., London, Eng.

Then of what is to be, and of what is done,
Why quierest thou?—
The past and the time to be are one,
And both are *now*!

Religious Items.

In an editorial entitled "Named by That Which is Highest," the (Baptist) *Watchman* says: "Why cannot we learn our Lord's lesson, in our intercourse with our fellow-men, and give by anticipation the encouraging and prophetic names to qualities that exist as yet only in embryo, visible, perchance, only to the eye of faith and hope? To call our children dull and stupid and foolish will often go a good way toward making them such. To applaud the efforts of the weak and over-weighted will often enable them to achieve the victory. Their endeavors may seem feeble measured by our own strength, while in reality they are herculean. We must consider circumstances and disadvantages. You who are strong must bear the infirmities of the weak; and one effective way of doing this is to fix upon their best qualities, however slightly developed, and emphasize those. Call a man a saint, though he is only a saint in the making, and the process is just begun; you shall help to hasten the process and have your share in the joy over the finished product. There is joy in the presence of God over one sinner that repents. No angel ever found delight in reminding a penitent sinner of his degradation and guilt; he rejoices to lure him toward the shining seats of the blessed. Call every man by that which is noblest and best in him, and help to create the qualities that God will crown."

The *New-Church Messenger* says: "Who is able to say in absolute sincerity when entering upon some undertaking, however good: 'I seek nothing for myself in this. I am not counting on any special benefits. I simply desire to carry out the divine will—not according to any special plan on which I have set my heart, but in whatever way is really best.' We are more likely to try to force issues; to take the truth or the good, which we say we will serve, determined, if it lies within our power, to make it move along the line of our natural desires, and fulfil hopes on the realization of which we stake our happiness. And if we fail, if the results are slow in coming, if, indeed, our hopes are incapable of fulfillment, there is the temptation to become vexed, troubled, downhearted. This experience is likely to occur, not because we are necessarily insincere or hopelessly selfish, but because until we have advanced well in the regenerate life, it is the way of our nature. We do not, we cannot come at once into that perfect self-mastery which would still all this tumult of natural desires and leave us free to carry out in perfect willingness the will of God."

The (Unitarian) *Christian Register* publishes a sermon by the Rev. Minot J. Savage, D.D., from which the following is taken: "Suppose that socially Jesus ruled the world, ruled the city of New York. Suppose that scorn and contempt and jealousy and hatred were done away with, and that the rich looked upon the poor—the honest, the struggling poor—with tenderness and sympathy and a desire to help. Suppose that the poor, instead of looking up with jealousy and anger, recognized the rights of all, and tried to fill the place assigned as simply and patiently and lovingly as they could. Suppose Jesus ruled the world of society, not by power but voluntarily. Suppose the qualities that were in him had become so strongly intrenched in us that we were wrought over into their likeness. . . . When I ask you to think what kind of a world this would be if Jesus were lifted up and we all drawn into the imitation of his character and living his likeness, I am only asking you to think of the kind of a world that is inevitably coming."

The *Congregationalist*, in an editorial on "Practising the minor virtues," says: "The minor virtues are fruits of obedience to the great commandments of love to God and love to man. They are cheerfulness, gentleness, consideration, and compassion. To some they appear to come as mere gifts of natural disposition, but these are of a

lower and perishable sort. To most of us they are heroic virtues, only won by faith and effort in the service of Christ. It is in trying days that Christian Cheerfulness is tested and that it shines. It is under provocation that gentleness reveals its quality. It is in contest with self-will that our thought of the rights and needs of others comes to proof; and compassion is never so beautiful as in the company of strength."

In one of a series of articles in *The Congregationalist* on "The Primary Christian Realities," the Rev. William Newton Clarke, D.D., says: "We do not know that the Master ever uttered in the hearing of his disciples the great words, 'God is love,' yet somehow it came to pass that when he had gone and they had pondered his message they were able to utter those words for themselves. That was better, I think, than it would have been for him to say it. 'God is love.' It is the condensed substance of his instruction; it is the height and depth of his revelation. While he deepened and purified the sense of God's eternal holiness, he also enabled men to tell one another, with new fulness of meaning, that God is love."

Kellogg Durland, in an article published in the *Boston Transcript* concerning the Salvation Army, says of General Booth: "He is to-day the unquestioned head of an army of 6,800 corps led by nearly 15,000 officers, his subordinates and servitors. In forty-seven countries and colonies the Salvation Army now has its soldiers, commanded by 37,000 local officers. Fancy a single organization supporting fifty-four newspapers printed in twenty-one languages. And one man is the moving spirit, the actual as well as theoretical leader. Lord Wolsley, the recently retired commander-in-chief of the British army, after an hour's talk with General Booth, is said to have remarked: 'If that man had not been what he is he would have been the first soldier in Europe.'"

The *Congregationalist* publishes the following in its "Closet and Altar" column: "Whatever our past life may have been, at whatever point of life and progress we may be standing, if we would not destroy what we still have left of spiritual apprehension, if we have any desire to grow in spiritual growth, the first thing to be done is to face conscience—to be entirely honest with ourselves, to cease from excusing ourselves to ourselves, cease from subterfuges and self-deceptions, and bring ourselves, our desires, our past lives, our aims, our characters into the light of conscience and of God, and there desire to have them searched, sifted, cleansed."

The Rev. Walter A. Tuttle says in the *Universalist Leader*: "The moral life can be grasped by him alone who will tread the lower life beneath his feet. The moral heights are scaled by him alone who can walk the pathway of self-sacrifice. But character is worth all it costs. To be able to stand up among your fellows with a clean record and with the consciousness that your heart is just as white in God's sight as your reputation is in men's; to stand with the strength to do right, though the heavens fall; to stand a centre of helpful, loving influences—it is worth fighting for."

George Willis Cook says in the *Christian Register*: "We cannot be Christians of the modern type if we are content to live in our own Christian fidelity, but that is to be only the beginning of a life of service to mankind. In order to experience individual salvation, we must also realize around us a social regeneration. The Christian life, in fact, is not merely individual, but social and communicative. It is for each in all and all in each."

The Rev. Herbert E. Wise says in the (Baptist) *Examiner*: "The function of the preacher is to bring God, as revealed in His Word within the moral consciousness. Heart experience in the full measure of the Hebrew use of the term, is essential to true knowledge. The heart was understood, not as the seat of mere emotion, but as the seat of

practical wisdom. A heart knowledge denotes conviction, experience, fellowship."

The Rev. George H. Dryer, D.D., says in the *New York Christian Advocate*: "With no lack of respect for others, the American is the mightiest Christian people on the globe in numbers, in intelligence, in material resources, and in possibilities of effective work for Christ. If evangelical Christendom is to be the controlling factor in the religious development of the new century, then no nation has a responsibility equal to ours."

The (Unitarian) *Christian Register* says: "The beauty of holiness does not lie in separation, but in a more perfect union with our kind; not in giving over nature to the devil, but in recognizing the divine everywhere in nature; not in exclusiveness, but in inclusiveness, and in sweeping the nature free from those obstructions that prevent the recognition of God."

The *New York Observer* says Christianity might be called love in action. It makes itself visible in character. But it never stops there, for a Christianity that is vital enough to be seen in the life, goes out ceaselessly in some unselfish form of ministry.

The (Unitarian) *Christian Register* says: "Fifty years ago most people would have regarded him as a fool who should say that touch, sight, and hearing represented nothing but mental states. Now such knowledge is commonplace."

RULES TO BE OBSERVED.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quaterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

We especially request our contributors to write plainly, and only on one side of the paper.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem, Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers: 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Political and Governmental Notes.

The two Senators from South Carolina, Tillman and McLaurin, engaged in a joint debate recently, and, stung by mutual taunts, they agreed then and there to resign their seats in the United States Senate and go before the people in a campaign for re-nomination and election. Both are Democrats, but Senator Tillman represents the Bryan element, and Senator McLaurin represents the element which favors the present administration policy to quite an extent. In South Carolina the voters at the primaries of the Democratic party virtually choose the United States Senators, the action of the Legislature being merely a ratification. A stirring campaign was promised, but by the conservative action of Governor McSweeney, it was averted. On May 31 he notified Senators Tillman and McLaurin that he would not accept their resignations. A canvass between them, he said, would result in bitterness, stir up the people just at a period when they are trying to get together for the material progress of the State, and would be a campaign of personalities instead of education.

The Cuban constitutional convention on May 28, adopted a report by a vote of 15 to 14, accepting the provisions of the Platt amendment to the army bill passed by the United States Congress some weeks ago, by which the relations of Cuba to the United States, under the proposed independent government of the island are defined. The report, which carries with its adoption the acceptance of terms offered by Congress, does not, however, accept the Platt amendment unconditionally, but in the light of the interpretation of certain clauses, which the Cuban commissioners claim to have secured in their recent visit to President McKinley.

At a meeting of President McKinley with his cabinet on May 31, it was decided that the Cuban convention must accept the Platt amendment "substantially," and without interpretation or modification, before the administration will approve the constitution.

According to a bulletin of the recent census Rhode Island, with 407 inhabitants to the square mile in 1900, is the most densely settled State, while Massachusetts comes next with not quite 349 to the square mile. New Jersey, with a little more than 250 inhabitants to the square mile, is third, and Connecticut, with somewhat more than 187 to the square mile, is fourth. Four other States had more than one hundred inhabitants to the square mile in 1900, namely: New York, 152.6; Pennsylvania, 140.1; Maryland, 120.5; Ohio, 102. Alaska has on the average one-tenth of one person to the square mile and Nevada only four-tenths of one person. Hawaii has not quite 24 persons, ranking between Maine, with 23.2, and Arkansas, with 24.7.

The Supreme Court of the United States substantially sustained the government's chief claim in the Porto Rico cases, May 27, declaring that Porto Rico is territory "belonging to the United States, but not a part of the United States within the revenue clause of the constitution. The Foraker act is constitutional so far as it imposes duties upon imports from Porto Rico."

Five cadets were recently dismissed from the West Point Military Academy because of their participation in a demonstration of disapprobation of the superintendent of the Academy on account of his strict stand against hazing. An appeal was made to the Secretary of War to reverse the sentence of dismissal, but he refused to interfere.

A dispatch received at the War Department from General Chaffee at Taku says that the transports Summer and Lennox sailed May 27, and that all the troops that are to leave China are off for Manila.

Foreign News.

China has accepted the indemnity terms imposed by the powers and has agreed to pay four per cent interest on the amount due until the debt is paid. The powers began making immediate arrangements to withdraw their armies. The embarkation of the German troops will begin June 20, and transports for the removal of the British troops arrived at Tongku last week. The government of Pekin was partially surrendered to the Chinese on May 29.

During the summer the one thousandth anniversary of the death of King Alfred the Great will be celebrated at Winchester, England. A large statue of King Alfred will be unveiled, and a museum of early English history will be opened as a memorial of the great king. John Fiske, the American historian, has accepted an invitation to deliver an address in connection with the Winchester celebration.

Lord Kitchener reported on May 31, that on Wednesday, May 29, there was severe fighting between the garrison at Vladfonteln, forty miles from Johannesburg, and a force of Boers under General Delarey. The Boers were finally driven off leaving 35 dead, and the British killed and wounded numbered 174. Of the British killed four were officers.

St. Petersburg advices state that Dr. Hendrik Müller and Dr. Leyds, representing the Boer republics, have appealed formally to The Hague Arbitration Court, promising to abide by its decision regarding the issues involved in the South African war.

The census of Scotland gives that country 4,471,957 inhabitants, a gain of 446,310 since 1891. For the first time in its history since the taking of censuses began in Great Britain, Scotland has more people than Ireland.

British authorities report that the total number of Boer prisoners held by them was 18,578 up to May 29.

Industry and Commerce.

The following is the pointed way in which President James J. Hill of the Great Northern Railway, discusses twentieth century commercial questions: "The fight is on the high seas. The great traffic contest is between the Pacific on the one hand, and the Suez canal and Cape Horn on the other. Our fight is international; our problem is to get the commerce of the Pacific Ocean; we are doubling population every thirty years; we have multiplied more during the past thirty-five years than during the three hundred preceding; the coming millions will not go to New England, with its rocky and unproductive hills, nor will the South take much of the increase with the exception of the Latin influx from Southern Europe; the great increase will be in the valleys of the Ohio, Mississippi, Missouri, and westward. What will these people produce? The three

great staples of traffic, food, fuel, and shelter, but food in the main. The problem is to place the great surplus staples of Central and Western America at the door of the Orient, and bring back from the latter anything that we can use. By what route shall it go? Shall America handle it, or Europe? by the Suez and the Horn, or by the Pacific? The purchase of the Burlington by the Northern roads is accomplished. The Northern Pacific has not changed hands. We railway managers are largely automatons in the shuttle—we must move as nature and commerce dictate. As between roads and magnates it is the survival of the fittest. Who is the fittest, which road, what route? That which geography, gravitation, climate, production, population, commerce, and progress select, control, and support."

The steamship Korea, which was launched at the Newport News Shipbuilding Company's works, bears the distinction of being the largest steam vessel ever built on this side of the Atlantic. With a length of 572 feet 4 inches, and a beam of 63 feet, she will displace 18,600 tons on a draught of 27 feet. Some idea of the size of the Korea may be derived from the fact that from the top to the bottom of the bare hull is a distance of 40 feet, while the distance around the rail is nearly a quarter of a mile. She is to be fitted with engines of 18,000 horse-power, sufficient to propel her at a speed of from 18 to 20 knots. The Korea will accommodate 1,400 passengers, of whom 200 will be first-cabin passengers. She is designed for the Pacific Mail Steamship Company to ply between San Francisco and Hong Kong.

Judge Gary, the chairman of the United States Steel Corporation, on returning from his inspection of the plants of the company, said: "Everywhere they are crowded with orders and many of them are way behind in their execution. I did not see any signs of discontent among the workingmen. It is to our interest not to antagonize organized labor, and we intend to see that our employees are properly paid and cared for. There are no disputes pending as to the recognition of labor unions, and we expect none."

General News.

The city of Chicago started a pawn-shop about a year and a half ago, of which Hon. John V. Farwell, head of the great dry goods house of John V. Farwell & Co., is president of the board of directors. He gives a most encouraging report of its work. During its first year the shop loaned over a quarter of a million dollars, and Mr. Farwell says that, "considering the results achieved, the directors have no hesitation in saying that the stock will undoubtedly earn ten per cent per annum, and that semi-annual dividends at the rate of six per cent per annum (the maximum allowed by law) can be regularly and safely declared."

It is said that the list of things prohibited in war by the law of nations has been condensed as follows: First. You must not kill or maltreat unarmed prisoners. Second. You must not violate flags of truce in any manner or for any purpose. Third. You must not poison the water supply of an army; you may interrupt or cut it off, but you must not poison it. Fourth. You must not use poisoned or explosive missiles, or those made in such a manner as to cause unnecessary suffering from wounds.

A magnificent oak tree at Athens, Ga., not only owns itself, but possesses other property. It was owned many years ago by Colonel W. H. Jackson, who, in his childhood, played around its massive trunk and in later years grew to love it almost as he would his own child. Fearing that after his death the old oak would fall into the hands of persons who would destroy it, he recorded a deed conveying to the tree "entire possession of itself and of all land within eight feet of it on all sides."

Violins and Violin Making.

Rapidly Growing Interest in this Art in America.

THERE is a rapidly growing interest among Americans not only in violin music, but in the instruments themselves. There are to-day ten persons learning how to play on the violin where there was one student of the instrument a dozen years ago. The astonishing popularity into which this musical instrument has sprung has led to the present widespread interest in the violin itself. The violin is much more than a musical instrument; it is a work of art. In fact, it is the only musical instrument which has an art history, and which is alike of interest to the art collector and the practical musician.

A good musician always insists on playing on a good violin, but the difference in instruments is so marked that the great artist players sometimes search for years before they find an instrument which is exactly suited to them individually. Since the market value of violins ranges from one dollar up to ten thousand dollars, it is seen that there exists a wide range for selection, so far as price is concerned.

Musical antiquarians are still wrangling over the question as to who invented the violin, although it is now quite generally recognized that this instrument acquired the form in which it has been known for the past three centuries through the genius of Italian artists. Before the year 1600 a few violins of great beauty and exquisite tone had been made in Italy at Brescia and Cremona, but a steady improvement in their design continued to be made for another hundred years, until the highest point in the art was reached in the instruments of Stradivarius about the year 1700.

It is said that more thought has been expended in trying to make improvements in the violin than in any other single direction, but instead of excelling those of the greatest of the old masters, their productions have been but in few cases even approached. These old Italian makers had the same genius that their old painters possessed.

The essentials in the making of a fine violin are: The selection of wood of a proper graining, elasticity, condition, and age; the shaping of the wood into the graceful curves, and the proper thickness which shall allow of the most perfect vibration; the artistic finishing of the wood carving, and, finally, the covering of the instrument with a varnish which shall add beauty to its appearance without injuring the freedom of the tone. Be it said, however, it requires genius to exercise the judgment and skill necessary for doing these things properly. The perfect violin is the product of the artistic temperament, and all the science in the world will not avail to make a good instrument if the divine spark is absent.

A most practical matter in connection with the subject of violins is the question of the kinds of instruments that one meets with in this country. It may as well be admitted in the first place, however, that in no civilized country on earth is there such ignorance concerning violins

as in the United States, and in most cases the retail dealer is nearly as ignorant as the purchaser.

Genuine violins by the great Italian masters, Stradivarius, Guarnerius, Amati, and Bergonzi, are as rare in this country as paintings by Raphael, Michael Angelo, Titian, or Murillo. There are a few undoubtedly genuine instruments of this class on this side of the water, but most of the so reputed ones are but copies by less renowned makers. A New York violin connoisseur recently said that he saw two probably genuine violins by Stradivarius among about a hundred instruments which he found in the possession of collectors and musicians, and which their owners firmly believed to be genuine.

It is seldom that a well-made violin by an inferior maker, and which bears some resemblance to one from the hands of a great maker, is ever allowed to shed lustre on the true maker's name, but it is foisted off as the work of the greater man. A genuine specimen of the handiwork of the great makers cannot be bought under two thousand dollars. Of the violins constructed by the second and third rate makers, a very considerable number are in the hands of our good musicians and the few collectors who are scattered over the country. Such violins are worth from two hundred to two thousand dollars, depending on condition, tone, and name attached. They are usually better in tone than in looks.

Hundreds of European violin makers have been laboring incessantly at their art during the past two centuries, and they have produced hundreds of thousands of instruments which may now be termed old. Among all these, really fine old violins are rare. Modern Europe turns out annually probably one hundred thousand new violins, and among them all fine new instruments are equally rare.

Nine tenths of all the violins which have been made within the past one hundred years, and which are still being made, come from the neighborhood, of Markneukirchen, or Mittenwald, in Germany, or Mirecourt, in France. One factory in the latter town sends out twenty thousand instruments a year. Most of these violins bear the same relation to the really fine instruments by good makers that chromos bear to the paintings of great artists. It is said that near Markneukirchen there are about thirty thousand people who are dependent on the violin industry, and the majority of the cheap violins come from there.

The question arises as to the kinds of violins made in America, and the answer is that, while a few instruments are made here, and they range in excellence from the toy violin whittled out of common wood with a jack-knife, by persons who have no knowledge of the art, up to the finest productions of modern times, yet these American-made violins are relatively few in number, and probably not two in five hundred of the instruments sold in this country were made here.

For a hundred years the self-taught American violin maker has been at work, but most of his productions have

been but mediocre, and, so far as appearance goes, vastly inferior to the instruments produced in the great violin-making centres of Europe, where the traditions of the art have been transmitted through successive generations.

There have, however, settled in the United States many German and a few English violin makers, some of them men of the very highest ability, who have brought with them the best European traditions of the art of violin making. Two or three of these artists have produced some violins which have been pronounced by excellent judges to be unsurpassed by new instruments of any other modern makers.

In fact, it has been said more than once in London, that most critical of all centres of violin worship, that the best violins of modern times have been made in America. Certainly the prices received by their makers have been far higher than any foreign maker has been able to obtain, and that, too, in direct competition with the best of the European productions.

Unfortunately, not all the violins of even the best makers are of the same excellence as regards tonal qualities or beauty, and there is no single standard of value which may be placed on one man's instruments. One of the greatest of these makers received sums varying from one hundred to five hundred dollars for his instruments, and some of the highest priced ones quickly found their way over into Europe.

I have seen some of these American made instruments which even in their new state had tones that were really finer than most old violins of any but the very highest rank. Such violins are rare, however, but are to be had for the seeking—and a goodly sum of money.

One thing which has been detrimental to the production of many fine violins in the United States is the fact that the good makers are good repairers of old instruments, and they are called upon to do so much of this latter work that they have to sandwich in the time, so to speak, to make new ones. Probably on the average not over two dozen really high-class American violins are made in a year, and in individual years some of our best makers do not complete a single instrument.

When one of these men has a violin in process of manufacture, the growth of that instrument is watched with eager eyes by a dozen musicians or amateur collectors, each begging to be allowed the first trial, and he is considered a lucky man who becomes the favored one. Nor do they always wait until the violin is completed; when it is still lacking the varnish, the strings are put on the instrument and its tone is tested, and an unusually fine quality of tone in this condition will call forth offers for the violin, even before it is seen what will be its final voice after the beautiful coloring has been applied.

In Europe there are many art connoisseurs who collect violins just as they collect paintings. Some such collections have been made in the United States. The best known of these are the Hawley collection, gathered by the late Mr. Hawley of Hartford, but purchased after his death by a Californian; and the collection of Mr. Sears of Boston. Mr. Hawley carefully guarded his treasures, but Mr. Sears pursues the generous policy of lending his violins to some of the numerous Boston musicians. Thus the instruments are kept in good playing order, and the musicians have the use of treasures which might be a long way beyond their purses.

In regard to the collecting of violins, at least in this country, I will say that it is much more sensible and far safer for the connoisseur to make a collection of the best instruments that he can find by our modern makers, and the

identity of which can be established with certainty, rather than to accumulate the older treasures which command high prices and are of uncertain authenticity and value.

There are some modern violins which may be had at prices ranging from two hundred to five hundred dollars, which are equal in tone to any of the instruments which are in the market at five times these sums, and these are really the most satisfactory violins to be obtained for moderate outlays. We have the testimony of many eminent authorities on the violin that an instrument made of properly selected and seasoned old wood, will become about as good as it ever will be after twenty-five years' playing; so what is the use of paying high prices for the wear and tear of a century?

The general impression seems to prevail, and I think mainly due to the newspaper paragraphs on the subject, that really valuable violins may be picked up at small prices in the stores where they sell such instruments, or in out-of-the-way places. During some fifteen years' experience as a violin collector, I have never yet known of an instance, from personal knowledge, where a rare instrument has been obtained in this manner. Nearly all the violins that one sees are of the chromo type, and I would as soon think of finding a rare painting in a store where picture prints and chromos are for sale, as I would expect to find a rare old violin in the ordinary shop where fiddles are sold.

FRANK WALDO, Ph.D.
In the *Boston Herald*.

First Declaration of Independence.

THAT there was a prior Declaration of Independence to that of July 4, 1776, will be surprising information to the general mass of people in the United States and elsewhere. It is certainly a record not included in text-books or standard American histories. In Charlotte, N. C., however, a Declaration of Independence from Great Britain was drawn up and signed more than a year before the United States of America's first Fourth of July, and May 20 is still a legal holiday in the state of North Carolina, while in Charlotte it is a day of great celebration with parades, meetings, and patriotic speeches.

The history of the Charlotte or Mecklenburg Declaration of Independence as accepted by the people of that locality is as follows:—

In the months of March and April, 1775, some of the more energetic men of Mecklenburg County, N. C., held meetings to agitate the question of opposing Parliament's claim to impose taxes without representation and regulate the colonies' internal policy. The sense of the people being for a resistance to Parliament's policy, Thomas Polk, then colonel commandant of the county, was directed to issue an order calling upon each captain of the militia to call a company meeting, each company to elect two delegates to meet in general committee on May 19, 1775. To these delegates ample power was given to adopt such measures as they thought necessary to defend the colony's rights, and to make common cause with the people of Massachusetts, already aflame with resentment against the mother country. Various leaders addressed the committee before its assembling, urging a firm stand.

What the committee had originally decided to do is not clear, but about this time there reached the North Carolina community the echo of "the shot heard around the world" from the engagement at Lexington on April 19. That was decisive. The whole assemblage was stirred to its depths by the news. The old account of what occurred says: "The speakers addressed their discourses to the spectators as well as to the general committee, and those who were not convinced by their reasoning were influenced by their feelings and all cried out: 'Let us live independent!'"

Let us declare our independence and defend it with our lives and fortunes.' "

A committee composed of the men who had planned the whole proceedings was appointed to draw up resolutions. These read:—

I. Resolved, That whosoever, directly or indirectly, abets, or in any way, form, or manner countenances, the invasion of our rights, as attempted by the Parliament of Great Britain, is an enemy to his country, to America, and to the rights of men.

II. Resolved, That we, the citizens of Mecklenburg County, do hereby dissolve the political bonds which have connected us with the mother country, and absolve ourselves from all allegiance to the British crown, abjuring all political connection with a nation that has wantonly trampled on our rights and liberties, and inhumanly shed innocent blood at Lexington and Concord.

III. Resolved, That we do hereby declare ourselves a free and independent people; that we are, and of right ought to be, a sovereign and self-governing people under the power of God and the General Congress: to the maintenance of which independence we solemnly pledge to each other our mutual co-operation, our lives, our fortunes, and our most sacred honor.

IV. Resolved, That we hereby ordain and adopt as rules of conduct all and each of our former laws, and that the crown of Great Britain cannot be considered hereafter as holding any rights, privileges, or immunities amongst us.

V. Resolved, That all officers, both civil and military, in this county, be entitled to exercise the same powers and authorities as heretofore; that every member of this delegation shall henceforth be a civil officer and exercise the powers of a justice of the peace, issue process, hear and determine controversies according to law, preserve peace, union, and harmony in the county, and use every exertion to spread the love of liberty and country until a more general and better organized system of government be established.

VI. Resolved, That a copy of these resolutions be transmitted by express to the president of the Continental Congress assembled in Philadelphia, to be laid before that body.

There was some discussion, and after sitting in the court house all night, neither sleepy, hungry, nor fatigued, the delegates adopted the resolutions about two o'clock on the morning of May 20, and led by Abraham Alexander, chairman, appended their signatures to the document.

A few days later, Capt. James Jack of Charlotte was dispatched with the account of the proceedings to the Continental Congress at Philadelphia. According to the Charlotte version, the president of Congress "returned a polite answer to the address which accompanied the resolutions, in which he highly approved of the measures adopted by the delegates of Mecklenburg, but deemed the subject premature to be laid before Congress." At this identical time Congress was preparing a petition to the king, which was signed by every member on July 8, 1775, stating in part: "We have not raised armies with the ambitious design of separating from Great Britain and establishing independent states."

The original Mecklenburg Declaration of Independence is not now in existence. That, together with all the records of the general committee which signed it, was burned in April, 1800, in the fire which destroyed the house of John McKnitt Alexander, the secretary of the general committee and the custodian of all its records. After the fire he prepared a copy of the Mecklenburg Declaration for his friend, General William R. Davie. This copy, which is now in the archives of the University of North Carolina, has admittedly errors in the text and omits the sixth resolution. Mr. Alexander added a certificate vouching for its substantial accuracy, but qualifying his statement with the proviso: "That the foregoing statement, though funda-

mentally correct, may not literally correspond with the original record of the transactions of said delegations."

That there were those in North Carolina who did not sympathize with the work of the convention is attested by a curious poem in the *Mecklenburg Censor*, which was printed about that time.

When Mecklenburg's fantastic rabble,
Renowned for censure, scold, and gabble,
In Charlotte met in giddy council,
To lay the constitution's ground-sill,
By choosing men both learned and wise,
Who clearly could with half closed eyes,
See mill-stones through a spy or plot,
Whether existed such or not;
Who always could at noon define,
Whether the sun or moon did shine,
And by philosophy tell whether,
It was dark or sunny weather;
And sometimes when their wits were nice,
Could well distinguish men from mice,
First to withdraw from British trust,
In Congress they the very first;
Their independence did declare.

When the royal governor of North Carolina heard of the resolutions adopted May 20, 1775, he addressed the Executive Council upon "the late most treasonable publication by a committee in the County of Mecklenburg, explicitly renouncing obedience to his majesty's government, and all lawful authority whatsoever." Five days after this address the governor wrote to Earl Dartmouth: "The resolves of the committee of Mecklenburg . . . surpass all the horrid and treasonable publications that the inflammatory spirit of this country has yet produced."

Although the original document is lost, there is abundance of proof of its formulation and adoption in personal statements and writings preserved from the early years of the nineteenth century.—*Denver Republican*.

Increased Use of Wireless Telegraphy.

The value of wireless telegraphy as a means of communication at sea and between ships and shore stations was again made plain by the recent experience of an English Channel mail boat. During a late voyage messages were received on board from the lightship stationed twenty odd miles off Dunkirk declaring that the lanterns could not be illuminated the next night unless speedy aid were sent from the coast. This appeal was repeated by the steamer to the station at La Panne, and the required assistance was sent in season to make the necessary repairs.

This is one of many instances that demonstrate the importance of this new aid to navigation. In the cruise of the *Ophir* the British convoying ships have used wireless telegraphy with great success in communicating their progress and the hour of probable arrival. In naval manœuvres great tactical advantages have been secured through the certain information furnished by it over long distances from connecting groups of scouting ships. It is now claimed that direct and undisturbed messages have been received at points separated two hundred miles.

The great improvements made in the system and the reduced cost consequent upon the simplification and surety of methods and upon its more general employment will undoubtedly cause its installation in the higher classes of passenger and freight steamers, on board lightships, and at light-houses, life-saving depots, and signal stations. Its use will not be confined to the business or sentimental demands of passengers, because of its possible great value in giving early information of accidents or, in the case of continued fogs, in picking up the approximate distance, if not the bearing, of dangerous points on the coasts. Should economical directors of transport lines seek to defer this employment of the system, underwriters and governments may be depended upon to require it in the interest of ships and of their crews and passengers.

New York Herald.

The Lectures.

At New Bern, N. C.

An audience which occupied every seat in the Court House last night (Friday, May 17) listened to the Hon. William G. Ewing of Chicago, who spoke on the subject of "Christian Science, the Religion of Jesus Christ."

L. J. Moore, Esq., introduced the speaker, in a most happy manner.

Judge Ewing's style of speech is conversational, taking his listeners at once into his confidence, and impressing each one that the speaker is thoroughly in earnest and sincere in his belief, and is only surprised that any one can see differently from him.

Throughout his lecture of about an hour and a quarter, Judge Ewing received the close and undivided attention of his audience, many who were not Scientists seeming to be very appreciative listeners.

The space within the rail where the speaker stood, was beautifully decorated, large baskets of roses being most prominent. There were Scientists present from Kinston, Goldsboro, Pamlico, and Jones Counties.

New Bern Daily Journal.

Mr. Moore's introductory address was as follows:—

Ladies and Gentlemen:—It gives me pleasure to present to you this evening a distinguished fellow-citizen from the State of Illinois. He comes among us to speak upon a subject in which we are interested, but about which we know little. I believe we shall be enlightened when we hear Judge Ewing lecture upon the subject of Christian Science. Judge Ewing is a member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston. He gave up a lucrative practice as a lawyer, and other important interests, that he might proclaim to the world what he had found to be the best thing on earth for man. He has been honored by the people among whom he lives. He has been a Judge of the Superior Court of the state, and held many honorable positions of trust and profit.

I will not detain you further, but present to you Judge William G. Ewing of Chicago, and beg you to hear him for his cause.—*Correspondence.*

At Joliet, Ill.

Before a large audience Mrs. Annie M. Knott of Detroit, stood on the stage of the Joliet Theatre last night (Thursday, May 9), and expounded the principles of Christian Science.

C. W. Brown introduced the speaker. He said in part: "We are to listen this evening to an address upon Christian Science. I am asked to make a few introductory remarks. There is a manifest incongruity in the giving and in the accepting of the invitation, and it is but fair and proper to state that I am not a Christian Scientist, nor in accord with, nor a believer in, the society's distinguishing tenets. This may be a misfortune, arising from ignorance or misconception, but in either event it is not wilful.

"However, the attitude of intellectual growth to-day is one of alert inquiry. Men stand with every sense keenly aroused to detect and recognize the truth whenever it comes, whatever its guise. Bigotry and intolerance are surely being relegated to the outer darkness, where they belong.

"Creed and dogma are disintegrating—are losing much of their cohesive force. But true religion does not suffer in these changes. Pure religion is not a formula—it is rather the concept of one's relation to the infinite—the soul's inquiry, whence it came and whither it goes. To be, to exist without some form of faith, is to be a derelict adrift on a shoreless, sunless, starless sea, without belief, without compass, without anchor, without hope.

"Christian Science now comes and in apparent sincerity claims to present, not new truth—truth is never new—but new light, and the same earnest spirit of fair inquiry should turn both eyes and ears toward the voice proclaiming a brighter dawn.

"It has already won to its ranks many men and women of great culture and irreproachable lives, whose honesty of belief is beyond suspicion."—*The Joliet News.*

At Salem, Ore.

Monday evening, April 22, the people of Salem and surrounding country had the privilege of listening to a lecture on Christian Science, by Dr. A. A. Sulcer, of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., who appeared here under the auspices of Second Church of Christ, Scientist, of Salem. Dr. Sulcer spoke at the new Grand Opera House, to a large and most attentive audience of representative people, including a number of physicians and other professional men and women. The lecturer presented his subject in a most unpretentious manner, yet with clearness and elegance of language. The discussion of mental therapeutics and the healing power of Truth, from the lips of an old-time medical practitioner, made the doctor's remarks doubly interesting, and set many minds to thinking.

The speaker of the evening was introduced to the large audience by Associate Justice C. E. Wolverton, of the Oregon Supreme Court, with a few remarks, in which he commended the courage of the speaker and hoped that such discussions of the higher religious and scientific subjects would result in great good.—*Correspondence.*

Lectures at Other Places.

Wilmington, N. C.—William G. Ewing, May 16.

Fort Wayne, Ind.—Mrs. Annie M. Knott, May 16.

An Expert Penman.

RILA KITTREDGE of Belfast, Me., champion small writer of the world, has retired from the field, leaving his record of forty-six thousand words written with a common steel pen on an ordinary postal card for ambitious microscopic penman to equal or excel. Up to two years ago he wrote a great deal, but now, being within a few months of ninety, he has given up the laborious practice of writing volumes upon small cards, his hand being less steady and his eye less bright than in his best days.

Mr. Kittredge has long been famous for his penmanship. He is a Vermonter by birth. His practice of miniature chirography began early in life, and many a time he has gone without his dinner rather than leave unfinished a piece of work.

His first serious competitive effort was made in 1887, when some one sent to the *Belfast Journal* a postal card upon which six hundred words had been crowded, and defied any one to beat it. A few days afterward Kittredge handed in a postal card upon which he had written one thousand words, and this being beaten he produced one with three thousand words.

The three-thousand-word postal card ended the competition, but Mr. Kittredge kept on crowding his letters and words into still smaller space, turning out in succession cards bearing six, ten, and twenty thousand words. His finest work was done in 1889, when he wrote forty-six thousand words upon an ordinary postal card, and the entire text of the New Testament, about 181,000 words, upon four postal cards.

He has written several presidential inaugural addresses upon postal cards, and has always considered it easy to

write the Lord's Prayer eight times within the space covered by a five-cent nickel. He wrote one of Gladstone's speeches upon a postal card and sent it to the statesman, who wrote a letter in reply, thanking Mr. Kittredge and praising his skill.

Mr. Kittredge never used any magnifying glasses or other aids. He has always worn a pair of ordinary spectacles, such as most elderly men use, and all his writing has been done with an ordinary steel pen and common black ink. He has competed with many would-be champions who have used magnifying glasses and sharp-pointed hard lead pencils, and he has easily beaten them all in spite of their advantage in the matter of equipment.

His writing is distinguished by its beauty and the artistic arrangement and uniformity of the letters. Each letter is separate and distinct, and some framed specimens were shown at the Paris Exposition. He says that his eyes naturally magnify.—*National Watchman*.

Charles Kingsley's Love for God's Creatures.

Charles Kingsley's love for all God's creatures was remarkable. He spoke of them as his friends. On his lawn dwelt a family of natter jacks (running toads), who lived on from year to year in the same hole in the green bank, which the scythe was never allowed to approach. He had two little friends in a pair of sand wasps, which lived in a crack of the window in his dressing-room, one of which he had saved from drowning in a hand-basin, taking it tenderly out into the sunshine to dry; and every spring he would look out eagerly for them or their children, who came out of or returned to the same crack. The little fly-catcher, who built its nest every year under his bedroom window, was a constant joy to him. He had also a favorite slowworm in the church-yard, which his parishioners were warned not to kill, the mistaken idea being prevalent in Eversley that slowworms were poisonous. All these tastes he encouraged in his children, teaching them to love and handle gently without disgust all living things, toads, frogs, beetles, as works and wonders from the hand of a living God.

His guests were surprised one morning at breakfast when his little girl ran up to the open window of the dining-room holding a long, repulsive-looking worm in her hand, "Oh, daddy, look at this delightful worm!"

Baptist Standard.

A Valuable Tree.

There is an orange-tree at the agricultural department which, tradition says, has produced revenue sufficient to meet all the expenses of that department for the last thirty years. Its history is interesting. About 1870 an American woman told Mr. Saunders, the expert on pomology for the department, that she had enjoyed the most delicious oranges while in the vicinity of the City of Bahia, Brazil, and believed he would do well to procure some of the budded fruit as an experiment in this country.

The secretary of agriculture requested our consul at that point to send him twelve budded trees. They came in due time, and were in turn budded on small seedlings for distribution. This is one great tree that survived, and, while they did not thrive in Florida, they did on the Pacific coast, and to-day the navel or Bahia orange, the father of that industry in California, owes its existence to the single tree now standing in the glass house in the agricultural grounds.

Of the crop of about twenty thousand carloads for 1901 at least fifteen thousand of them were of the navel variety, while the revenue varies from three to five million dollars a year. The statement of this fact, a single tree having produced sufficient revenue to sustain the department for a period of thirty years, never fails to awe the tourist, and causes him to beg for a single leaf from the wonderful money tree.—*Chicago Tribune*.

Notices.

Communion Service at the Mother Church.

OWING to circumstances the Communion Service and Annual Meeting of the Mother Church have been postponed until further notice which will be given in our periodicals.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads June '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for July, August, and September.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

A Word to Inviters.

Inviters of applicants to membership with the Mother Church will confer a favor on the Clerk and save disappointment to the applicants if they will withhold, until after the semi-annual meetings, all applications that have been sent to them for their signature too late to reach the Clerk before the date for the closing of the entries for admission, and also notify the applicants that their applications have been retained.

All applications should be addressed to William B. Johnson, 30 Norway Street, Boston, Mass.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

An elderly woman who for years has lived out on the Old York road tells a characteristic anecdote of the late Lucretia Mott, who was formerly a neighbor, and whom she knew very well. "Lucretia had a fine apple orchard," she said. "Her apples were the best grown anywhere around. The orchard was separated from the road by a stone wall, and people in passing would often climb over the wall and take some of the fruit. This was a source of great distress to Lucretia, who was one of the best women that ever lived. That she should place temptation in the way of others troubled her greatly. Finally she decided upon a plan to ease her conscience. At intervals along the top of the wall she had baskets placed, filled with choice apples. On each basket was a sign which read: 'Thou shalt not steal.' Then, underneath, was another sign, reading: 'Help thyself.' This was characteristic of the old abolitionist."—*Philadelphia Record*.

Begin with a generous heart. Think how you can serve others. Then you shall find resources to grow. Your own portion shall not be left desolate. Strength shall be shed through you. Do the utmost with what you have; and it shall go far enough.—O. B. FROTHINGHAM.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Less Startling Demonstrations.

In this distinctly utilitarian age, it is not surprising that the question of practical value should be promptly presented to every progressive idea claiming recognition and approval.

The symmetry, plausibility, and free flow of a theory count for much less than they have in times past, and they will not long float a system of thought which is not supported by satisfactory evidences of genuineness and substantial worth.

This mental attitude of the world must not be forgotten in considering the history of Christian Science, for it makes it the more apparent that the movement could not have reached its present proportions had it not been prepared to meet every fair test imposed. All efforts to explain its phenomena fail, and fail utterly, if its undeniable demonstrations are ignored. Christianity is no longer an appeal to credulity but to reason and observation, and in venturing its all upon the verification and attestation of scientific tests, Christian Science has assumed a position which would be insanely hazardous, if it were not prepared to substantiate its claims with indisputable proofs. The ability of the blind man to face his contemptuous questioners with such entire self-possession, was based upon a definite personal experience of the authority and value of the Master's teaching, and because of this his logic, "whereas I was blind, now I see," was simply unanswerable.

The world's thought of the relation of demonstration—so-called miracle—to ultimate truth, or causation, is revealed in the constant use of the term *supernatural*; when describing unusual phenomena. The universal and abiding sovereignty of the one spiritual law is practically denied, and causation is classified as primary and secondary, the latter being in command, save in cases of exigency which call for its annulment by superior authority.

The universe thus becomes "a house divided against itself," and the assertion of the divine immanence,—that God is the only causation, "in whom all things consist," is really, though perhaps unconsciously, given up.

Demonstration, from this point of view, is the manifestation of a spiritual force which comes to the world's rescue in time of need, and which gives evidence of the impulse of God, rather than of the spiritual apprehension of man.

In opposition to all this thought, Christian Science affirms the oneness, harmony, and invariableness of spiritual law, and declares that demonstration is not an abnormality of the spiritual life, but its natural and inevitable expression. It is to spiritual apprehension,—the "knowledge of God,"—what radiance is to the sun.

The common thought of a miracle, as unnatural and foreign to ordinary experience, may linger among Scientists in the form of an unfortunate predisposition to identify demonstration with the more marked phenomena of healing, or preservation from ills.

Less tragic but equally important experiences are thus relegated to obscurity, and we fail to realize the encourage-

ment, the stimulus, and the joy, which they ought to bring us, and which they otherwise would.

Who shall estimate the significance to the individual and to the race of that quiet determination to commit the life and its keeping, in every experience and event, to the hands of God; that knowing entry upon a secret and ceaseless struggle for the realization of the Christ ideal of purity; that willingness to bear in love all the possible misjudgment of those who love us, all the persecution of those who know and love us not, which attend all enlistments in this war for truth? And yet these demonstrations have all been made by many who perchance bemoan the fact that they have no personal proofs of the power of Truth, worth the mention. The bravest, the most heroic acts are ordinarily a composite, representing unnumbered calls to the ideal, and unnumbered quiet, unselfish determinations for its achievement, and the nourishment and satisfaction of life must be gathered by many of us, as the bee gathers its sweets, from a myriad blossomings. Life's most splendid demonstrations are sometimes chronicled in spiritual strength and maturity, rather than in events.

The demonstration which is imperatively demanded to-day of all religious propositions and pretensions, may be phenomenal and startling, such as the immediate healing of the sick and sinful; these count for much, and they must be made; but there is another type of demonstrations which are no less surely exacted, and which are woven into the web of our life character. They make their appeal in the gentleness, the loving-kindness, the humility, the patience, the broad-mindedness, the repose, the good cheer and good sense that betoken a disciplined will, a glowing heart, a noble, unselfish spirit. And these, our best possessions, that win always, convincing and capturing when all other appeals fail, these all are composites which register in their golden chambers the unnumbered little devotions, self-denials, and endeavors which, alone and unseen of men, we have made when we were led by the Truth within,—the silent Christ.

From Day to Day.

"TAKE therefore no thought for the morrow: for the morrow shall take thought for the things of itself," was one of the hard sayings of the Master. Like that other command to be perfect as God is perfect, it is classed with the impossible things and does not inspire the effort that could and should be made. Instead of saying it is impossible not to take thought for the morrow, the wiser course would be to regard that condition of faith and trust in God which is free from care and anxiety, as an ideal well worth striving for, and if it cannot be reached to-day, it is good to know that its realization is even a little nearer than it was yesterday.

Perhaps the reading of the Revised Version, "Be not therefore anxious for the morrow," etc., makes it seem more possible and more in keeping with mortal man's thought of a consistent and practical view of life and its duties. But even this requires much more than one is able to perform in his own strength. It requires no argument to convince a person that he is unnecessarily anxious as to what the morrow may bring forth. He knows that a part of his anxiety is uncalled for and the other part does no good, but how to help himself he knows not. The exercise of the human will has not dispelled his fear and anxiety, and he is beginning to realize that he must look higher than himself if he would escape the error of adding to-morrow's burden to that of to-day.

It is acknowledged by all Christian people, of whatever creed or profession, that nothing can do so much for man, as faith and trust in God. Then whatever adds to the measure of his faith, increases his trust in God, and encourages greater reliance upon His promises, bestows a blessing

that cannot be estimated according to the human measure of values.

That Christian Science has brought and is bringing such a blessing to hundreds and thousands of those who were almost ready to sink beneath the heavy burdens that had been thrust upon them, is a fact that cannot be denied, if the testimony of honest and intelligent men and women, scattered throughout the world, is to be accepted. Their testimony would be accepted on any other question, then why not on this, which is of most vital importance?

Christian Science strongly emphasizes the Scriptural teaching that "God is no respecter of persons," that with Him there "is no variableness, neither shadow of turning," that He is unchangeable, "the same yesterday, and to-day, and forever," and that He is the cause and Creator of all that really exists. In proportion as man is impressed with this fact, he is content to live in the present. He knows that to-morrow cannot change God, neither can it cause man to become less than God's image and likeness. He understands that all good is from above, and that all discord and suffering is from beneath. God's grace is sufficient for him to-day, and because he is assured that God cannot change and that his faith in God will not decrease, he knows that he will not be left comfortless on the morrow. Whatever shall be required of him he will be given strength and wisdom to perform.

Now what are the results of this faith and trust in God? Does it cause man to become careless and indifferent? Rather does it produce the opposite effect. He is more careful and more deeply concerned about the affairs of to-day. Because he is in a measure, at least, relieved of his anxiety for the future, he can the more faithfully devote himself to the performance of his daily duties and to the enjoyment of the blessings bestowed upon him by his heavenly Father, infinite Good.

One who has discerned the fact that God is the divine Principle of his being, knows that health, happiness, and prosperity are in accordance with God's laws, and to him the all important thing is present obedience to those laws. He knows that a man can and will reap only as he has sown, hence if he is to-day faithful to the light that is given him he has no cause for anxiety about the future. This assurance brings contentment with the present and the future is filled with joyful anticipation. He lives from day to day, rejoicing in God's goodness and looking forward, not to multiplied trials and burdens too heavy to be borne, but to a more complete and more beautiful unfolding of the Truth of Being. Thus he is enabled to rejoice evermore, while he prays without ceasing, and in every thing gives thanks, knowing as he does that "all things work together for good to them that love God."

The June Number of "The Arena."

ONE of the leading features of the June *Arena* is a symposium on Christian Science which is editorially referred to in that magazine as follows:—

"In line with the absolutely impartial policy of *The Arena*, we give space in this number to an officially authorized presentation of the doctrines of Christian Science, to offset, as well as it may, the criticisms of its teachings and methods of propaganda that have hitherto appeared in our pages. The first of the two articles is by a prominent thinker and scholar who has been identified with the movement, and the second is from the pen of the accredited press representative of this growing church. They are therefore authoritative, and are commended to the attention of every one interested in the new spiritual development of our era."

Purchases for reading rooms should be made from the nearest News Company. Copies of this issue procured from the News Companies will be supplied at reduced rates, and are returnable within three months if unsold.

Among the Churches.

Progress in Reading, Mass.

A brief report of one of our recent Wednesday evening meetings may be of interest to the Field as an indication that we are finding the Truth a very present help in time of trouble.

Following the leader's opening remarks, a lady arose and said:—

"I did not come into Christian Science because of physical healing, but because after I had attended two Sunday services in the church here in Reading, and in the mean time read *Science and Health*, I was assured it was the Truth which Jesus taught, and which he referred to when he said, 'Ye shall know the Truth, and the Truth shall make you free.' In those two Sunday services and the first reading of *Science and Health*, I learned more about the Bible, about who and what God is and man's true relation to Him, than I had learned in all my life before. During the two years I have been interested, I have had many, many proofs of the physical healing in myself, my family, and my friends. A demonstration which occurred recently I would like to give.

Early last Friday morning a trouble asserted itself, and although I worked hard denying the error, it rapidly grew worse, and at ten o'clock I was obliged to go to bed. At noon it was so much worse I could hardly move or speak, but I thought, God *will* help me, and after that an error, or wrong thought, was uncovered to me and instantly the trouble left me. I was able to get up immediately, eat heartily, and do a large afternoon's work, and I never should have known that such a difficulty had manifested itself. Now was not God a very present help in time of need? And is it any wonder that people say over and over again that words will never express the gratitude they feel for all that this Truth has done for them?"

A business man cited references from the Bible and our text-book showing that Jesus taught his followers to cast out devils and heal the sick, and they obeyed. "These are present possibilities," said he, "which can be proven by every one, because we do not have to demonstrate a problem in its entirety before we begin to see satisfying proofs. In the degree that we become conscious of and subservient to God's laws, in that measure can we reflect these laws which bring only love, health, and freedom." He also gave one proof that God's laws are manifest by those who have but a partial knowledge of His power and presence.

A telephone message was received telling him that a friend was suddenly attacked with a very severe and painful trouble which entirely incapacitated him for business. He treated him, and very soon afterward learned that his friend had been entirely liberated from the suffering, and that not a trace of the discomfort remained.

Another gentleman stated that he wished to be a witness to the efficacy of Christian Science. He was mentally and physically wrecked and confined in an asylum. While there a student of Christian Science came to him and in nine weeks he was entirely healed. With the freedom from bodily ills came also a greater blessing, freedom from bad appetites and passions.

A gentleman who had been treated by a Scientist in Reading said, "It is out of a heart filled with gratitude that I come out here to-night to tell you all of the great benefit I have received from Christian Science treatment. I can hardly call myself a Scientist, so recently have I come among you. Six years ago I was stricken suddenly ill with what my family physician called nervous exhaustion. Sleep practically deserted me and I was very much depressed. For five years I doctored and traveled, spending winters in Florida and summers at the seashore and in

the country. Insomnia was my greatest trouble, sometimes getting as little as half an hour and rarely more than three hours sleep for a night's rest. I employed the best doctors in my own state (Maine) then three in New Hampshire. I came to Massachusetts with like results, also was four months in one of the best sanitariums in the state. Two years ago I came to Somerville and built a house, my friends thinking this might tend to take my mind from myself. I was so poorly that I never saw my house but twice during its construction. I was convinced that I should never live in it, and took but little interest. About one year ago my attention was called to Christian Science by a kind neighbor, just as I had about decided to try mesmeric treatment as a last resort. My wife, having a leaning towards Christian Science induced me to try that first. My case yielded slowly and I was many times discouraged, but aided by the loving patience and sympathetic help of my healer, I was led on and up, and in about eight months was able to discontinue treatment. I now consider myself well, physically, having gained over twenty pounds in flesh. Harmony has been brought out in my daily life, hate has been taken from the heart, and the appetite for tobacco has been destroyed. My wife in the mean time has been healed of a severe chronic trouble. These are some, but not all, the physical helps that I have received. From my earliest childhood I had been associated with the church in various ways, studying the Bible and trying to understand it. There were many passages that were never explained satisfactorily; now the Bible is to me a new book. Through Science 'the crooked is made straight,' the rough places smooth, and my spiritual perception and understanding have been illumined."—E. D. HALL.

New Reading Room in Brooklyn, N. Y.

A progressive step in the growth of the cause of Christian Science in Brooklyn was the opening of the new Reading Room of First Church of Christ, Scientist, in the Temple Bar Building, on the corner of Court and Jorolemon Streets. This building, just completed, is the largest and finest architectural structure among the office buildings in the business section, and because of its central location and freshness proved a desirable place for a larger reading room. Before the completion of the building, ample floor space was secured on the third floor, opposite the elevators, and this was suitably partitioned into nine rooms, consisting of the reading, literature, and reception rooms, and rooms for the First and Second Readers and practitioners. The rooms are tastefully carpeted and decorated, richly furnished in mahogany and golden oak, and appropriately embellished with pictures, mottoes, palms, and flowers. A handsomely framed life-size picture of our Leader, a gift of love, has a prominent place in the reading room, just opposite the large centre table upon which the literature is displayed.

At an early hour on the morning of April 18 the Scientists gathered, and with reading from the Bible and "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, followed by prayer and brief remarks by the First and Second Readers, the rooms were consecrated to the cause of Truth, with the fervent desire that tired humanity might find in them, through the study of the writings of our Leader, the satisfying, restful, spiritual light and life contained therein.—NORMAN E. JOHN.

Reading Room at Toronto, Can.

The reading room of First Church of Christ, Scientist, Toronto, has, up to the present, been in the church building, at corner Simcoe and Caer Howell Streets; but in order to meet the requirements of the greater activity which is becoming more clearly manifested in the Christian Science movement, and realizing that a reading room located in

the business centre of the city will confer greater opportunities for the promulgation of Christian Science, in January last a search was commenced for suitable quarters, and now a large and beautiful room has been opened in the Confederation Life Building (one of the most commodious business structures in Toronto), corner Yonge and Richmond Streets, where visiting friends will be heartily welcome. Hours 9 A.M. to 5 P.M.

W. SPAULDING.

The Great Siberian Railway.

RUSSIA has succeeded in keeping herself "in the public eye" for some time, and the end is not yet. Not only in politics, diplomacy, and multiplied internal disturbances has she been making history, but in industrial and commercial development as well.

The building of the great Trans-Continental railway is an undertaking of such colossal proportions and world-engaging significance that its very suggestion would have amazed the dreamers of relatively recent times, and yet it is going on to its completion, and a five days' trip to Liverpool will soon be the only "floating interval" between America and the shores of "far Cathay." In anticipation of the approaching holiday trip, the following description of the conveniences provided for the journey is of interest. The ride from Moscow to Port Arthur will consume about fourteen days, and the train on which we are to travel is described as follows, in the columns of the *Literary Digest*:

"The trans-Siberian express is composed of six coaches, one first and two second-class, a saloon-coach containing a dining-room and a library, and a baggage car. The cars are heated by means of hot water, and are lighted both within and without by electricity.

"The train is capable of carrying eighteen first-class and forty-eight second-class passengers. The dining-room contains nine small tables, and is capable of seating twenty-eight persons at one time.

"Adjoining the dining-room is the library, which is like a little *salon* elegantly furnished, with a bookcase containing about a hundred books in the Russian language, besides numerous foreign works, maps, periodicals, and the newspapers of the principal cities of the route. The best official and private publications regarding Siberia are also to be found here. Besides reading, travelers can while away the time with music, for there is a piano, or seek amusement in cards, dominos, or chess, the favorite game of the Russians.

"One of the coaches contains a bath-room with enameled tub and a very complete arrangement for shower-baths. Like all the other toilet-rooms, floor and walls as high as windows are covered with decorated porcelain tiles. The rest of the walls and the ceiling are covered with wood paneling. Hot and cold water for baths and douches are provided by means of a reservoir placed on top of the coach.

"Besides all this there is a gymnasium with all kinds of apparatus for exercising all the muscles of the body, including a chamber velocipede. Finally, for the use of the tourist-photographer, of whom there are multitudes at present, a dark cabinet has been fitted up with all the necessary paraphernalia.

"Besides the usual number of conductors, each train is provided with a mechanic, an electrician, a *chef de train*, cooks, waiters, and two men for the lighting and heating."

Be not anxious about little things, if thou wouldst learn to trust God with thine all. Act upon faith in little things. Commit thy daily cares and anxieties to Him, and He will strengthen thy faith for greater trials that may come.

DR. PUSEY.

From our Contributors.

Christian Science.

BY EUNICE POND ATHEY.

UNTOLD are the mercies, untold are the blessings,
Untold the glad songs that ring out to-night;
Singing of peace, health, harmony, gladness,
Brought to our hearts by this radiant light.

Infinite tenderness, infinite mercy,
Dwells in the stillness and power of thy might;
Lifting the sad, and the sick, and the lonely,
Out of all sorrow into the right.

Fair Investigation.

BY H. W. N.

MANY of us no doubt, as is the case of the writer, have an intense feeling at times to say or write something of our experience in Christian Science, and yet without being aggressively doubtful feel that a statement of our physical and mental demonstrations cannot be narrated *positively* enough to satisfy our own conscience that our words are entirely free from self-deception; in other words, that we are sure in our own hearts that we believe all we say.

Following this, we naturally have some diffidence in speaking about all the love and beauty we see for ourselves in Christian Science, fearing that our words may savor of preaching without proof of our sincerity.

Despite the above, a few thoughts struggling for utterance may be of help to some others who are attracted to Christian Science and seem unable to find a starting-point.

At a recent Wednesday evening meeting in New York, one of the speakers thanked Christian Science for the enlarged view it gave him of God, and he showed by what system of education he was training his mind to get away from the circumscribed, finite idea which most men have of God. He collected and collated all the names and expressions used in the Bible and Science and Health employed to signify God, then he very graphically showed how they all meant that "God is All in All," and that ALL, meant God.

This is doing scant justice to his remarks, but it is sufficient for our purpose. In like manner take pages 616, 617, 618 Index,—[God]—in Science and Health and study that. It will be a revelation. (Revelation—an unveiling, an unfolding.)

We all, if we look into Christian Science with an *open mind*, will grasp the fact that it is logical, consistent in its reasoning, and not at all antagonistic to the thought of our great modern idealistic philosophers.

Mrs. Eddy and thousands of her followers have given proof positive that they are able to heal the sick through prayer. The results are beyond question. The sceptic questions the process. Some say advanced mesmerism, imagination acting on the nerves, change of blood circulation, etc. But, what does this form of explanation amount to? It is only a vague, undemonstrable theory against actual good results. Why not, therefore, be generous minded, and start out with the postulate that Christian Science teachings may be true.

Read the Bible and Science and Health and see what a sense of peace will come to you. Without making any assertions about the reasons for such a change, the writer in his own case can say that he read Science and Health for a whole year and could not see any sense in it, or how it gave a spiritual interpretation to what he considered the rubbish of the Bible; but after that time—to be exact, in August, 1899—he talked with some wise Christian

Scientists who somehow or other started him on a fresh line of thought, with an "open mind" for such truth as there might be in Christian Science, and immediately following that, he grew from a thin man of somewhat peevish health and irregular functions, into a stout, healthy, happy man.

To get the spiritual import of the Bible, it must be read with love instead of a carping criticism searching for inconsistencies. It must be recognized that the Scriptures were written by Orientals, of a different method of thought and expression from ours, in a language that has been obsolete for hundreds of years, and that the translations we now read have a context very much colored by the meanings given to them by the translators, who may possibly and probably have very often missed and misstated the turn and inflection conveyed by the original writer. We shall find the Scriptures helpful and consistent if we read the Bible narratives in the same spirit of love that we read a letter from a dear one in a foreign land, in which this one talks familiarly of customs and manners with which we are not personally acquainted. If the letter has become soaking wet and much of the writing blurred and undecipherable, should we try to invent all manner of foolish theories as to our dear one's meaning? On the contrary, we should try to fill in the missing meaning with all the good, kindly thoughts actually written.

The good, kindly thoughts are what Jesus and the prophets have been trying to convey; not even the cynical person can attribute worldly vanity or hope of material gain to them. Their words are utterly meaningless from a material standpoint.

Take a few of the sayings of Jesus, for instance: "He that eateth my flesh, and drinketh my blood, dwelleth in me, and I in him;" "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I speak unto you, they are spirit, and they are life;" "That they all may be one; as thou, Father, art in me, and I in thee, that they also may be one in us: that the world may believe that thou hast sent me."

Now, unless the only real Substance and Mind is Spirit, and unless the physical is unreality,—the inverted or distorted image,—what possible explanation can be made of these and other Scriptural sayings?

In view of the fact that following the attempt to obey the teachings of Christian Science, a very great improvement in the life of the writer is to be observed, and that hundreds of others bear testimony to similar experiences, it certainly seems that Christian Science is worthy of kind and generous investigation, an investigation upon the assumption that it is the truth until proven false.

Not Opposed to Christian Science.

BY EMMA GOULD EASTON.

It is a sweet thought to me that no one is really opposed to Christian Science. Where there is opposition, whether from a theological or a medical standpoint, investigation always shows that it has arisen from a mistaken report, or from the action of some one who has taken the name without the nature of Christian Science, and whose conduct would be disapproved of by Scientists themselves.

The early Christians were not tortured and put to death for what they did, but for what the people with whom they were surrounded *thought* they did. They said, "these Christians would like to burn our cities; they are a danger to the community. They sacrifice their children alive to propitiate their gods." This was the direct opposite of the truth, but one repeated it to another, till it was generally believed and accepted as the truth. The fundamental trouble, then as now, was lack of fair-minded investigation.

Those who object from a medical standpoint to what they

believe to be Christian Science say it is a menace to the community because Scientists refuse help themselves in time of sickness, and prevent others from seeking help. What are the facts? It is now well known that Scientists obey the law as regards vaccination and the reporting of so-called contagious diseases. As for nursing, when a person, who is being cared for by a nurse as well as physician, decides to put himself under the care of a Scientist, he is not required to suffer inconvenience from lack of nursing while the demonstration is being made, though in most cases, the Scientist in charge would think it wise to substitute a nurse who was a Christian Scientist in addition to her other qualifications. This is in order that the patient may have Science read and explained to him, and at the same time be cared for by one in whose thought health rather than sickness is uppermost.

The difference, then, between a patient under medical treatment and one under Christian Science is not the difference of one who is law-abiding and one who is not, or of one who is properly cared for and one who is not, but of one who is looking to drugs for healing and one who looks to the fulfilling of the promise in Jeremiah: "I will restore health unto thee, and I will heal thee of thy wounds, saith the Lord."

The charge that Christian Science is forced on people would be too absurd to answer were it not that many of the objections seem to be based on that supposition. In ninety-nine cases out of a hundred the practitioner has never seen the patient till he comes to his office and asks for treatment, the patient in most cases having heard of some good work done by the practitioner.

The theological objections are even more groundless, for the theology of Christian Science is based on the Bible and the teachings of the Master, and that platform is (or should be) a broad one on which all Christians can meet in friendly greeting.

When one thinks of the Leader of the Cause the very word objection is objectionable, and not to be thought of, for any one who sees in her any other than a self-sacrificing, loving, and lovable Christian woman, sees what comes wholly from false report and misconception. To those who feel that they owe their happiness and even their lives to her book, *Science and Health*, she is a thousand times more beautiful. I have a cousin, not a Christian Scientist, who has known her from girlhood, he having been born and having lived his long life in the vicinity of her birth-place and present home, who said of her a while ago, "She has only fulfilled the promise of her youth in taking the stand she has before the world," referring to the high degree of spirituality manifested by her from her earliest days. She was his father's pupil, and "a favorite one, too, intellectually," he wrote me recently.

The Advantages of Attending a Christian Science Church.

BY FLORENCE MAGIVNY.

CHRISTIAN SCIENTISTS who formerly belonged to an Orthodox Church are frequently asked, What advantage is there in attending a Christian Science Church?

A Christian Science service is so entirely different from that of any other that it stands quite alone.

One of the advantages to be considered is its choice of preachers. The Bible and the Christian Science text-book are the only preachers. Both books reveal the Truth to man. These preachers have no human views to promulgate, they indulge in no sensationalism. They are not trying to please any mortal, but only to give the Truth, as Jesus taught it. They preach that he came to save the sick as well as sinners. Hence we hear the Truth about ourselves and are correspondingly benefited.

Another advantage is in the character of the sermons preached. The Bible texts and their correlative passages from *Science and Health* constitute our sermons. The several sections into which the subject is divided, are not even named, lest human hypotheses should find an entrance. Carefully and logically the subject is developed, until we behold the beautiful symmetry of the whole. These sermons teach the Word of God, and give the spiritual interpretation of the Scriptures and thus impart a thorough knowledge of the Bible. They proceed from Genesis to Revelation, and show the relation of our text-book to the Bible.

While listening to these sermons, man learns his true relation to God as his loving Father, who never sends sin, sickness, or death, and that no power, outside his own belief, can make him subject to these errors; also that Jesus came, not to save sinners by his crucifixion, but to demonstrate the great fact that God is the Life of man, and that no material condition has power to destroy it.

Finally, the healing power of these sermons is beyond question, since thousands have testified to their effect. The realization of the presence of God alone is often so strong in the minds of those present, that many people are healed of severe maladies while attending a Christian Science service. The thought is different from the worldly concept; here we turn from the material side of our lives to behold spiritual things. Sin, sickness, and death are not preached as realities, but we are taught how to meet these errors, how to overcome trouble and sorrow, financial reverses and all the ills of mortal belief. Always and unceasingly this one keynote is sounded, the allness of God and the nothingness of error, until, at last, the listener finds himself in harmony with the Science of Being.

Milton's View of the Supremacy of Good.

BY A. C. S.

THE medium must be clear if the light is to penetrate, so exaltation of thought must precede inspiration. In no other poet do we see so clearly the conscious effort to make his life true and pure, as we see it in Milton. While still a boy, he discerned the spiritual law of Good, and at twenty he said of himself, "I am enamored of moral perfection." So pure was his college life, that his companions called him "The Lady." He felt that he was to be a great poet, and, with this thought there was with him constantly the thought that his life must be a poem in its purity, sincerity, and truth. So clearly was this purpose manifested in his life, that another poet says of him, "Thy soul was like a star, and dwelt apart." So it is divinely natural that we should find in his work the discernment of the inspiring, encouraging truth of the following passage, which is really the keynote of his masque, "Comus:"—

Against the threats
Of malice or of sorcery, or that power
Which erring men call Chance, this I hold firm]
Virtue may be assailed, but never hurt;
Surprised by unjust force, but not enthralled;
Yea, even that which mischief meant most harm
Shall in the happy trial prove most glory.
But evil on itself shall back recoil
And mix no more with goodness, when at last,
Gathered like scum, and settled to itself,
It shall be in eternal restless change
Self-fed and self-consumed.

Sorrow.

BY MOWBRAY MARRAS.

SORROW appears
Crowned with her diadem of tears.
To us she brings
The knowledge of those spiritual things
From which all wisdom springs.

Testimonies.

Light in a Moulding Room.

Many a time I rise early to read something from the *Sentinel* or *Journal* before going to my work among men who do not believe in Christian Science, for I have felt the need of being fed with Truth and Love so that I can talk to the men in the spirit of love when they talk rough to me and use profane language, so that they could see by my way of talking that I loved God too much to take His name in vain, even when the same things happened to me as to them. I did not work a week before they saw the difference, for they soon told me they noticed I did not swear. I have gone to my work oftentimes refreshed by reading some one's experience, or some word from our Leader in the *Journal* or *Sentinel*, and yet I did not know then as I do now of the practical value of these things.

I have found, in the short experience I have had in following the teachings of Science, that things I have longed to be free from and could not get rid of with all my will power, I am free from to-day, and in work at which I failed I have succeeded because it taught me that I have dominion over my work and not my work over me.

I am a moulder by trade, and before I knew of Christian Science if I got burned I was laid off for six weeks or two months, now I am not laid off at all. Last week I got two of my fingers burned in the red-hot sand, and I never told a man in the shop about it. I still continued to work away in the heat, though error tried to make me think I could not. I just held on to Truth as I was taught, and as far as I understood, for it is only what I have proved in my own mind that I know is Truth.

Have I made a mistake in rising early in the morning for Truth and making use of what I had received and proving what I had felt to be true? Whenever I have asked the men if they would like to read a *Sentinel* or *Journal* if I would let them have one, I have always met with this reply, "Certainly, I shall be only too glad to get one to read," and to-day I have hardly a *Journal* or *Sentinel* left. You good friends who write for our publications don't know who is reading your messages. You may be across the ocean but we are here drinking in the Truth just the same. It is helping us, and I desire to help you by telling you a little of what good I have received. Some one may be in the furnace, and it may, according to the seeming, be very dark to them and you may be just the one God has chosen to help a brother out. I have been there, I know what a loving message from God through one of His children will do. I know how it lightens the weight when you have no one to talk to until you find some one in your neighborhood who understands as you do.

It has been a dark way to me, but it was God's way, and I would not ask it to be changed to-day if it could be. I have leaned on God and found Him just as Jesus said, that He would never leave me nor forsake me.

I for one shall be glad when I can get a *Sentinel* six days of the week, for I long for it before it comes and often read it half through before I eat my supper after coming home from work. I always get some thought to work on. It is the steady work that keeps me bright. Let me cease working and I would rust, and it takes quite a bit of rubbing to get me to shine again, for rust doesn't come off at a single stroke.

"By this shall all men know that ye are my disciples, if ye have love one to another." Love is my only remedy for evil thinking. When my brother or sister thinks differently from what I do, I continue to follow Truth and Love and do not criticise them but love them. One thought that has helped me to overcome that difficulty, for it was a difficulty with me, was to think that I might have been

even more bitter and acted worse than they, if I had been in their place. And so I say, "Father, forgive them; it's only their misunderstanding of Truth and Love that makes the difference; therefore help me to love them still as Jesus taught me to love them, that all I may have to show them, and all they can see is love, that love may be the one attraction, for God is Love."

ANDREW H. RUNDSTALLER, Toronto, Can.

Healed after Twenty-five Years of Suffering.

I deem it my duty and privilege from a sense of gratitude to Christian Science and for the sake of others to send my testimony to the *Sentinel*:

For twenty-five years I suffered on account of fainting fits which I have since learned were caused by heart disease. My medical advisers kept this knowledge from me, but told my relatives that I might die at any moment. These "faints" used to come on very suddenly and I would be quite prostrated for a time and lose consciousness. It was not an uncommon occurrence for me to fall down when walking, and even when shaving in the morning, sometimes giving myself bad bruises.

I consulted several physicians of standing, but none of them told me what was really wrong with me, but said that they could not do me any permanent good. The medicine they prescribed failed to benefit me, for these "faints" continued to get worse each year till August, 1899. I forgot to mention that I have had as many as six of these attacks before one o'clock in the day. In August, 1899, Christian Science was brought to my notice by my son, who was arranging to visit Boston to receive class instruction. He then commenced to give me treatment. I must confess I had very little faith in it and did not interest myself as I might have done.

Treatment was continued till the following December, 1899,—four months,—when I was entirely healed. I have not had a return of the trouble since. I must thank Christian Science for having done this for me.

I am reading "Science and Health with Key to the Scriptures," also some of Mrs. Eddy's other writings. Although not calling myself a Christian Scientist, I wish to express my gratitude to Mrs. Eddy, the Discoverer and Founder of Christian Science, for all it has done in freeing me from the fetters that had bound me for twenty-five years. I am seventy-five years old, an age at which, to mortal sense, material aid does not help one much.

HENRY GIBBS, Sydney, Australia.

The Seed of Truth Sown in Austin, Pa.

Four years ago this winter, my husband took his little boy to the city of Buffalo. The child was nearly blind. His eyes had been operated on several times, but with all the care of the best physicians no lasting benefit had ever been received. Later on the boy was again placed under medical care; but it happened that the father secured rooms in the home of a Christian Scientist, where Christian Science was recommended to him. He would not listen, but did say that if Science could heal him of a stomach trouble with which he had suffered for several years, he might venture to place his child under their care.

Some doctors had pronounced the trouble cancer of the stomach, one had said the cords holding the stomach in place were worn out, but the general verdict was—no help. They could make him more comfortable, that was all. Doses of morphine were taken day and night, but he could neither sleep nor eat.

Such was his condition when he walked into the practitioner's office, and in reply to the question whether he came for treatment he said he did not know; he had no faith in it at all; but a lot of women's whims had sent him there. He guessed he had come to please them.

Should this kind lady ever read this article, she will see a little of what her stand for the Truth has done in Austin, Pa., and not only here, but each one interested has told the good news, and so it has spread to many other towns and villages. He returned home perfectly healed, after having one treatment. At that time no one in this town of over three thousand inhabitants knew anything of Christian Science, but Science and Health soon found its way into several homes.

A little more than a year ago I came to Austin and was soon followed by my sister. We began to read the lessons in our home with two families besides our own represented. To-day, although we have not yet an organized church, we can count on at least six families who have taken a firm stand for Science, and many more are interested and in sympathy. I have not time to tell of all the healing done in Austin. Many discords, not of the body, have been banished, and harmony realized. Numerous cases of fever, and well-nigh every ill that affects mortal man have been overcome through the Truth.

Within the last few months two little ones have been born under Christian Science treatment. One mother scarcely knew a pain, and the following morning she arose and attended to many household duties, going up and down stairs, etc. She continued to do these things every day and has been quite well and strong.

Another mother sat up the next day, the third day was about her house, and has felt perfectly well ever since. These demonstrations give us great courage and joy.

DELIA H. HORN, Austin, Pa.

Christian Science and Dentistry.

I have been the recipient of such great good from Christian Science that I feel it my duty to speak a word of gratitude through the pages of our *Sentinel*.

It has been my privilege to receive class instruction from one of our Leader's loyal students. When leaving the class, our teacher said, "Be very careful when giving a testimony that you have made it your own." I feel that I have made this one in dentistry my very own.

The work was commenced January 7, and finished March 20. It consisted of nearly all possible kinds of dental work, and caused me neither inconvenience nor pain. Neither anæsthetic nor medicine was used.

From childhood my front teeth have been widely separated, the space between being wide enough for another tooth. When the appliances were made the first half drew together quite rapidly, then almost stopped. The dentist said the bone had become very hard and that it would require at least a year to absorb enough for the teeth to come together. I was preparing to move away from Chicago and told the dentist I could not remain a year on account of my teeth, that he must do something to hurry the work. I felt that I could not hurry matter with Mind while depending on material surgery, but that I could use Mind to prevent pain or bad results. The dentist said the only thing he could do was to remove a portion of the bone, and use rubber bands. He said it would be very painful, and wanted to know if he should use an anæsthetic. I declined and he began working. He said if I could not stand the pain he would use something to deaden it, but there was no pain.

He said it was the best operation he had ever performed, and added, "You did not even flinch." Why should I flinch, when I was not being hurt?

The teeth came together in a short time. I had one tooth extracted, live nerves cut into and taken out, old fillings removed and new put in, teeth filed off and crowns put on. I have sat three hours at a time with one filling.

One day the dentist said, "Now get to work with your treatment, for I am coming to a live nerve and it is a

terrible one." I told him if he would keep his mind on his work and not on me we should both get along better. He seemed to think I had a remarkable power of endurance. I asked him if he thought I would sit quietly and allow him to hurt me without a protest. He said, "No, I believe you have been free from pain and I know you have had no fear. It would be a blessing to me if all my patients were Christian Scientists," and expressed a very great desire to learn more about it. The word thankful is insufficient to express one half my gratitude to Mrs. Eddy and my teacher.

MRS. FLORA A. JUSTUS, Toledo, O.

Healed by Reading Science and Health.

I am reminded of a bit of early history of Methodism. In the "Illustrated History of Methodism" by the Rev. W. H. Daniel, A.M., pages 172 and 215 we read, "the Methodists were stoned in the streets. In newspapers and pamphlets of all kinds, they were painted as unheard of monsters, impostors, and seducers. . . . One Edward Greenfield, a tinner of Cornwall, Eng., was arrested, John Wesley presented him to the court demanding of what offence he was guilty: 'Why, sir, he says his sins are forgiven,' was the reply of the magistrate. 'But for a magistrate and a clergyman to cast this man into prison for such an offence, is bigotry and tyranny,'" declared John Wesley.

Now that Christian Science methods are healing the sick they, too, are being persecuted; history is repeating itself. One thing I am convinced of, that Mrs. Daniel F. Beatty used to wear glasses, had violent sick headaches and chronic indigestion; over one year ago she bought a copy of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," and was healed by reading the same, and has been well ever since, is now in perfect health, and has no further use for her glasses. Seeing the wonderful results of Christian Science in one's own home, God's love to man is convincing. "And He sent them to preach the kingdom of God, and to heal the sick." This passage of Scripture has been fulfilled in our home. "Bless the Lord, O my soul, and all that is within me, bless His holy name."

COLONEL DANIEL F. BEATTY, Washington, N. J.

Christian Science in Childbirth.

I wish to give my testimony in regard to what Christian Science did for me recently in a case of confinement with my first child. I was under treatment for about two weeks before the birth took place. About 4.30 P.M. I had a few slight pains. My sister-in-law came in, and she said there was no need of them, that if the healer were here they could be stopped. I sent for the healer and she arrived here about six o'clock. During that time slight pains continued at intervals. About ten minutes after the arrival of the healer, our child was born. I experienced but very little pain, the child weighed nine pounds. The next day I sat up in bed and ate a hearty dinner, and the second day I stood on my feet. I gained right along; but on the fourth day I was taken with chills which came on so severely and with so much fear that I had extra covering put on. Then I went to work, and soon saw that I did not need the extra covering. I threw it off and turned to God. In a few minutes my temperature was normal. I feel very thankful to Mrs. Eddy for the benefits I have received in Christian Science.

MRS. LAURA CHARNLEY, Manawa, Wis.

It is the lives like the stars, which simply pour down on us the calm light of their bright and faithful being, up to which we look and out of which we gather the deepest calm and courage.—PHILLIPS BROOKS.

Religious Items.

In an editorial *The Congregationalist* says: "It has been apparent for some time to admirers of John Watson, D.D., that he was something more than a clever story writer and interpreter of humble life. Again and again he has revealed a power of insight in penetrating to the heart of shams and follies, and a courage in rebuking them with shafts of irony or open wrath which have set him forth as having proportions like unto the prophets of old who rebuked Israel. Of this sort was his sermon on Middle Class Pharisees, just preached to the Synod of the Presbyterian Church in England, in his official capacity as moderator. Acknowledging freely that he was a middle class man preaching to other men of his class, and first pointing out distinctly the virtues of his class, he proceeded to strip naked the smug egotism, the worship of respectability and the aversion for the outcast and the poor of the middle-class Christians of his time. With Frank T. Bullen, he says that the average church to-day is altogether too respectable for an artisan or laborer to venture in it."

In an article in the (Methodist) *Christian Advocate* on "The Relation of the Church to the Poor," Thomas Blake says: "So far as the Church of Christ is concerned there ought to be no middle wall or partition between the rich and the poor. The failure of the Church to reach the masses may be due largely to the fact that such a barrier exists. The up-town movement of the churches into more fashionable neighborhoods, together with the select audiences attending these churches, indicates a state of things at variance with the true spirit of the Gospel. It was the crowning feature of Christ's work here on the earth that the poor had the Gospel preached to them. It was preached to them by one who, though rich, had made himself poor for their sakes, that they, through his poverty, might be made rich. No wonder the common people heard him gladly."

The *Universalist Leader* publishes the following: "The editor of *The Homiletic Review*, Dr. D. S. Gregory, in considering 'Some Lost Notes in Present-Day Preaching,' observes: 'There is manifestly in many quarters a subtle and pervasive Universalism, a lack of faith in retribution for sin, especially in future retribution for sin.' Subsequently in the same article Dr. Gregory remarks: 'No rational exegesis can get away from Christ's two-fold teaching: that sin unrepented of will be visited with a penalty awful beyond the power of human language to express, and endless in duration.' There are other hard sayings under the section treating of man's lost condition and imminent peril of judgment and perdition.' But the above are a sufficient text for some further present-day preaching."

The London correspondent of the (Episcopalian) *Church Standard* quotes extracts from the London *Daily Express* to show that Christian Science is growing in interest among the fashionable people, and then says: "From a very different quarter comes the statement that Trinity College, Cambridge, seems favorable to the growth of Christian Science. In a letter to a friend, Mrs. Butler, wife of the Master of Trinity, remarks that she has often taken her children to a dentist 'trusting to Christian Science to overcome any pain or fear,' and gives details of successful experiments in this direction. Another disciple, also from Trinity College, testifies to the efficacy of this cult as applied to chilblains."

A story is told of a Scottish minister touring in Belgium, who, on arriving at Bruges, looked about for the cloak-room. His acquaintance with the language of the country was, however, so imperfect that he failed to make the porter in attendance understand what he wished. Being a man of resources, it flashed across his mind to try a Latin phrase likely to be understood in a Roman Catholic country. "requiescat in pace," said he, pointing to his property. The

porter smiled, nodded his head to show that he caught the traveler's meaning, snatched up the portmanteau and took it off to the place where "left luggage" was kept.

The Rev. W. S. Pryse, D.D., says in the *Homiletic Review*: "In the seven petitions of the Lord's Prayer we have the model of all true prayer. It is the perfect and universal prayer. It is equally suited to all conditions and periods of human life. All alike, young or old, rich or poor, ignorant or learned, may find in it a true expression of their wants and of communion with the heavenly Father. Brief as it is, it presents the true spirit, the decisive reason, the right method, and the complete substance of prayer. It is a prayer which is never outgrown, which never loses its pertinency, whose freshness and beauty never fade."

In an editorial on "Kindler Judgments," the (Baptist) *Watchman* says: "The kindler estimates of our fellows that we take with maturer years are apt to be more nearly just than those harsh judgments we were so ready to pronounce in youth. We see that a great many factors enter into human conduct; that few persons really act from unmixed motives, and that it is easier for people to deceive themselves than any one else because in the case of self-deception no one is watching them. The French maxim 'to know all is to forgive all' is very far from the truth, but to know all is to forgive much."

In an editorial on "The Faith that Comforts," the (Methodist) *Christian Advocate* says: "The stoic may bear everything unmoved, but to reach that condition of callousness he has done violence to his nature. There are those who, when deprived of one friend or one trusted support, seek to forget the past by fastening their affections or hopes upon another; but they only subject themselves to a series of disappointments. In the hour of bereavement and the lonelier hours or years that follow, the only consolation is that found in the Christian religion."

The (Methodist) *Christian Advocate* says: "Tenderness is an element of greatness. A prominent feature of the character of God, as manifested in Jesus Christ, is compassion. At the grave of Lazarus 'Jesus wept.' As he entered the deep shadows of his passion he looked down on the city of Jerusalem, which had stoned the prophets and killed the messengers of God and was ready to put him to death; but instead of heaping reproaches on the wicked people he wept over them with tender compassion."

The rector of St. Andrew's Church, Duane Street, New York (Roman Catholic), has inaugurated a service for newspaper men at half past two in the morning, with an attendance of about seven hundred men—newspaper workers, telegraph operators, and post-office employees. The *Churchman* notes that before this service could be held, the archbishop was obliged to ask authorization from Rome.

The *Boston Herald* says: "It is stated that there are now more than one hundred and twenty converted Jews preaching in Protestant pulpits in the United States to-day, and that there is scarcely any denomination which, among its ministry, does not contain at least one converted Jew. The number of converted Jews in the United States is estimated at forty-five hundred."

Phillips Brooks once said: "There is no authority short of God. Look up to Him, expect His teachings. And though clouds of uncertainty may come, never let them make you turn your eyes away in discouragement, or think that on the earth you can find that guidance which is not a thing of earth, but which must come to us from heaven."

The *Boston Transcript* says: "It is stated that preaching is disappearing more and more in the Russian Church. Sermons are given only on rare occasions. The priest who wishes to deliver a sermon must first submit it to the approval of his bishop."

The Presbyterian General Assembly, in session in Philadelphia, opened debate on May 23, on the question of revising the Westminster creed. The General Assembly is the national legislative body of the Presbyterian denomination.

The Congregationalist says: "He who, having lost one ideal, refuses to give his heart and soul to another and a nobler, is like a man who declines to build a house on the rock because the wind and rain have ruined his house on the sand."

The (Baptist) *Examiner* quotes the Rev. Charles E. Jefferson as saying: "No braver man than Jesus ever lived and he never struck a blow. Saul of Tarsus never joined an army, but he said: 'I have fought a good fight.'"

The (Baptist) *Examiner* says: "We have no right to allow trouble to overwhelm or drive us to despair or sour our disposition, so long as the divine goodness has provided a way of escape from its burden."

The (Baptist) *Standard* says: "Sleep not, nor work, nor play, with God's smile removed from the life because of your unwillingness to turn yourself in affection toward Him."

"Many a man who has shown the courage of his convictions lacks the courage to change his convictions," says the (Baptist) *Watchman*.

LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Theories. Realization. Is Christian Science an Opinion. Practicality of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Address all orders for above literature to The Christian Science Publishing Society, 93 Falmouth Street, Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

- Cloth binding, each \$3.18
Two to Twelve books to one address, each, prepaid . . . 3.00
Twelve or more books to one address, each, prepaid . . . 2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
Twelve or more to one address, each, prepaid 3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid . . . 5.00
Twelve or more to one address, each, prepaid 4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
Twelve or more to one address, each, prepaid 5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS.

- A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth) each, prepaid \$2.25
Twelve or more books to one address, each, prepaid . . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid . . . 4.00
Twelve or more to one address, each, prepaid 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
Twelve or more to one address, each, prepaid 4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS.

- An illustrated poem,
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . . 2.50
RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

Editor. Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.
Entered at the Boston, Mass., Post Office as second-class mail matter.

Political and Governmental Notes.

Senator Chauncey M. Depew is reported by a Chicago press dispatch to have made the following statement regarding a third term for President McKinley: "There is absolutely nothing in the way of a third term for President McKinley, in my opinion. The country has been phenomenally prosperous under his administration. Universal confidence is reposed in him and there is a vast national pride in the results of his work. The third term is not a bogie, and there were entirely outside circumstances in the cases of Washington, Grant, and Benjamin Harrison that prevented a precedent being set for the nomination and election of a President of the United States for the third term."

A Washington dispatch to a Republican newspaper says that the Republican managers are preparing to materially increase that party's strength in the House of Representatives at the next congressional election, owing to the fact that the recent decision of the Supreme Court gives Congress absolute control of insular affairs, and extra strength in the lower house is much desired. The new burden of responsibility placed by the Supreme Court upon Congress, and the additional opportunities for legislation, will, in the opinion of some of the political leaders, make the congressional elections of the future a great deal more important than they have been in the past.

A constitutional convention convened in Richmond June 12, is dealing with the question of disfranchising negro voters in the State of Virginia. There is said to be little sentiment among the white people against such action, but Governor Tyler has taken his stand in opposition, and in an authorized interview said: "I am opposed to any measure curtailing the right of suffrage. I do not believe that those who are required to exercise all the duties of citizenship, including the payment of taxes, should be restricted in voting."

Foreign News.

A dispatch to the *New York Herald* from St. Petersburg quotes the following from an article on the policy of the Powers in China from the *Stock Exchange Chronicle*, which is said to represent accurately public opinion in St. Petersburg: "Russia is the one country which emerges with credit from the most deplorable spectacle of feebleness ever exhibited by civilized peoples. The Powers went out to seek gold, but they returned empty handed with a promise from the Chinese to raise a loan. And the disillusion is all the greater because never before has an attempt to bring the Powers together and make them forget their quarrel so poorly succeeded. It is vain to seek any positive results from all these marches and demonstrations. The Chinese question was never further from being settled. We have not

pacified China. The security of foreigners is not guaranteed or assured. The sphere of commerce has not been extended. The belief of China in the mutual distrust of the Powers has been in no wise shaken. There will probably be fresh surprises in China again and again, and next time what nation will care to take up the leading role which Germany so lightly assumed with military and diplomatic results which can be little envied?"

Andrew Carnegie signed a deed June 7, transferring ten million dollars worth of five per cent United States Steel Corporation bonds, in accordance with his offer, to the universities of Scotland. The gift becomes immediately available. The trustees of the fund are the Earls of Elgin and Rosebery; Lords Balfour of Burleigh (chief secretary for Scotland); Kelvin, Reay, and Kinnear; Sir Henry Campbell-Bannerman, A. J. Balfour, James Bryce, John Morley, Sir Robert Pullar, Sir Henry E. Roscoe, Thomas Shaw, M. P.; Richard B. Haldane, M. P.; the Lords Provost of Edinburgh and Glasgow, the provost of Dunfermline, and one trustee from each Scottish university.

Maitre Labori, the distinguished French advocate who so ably and courageously defended Dreyfus, and who so nearly lost his life at the hands of an assassin because of his faithfulness, was given a reception by the members of the British Bench and Bar in London on June 5, such as Englishmen were never known to give any other representative of the French nation. All the legal members of the British Cabinet, all the justices of the High Court of Judicature, the Lord High Chancellor, and the most distinguished jurists of the capital were present and rivalled one another in doing Labori honor. It was a tribute to honesty, courage, and true manliness.

The Japanese newspapers state that the Russian military authorities at Vladivostok have been advised officially from St. Petersburg that the Russian government has made overtures to Japan offering the latter the ports of Dalny and Port Arthur in the event of Japan offering no opposition to the acquisition by Russia of an "ice-free port" in Korea, presumably Masanpo or Port Lazareff. Building operations at Port Arthur and Dalny have been suspended by the Russian government pending Japan's reply.

A Pretoria dispatch dated June 5, says that Colonel Wilson with 240 of Kitchener's scouts surprised and routed four hundred Boers belonging to Beyer's command, killing 37 Boers, capturing one hundred prisoners, and taking eight thousand cattle and a large quantity of supplies. The British losses are stated to have been three killed and 15 wounded.

From Count von Waldersee the Berlin War Office has received the following dispatch, dated Tientsin, Tuesday, June 4:—

"I have now resigned the functions of commander-in-chief, and to-day am leaving China by way of Tokio. Strict measures have been taken here to avoid collisions between the different contingents."

Industry and Commerce.

A large delegation of members of the New York Chamber of Commerce visiting in England has for several weeks past been treated with the utmost cordiality by the commercial bodies of London. On June 5, the London Chamber of Commerce gave a banquet to the New York Chamber of Commerce at which prominent statesmen and business men of both nations were present. Among the Englishmen were Lord Chief Justice Alverstone, Lord Lansdowne, Minister of Foreign Affairs, Lord Brassey and James Bryce, M. P. Among the Americans were Ambassador Choate, General Alger, Admiral Erben, Andrew Carnegie, and J. P. Morgan.

J. P. Morgan has given three remarkable collections of textile fabrics to the Cooper Union Institute in New York. Abram S. Hewitt, in speaking of the collection, says:

"Their artistic value may be gauged from the fact that the German Government asked the privilege of borrowing six of the specimens in order to copy and photograph them. The fabrics acquired by Mr. Morgan form a remarkable group, as they cover the whole history of weaving between the Middle Ages and the sixteenth and seventeenth centuries."

The first electric suburban railroad in Russia has been opened for traffic. It connects the manufacturing city of Lodz, in Russian Poland, with Zgierz and Pabianice, and is 13½ miles long. The road is owned by a company of Polish merchants and manufacturers, and was built at a cost of \$560,000. The charter provides that the Government shall receive a share of the profits, and that the road and all equipments shall become the property of the Government at the expiration of twenty-eight years.

The King of Italy has instituted a new order, to be known as the Knights of Labor, the gold cross of the order being given to those who have helped on the progress of the working classes, and who have invented improvements to assist skilled labor. The cross bears the inscription: "To the Worth of Labor."

General News.

J. K. Taylor, supervising architect of the new United States mint at Philadelphia, speaking of the security of the gold vaults, says: "The vaults are built on the solid rock underlying the city. Fortunately it came to the surface here and extends under the building and clear across the street. We found early in our work that there would never be any danger of tunnelling, as the rock is so full of springs that the smallest opening is immediately flooded. The would-be tunneller would be drowned. The vaults are built of solid steel; the gold vault being seven inches in thickness, while the silver vaults are an inch thick. It is not necessary to take so great precautions with the silver, as it is so bulky and heavy it could never be carried away except with drays. Even now there are big ingots of silver lying about the hallway just covered with tarpaulins. But we have no fear of its being stolen."

For the last seven years Vassar College has been trying partial self-government by the students themselves. The enforcement of the rules presented by the faculty to regulate the routine of college life has rested with the students' association, acting through a committee in which each class was represented. In cases of infraction of the college rules the committee has usually persuaded the culprit to wiser courses, and only twice has it resorted to the extreme penalty of social ostracism. The system has worked admirably, and recently at the request of the student body the faculty voted to extend it so that the students hereafter may make rules for themselves as well as enforce them.

The New York cup defender Constitution was dismasted in a trial off the Rhode Island coast on June 4, in a manner very closely resembling the wrecking of the Shamrock's spars a short time ago when the challenger was so badly disabled that a long delay in the date of holding the races had to be asked. The damage to the Constitution will not delay the races further, as the owners have a duplicate mast and set of spars, and the damage was not so serious, either, as to be beyond repair.

It has been decided to dismiss all the six hundred female students of Armour Institute, Chicago, at the completion of the Spring term, and thereafter co-education will be a thing of the past at that school. The course will in future be strictly scientific.

A severe frost visited Idaho and Oregon on June 6, the mercury falling to six degrees below the freezing point. In Oregon there was snow. In the parts of these states embraced in the frost area, all fruit and vegetables are reported to have been killed.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Where the Corks come from.

Vast Cork Forests of Spain and Portugal.

THE application of cork as a stopper for liquid vessels is said to be of great antiquity. The earliest record extant of its use in Europe is that mentioned by Horace, who asserts that the Romans had corks as stoppers for their wine amphoræ. Certain of the uses of cork were known to the ancient Greeks and Egyptians; but whether they used cork for stopping the mouths of their liquid vessels, history does not say.

It was not until the year 1760 that the Spaniards first began to work their cork woods with some degree of regularity for the making of corks. Although, perhaps, corks were more or less in use from the time glass bottles were first invented, in the fifteenth century, yet it was not until two and one half centuries later that the Spaniards began to prepare cork for bottle stoppers, which they did in a forest situated at the northeast of the Tiguerras, on the Muge. The cork industry has since gradually risen to be one of the first magnitude, its chief centre in Spain being in Catalonia, where many thousand persons are employed.

The cork forests of Spain cover an area of six hundred and twenty thousand acres, producing the finest cork in the world.

The cork tree is indigenous, it attains to a height varying from thirty-five to sixty feet, and the trunk to a diameter of thirty to thirty-six inches. This species of the evergreen oak is often heavily caparisoned with wide-spreading branches, clothed with ovate, oblong evergreen leaves, downy underneath, and the edges slightly serrated. Annually, between April and May, it produces a flower of a yellowish color, succeeded by the acorns. These when ripe in the autumn serve as an article of food, resembling chestnuts in taste.

Over thirty thousand square miles in Portugal are devoted to the cultivation of cork trees, though the tree virtually abounds in every part of the country.

The methods in vogue in barking and harvesting the cork in Spain and Portugal are practically the same. The barking operation is effected when the tree has acquired sufficient strength to withstand the rough handling it receives during this operation, which takes place when it has attained the fifteenth year of its growth. After the first stripping, the tree is left in this juvenescent state to recuperate, subsequent strippings being effected at intervals of not less than three years; and under this process the tree will continue to thrive and bear for upward of one hundred and fifty years. If the bark is not removed artificially it will on maturity split and dismantle itself. This is caused by the fresh growth of bark forming underneath.

The bark is stripped from the tree in pieces two or three inches in thickness, of considerable length, and of such width as to retain the curved form of the trunk whence it has been stripped. The bark peeler or cutter makes a slit in the bark with a knife perpendicularly from the top

of the trunk to the bottom; he makes another incision parallel to and at some distance from the former, and two short horizontal cuts at the top and bottom. For stripping off the piece thus isolated, he uses a kind of knife with two handles and a curved blade. Sometimes, after two cuts have been made, he leaves the tree to throw off the bark by spontaneous action of the vegetation within the trunk.

The first process through which the bark passes after stripping is that of boiling. This is sometimes done in the woods, but more frequently in the cork factory, in large specially constructed cauldrons, in which the bark is left to boil for upward of an hour, causing an increase of thickness (generally of one fourth to one fifth), elasticity of the cork, and dissolution of the tannin and other substances. The cauldrons in which the cork is boiled are of copper. The boiling of the cork can also be effected by steam, for which purpose it is introduced into a wooden box lined with copper or zinc, which is filled with water and steam injected therein. The steaming of cork sometimes hardens it and makes it brittle. The loss of weight effected by boiling the cork varies between twelve and forty per cent.

In making corks it is necessary to take away the hard crust or raspa, for which a tool is used with a short handle and curved blade.

Before cutting the slabs into strips they are cooked for about half an hour so as to facilitate the cutting, and piled up soon afterward in a damp place, so as to preserve the softness until ready to operate upon. The slabs are divided into three strips, the width of which is equal to the length of the corks, and in such a way that, if the cork be placed in the position occupied by the slab on the tree, they would have their fibres running alike. The workmen cut the strips by means of a knife with a flat surface and curved edge. They then have the edges cut, and are ready to be made into corks.

The squares pass into the hands of a workman who is furnished with a knife composed of two pieces—one of them similar to an ordinary knife, and the other a blade the edge of which fits into the first. He holds the knife by a small iron catch to the table in front of him, and, giving the square a circular movement the result is that a cork is made in a few seconds. The squares are usually boiled for about a quarter of an hour. They are then deposited in a cool place, and four or five days afterward they are sorted and kept damp until required.

Machines are also employed to make corks, and all consist, at the base, of a knife, the blade of which is placed horizontally, joined generally to a piece of wood, to which a backward and forward movement is given similar to that of a carpenter's plane. In moving, the knife turns the square cork, which, being attacked by the knife, takes off a strip of cork more or less thick, according to the distance from the axle of the cork to the edge of the knife. If these are parallel, the result is that the cork is cylindrical; and if not, it becomes conical. The corkmaker or workman has several large baskets in which he places the cork according to size or quality; but this first classification is

not sufficient, and the corks are placed upon a table and more carefully sorted. To classify the corks according to size, wooden boxes are employed, the bottoms of which can be taken out or put in, having a kind of grating of wood. The boxes are suspended by ropes to the ceiling, and the workman gives them a swing backward and forward, by which operation the smaller corks drop out at the bottom. With this apparatus worked by one man, one hundred thousand corks are classified for their size in one day.

The corks are worked in a solution of oxalic acid or binoxalate of potash. As soon as washed, they are placed out to dry gradually in the shade, in order to enable them to retain the silky gloss which the cork has when it is damp. For packing, thirty thousand corks constitute what is called a bale; but for transportation across the ocean, bales of from five thousand to ten thousand corks are made.

The bark of the cork oak is composed of two distinct concentric layers—an inner sheet, which is the active part of the bark, and corresponds with the fibre of other trees, and a thicker, outer zone, composed of light, compressible, spongy substance, only slightly permeable to liquids, and constituting the cork proper. Wherever on the body of the tree the inner sheet, or “mother” bark, is destroyed, no further formation of bark or wood takes place; and even a narrow decortication clear around the tree would cause it most certainly to perish. The other coat, or cork, is inert, and does not contribute to the active functions of vegetation; and this explains how it is possible to strip the cork oak of its corky envelope without endangering the life of the tree.

The cork or bottle stopper trade is still the chief cork-consuming factor; but this branch of the industry is not free from the encroachments of rivals, and numerous inventions have been introduced to the public with the idea of obviating the trouble sometimes experienced in drawing the cork bottle-stopper. Some of these new stoppers certainly possess this advantage over the cork stopper. The specific qualities of the cork stopper, however, are too unique in themselves to admit of their being totally annihilated. Imperviousness to air and water is a rare quality which cork possesses over any other known material; besides, corks convey no disagreeable taste or flavor to the liquid they retain. These, coupled with such other qualities as compressibility and elasticity, are virtues which it would be difficult to find in any substance outside the range of cork.

Considering the number of newly invented stoppers now in use it would be reasonable to anticipate a pro rata decrease in the consumption of cork. However, on comparing the past with the latest trade returns of Spain and Portugal, no perceptible change appears to have taken place in this respect. This can probably be accounted for by taking into consideration the increasing progress in some branches of science, and the large draughts made upon cork to supply the demand from this source, which may more than counterbalance any falling off in the supply to the principal branch of the cork industry.

In Spain, beehives, kitchen pails and other culinary utensils, and also pillows, are made of cork. In Italy, images and crosses are carved out of it, and footpaths are paved with it. In Turkey, it forms cabins for the cork cutters and coffins for the dead. In Morocco, it appears in the form of drinking vessels, plates, tubs, and water conduits. In Algeria, shoes, armor, boats, and various articles of furniture consume their share. The Portuguese use cork for structural purposes, such as roofing houses and lining wells, and also in articles for domestic use.

Some of the thick soles of Chinese shoes are made of cork. Beckman tells us that “among the Romans cork was made into soles, which were put into their shoes, in order

to secure the feet from water, especially in winter; and, as high heels had not then been introduced, the ladies who wished to appear taller than they had been formed by nature, put plenty of cork under them.”

Much of the cuttings left by cork cutters is sold to color makers, who burn and prepare them into what is called Spanish black.

Cork appears to the eye very porous, but the pores do not open into one another, and it allows no ordinary liquid to percolate through it.—*Boston Herald*.

The Next Great Awakening.

HISTORY would seem to warrant the generalization that periods of great intellectual and spiritual activity have been preceded by periods of exploration and discovery, of invention and of expanding commerce; that is, by extraordinary material development. The law of growth for the individual seems to be also the law for the nation—first the physical, then the mental and moral; or, as Paul puts it, first that which is natural, then that which is spiritual.

The nineteenth century was characterized by a material development altogether marvelous and scarcely less than miraculous. It has left to us the heritage of a more or less refined materialism and of an intense commercialism. The question arises whether in the twentieth century, as in earlier ages, the great advance along physical lines is to be followed by a new advance along intellectual and spiritual lines.

The advent of the new century has been hailed, both in Great Britain and America, as a fitting time for a new awakening to the things of the spirit, a keener appreciation of realities which sustain no relations to the yard-stick, the scales, or the crucible; a deeper sense of values that are never quoted on the Stock Exchange. Extended efforts have been made on both sides of the Atlantic, and especially in England, to arouse the conscience and to quicken the religious life. But as yet we hear of no extraordinary results—nothing corresponding in the remotest degree to the great awakenings which occurred in the sixteenth, seventeenth, and eighteenth centuries, and in both the first and second half of the nineteenth. These great movements, which lifted whole nations to a higher plane, did not come uncaused or at haphazard. It is as easy to invoke them as to “call spirits from the vasty deep”—

But will they come when you do call for them?

Not simply for the calling. Means must be adapted to ends. The laws which govern such movements must be obeyed.

These movements differed widely in character, in method, and in the conditions and causes from which they sprang. And yet the study of them reveals the fact that *each of these great religious awakenings came in connection with the preaching of previously neglected truth which was precisely adapted to the peculiar needs of the times*. A rapid review of these movements will, I think, suffice to establish the above generalization.

THE SIXTEENTH CENTURY.

At the time of the great awakening known as the German Reformation, the individual was wholly overshadowed by the church; his conscience was subject to her authority, his liberties were sacrificed to her absolutism, his salvation depended on her sacraments. Luther regarded the personal relation of every soul to Jesus Christ as fundamental, and the central truth preached by him and the other reformers was justification by faith. The prevalence of this teaching, heretofore neglected, established the importance of the individual, won for him liberty of conscience, and made his salvation subjective,—a matter of character. Thus the peculiar needs of the times called for a truth which

had long been lost to sight, and the great awakening came when it was powerfully preached.

THE SEVENTEENTH CENTURY.

The next great spiritual movement came in the following century, and is known as the Puritan revival. Civil power, which, under the feudal system, had been widely distributed among the nobles, was now centralized in the king, who claimed by divine right an authority superior to all human control. He was, moreover, the head of the Church as well as of the State. Men could easily understand the meaning of sovereign power and the enormity of offending against it, for they had an illustration of it embodied before their eyes. Then it was that the Puritans contended for the *Divine* sovereignty, insisting that God was the Head of the Church, and that the conscience was answerable to Him. This had been a neglected truth, and the new emphasis laid on it made God real to men, and brought home to them the reality and sacredness of His law.

THE EIGHTEENTH CENTURY.

The next great revival was that in which the Wesleys and Whitfield were the great figures. Religion had lost all spirituality. Isaac Taylor calls the church of this period "a fair carcass." Blackstone says that he went to hear every preacher of note in London, and that there was not one whose discourse indicated whether he was a follower of Confucius, or of Mohammed, or of Christ. Religion seemed to consist in its outward and formal observances. The great spiritual truths of Christianity were neglected. It was then that the Wesleys and Whitfield emphasized the necessity of a deep spiritual experience, and the agency of the spirit in regeneration and sanctification. With the proclamation of these neglected truths, the popular conscience was quickened.

FIRST HALF OF THE NINETEENTH CENTURY.

The central figure in the great religious movements of the first half of the nineteenth century was Charles G. Finney. The doctrine of the Divine sovereignty had triumphed. The Church was separate from the State; men were accountable to God in matters of conscience, but men had lost the balance between God's sovereignty and man's free agency. Multitudes were waiting for God to come and convert them. Then Finney thundered forth the neglected truth of man's free agency and guilt, and the retribution due to sin; and again the conscience was aroused.

THE LAST HALF OF THE NINETEENTH CENTURY.

During the early years of the second half of the century profound changes took place. The industrial revolution produced radically new conditions. Men began to live at a much more rapid pace. A change took place in the nervous organization, and men grew keenly sensitive to suffering. Philanthropic movements were multiplied. We became more considerate of dumb animals than our grandfathers had been of human beings. It was only a few generations since the most enlightened court in Christendom had sentenced men to be boiled to death in oil. Now cruelty to a horse or dog was a crime.

Such a change in human sensibilities could not fail to demand a modification of the stern theology of the Puritans. The divine Love had had small place in the pulpit. The "terrors of the Lord" were the chief reliance to persuade men.

When the great religious awakenings of the second half of the century came, a new note was heard. Mr. Moody was the great figure in that movement, and the burden of his preaching was the neglected doctrine of the love of God. It was precisely the truth needed, and it took hold. Notwithstanding the headlong rush of business,

men stopped and turned aside to hear of the Divine love. It persuaded multitudes who had become indifferent to the staple presentations of the pulpit. Again the preaching of neglected truth, peculiarly adapted to the times, made God and the great spiritual verities real to men.

THE TWENTIETH CENTURY.

If our generalization in regard to the great awakenings of the past four centuries has been sustained, does it not afford a reasonable basis for future reckoning? And if neglected scriptural truth precisely adapted to the peculiar needs of our own times can be pointed out, is there not a strong presumption that the next great spiritual awakening will come when this truth is faithfully preached?

It is quite obvious that the great questions peculiar to our times are social. The industrial revolution has produced a social revolution; we have passed, within three generations, from an individualistic to a social or collective type of civilization. Relationships which a hundred years ago were few and simple, are now become many and complex. New questions concerning rights and duties have arisen. Society is gaining self-consciousness, which marks one of the most important steps in the progress of the race. We are beginning to see that society is an organism which lives one vast life, of which every man is a part. We are gaining what Walter Besant calls "the sense of humanity." We are discovering that life is something larger and farther related than we had thought; and with this perception of wider and multiplied relations comes a new sense of social obligations. That is, a social conscience is growing, though as yet it is uninstructed.

Now, if the limitations of space permitted, it could be shown that in their adaptation to the peculiar needs of our times, the social teachings of Jesus, which have been neglected for many centuries, are as close-fitting as a glove.

There are multitudes in our churches who have read these teachings a thousand times without sensing their meaning. Even religious teachers have declared that the Sermon on the Mount was not practicable, and therefore could not be applied to modern society. There are many who call Christ, Lord, but do not the things which he says.

What truths are better calculated to arouse the sleeping conscience, awake men to the fact that God is really in the world, concerning Himself with men's every-day lives, measuring their acts by His immutable standards, and preparing to call them to account than precisely these social teachings of Jesus which are so exactly adapted to the times, and which are so commonly neglected?

God is the greatest fact, the greatest reality in the universe. And for a life to take no account of this greatest of all facts is the greatest of all possible blunders. How can men be made to see this, if not by showing them that the great social disorders of the day are due to the disregard of the social teachings of the New Testament?

It is not proposed to make a religion out of man's obligations to his fellows, to put love for man in the place of love to God. It is, however, both reasonable and Scriptural to test the one by the other. "If a man say, I love God, and hateth his brother, he is a liar: for he that loveth not his brother whom he hath seen, how can he love God whom he hath not seen?"

If there are men whose lives are a lie because they profess love to God and show none to their fellow-men, how can such men be more easily convicted at the bar of their own conscience than by testing their relations to God, not by their professions, but by their known relations to their fellow-men—the latter being judged, not by popular standards, but by the social teachings of Jesus?

There is every reason to believe that when these teachings are clearly apprehended and faithfully proclaimed, the great spiritual awakening of the twentieth century will come.—DR. JOSIAH STRONG, in *Social Service*.

The Lectures.

At Northampton, Mass.

Rev. William P. McKenzie, C.S.B., a member of the Board of Lectureship appointed by The First Church of Christ, Scientist, in Boston, gave an address in the Academy of Music last evening (Tuesday, May 28) on "Christian Science, the Panacea for the World's Unrest." A large and appreciative audience was present, which comfortably filled the Academy. The lecturer was introduced by Rev. G. C. Cressy, D.D., of the Unitarian Church, who said in part:—

"When I was asked yesterday to preside at the gathering this evening, I canvassed the situation mentally to determine the grounds for the request; and I concluded that they were probably these: First, because I am not a Christian Scientist, and second, because I am entirely willing that others should be such if they wish. The attitude of many even in this day of comparative toleration toward views new, contrary to tradition, or even simply out of accord in any way with their own ideas, is illustrated by the incident of the landlord in the suburbs of Boston, incredible as it may seem, who gave as a disadvantage of location to the visiting applicant the fact that the nearest neighbor was heretical in his religious views.

"I am glad to preside here to-night for one reason at least; being, as you perhaps know, an idealist in philosophy, and somewhat a believer in the possibility, if not in the present accomplishment, of 'Mental Healing.' I insist that between all who believe in the superiority of mind over matter there should be harmony and fraternity. I will go farther, indeed, and say that between all seekers after truth, however our individual views and interpretation of that truth may differ, there should be complete harmony, sympathy, co-operation, and fellowship.

"There is one fact which is very frequently overlooked, and that is, that every creed, cult, system of thought or institution which has prospered, has attained its measure of prosperity, never through the falsity of its teachings, though it may involve much which is not true, but always through the truth which it contains and the truth which it teaches. No one can deny the rapid progress of Christian Science during the last few years, and this has been through the truth which it teaches or the spirit for which it stands, which, however we may disagree with its beliefs in detail, commands our respect. We may regard it pre-eminently indeed, as a protest or reaction against the crass materialism and commercialism of our age; an attempt, at least, to lift man to the higher plane of spiritual life wherein is the only source of righteousness.

"The sons of Massachusetts have ever believed in human liberty, in the exercise and enjoyment of individual rights. We presume to select him who shall minister to the soul, him also who shall minister to the body; and we do not propose that the state or a majority of its citizens, if we are indisposed in health, shall tell us when we shall summon a physician, who he shall be, or of what school forsooth he must be, or even whether or no we shall employ a physician at all. We insist on exercising our personal rights and enjoying our personal liberty, and so long as we do this without infringing on the freedom and rights of our neighbor, the privilege must and shall be maintained. Another characteristic of our state is the willingness of its people to listen with interest to the thought and convictions of all who believe they have something which will help and uplift humanity, and it gives me pleasure to introduce to you one so well qualified to speak on the subject of the evening, Rev. William P. McKenzie, C.S.B., of Cambridge, who will lecture on 'Christian Science, the Panacea for the World's Unrest.'"—*Northampton Daily Herald*.

At Asheville, N. C.

The Opera House was filled from stage to door recently by those eager to hear Judge Ewing of Chicago speak upon Christian Science. He was introduced by ex-Attorney-General Theo. F. Davidson in the following words:—

Ladies and Gentlemen:—I congratulate you and myself upon the opportunity presented to us to hear to-night one of the distinguished men of the country, a gentleman worthily bearing a name honorable in the annals of our people for generations, a gentleman who has received marked distinctions from his countrymen in recognition of his virtues as a citizen, his character as a jurist, and his position as an advanced and profound thinker. I know that it will add to your interest and pleasure to hear that he is of good old North Carolina family,—a fact that he is not at all disposed to have forgotten, even though the accidents and misfortunes of his life have compelled him to live in Chicago.

It is a subject for great satisfaction, I am sure, to all of us that he is here to present his views upon one of the most interesting questions evolved by the wonderful mental and philosophical activities of the age.

Christian Science has passed the period of ridicule. It has by the intrinsic power and the sweetness of its doctrines; by the zeal, devotion, disinterestedness and exalted character of its advocates, won a secure place in the highest regions of the thought of the age, and to-day invites acceptance and challenges the investigation of the world. If there were no other, the fact that the doctrines and rule of life avowed and practised by Christian Scientists have received the unqualified and enthusiastic support of hundreds and thousands among the best and most intelligent men and women throughout the land, would be sufficient to commend it to the fair and sympathetic consideration of every fair-minded person.

The Asheville Daily Citizen, May 23, 1901.

At Richmond, Va.

Judge William G. Ewing lectured on Christian Science at the Academy of Music in Richmond, Sunday afternoon, May 19, to about four hundred people, among whom were many representatives of the various churches, a few ministers, and other professional men.

This was the first lecture on Christian Science that has been given here since the commencement of services in the home of our First Reader December 16, 1900, before which little was known of Christian Science. Friends from Norfolk, Newport News, Petersburg, and Lynchburg attended the lecture.

Judge Ewing was introduced by Mr. Garland Pollard, a brilliant young lawyer of our city.

Judge Ewing prefaced his remarks by saying that it was a coincidence that his conversion to the Christian Science faith had taken place in this city sixteen years ago, when he came here, broken in health, without hope of recovery. He had embraced the faith then at the solicitation of friends and placed his life in the hands of God. He said that within three days he was sufficiently recovered to return to his home in Chicago, and since then he has enjoyed good health.—*Correspondence*.

I have, like other people, I suppose, made many resolutions that I have broken or only half kept; but the one which I send you, and which was in my mind long before it took the form of a resolution, is the keynote of my life. It is this,—always to regard as mere impertinences of fate the handicaps which were placed upon my life almost at the beginning. I resolved that they should not crush or dwarf my soul, but rather be made to "blossom, like Aaron's rod, with flowers."—HELEN KELLER.

Is Erie Drying Up?

TRADITION has it that once upon a time, for a single day, since civilization obtained a footing on this continent, the bed of the Niagara River was dry and the cliffs down which the mighty waters have since plunged without cessation stood forth naked and black and frowning and grim. The phenomenon was explained on natural grounds. The same thing may happen again under similar circumstances, though such an occurrence would attract more wondering visitors probably than does the great cataract now as it roars and surges and flashes in the sunlight from century to century. It must suggest to most people a surprise of hardly less degree to be informed that Lake Erie is in danger of becoming so shallow as to offer serious obstacles to navigation. We can conceive of the Niagara being dammed at its source, but few have ever dreamed that the vast expanse of water which furnishes it its life current would ever perceptibly shrink.

That is the startling report, however, that a chief engineer of the marine department of Canada has just made. He has returned to Ottawa from a tour of inspection of the upper lakes, and states that Lake Erie is lower than was ever known to be the case before. This condition is due, he thinks, to a series of dry seasons, to the drain made by the power development works at Niagara Falls, and to the fact that dredging the Tonawanda Canal has made it easier for water to escape from the lake. He considers it imperative that the United States government adopt remedial measures at an early date, else navigation upon its present basis will be seriously interfered with.

He offers no suggestions as to what remedies should be applied. The seasons are not likely to remain always dry, though when a body of water like this great inland sea is appreciably affected it is about the most startling commentary yet noted upon the policy of stripping the country of its rain-gatherers in the forests of the Northwest. Lake Erie at best is one of the shallowest of the great chain. There are three divisions in its floor, increasing in depth toward its outlet. The upper portion has a level floor with an average depth of about thirty feet. The middle portion, taking in the principal part of the lake, has a mean depth of from sixty to seventy feet. The lower portion varies from sixty to two hundred and forty feet. These measurements were taken a number of years ago and are not applicable to the reduced depth that has been reported.

The area of the lake is ninety-six hundred square miles, or more by nearly a fourth than that of the State of Massachusetts. But it drains only a narrow margin of country around it and receives no rivers of importance, the Maumee being the largest on the America side. It is more than three hundred feet higher than Lake Ontario. It is one of the most important factors in our system of lake navigation and furnishes business for many flourishing towns and cities. The present report concerning it may be a false alarm, a passing sensation, though we do not expect representations for the sake of sensation from scientific gentlemen in government service. No harm can come from a careful investigation of the conditions, to say the least.—*Boston Transcript*.

The Largest Stationary Engine.

WHAT is asserted to be the largest stationary engine ever built in this country has just been completed in East Pittsburgh, Pa., by the Westinghouse Machine Company for the New York Gas, Electric Light, Heat, and Power Company. Seven others of equal size are to be built for the same company. These engines are rated at 6,000 horse-power each, but on occasion they will be capable of delivering 10,500 horse-power. We quote below part of a description con-

tributed to *The Iron-Age* (May 2) by its Pittsburg correspondent:—

"Some idea of the proportions of this monster engine can be obtained when it is said that more than 10,500 separate pieces of different kinds of metal were used in its construction, and that the whole engine completed weighs more than 1,500,000 pounds. The following are the dimensions: Height from floor line to the top of the cylinder, 37.25 feet; width across front, 41 feet; width from front to rear, 23 feet; diameter of fly-wheel, 23 feet; weight of main shaft, 136,000 pounds; diameter of shaft, 26 to 29½ inches. For shipping, the engine will require thirty cars. The base of this engine, cast in three pieces, weighs one hundred tons. Upon this base are set the three A-frames, with irregular flange-tops, upon which are set and bolted the cross-head guide-frames."

Circumscribing the engine frame are three iron platforms, connected with each other by spiral iron stairways, and to the ground by means of a stairway descending from the lowest platform. There are one high-pressure cylinder, 43½ inches in diameter, and two low-pressure cylinders, each 75½ inches in diameter. The stroke is 60 inches and the speed 75 revolutions per minute. The engine is condensing and a vacuum of 26 inches is maintained at all times. We quote again:—

"The main shaft is of open-hearth, fluid compressed, hydraulic forged steel, the connecting rods are of the same material, and both were supplied by the Bethlehem Steel Company. The shaft is 29½ inches in diameter at the fly-wheel pit and 26 inches diameter at the bearing; it has a 10-inch hole through the centre of that portion located between the bearings and a 9-inch hole at the bearings.

"The fly-wheel centre is of air-furnace iron, the arms and rims of cast steel. The central portion is cast in five segments, each consisting of two arms and 72 degrees of the rim. These are jointed by I-links shrunk into pockets in the sides and are bolted to the hub. The rim is strongly reinforced in such a way as to give practically three rings running together, each self-supporting as to centrifugal force. . . .

"Though this engine is somewhat more powerful than either of the two recently built for the Bay Ridge Station of the Kings County Light and Power Company, the fly-wheel is considerably smaller, a construction possible in this case because the cranks are arranged in the best position to give an even turning movement—cranks being separated by 120 degrees—a condition that is not possible to attain in any two-cylinder engine."—*Literary Digest*.

Notices.

Communion Service and Annual Meeting.

THE Annual Communion Service will be held in the Mother Church on July 7.

The Annual Church Meeting of the Mother Church will be held Tuesday, July 9, at 10 A.M. The place of meeting will be duly announced.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Resolutions for the Day.

THE following poem was written by the Rev. Mary Baker G. Eddy in childhood, and recently appeared in the *People and Patriot* of Concord, N. H.

To rise in the morning and drink in the view
Of blossoms that dwell in the vale,
And scatter their fragrance and charms ever new
O'er hillside and flowery dale.

To gaze on the sunbeams enkindling the sky—
A loftier life to invite—
A light that enlightens my spiritual eye,
And inspires my pen as I write.

To form resolutions with strength from on high
Such physical laws to obey,
As reason with appetite, pleasures deny,
That health may my efforts repay.

To kneel at the altar of mercy and pray
That pardon and grace through His Son,
May comfort my soul all the wearisome day,
And cheer me with hope when 'tis done.

To daily remember my blessings, and charge,
And make this my humble request;
Increase Thou my faith and my vision enlarge,
Clothe me with Christ's righteousness.

To hourly seek for deliverance long
From selfishness, sinfulness, dearth,
From vanity, folly and all that is wrong—
With ambition that binds us to earth.

To kindly pass over a wound, or a foe,
(And mem'ry but part us awhile)
And breathe forth a prayer that His love I may know,
Whose goodness my sorrows beguile.

If these resolutions are acted up to,
And faith spreads her pinions abroad,
'Twill be sweet when I ponder the days may be few
That waft me away to my God.

Mrs. Eddy's Successor.

WE desire to correct an error which inadvertently appeared in the following statement by Mrs. Eddy as it was published on page 604 of the *Sentinel* for May 23, 1901. In the fourth line from the bottom, we failed to capitalize the word "his." This destroyed Mrs. Eddy's meaning, as she referred to God and not to the Christ.

In a recent interview which appeared in the columns of the *New York Herald*, the Rev. Mary Baker G. Eddy, Discoverer and Founder of Christian Science, stated that her successor would be a man. Various conjectures having

arisen as to whether she had in mind any particular person when the statement was made, Mrs. Eddy gave the following to the Associated Press, May 16, 1901:—

"I did say that a man would be my future successor. By this I did not mean Mr. Alfred Farlow nor any other man to-day on earth.

"Science and Health makes it plain to all Christian Scientists that the manhood and womanhood of God have already been revealed in a degree through Christ Jesus and Christian Science, His two witnesses. What remains to lead on the centuries and reveal my successor, is man in the image and likeness of the Father-Mother God, man the generic term for mankind."

"Great Masterpieces."

WE are glad of the privilege of publishing the following endorsement of the above entitled work by the Rev. Mary Baker Eddy:—

"The World's Great Masterpieces," published by The American Literary Society, New York City, I consider *par excellence*. In its convenient arrangement for the reader, its grasp of classics, and its rare literary selections it has few peers. I am glad to recommend it to all Christian Scientists and to the *literati* of the world.

MARY BAKER G. EDDY.

From our knowledge of this work and its promoters, we are satisfied that it is entirely meritorious, and that those connected with it are honorable business men.

We know of no reason why Christian Scientists should not encourage this enterprise if they so desire.

The Law Suit Decided

THE action at law against Rev. Mary Baker Eddy for alleged libel resulted in a verdict in her favor in the Suffolk County Superior Court on Wednesday, June 5, 1901.

Judge Bell, who presided, delivered his opinion at the conclusion of all the testimony included in the plaintiff's case, and without hearing any testimony whatever on the part of the defence.

This opinion was to the effect that, regardless of whatever may have been the conjectures of others as to the meaning of the Scriptural passage complained of, there was no evidence that Mrs. Eddy had the plaintiff in mind, or that she used the words as relating to her. He therefore directed the jury to return a verdict for the defendant.

The following is republished from *The Boston Journal* of June 8, 1901:—

"It was for the purpose of making clear the attitude of Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science, regarding certain points that came out in the testimony submitted by plaintiff in the trial of the Woodbury-Eddy libel case, just finished, that a *Boston Journal* reporter asked Mrs. Eddy for a statement.

"Mrs. Eddy referred the matter to Edward A. Kimball of Chicago, who has been on here during the last three months assisting in the preparation of Mrs. Eddy's case in the courts.

"Mr. Kimball said:—

"Mrs. Eddy does not wish to make any statement relative to this subject. She has solemnly declared from the first that she did not refer to the plaintiff when writing about the Babylonish woman, and the only dignified and consistent course open to her is to rest peacefully on that declaration, and let others contend, if they will."

"What about the statement that Christian Scientists regard her as being infallible?"

"Mrs. Eddy does not believe or teach or want any one else to believe or teach, that she is infallible. She and we believe in the infallibility of God only."

"Does she think that she is the 'woman clothed with the sun' spoken of in Revelation?"

"She does not. She does not teach or want any one to teach that. On the contrary, we do not believe that the word 'woman' means any particular woman, but rather refers to conditions of thought, or the revelations of truth."

"Why did not the witnesses explain what your belief is about Mrs. Eddy?"

"Because there is no formulated belief on the subject. She discovered Christian Science and founded or established 'Christian Science' as a religious belief or faith. It may be said in a general way that Christian Scientists regard her as the one who has perceived this great spiritual science and as one who by reason of her moral and spiritual culture has become the logical, beloved, and well-equipped leader of this denomination. She is generally recognized as being one of the foremost religious teachers of the age. She says that she has never taught, privately or otherwise, any theories concerning generation or any of the phenomena of existence contrary or in addition to those which have been uniformly presented in her classes and stated in her books. In her work 'Retrospection and Introspection,' she writes: 'We do not question the authenticity of the Scriptural narrative of the Virgin Mother and Bethlehem babe and the Messianic mission of Christ Jesus; but in our time no Christian Scientist will give chimerical wings to his imagination or advance speculative theories as to the recurrence of such events.'"

"An effort was made to show the exercise of unusual control by her over the affairs of the church. What do you say about that?"

"The by-laws of our church are originated by Mrs. Eddy and adopted, or rejected as may be, by the church. No by-law can be enforced unless the church does enact it. These by-laws do seem to lodge with her considerable discretion or veto power, but this is not for any other purpose than to maintain the integrity of the denomination and its affairs. As a matter of fact, she never exercises any of the privileges provided for, except in the interest of the church; and all our branch churches are independent organizations."

"There is considerable comment about Mrs. Eddy's income and the financial affairs. What are the facts?"

"There are over five hundred church societies in our denomination. None of the usual provisions have been made for the financial support of a central denominational organization, the per capita contributions and pew rent being applied to the immediate expenses of the Mother Church. Other denominations take up quarterly or annual collections for this purpose. We have none. The only money we get for such purposes is derived from the sale of literature, including Mrs. Eddy's works. I think that during the last five years a very large part of her means has been devoted to the advancement of the cause."

"What do you expect to be the result of this verdict?"

"I cannot predict. I am convinced that people generally realize that Mrs. Eddy was ever a tender, loving teacher, intent upon the genuine welfare of her students."

"To whom did your people think the message referred?"

"I do not know. I can only say that I have never yet talked with any one who said he thought it meant a person."

We commend to all Christian Scientists the well-known saying, "Silence is golden." Our ways should be through the paths of tranquillity. No possible good can come of any continued discussion of this subject. Our progress is gained through the exercise of peaceful methods of thought and speech, and the entire teaching of Christian Science admonishes us to avoid all semblance of contention and extravagance of thought and word.

While all Christian Scientists have reason to rejoice

because of this vindication of our Leader and our cause, they should wholly refrain from anything in the nature of exultation. Let us rather heed the precepts of the Sermon on the Mount.

"Thou shalt Love thy Neighbor as Thyself."

The foundation of mortal discord is a false sense of man's origin.
—Science and Health, p. 158

THE significance of our Lord's injunction is to be determined largely by our understanding of its concluding phrase, and the inference is more than suggested that we have not been in the habit of regarding our neighbor's interests in the same way that we have our own.

However unwisely and unwell we may love our immediate own, it is probably true that most of us love them as well and wisely as we do ourselves.

Life is full of exhibitions of that purposeful self-sacrifice, that anticipation of possible need, that ceaseless ministry to love's "undying hope" which saves so much family life from becoming uninteresting and commonplace; but our neighbors, those with whom perchance we simply touch elbows, whom we sometimes wish location or incidental association had not presumed to impose upon our attention, the commoners who live among thieves perforce, and hence fall among them all too frequently, do we love them, or even think of loving them, as we love ourselves? and if not, why not?

Apart from the satisfaction of vanity, self-love is a ministry to real or fancied needs, and in an important sense these have instigated, as they explain, that aggregation of personal endeavor which has registered itself in the world's civilization. True, there has ever been a genuine altruistic impulse, but it has followed civilization rather than led it. The great bulk of the world's practical work,—the digging and dredging, the mining and making, the engineering and erection of that colossus which we call civilization,—what has led to it all but the individual desire to acquire the place and means which would satisfy personal want and ambition? For himself and for his own, man has braved every danger, made every sacrifice, assumed every risk, borne every burden, for man has loved himself from the beginning. Yet this is not all mean and unworthy; much of it has been manly and heroic else it would not have been so far approved by the Master as to make it a type and measure of the love we ought to show to others.

Among the crowning characteristics of this self-love is its constancy. How difficult to elicit a judgment, or prompt an impulse that does not, in some way, reveal the earmarks of personal interest!

Another, is its far-sighted thoughtfulness. It looks ahead, plans and provides for possibilities, is alive to the main chance, seeks its own, and so far determines and directs the activities of the business man that he is said to live, move, and have his being in the lookout for number one.

So, too, alacrity and prompt and unwearied regard for every link in the chain of its purpose,—these mark the self-love which we all express, and all these manifestations would be authorized and approved had we but the *true self* in mind, for our attitude toward this self will be reflected in our attitude toward our neighbor. Man is to be redeemed from selfishness, not by ignoring self, but by correcting his sense of self; and his sense of self but voices his sense of God.

With the old thought of what God is and what we are, it were practically impossible to fulfil this injunction of the Master, for our hands are manacled, our wish defeated, by a sense of limitation in supply. The resources of the material self are felt to be restricted and inadequate to the needs of all, and the spirit that leads to unfair, unjust

competition is a child of this sense. The love of our neighbor as ourselves is not consonant with a competitive struggle for existence,—hence the ethical significance of all economic strife and tragedy; but when we come to know God aright, and awake to our true selves, then we recognize that our one resource is spiritual, inexhaustible, immediate; then we gladly receive the loaves from our Lord's hands and break them unsparingly to our neighbors. Our love for them is no longer restrained and thwarted by self-reserve, its only limitation is their need, and the constancy, forethought, alertness, and devotion to details, which has always characterized our love and service of self, will be exhibited in our love and service of others. Man's inability to love his neighbor *as himself* is the outgrowth of his misapprehension of himself, and his misapprehension of himself is the resultant of his misapprehension of God.

Here Christian Science becomes the helper of every aspiring soul, by begetting such a realization of the divine nature, such an assurance of the possibility and naturalness of man's reflection of that nature, that the fulfilment of our Lord's commands is rescued from the domain of unattainable ideals, and made the blessed and beneficent experience of every-day life.

Among the Churches.

Corner-Stone Laid at Los Angeles.

Wednesday, May 22, witnessed the laying of the corner-stone of the new temple of worship of First Church of Christ, Scientist, of Los Angeles. Work on the building was begun in February, but owing to the non-arrival of the corner-stone, its laying was unavoidably postponed many weeks. So that when the Science friends from the sister church in this city and from the surrounding cities and towns, assembled with the members of this church to witness the laying, they beheld a structure already walled and domed, rapidly progressing toward completion. The church is modeled after the Corinthian Greek order, and already expert opinion has passed the judgment that its architecture is perfect.

The brief exercises took place at high noon, under one of those clear, cloudless skies so common in beautiful Southern California. John P. Filbert, C.S.D., First Reader, conducted the exercises, assisted by Mrs. Lizzie Filbert, C.S.B., Second Reader. The stone was a block of white Vermont marble, inscribed on the front with the words, "Jesus Christ himself being the chief corner-stone," and on the side with the date, "1901."

The programme was as follows:—

1. Reading: 91st Psalm.
2. Hymn: "Saw ye my Saviour?" by Rev. Mary Baker G. Eddy.
3. Silent prayer, followed by the Lord's Prayer and its spiritual interpretation.
4. Address by First Reader.
5. Reading of Scriptural references, and correlative passages from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and from "Miscellaneous Writings" by the same author.
6. Laying of corner-stone.
7. Scientific Statement of Being in unison.
8. Doxology.

Mr. Filbert's address was as follows:—

Fellow-citizens, Friends, Christian Scientists:—In behalf of First Church of Christ, Scientist, of Los Angeles, we bid you a cordial welcome on this long hoped and prayed for, memorable occasion, the laying of this corner-stone, the first of this denomination in this city, prophetic, however, of many more to follow. How has God smiled

upon your efforts! And to-day your hearts are made glad in reward of the faithful sacrifices you are making for God. They are known and are blessed by His right hand of righteousness. This temple begun, will be finished. Its walls stand figuratively for the salvation of mankind, its gates for the praise of God.

A word in favor of architectural harmony will not be amiss and I hope not out of place. Every stone and piece of timber fitting exactly; arches, spans, and pillars, from basement to dome, speak louder than words, of architectural skill, beauty, and symmetry, representing figuratively the Church Triumphant over sin, sickness, and death. The true significance of Church is given us in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

The accomplishment of this object, the building of this church, is made possible by the great First Cause, the divine Principle, which we denominate as God. Jesus says: "I can of mine own self do nothing." Christian Scientists, loyal to the Divine energy, guided by unerring Principle, we shall triumph over the false evidences of physical sense.

We are not unmindful of the fact that we are indebted to our beloved Leader, Mary Baker G. Eddy, who has taught us how to overcome error and demonstrate the Truth in all the affairs of life.

Would to God that all men had eyes to see, and ears to hear the overture of the angels of God, who are rejoicing with us that the stone which the builders rejected has become the head of the corner.

C. L. LAWRENCE, Clerk.

The Work in San Francisco, Cal.

The pioneer worker possibly feels a deeper gratitude and a keener sense of rejoicing over the events which mark the progress of our much-loved cause than the younger disciples who have not experienced the trials and difficulties attending the earlier days.

We are glad to acknowledge our share in the general rapid growth of the present time.

The purchase of a building lot (corner Sacramento and Scott Streets) in our best residence district at a cost of nineteen thousand dollars is an important step forward in our local work, and opens the way for higher demonstration. The building of our church we feel is not far distant.

The substantial foundation upon which the visible church is built is already manifest, that is, the works. Goodly numbers bear witness at our Wednesday evening meetings to the practical results attained through the power of Truth as taught in Christian Science.

The attendance at our services is between three and four hundred, and as I look upon this earnest congregation I realize how beautifully God has prospered His work here, in spite of the long years since it was first begun, for the workers were few and the obstacles many.

The few who were gathered together and held meetings that year made possible the organization of a church in July, 1889. Regular services were held for two years, when it seemed wise to discontinue the organization, though meetings were held informally until our present church was formed in October, 1895.

The work has gone steadily forward since then. We have had lectures for the public by Mr. Kimball, Dr. Fluno, Judge Ewing, and Dr. Sulzer. These lectures were listened to by fine audiences and have done much toward awakening a greater interest in the subject. The last lecture was most fruitful in results.

The attitude of the press, as well as the general thought, has grown more kindly and just during the past year. Prejudice is yielding to enlightenment, and all barriers to the progress of our cause are gradually being removed.

SUE ELLA BRADSHAW.

From Our Contributors.

Dr. Holmes on Critics and Criticism.

BY E. RAY INMAN.

I AM an earnest student of Christian Science and an interested reader of the *Journal and Sentinel*, for which, by the way, I am under obligations to dear friends, who, by their practical application of the teachings of Christian Science, and their demonstration thereof, have compelled, in the mind of a former scoffing unbeliever, the conviction that Science contains an element which is generously conducive to that peace which passeth understanding, to harmony, love, happiness, and success; an element which seems to be rather conspicuously absent from man-made doctrines.

Since coming into Science, I have been considerably interested in the criticisms emanating from non-Scientists, and am reminded of a passage from "The Autocrat of the Breakfast Table" (written about 1857), which seems to me to be quite prophetic of the criticism to which Christian Science has been subjected, and I think a part of it is particularly apropos. It is as follows:—

"Did you never, in walking in the fields, come across a large, flat stone, which had lain nobody knows how long, just where you found it, with the grass forming a little hedge, as it were, all round it, close to its edges,—and have you not, in obedience to a kind of feeling that told you it had been lying there long enough, insinuated your stick or your foot or your fingers under its edge and turned it over as a housewife turns a cake, when she says to herself, 'It's done brown enough by this time'? What an odd revelation, and what an unforeseen and unpleasant surprise to a small community, the very existence of which you had not suspected, until the sudden dismay and scattering among its members produced by your turning the old stone over! Blades of grass flattened down, colorless, matted together, as if they had been bleached and ironed; hideous crawling creatures, some of them coleopterous or horny-shelled,—turtle-bugs, one wants to call them; some of them softer, but cunningly spread out and compressed; . . . but no sooner is the stone turned and the wholesome light of day let upon this compressed and blinded community of creeping things, than all of them which enjoy the luxury of legs—and some of them have a good many—rush round wildly, butting each other and everything in their way, and end in a general stampede for underground retreats from the region poisoned by sunshine. *Next year* you will find the grass growing tall and green where the stone lay; the ground-bird builds her nest where the beetle had his hole; the dandelion and the buttercup are growing there, and the broad fans of insect angels open and shut over their golden disks, as the rhythmic waves of blissful consciousness pulsate through their glorified being. . . .

"There is meaning in each of those images. . . . The stone is *ancient error*. The grass is *human nature* borne down and bleached of all its color by it. The shapes that are found beneath are the crafty beings that thrive in darkness, and the weaker organisms kept helpless by it. He who turns the stone over is whosoever puts the staff of truth to the old lying incubus, no matter whether he do it with a serious face or a laughing one. The next year stands for the coming time. Then shall the nature which had lain blanched and broken rise in its full stature and native hues in the sunshine. Then shall God's minstrels build their nests in the hearts of a new-born humanity. Then shall beauty—Divinity taking outlines and color—light upon the souls of men as the butterfly, image of the beatified spirit rising from the dust, soars from the shell that held a poor grub which would never have found wings had not the stone been lifted.

"You never need think you can turn over any old falsehood without a terrible squirming and scattering of the horrid little population that dwells under it.

"Every real thought on every real subject knocks the wind out of somebody or other. As soon as his breath comes back, he very probably begins to expend it in hard words. These are the best evidence a man can have that he has said something it was time to say. Dr. Johnson was disappointed in the effect of one of his pamphlets, 'I think I have not been attacked enough for it,' he said; 'attack is the reaction; I never think I have hit hard unless it rebounds.' . . .

"Do you think I don't understand what my friend, the Professor, long ago called the *hydrostatic paradox of controversy*?

"Don't know what that means? Well, I will tell you. You know that if you had a bent tube, one arm of which was the size of a pipe-stem, and the other big enough to hold the ocean, water would stand at the same height in one as in the other. Controversy equalizes fools and wise men in the same way,—*and the fools know it.*"

It would be hard to find a better putting of the situation than this. And now, another quotation from the same genial philosopher, which is conclusive evidence that, if he did not recognize the important part being played by a woman in the revivifying of our creeds, he at least was cognizant of the opportunity for it:—

Would that the heart of woman warmed our creeds!
Not from the sad-eyed hermit's lonely cell,
Not from the conclave where the holy men
Glare on each other, as with angry eyes
They battle for God's glory and their own,
Till, sick with worldly strife, a show of hands
Fixes the faith of ages yet unborn,—
Ah, not from these the listening soul can hear
The Father's voice that speaks itself divine!
Love must be still our Master: till we learn
What he can teach us of a woman's heart,
We know not His, whose love embraces all.

Belief in Science cannot be induced by words and argument, any more than a belief in it and knowledge of it can be dissipated by them, for it is *not* a matter of intellectual, but of spiritual discernment.

True Responsibility.

BY ELLA W. HOAG.

INTO the life-problem of every Christian Scientist, there comes, sooner or later, the question as to what true responsibility includes.

When Christian Science comes to us, waking us to the sense of activity, showing us that each must indeed work out his own salvation, it finds many of us so tinged with the prevailing thought that Jesus did our work for us, that we are apt to meet with temptations from the opposite direction.

The danger of making ourselves responsible for our neighbors' problem, may assail us and we may fail to remember that all we have to do is to let the light shine and then the light will do its own work.

An illustration, so much used as to seem hackneyed and yet always a strong one, came to me with a new force in connection with this thought. It was that of the lighthouse keeper. He stands steadfastly at his post, thinking only of his own duties; his work is to keep the lamp full of oil, trimmed, and burning, and the glass surrounding it, clean and bright, both within and without, free from everything that could render it less than clearly transparent.

He wastes no time in running along the pathway of the light to see what good it may be accomplishing, or to count the number of those who are failing to avail themselves of its benefits.

His only care is to keep the light burning, knowing full

well that only thus can a blessing go out to those who come within its beneficent rays.

The application of the illustration is of course very simple and plain. The true Christian Scientist works steadily at his post, filling his lamp with the pure oil of Truth, as found in our text-books, the Bible and "Science and Health with Key to the Scriptures," and then by applying their teachings, he keeps it trimmed and burning, as well as the glass clean, purifying it from all false atmosphere both within and without. Then the light must shine and certainly there should be no responsibility in regard to its work.

If precious moments are spent in watching to see what the light is accomplishing, the lamp will be very apt to grow smoky and dim, giving out only a flickering ray. On the contrary, work faithfully done, unhampered by distracting curiosity, even though it call itself by a more attractive name, will result in a bright and shining light. To be sure, some may flee from its beams, lest their evil deeds be exposed; others may seek only a temporary advantage from its rays; but many will be most deeply grateful for its protection, recognizing that by accepting what it reveals, they shall be saved from hidden rocks and reefs, and directed into a safe haven.

Passing Thoughts.

BY A. C. S.

"BUT how can one help being envious?" "The Vision of Mirzah" had just been read to a class of young people and Addison's imagery interpreted, when the above question was asked. The birds that hovered over the bridge across which humanity streamed were interpreted as symbolic of the dark thoughts that hover about us: the raven of sensuality; the buzzards of envy, slander, and strife. The question has remained in thought until an answer came. Cannot envy be met by the realization that each is in his place; each has his own work to do and all work is valuable. We cannot see another's problems, nor can we know the trials of positions that seem to be desirable. "The place where you are is the place for you to be until the Master of the feast bids you take a step higher." To do our work well requires consecration of effort, and this implies no leisure for the contemplation of the lives of those seemingly more fortunate. If they have reached a higher plane, this should encourage us; if others have proved the all-sufficiency of Love's supply, their proof should be our encouragement. All are now children of God, heirs to the infinite riches of Mind, and with God there is no respect of persons, neither is there change, so all may prove the richness of His love if we but destroy fear and distrust. These thoughts shut out the light which would reveal the unfailing supply at hand.

"How can we help being envious?"

Another answer comes. Does not the thought that we are one in Christ destroy this claim of mortal mind? If part of the one body, can we say that, because unseen, our word is unimportant? Each is needful to the other; each has work necessary to the whole. Ruskin said that all one's life is a music if one but touches the notes rightly and on time. Each has his own notes. The leader and the music must take the undivided attention in order to "touch the notes rightly and on time." If a neighbor has a more important part in the grand symphony of life, it is, because faithful following of the principle of music has given him the place; but each part is essential; no part that contributes to the universal harmony is insignificant.

Nor knowest thou what argument
Thy life to thy neighbor's creed has lent.
All are needed by each one;
Nothing is fair or good alone.

That which Satisfies.

BY ANNAH CROZIER.

A CERTAIN poet has said:—

Man wants but little here below,
Nor wants that little long.

Science tells us that man wants a great deal, he wants it now, and wants it through eternity. Jesus said heaven is within, heaven is at hand. St. Paul said now is the day of salvation, now is the accepted time. So we may infer that it is possible to experience a state of happiness here and now, and man will come into a condition of bliss when he understands he wants the real treasures of the infinite, and not the unrealities of the finite. He wants the Life that is eternal; the Intelligence that is omniscient; the Good that is omnipresent, and the Love that is omnipotent; the real living Love; the life-giving Love; the Love that enables man to demonstrate the at-one-ment with God, and causes him to relinquish the so-called pleasures of sense for the real joys of Soul (for the Psalmist sang: "In thy presence is fulness of joy; at thy right hand there are pleasures forevermore"). He wants the Love that is not partial, is no respecter of persons, but that gives beauty, sweetness, purity to all, and clothes all with majesty and power; the Love that robs the grave of its victory and death of its sting; the Love that gives the delicate tints as well as the gorgeous coloring to the sunset; the Love that wipes out the trail of the serpent, and reveals man as having dominion over all things.

This Love, man adores. He is aroused by its beauty, touched by its voice, attracted by its charms, and satisfied with its wealth. This is the infinite Love in which all God's children are united, their voices blending in one grand harmony,—the harmony of soul, the *Love-created* harmony, in which the very stars sing together, and the sons of God shout for joy. It is Love that man wants, for Love is God and God is Love.

Drudgery.

BY A. R. W.

ONE morning, while doing some work which I considered drudgery, I found relief from pain and weariness in this thought, "Whatever it is your duty to do, can be done without harm to yourself" (Science and Health, p. 384).

As I went with grateful heart about my work this sentence came to me from "Retrospection and Introspection," p. 36, "He must be ours practically, guiding our every thought and action; else we cannot understand the omnipresence of Good sufficiently to demonstrate, even in part, the Science of the perfect Mind and divine healing."

In the light of this shining sentence I saw that to admit there was drudgery was to do one of two things: either to call work done with our tender loving Father drudgery, which is blasphemy, or to say that we can do work apart from Him, which is idolatry.

And then this verse grew clear to me, "Who can understand his errors? cleanse Thou me from secret faults." Surely this was a secret fault, so hidden, so secure in its disguise, that it had walked with me for years unrecognized.

Thanksgiving.

BY BERT POOLE.

ETERNAL God of Life and Truth and Love,
I thank Thee who hath to my soul conveyed
A consciousness of spiritual birth.
To see Thy face, mine eye is turned above
And sees the light of clear, diviner sense
To use in aid of mortals on the earth.

Testimonies.

The Experience of two Physicians.

My husband and I took up the study of Christian Science about two years ago. Previous to that time, we had both been in the practice of medicine. We knew of almost all the remedies for my ailment, for we were of the eclectic school, and after trying them, we found man and man-made remedies utterly powerless to relieve my terrible suffering.

Physicians in Cincinnati and Detroit told me that if I were enough better in from three to four years to feel that I had improved just a little, I might consider myself fortunate. One of these good men said to me after I had explained my symptoms, which were purely mental, "Why, I have been wrestling with just these same terrible conditions for four years, and only now am beginning to feel that life is worth living." This was poor consolation. A few evenings after my experience with this doctor, I remembered we had not tried all known remedies, for Christian Science was unknown and untouched by us, though about nine years ago in the city of Newport, Ky., a dear friend talked with me about the goodness and allness of God, and that Christian Science healed sin as well as sickness. So like a tired, sick child I turned to God for help and found Him truly a God of Love and Power.

After my first treatment hopeless fear, fear of every thing and every body, began to diminish. Noises that would almost drive me mad were unnoticed, strong dislike for certain individuals was turned to tender love and compassion, and step by step have I journeyed upward in thought until self-will, self-love, self-justification, and self-righteousness have become less in their seeming power, until at times, at least, I have the consciousness of Good. I have learned that infinite Love has infinite channels, and that if none of these channels are obstructed by sin in myself it will be an abiding consciousness.

After three months experience in Christian Science, my husband closed his office, we took class instructions, and have earnestly studied the works and writings of our beloved Leader. We have proved in our experience that God as revealed in Christian Science is the only Physician.

True it is a wonderful thing to be healed of pain, but to be healed of sin in thought, word, and deed brings that peace that passes all (human) understanding.

We have had many long nights and struggles with error, but just as surely as God is Love, just so surely did the morning dawn, and so we echo the hopeful refrain of many who have "come out of great tribulations:" "Let us not be weary in well doing: for in due season we shall reap, if we faint not."

With grateful acknowledgment to God for our dear Leader, Mrs. Eddy, and for the help and cheer of our beloved church with its Readers, students, and members, I lovingly submit this testimony.

EVA W. PFUNTNER, Detroit, Mich.

Many Reasons for Praising God.

In the truth of Christian Science I am a new creature. Each day I am enjoying privileges I had been deprived of for years. I was indeed a wreck, living for months at a time on what little nourishment could be taken through enemias of beef juice. Hygiene, electricity, massage, stomach pump, and in fact, every remedy or treatment known to *materia medica*, was tried only to leave me worse and increase my suffering.

At last the only nourishment taken was oil which the nurse rubbed on the abdomen, and the bowels had not moved naturally for ten years.

Finally the physicians said nothing more could be done for me. During all these years of suffering, "the ever-

lasting arms" were beneath me, sustaining and keeping me as our Father alone can sustain and keep.

I fully believed in Divine healing, and at times felt that God *would* heal me; but as the years passed, and I steadily grew worse, my faith almost gave out. At such times this precious promise was often given me: "I will bring the blind by a way that they knew not; I will lead them in paths that they have not known: I will make darkness light before them, and crooked things straight. These things will I do unto them, and not forsake them."

Christian Science was indeed an unknown path, for I was as ignorant of its teaching as a babe. I had never met a person who believed in it or read an article in favor of it, until I incidentally learned from a letter that Christian Scientists trust in God alone. I said to myself, "If there is anything in Christian Science I will have it."

On the 17th of September I began treatment. To-day I can eat all the good, wholesome food I want and as many times a day as appetite demands. I am gaining flesh and strength daily. My heart is full of love and praise to Almighty God; for what but the power of God could have wrought such a change?

I have been slow to grasp these blessed truths. I have passed through many struggles, and but for my healer's loving patience and tender forbearance, I should have given up. My husband has been a great help to me, reading Science and Health when I could not read it myself, and he has tried to help me put away all the old thoughts and grasp the new. I had been so thoroughly schooled in all the laws of hygiene, and read so many health journals, that I had much to forget. Since my awaking in Christian Science, the days have been long and full. God has wondrously sustained me, and showed me that divine Love meets every human need, and my heart is full of gratitude for this revelation. One most wonderful demonstration of God's power and willingness to help His child, was the spending of a day in the city tramping around the shops, endeavoring to make one dollar do the work of two. I started in the morning realizing that the task before me was impossible in my own strength, but claiming His promise, "They shall run, and not be weary; and they shall walk, and not faint." During the day I knew nothing of the poor old body. I seemed to be spiritual. My decisions were clear and quick, and I seemed to find everything I wanted with very little trouble. I came home at night not one bit nervous, and slept quietly all night. I shall never forget that day. I walked the streets praising God in my heart for this new life, light, and power that had come to me through the teaching of Christian Science. I bless the day that I heard the glad tidings which was the means of bringing to my life a joy unspeakable!

MRS. FLORENCE B. DEAN, Danielson, Conn.

God a Present Help in Trouble.

For a long time I have felt that I must in some way express my great debt of gratitude for Christian Science. I became interested through being healed of neuralgia, rheumatism, heart and bronchial trouble, and a fear of losing my mind, but the physical healing was nothing compared to the spiritual uplifting. In July of 1899 my husband insisted upon my trying Christian Science. I told him I had no faith, but consented. After two treatments I decided they were doing me no good, but my husband thought I had better go once more, so I did, to please him. Oh what a change! Such a peaceful sense came over me, as I had never felt before, and from that hour there was a gradual improvement. I took fourteen treatments.

Then my duties kept me at home, and not knowing I could take absent treatment, I stopped. I sent to Boston for Science and Health and read every spare moment.

Although much of it was Greek to me, I was entirely healed in a few weeks.

There was one thought that would never leave me. I had always believed there was such a thing as "righteous indignation," and did not want anything to do with those who I felt had injured me, did not even want to see them. After several treatments, I found that I felt nothing but love for them, and would say to myself, What is it? What can it be that has so changed me? It is more than human. In January, 1891, I went through a class.

Last June my husband had such a very severe attack of bowel complaint, that we thought he would pass away. I was very much overcome with fear, and telephoned for my teacher to give him treatment, but he was absent from the city. About two o'clock my husband said, "You must get Mrs. K. or I shall die." Mrs. K. was in Boston. He then said, "What shall I do?" I told him we would do the best we could. I took Science and Health and sat down by him, and read about half an hour, then gave him treatment. He dropped asleep and I went up stairs to work. About four o'clock I heard him at the foot of the stairs saying, "I am better." He got up and dressed and had tea with us. Surely, God healeth all our diseases.

Seemingly my progress has been slow, but I am learning that, "Love is not hasty to deliver us from temptation, for Love means that we shall be tried and purified" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 327).—GERTRUDE E. JOBSE, Mt. Clemens, Mich.

Help Received at Once.

It has been some ten or eleven years since Christian Science was brought to my notice, my mother having been healed of a dreadful cough and rheumatism. She brought an old copy of Science and Health to my home. I bless God for the mother that brought to me the knowledge of the Christ healing power.

Two years ago I was healed of pneumonia. I asked my husband if I might have Christian Science treatment, and was refused. In a few days the doctor was sent for and I had to take medicine for about two weeks. I ate nothing and my friends thought I was going to die.

My little girl, the only one I had in the Christian Science faith, helped me to get a letter written to a Scientist in Austin, Tex. The first treatment I went to sleep and I awakened hungry. I ate heartily afterward, and have never taken any more medicine. I slowly but surely recovered, and that through the treatment of Christian Science without doubt, for medicine did me no good.

I have since had treatment for childbirth, and I was surprised to learn that one could receive so much help at such a time through absent treatment.

I have made several demonstrations for the children and myself, and praise God for those blessings. I am thankful to Mrs. Eddy and all those who have helped me in Christian Science, and pray for more understanding.

ROSA M. KOLSTON, Streeter, Tex.

A Testimony from Ireland.

I have been thinking lately that it was time I should write to the *Sentinel* to tell something of the gratitude I feel for all that Christian Science has done for me. Error always rises up to prevent me, whispering that the editor has already more articles than he knows what to do with, so why should I write? But this is not obedience. Mother has told us to write, and if we leave our share of the work to others, we shall not receive the blessing.

I cannot express in words half the gratitude I feel towards Mrs. Eddy for all she has done for us, and my earnest prayer is that when the clouds seem dark and lowering and error shrieks discord all around, I, also, may be

faithful through the burden and heat of the day, ever following in our Leader's footsteps, radiating love to all around; never discouraged or afraid, but working honestly and naturally up to my highest ideal of right.

Sometimes it seems as if we had lost hold of Love,—as if we had fallen back in the fight and *could not* see the Light—but as we work and struggle on, laying *all* on the altar of Christ, and consecrating our lives anew to the service and glory of God, Love shines like a star out of the darkness, and a voice from above cries, "Be thou faithful unto death, and I will give thee a crown of life."

CONSTANCE GIBSON, Dublin, Ire.

Thankful for all the Good Received.

I have been interested in Christian Science since last October. Recently I went to my practitioner and told her that I was going to my former minister in the Episcopal Church to obtain my letter to the Science Church. I am thankful for the good received in the Episcopal Church. I was cordially received, and encouraged to talk of Science, which I did to the best of my understanding. I found in my minister a kind listener. He asked if I were assured of my course; if all the bitterness, malice, and hatred had left my heart. I replied that I was in earnest, that Christian Science had reached me. He uttered a few words of regret at my leaving, and hoped that I would often return for communion service. He assured me that the door of the Episcopal Church would be always open to me. I thanked him for the invitation and for the letter. After taking my departure the thought came that going back to the communion of bread and wine would be to me a going back to the offering up of material sacrifice to a God who is Spirit. Christian Science has freed me from all colds for the past winter. I am thankful to God, to Mrs. Eddy, and my practitioner for all the good I have received.

GEORGIANA SPRINGER, Chicago, Ill.

A Better Understanding of the Word.

An earnest religious worker, not of our faith, said to me the other day, "We do not believe in taking from or adding to, the Word." I replied, "Neither do we; the Word is perfect, a complete whole, it is God." In thinking over this conversation, the following illustration appealed to me.

While mortals were using tallow dips for lighting purposes they were satisfied, for the time being, with that idea of light; but as progress brought forward oil, gas, electric light, they willingly accepted the clearer expression of light. Now, light still remained a perfect, unchangeable whole, our conception only, had expanded, and with each advancing change we saw more clearly.

Just so it is with the Word. "As thought expands, under divine influence and guidance, we realize and understand the Word of God more clearly." The mortal belief of light was improved. The spiritual sense is unalterable, for the Word stands immovable, unchangeable, "the same yesterday, to-day, and forever." With each forward step we gain a more perfect understanding, knowing that "the Word was with God, and the Word was God."

M. M. T., Cincinnati, O.

None but the fully occupied can appreciate the delight of suspended or rather of varied labor. It is toil that creates holidays: there is no royal road—yes, that is the royal road—to them. Life cannot be made up of recreations: they must be garden spots in well-farmed lands.

MRS. GILBERT ANN TAYLOR.

Better the rudest work that tells a story or records a fact, than the richest without meaning.—RUSKIN.

Religious Items.

The following are some extracts from a sermon by the Rev. F. A. Dillingham, of Bridgeport, Conn., which was published in the *Universalist Leader*:—

"The fact of non-church attendance and support is apparent. We find variations in the percentage of church supporters in the different localities, but there are many who neither go nor pay; many who go and don't pay; many who pay and don't go. But the unwelcome fact stares us in the face that not one-third of the Christian community goes to church. And the lack of church attendance is especially marked among Protestants.

"The average church has run behind financially during the last six years. Some have made extra financial effort and are just keeping head above water. Some are funding the debt and don't know what the future has in store for them. Others are resorting to the attractions of some novelty, to the concert, or the biography, or the oratorio, or the theatre, or the comic opera. Many have lost faith in the ability of the church to grapple with the deep problems of life. Many honor the church for its history, its purposes, and its services, but regard it as powerless or inadequate to meet the vital questions of to-day in the light of science and philosophy.

"Men ask for progress and the church stands still. Men demand reasons and the church answers in traditions. Men ask the church to fall in line with the march of progress and the church fails either to recognize that the world moves or that its ancient platitudes are not everlastingly fresh. Men have not only outgrown the church scientifically, but philosophically.

"The Christian Church has a specialty, that is religion. Let it remain a religious institution."

In a note on the growth of the "Zionist Movement" for the reoccupation of Palestine by the Jews, the *Boston Transcript* says: "Zionists are going to meet again, the date being June 16 next, and the place Philadelphia. They deny the hostile acts and attitude of the Sultan, and declare reports of the same to be sent out by enemies of the plan to remake a Jewish State in Palestine. Delegates from all Zionist societies will be present, their number being larger than ever, for the number of such societies in this country steadily grows. The Sultan of Turkey is hard up as everybody knows. A characteristic stroke is that of loaning him some ducats upon the understanding that he is to wink at Jewish occupation of Jerusalem, since he cannot openly consent to the same. It will be reported to the Philadelphia meeting, it is said, that the Sultan looks with favor upon these approaches, and that money to make the loan is ready, some of it from this side the Atlantic."

In an article on "Veracity" in the (Baptist) *Standard*, Charles S. Kay says: "Much of the commotion visible within certain denominations having obsolete confessions of faith and outgrown restrictive creeds, is due to the struggles of truth-loving souls toward the freer atmosphere of doctrinal veracity. Such hampered spirits are like the goldfish in a deficiently aerated aquarium; they are pushing upward to the oxygen of God's pure elemental truth. The individual, as the conservator of the strictest truthfulness in his own utterances; parents and teachers, as the constant promoters of the spirit of veracity in those under their training; and the public preacher and conscientious journalist, as uncompromising censors of untruthfulness in every form, may all help to create and maintain an atmosphere of veracity, in which alone can the highest Christian virtues preserve vitality and find efficient development."

In an article entitled "Servant of all," the (Methodist) *Christian Advocate* says: "When Jesus taught his disciples that the highest aim in life is to be servant of all, he planted a seed of truth and righteousness which has brought forth abundant fruit, and shall yet bring forth more fruit. He showed the con-

trast between his kingdom and the kingdoms of this world. The princes of the Gentiles lord it over their subjects, but in the kingdom of God it is not so. The greatest among the disciples of Christ are those who serve most. Too many Christians look to God to free them from labor, hardship, and sacrifice, when they should look to Him for opportunities to labor and endure hardship for the good of others. Prayer should not be so much taken up with calling on God to do something for us to make us happy, but rather with asking Him what we can do to make others happy."

In an editorial entitled "Uplifts," the (Unitarian) *Christian Register* says: "It happens to nearly every one, some time in life, to get a vision of higher things,—a door is opened into the heavens. Paul did not know, at one time, whether he was in the flesh or out of the flesh: he was caught up to see and to feel, so far above the common level of his life. It was a vision that affected his whole career and his life-work. In some way you will find all the heroic characters of antiquity were thus lifted at times out of themselves and above the world's common level. Moses saw God on a mount. This was not a priestly extravagance, but as near a literal statement of facts as could be construed into language. 'It is a pitiful life,' says Harris, 'that does not see one gleam through its conventionalisms into something grander and holier, that never hears God or sees Him or feels that the divine Fatherhood is the most real fact of life.'"

By a unanimous vote on May 27, the Presbyterian General Assembly in session at Philadelphia, adopted the report of the special committee on the revision of the confession of faith, putting off the adoption of a new creed till next year. The debate had extended to the fourth day. The important section of the report was as follows:—

"We recommend that this committee be instructed to prepare and to submit to the next General Assembly, for such disposition as may be judged to be wise, a brief statement of the reformed faith, expressed, as far as possible, in untechnical terms. The said statement is to be prepared with a view to its being employed to give information and a better understanding of our doctrinal beliefs, and not with a view to its becoming a substitute or an alternative of our confession of faith."

A writer in the (Swedenborgian) *New-Church Messenger* says: "Fear is the strong motive that rules the life of the animal. We see in their crouching form, their shrinking gesture, their watchful eye, an embodied fear. But even in them the parental love is strong enough to place fear under foot. The mother bird will at any time risk death for herself to save her nestlings. It is man's privilege at all times to rise above such bondage. He may in every sorrow, every danger, every distress, call unto the Father of his soul to be with him, visible to the inward eye, audible to the finer ear of the spirit, felt as a presence to the inmost of his heart, 'more real than the pain itself.'"

The *Homiletic Review* says: "Such were Christ's marvelous calmness and assurance that even the cross could not swerve him from his purpose. How is this to be explained. It is due to his knowledge of God as his Father and to perfect confidence in Him. The inner life of Jesus was with the Father. He lived in the perpetual consciousness of the nearness of God. It was his meat to do the Father's will. . . . He looked through the veil of the earthly and everywhere recognized the hand of the living God."

President Samuel A. Eliot, of the American Unitarian Association, in a recent address said: "Religion, as I understand it, is inspirational, not mechanical. Genuine conviction and real feeling must work from within, outward; not from without, inward. It is our privilege to invite men to be religious,—not with the old arguments of self-reproach, but with the arguments of self-respect. It is our privilege to present

Christianity not as a theory to be explained, not as a system to be defended, but as a life to be lived."

The Rev. Dr. Joseph H. Crooker says in the *Universalist Leader*: "There have been thousands of addresses given about Jesus that were as inappropriate in the pulpit as a description of the lunar mountains; they did not take hold of the heart and make the hearer anxious to live like him. They were simply arid metaphysics. The doctrinal discourse that fails to increase the religious life does not help to make a real church. Likewise a sociological discussion that only satisfies intellectual curiosity, leaving the heart dry and cold, does not constitute any vital part of a religious service."

A writer in the (Baptist) *Examiner* says: "The highest service of the believer is to witness for Christ, in word and deed. In this service the least as well as the greatest may engage. The field is wide, the opportunities many, there is a place and a work for every one. Hence there is no excuse for idleness or unfaithfulness. The question that should constantly arise from the heart of every disciple should be, 'What shall I do, Lord.'"

The *Universalist Leader* says: "No man accomplishes great things relying upon himself alone. He who takes God into his confidence has for a partner one with unlimited capital and power. He who works with God in truth, in any and every thing he may undertake, will find mountains of difficulty easy to overcome."

RULES TO BE OBSERVED.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarters, Hymns, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

We especially request our contributors to write plainly, and only on one side of the paper.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid . .	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS.

A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid . .	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.	
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.	

CHRIST AND CHRISTMAS.

An illustrated poem,
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour."

Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER.

A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL.

Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL.

Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH.

By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892.

A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE.

By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE.

83 pp. SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

Political and Governmental.

The United States Government has formally communicated to the foreign Powers the impossibility of joining in a joint guarantee for the payment of the Chinese indemnity. The difficulties in the way of such an arrangement are set forth in the communication, particularly those relating to the constitutional restrictions on the President in making a joint guarantee of this character. In view of the determination of the United States not to be a party to the joint guaranty, there is anxiety shown in diplomatic circles as to the outcome on the question of indemnities. One view is that the majority of the Powers, being favorable to a joint guaranty, will execute this joint instrument, and thereafter carry on a concert of their own. In that event, it is said, the United States would arrange directly with China as to the American portion of the indemnity.

During the past two months suggestions have been made by prominent political leaders on the Republican side, that President McKinley could be and should be nominated for a third term. The proposition was taken seriously and many friends of the administration waxed enthusiastic over it. The President found that he could not ignore the third term talk, because he felt that it would prejudice the public mind and interfere with the handling of some very important public questions which the administration will be called upon to face; so he has published a message to the country solemnly declaring that he will not be a candidate for a third term, and that if he should be nominated he would decline to run.

John Wanamaker last week sent a letter to the mayor of Philadelphia offering to pay the city \$2,500,000 "for the powers, rights, and franchises granted and intended to be secured by fourteen ordinances of the city council awaiting the mayor's approval. Mr. Wanamaker said that he did not wish to embark in the street railway business, but he regarded the gift of such extremely valuable monopoly privileges to private parties with no return whatever to the city, as little short of public plunder, and by making this concrete offer he hoped to stop such rash proceedings.

Joseph W. Kay, of Brooklyn, past department commander of New York and chairman of the Committee on Legislation of the National Encampment, G. A. R., states that there are now about 1,000,000 survivors of the nearly 3,000,000 who enlisted in the army and navy of the United States in the Civil War. Less than 300,000 of these are members of the G. A. R.

The Thirty-First Volunteer Regiment arrived at San Francisco June 7, from the Philippines and landed at the Presidio. In

almost two years of campaigning not a shot was fired in battle by any member of the regiment, and not one man was killed or wounded by bullets.

Secretary Gage, acting for the Government, on June 13, accepted the United States mint which has just been completed at a cost of more than two million dollars, and is said to be the finest and best equipped building of its kind in the world.

Foreign News.

Italian Free Masons, after having for nearly three decades followed the example of the French branches of the craft in eliminating all reference to the Creator from their rites, and in barring the use of the letters, "A G D G A D U," which stand for the Latin words, "To the glory of the Great Architect of the Universe," have now restored this mystic device, and have returned to the Masonic recognition of the Divinity. This will have the effect of bringing about a reconciliation between the Italian lodges and those of the United States, of Great Britain, of Germany, and of Scandinavia, which have boycotted all those Masons of the Latin countries who have denied allegiance to the Great Architect of the Universe. The new departure of the Italian Grand Orient has just been made in a speech by the Grand Master of Italy.

King Edward, on June 12, presented medals to three thousand soldiers who had participated in the South African war. The king and queen stood on a gorgeous purple-covered dais, surrounded by an Indian tent, in the centre of the Horse Guards parade. The recipients of the medals, in a long line, marched past the king, received the decoration from his Majesty, saluted, and passed on. Lord Roberts came first, followed by Lord Milner, while behind them came crowds of generals and lesser officers whose names have become familiar owing to the war—Buller, Ian Hamilton, and a host of others. There were also groups of time-expired men in civilian clothes, policemen, and wounded soldiers limping along in hospital clothes. The ceremony lasted nearly three hours.

The Cuban Constitutional Convention assembled on June 2, to consider once more the Platt amendment, which was accepted as a part of the constitution several weeks ago, subject to modifying interpretations, but the constitution so adopted was rejected by President McKinley. At the meeting June 12, the terms of the Platt amendment were accepted without amendment or interpretation, by a vote of 16 to 11. Now that the Cubans have conceded everything demanded by Congress as a prerequisite to the withdrawal of American military authority, it is said that an independent Cuban government may be set up by next fall.

At exercises in connection with the celebration of the 450th anniversary of the foundation of Glasgow University on June 13, the degree of LL.D. was conferred on Andrew Carnegie, Lord Dufferin, Generals Sir Archibald Hunter and Ian Hamilton, and three Glasgow ladies. This is the first time the University has conferred the degree on a woman. An ovation was given Mr. Carnegie.

Industry and Commerce.

At a meeting of the American Linseed Oil Company on June 10, it was found that a majority of the stock had passed into the hands of John D. Rockefeller and other Standard Oil officials, although it was understood that the Union Lead and Oil Company was about to absorb the linseed oil concern. The American Linseed Oil Company is capitalized at \$33,000,000 and manufactures 85 per cent of the linseed oil produced in the United States. It owns plants all over the country.

Since American locomotives have been sold to a considerable extent in the British possessions in Asia, Africa, and Australia,

the English railway authorities and engine builders have given much attention to the comparative merits of American and English locomotives. It is contended that the American machines consume 10 to 25 per cent more fuel than the English, and that they are not built to last, but cost sixty per cent more for repairs than English locomotives.

Warren F. Purdy, manager of the Northwestern Steamship Company of Chicago, says that the company is satisfied with its venture in having ships ply directly between Chicago and Great Britain by way of the St. Lawrence route. There is \$1,000,000 invested in the four steamers already running, and two more are to be constructed immediately.

The new Boston Elevated railway system was opened for public traffic on June 10. The novelty of the system during the first week caused such crowds to resort to the elevated lines that the service was almost overwhelmed.

The National Metal Trades Association was organized at a meeting in New York last week, and a fund of \$500,000 was raised by assessment to carry on a fight against the striking machinists.

General News.

Recently note was made of the adoption of complete self-government by the students at Vassar, and now comes the announcement that the same plan has been adopted at Wellesley College, where self-government will go into effect at the opening of the fall term. The students have already completed a system of government, including a constitution and detailed plans of house government. The constitution was formally ratified at the close of the chapel service June 7, by the signature of the dean of the college, representing the faculty, and the signatures of the president and secretary of the Student Government Association, representing the student body.

Russia has elaborated a system for the protection of her forests as stringent in its provisions as if it were instituted for the protection of human beings. Only so much wood may be cut down annually in each locality as will be compensated for by the growth of the remaining trees, and all the clearances made are immediately replenished by young plants. Even private owners of forests are not permitted to cut down their trees except under Government inspection. No absolute ownership in trees is now recognized, in fact, but that of the State. As a matter of fact, a very large part of the Russian forests belong entirely to the State.

The New York Central and Hudson River Railroad Company has engaged a well-known landscape architect to plan and superintend the adornment of its right of way. For some years the older railway companies have been improving and beautifying the land about their stations by cultivating grass-plots, flowers, and shrubs, and now the New York Central proposes to go farther and practically make its line a continuous park-way. This is an important step forward in the growing movement to co-operate with nature in making villages, towns, and highways beautiful.

Some of the English tenures are exceedingly curious. A farm near Broadhouse, in Yorkshire, pays annually to the landlord a snowball in midsummer and a red rose at Christmas. The manor of Foston is held by the rental of two arrows and a loaf of bread. An estate in the north of England is held by the exhibition before a court every seven years of a certain vase owned by the family; another, in Suffolk, by an annual rental of two white doves.

The jubilee convention of the Young Men's Christian Association was held in Boston last week. Delegates were in attendance from all parts of the world.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

America's Valhalla.

Hall of Fame Opened on Memorial Day.

WHEN a thing happens for the first time, it is likely to attract universal attention, and the dedication of the great Hall of Fame on University Heights, New York, on Memorial Day, marks the advent of something that is entirely new in the annals of this republic. Great men and women have been born and have passed away, great deeds have been performed and most of them forgotten, but at last the accusatory apothegm, so often quoted in Europe, that republics are notoriously ungrateful, is likely to fall into desuetude, for now we have an American Valhalla, where the names of our most famous heroes, in whatever field they may have performed their exploits, will be perpetuated by means of durable memorials.

This wonderful structure, the Hall of Fame, is the outcome of an unconditional gift to the University of the City of New York in March, 1900, for the purpose of commemorating the achievements of those eminent in the arts of peace as well as in those of war, the author, the inventor and the scientist, to rank equally with the warrior and the statesman.

The gift was originally one hundred thousand dollars, but no limit was set upon expenditure, and double that sum has probably been expended in providing the structure now crowning beautiful University Heights. The name of the donor was withheld, but it has been universally assumed that it is Miss Helen Gould, already so well known through her generous and judicious benefactions.

The structure is in the form of an extensive colonnade, connecting the Hall of Languages with the Hall of Philosophy. It is five hundred feet in length, in the form of a semicircle, one hundred and seventy feet above the Harlem River, with a glorious view of the Hudson and the Palisades.

It is to the great gain of architecture in the United States that the Hispano-Moresque type, with its tiled roofs, extensive *patios* or inclosed courts, and picturesque corridors, has been extensively introduced. The columned corridor, which is a prominent feature in the old conventual structures of Europe, has been adapted with happy effect. And when, as in this most charming architectural adjunct, there is a superlatively beautiful view outspread from the colonnade, it becomes the most effective feature that could be chosen to enhance the beauty of the grounds and adjacent buildings.

It must have been a mind of more than ordinary calibre that conceived both the idea of the Hall of Fame and the mode of perpetuating and embodying it in the most suitable and effective manner.

The conditions of this munificent gift are set forth in fitly chosen words, as follows: "The exclusive use of this colonnade is to serve as 'the Hall of Fame for great Americans.' One hundred and fifty panels, each about two by eight feet, will be provided for inscriptions. Fifty of these

will be inscribed in 1900, provided fifty names shall be approved by the two bodies of judges named below. At the close of every five years thereafter five additional panels will be inscribed, so that the entire number shall be completed by A.D. 2000. The statue, bust, or portrait of any person whose name is inscribed may have a place either in the Hall of Fame or in the Museum adjoining.

"The following rules are to be observed for inscriptions: The University will invite nominations until May 1 (1900) from the public in general of names to be inscribed, to be addressed by mail to the chancellor of the University of New York City. Every name that is seconded by any member of the college senate will be submitted to one hundred or more persons throughout the country who may be approved by the senate, as professors or writers of American history or especially interested in the same. No name will be inscribed unless approved by a majority of the answers received from this body of judges before October 1 of the year of election.

"Further, each name must be finally approved by a two thirds vote of the thirteen regular members of the New York University senate, who are the chancellor, with the dean and senior professors of each of the six schools, and by a majority of the honorary members voting, the latter being each the president or the representative of one of the theological faculties in or near New York City.

"No name may be inscribed except of a person born in what is now the territory of the United States, and of a person who has been dead at least ten years. In the first fifty names must be included one or more representatives of a majority of the following fifteen classes of citizens: Authors and editors, business men, educators, inventors, missionaries and explorers, philanthropists and reformers, preachers and theologians, scientists, engineers and architects, lawyers and judges, musicians, painters and sculptors, physicians and surgeons, rulers and statesmen, soldiers and sailors, distinguished men and women outside the above classes. Should these restrictions leave vacant panels in any year the senate may fill the same the ensuing year, following the same rules."

The scheme has stood the test of more than a year of criticism, and it is doubtful if it could be essentially improved, which fact speaks volumes for the mind or minds that conceived it. In accordance with the provisions of the gift, a committee of college presidents, authors, editors, and learned men generally was selected to vote for those whose names should be considered worthy to be inscribed on these tablets of fame. In October of last year the collective decision was rendered. Fifty-one votes were necessary for a final choice, but when they were counted it was found that only twenty-nine native born Americans had been adjudged worthy of the high distinction of having their names emblazoned on bronze tablets where they are to remain forever.

It was intended that fifty names should be voted for and inscribed on those tablets the first year and five additional

names every five years thereafter until the year 2000, when it was believed the total one hundred and fifty inscriptions would be completed. This is allowing for a really great American to be born every year, which, in the light of past events, is somewhat above the average, it is believed. In case of failure to select the desired half hundred names, another balloting is to take place in 1902, when it is hoped the gap will be filled. As it stands now, there are still twenty-one names to be supplied in order to bring the list up to the requisite number.

The twenty-nine favorites were as follows: George Washington, with 97 votes; Abraham Lincoln 96, Daniel Webster 96, Benjamin Franklin 94, Ulysses S. Grant 92, John Marshall 91, Thomas Jefferson 90, Ralph Waldo Emerson 87, Henry W. Longfellow 85, Robert Fulton 85, Washington Irving 83, Jonathan Edwards 81, Samuel F. B. Morse 80, David G. Farragut 79, Henry Clay 74, Nathaniel Hawthorne 73, George Peabody 72, Robert E. Lee 69, Peter Cooper 69, Eli Whitney 67, John J. Audubon 67, Horace Mann 67, Henry Ward Beecher 66, James Kent 65, Joseph Story 64, John Adams 61, William E. Channing 58, Gilbert Stuart 52, Asa Gray 51.

The remaining twenty-one names will be balloted for in 1902 under the same rules that governed this contest, the same men, if they are living, being the judges, and all names which received as many as ten votes previously being again eligible.

The great University of New York City, of which the Hall of Fame is an appurtenance, has had a remarkable growth and almost phenomenal success. Chartered in 1831, it was opened in 1832, the first building erected in Washington Square. It was replaced in 1894 by a fine structure on the original site, which yields a good income in rentals and is also partly occupied by the graduate department and by the school of pedagogy, the first university school of its kind in the country. The chief university buildings, which at present are on Twenty-sixth Street, New York City, opposite Bellevue Hospital, afford accommodations for twenty professors and about five hundred and fifty students. The present value of the university properties approximates \$2,000,000, and fine buildings on the commanding hill between Morris Heights and Fordham Heights, above the Harlem River, were begun about six years ago. Here the great University will have opportunities for expansion that its cramped quarters in the city proper do not afford, and here is being evolved a scheme commensurate with an educational institution bearing the name of the largest city on this continent.

The new site is a beautiful one, the fine structures already erected being conspicuous from every point of the compass, and, while they are environed by scenes of almost sylvan beauty, yet the academic buildings are within about twenty minutes' ride by elevated trains of the heart of New York City.

ROGER P. BARNUM.

In the Fort Wayne Morning Journal-Gazette.

Cannon Fired at the Clouds.

AN effort is being made in southern France to dissipate hail storms by firing cannon at the clouds. Fifty-two cannon, manned by one hundred and four cannoneers and their chiefs, were last year distributed over an area of twenty-five hundred acres of rich vine land. For the expense of the experiment, the government appropriated f.2000 (\$386), the departmental council f.1500 (\$289), the National French Agricultural Society and a number of wealthy wine growers added f.12,000 (\$2,316), and furnished fourteen more cannon. The minister of war supplied powder for 2½ cents per pound. A high point in the vine land to be covered by the experiments was selected as the cen-

tral post of observation, and a signal code adopted. When a shot was heard from the central post all the cannon were fired, at first twice per minute; more slowly after the first ten shots. The report of the first firing at the storm clouds states that "the farmers of Denice were aroused at half past one on the night of June 5-6. The storm was very severe. The artillerists, from forty to fifty strong, fired their guns and stopped the thunder and lightning. In the neighboring communes, the people saw columns of flames rise three hundred feet above the cannon when the shots were fired."

The wine growers have organized to attack the hail storms in many of the great wine-growing regions of France. A writer in one of the wine-growers' organs says: "The results obtained from experiments are such that organizations will be established in all the places that have heretofore been ravaged by hail."

It is said that the practice of shooting at the clouds was known in France over a hundred years ago, and that it originated in Italy. It is to be more extensively carried on this year than ever before.

Mr. John C. Covert, who accompanied M. Jean Raulin, a professor of agriculture and an official of the Farmers' Alliance of the southeast of France, in a visit to the towns of Bois-d'Oinget and Denice, says: "In the first place, all the grape growers of the neighborhood had been invited to witness the trial of two guns, especially constructed as hail destroyers. In the second place, Denice, a general jollification was organized to give vent to the joy of the grape growers over their success in vanquishing their most dreaded enemy, the hail. Two long cannon were displayed in each place, almost identical in shape, but differing in the manner of firing. Each gun is of the shape of an inverted cone, the opening at the mouth being 28½ inches wide. It is planted upon a tripod three feet high. The gun itself is six feet six inches high above the tripod. It is made of thin boiler iron. At its base is a forged breech, which holds a forged iron block. In the centre of this block is an aperture six inches long, about the size of a large dynamite cartridge, in which is placed a metallic cartridge containing eighty grams of blasting powder, wadded with a cork and tamped like an ordinary miner's blast. It is discharged by a needle on a lever attached to the base of the forged iron holder.

"As many as fifty shots were fired in my presence, in order that I and Vice-Consul Browne might inspect the working of the guns. The detonation is very loud. As soon as the lanyard is pulled, flame is visible at the mouth of the gun, followed immediately by a wreath of smoke. A shrill whistling sound immediately follows the firing of the cannon, and is heard for fourteen seconds. At a distance this whistling is much louder than near the gun. I am told that it travels at a speed of 330 metres per second—4,620 metres in 14 seconds, which is nearly 2½ miles. During the firing a few drops of rain fell.

"I interviewed from twenty to thirty large wine growers who used the cannon last summer. They were all emphatic in their belief in the efficiency of fighting hail with gunpowder. They said that, if the weather were hot and they saw clouds forming, they prepared for a charge. If the clouds were moving rapidly, their direction was changed or the movement was stopped by the firing. They were torn asunder and broken into shreds, and a copious fall of rain soon followed. In localities where great losses from hail have been incurred every summer the cannon were used last summer and no hail fell. Two or three miles distant, where no cannon were fired, the hail was very destructive. At Denice, in the Beaujolais, the grape-growers have suffered from hail seven years out of the last decade. They think all the conditions favored hail last summer, and that

they were protected from its destructive ravages by their cannon.

"One cannon protects nearly seventy-five acres of land. The expense of equipping a shooting station is about \$45, and the cost of operating a gun for five hundred shots, not including labor, is \$15.50. The cannoneer is insured against accidents for a season for \$2.

"At the meeting which followed the exhibition the general secretary of the alliance delivered an address, in which he cited many proofs of the efficacy of the cannon against the hail. Several grape-growers took the floor and asserted that their vines were destroyed, while those of their neighbors who were under the protection of the cannon were uninjured."

At the congress held in November, in Padua, Italy, to consider the question of firing cannon at clouds to prevent hail, the reports presented by wine growers were all in favor of the efficacy of the use of cannon. Insurance men whose business is to insure crops against damages from hail attended the congress with the intention of proving that cannon firing was useless. Their propositions were overwhelmingly voted down. By an almost unanimous vote, it was resolved that the firing of cannon stopped the movement of the hurricane; that the lightning and thunder ceased; that rain or melted snow immediately began to fall; and that the clouds soon passed away.

Mr. Durand, the director of the large agricultural college near Lyons, states that the experience in the use of cannon in Italy left no possible doubt of their absolute efficacy. He says the vineyards on the line of the hail covered by the cannon were protected; those outside the spaces covered by the cannon, but very near them, were destroyed by the hail.

A vast defensive alliance has been formed in the French Alps, including the grape growers of five departments, for the purpose of buying cannon and powder for war against hail next summer. The grape growers everywhere believe in the cannon.

Dr. Paul Cazeneuve, one of the most distinguished scientists of France, says the question is still in the domain of experiment, and that nothing is proven; "that the commune of Denice was not last year on the line of the hail storm, and was only spattered by the heavy surrounding storms." He adds that "if a number of communes where cannon were fired were on the line of the hail storm and were protected, and the others were subjected to great losses from hail, that would prove the efficacy of the cannon." The wine growers say this is just what happened. Dr. Cazeneuve thinks no amount of cannon firing would influence great storms, and asks what these cannon would have done against the terrible cyclone at Galveston. But he thinks the experiments should be continued "systematically and scientifically," and that "when it shall have been demonstrated that moderate hail storms can be conquered, then it will be time enough to take measures against hurricanes."

The doubts of this learned scientist will not prevent many thousands of cannon from being used in the vineyards of France next summer.

In 1899 two thousand cannon were engaged in cloud shooting in Italy. Last year the number swelled to fifteen thousand. The Italian government goes so far in recognizing the efficacy of the cannon as to furnish powder to grape growers at three cents per pound.

The director of the agricultural societies of the southeast of France, a union of farmers' alliances, has sent a report to the French minister of agriculture on this subject. He witnessed many demonstrations against hail in France, and was a delegate to the anti-hail convention in Italy. He says in his report that "we cannot conclude that, in all cases, the use of cannon will afford complete protection, but it is

undeniable that the results obtained are most interesting and give veritable hopes for the future."

Before the present improved cloud destroyers were in use, vine growers shot powder from a sheet-iron case fixed in a strong box on the trunk of a tree. In some parts of France, they rang, and still ring, church bells, believing that the vibrations in the atmosphere affected the elements. If the hail continued to fall in spite of the ringing, they averred that it would have been worse but for the clangor of the bells.

Boston Herald.

In Darkest Canada.

THERE is no need that adventurous travelers should sail for Africa or even for South America in order to find regions yet unexplored, if, as the director of the geological survey of Canada asserts in his last report, practically nothing is known of one third of the Dominion of Canada.

He says, as quoted in *The Scientific American Supplement*, that there are more than 1,520,000 square miles of unexplored lands in Canada out of a total area computed at 3,450,257 square miles. Even exclusively of the inhospitable detached arctic portions, 954,000 square miles are for all practical purposes entirely unknown. The writer goes on to say:—

"A careful estimate is made of the unexplored regions. Beginning at the extreme northwest of the Dominion, the first of these areas is between the eastern boundary of Alaska, the Porcupine River, and the Arctic coast, about 9,500 square miles in extent, or somewhat smaller than Belgium, and lying entirely within the Arctic circle. The next is west of the Lewes and Yukon Rivers and extends to the boundary of Alaska. Until last year, 32,000 square miles in this area was unexplored, but a part has since been traveled. A third area of 27,000 square miles—nearly twice as large as Scotland—lies between the Lewes, Pelly, and Stikine Rivers. Between the Pelly and Mackenzie Rivers is another large tract of 100,000 square miles, or about double the size of England. It includes nearly 600 miles of the main Rocky Mountain range. An unexplored area of 50,000 square miles is found between Great Bear Lake and the Arctic coast, being nearly all to the North of the Arctic circle. Nearly as large as Portugal is another tract between Great Bear Lake, the Mackenzie River, and the western part of Great Slave Lake, in all 35,000 square miles. Lying between Stikine and Laird Rivers to the north and the Skeena and Peach Rivers to the south is an area of 81,000 square miles, which, except for a recent visit by a field party, is quite unexplored. Of the 35,000 square miles southeast of Athabasca Lake, little is known, except that it has been crossed by a field party en route to Fort Churchill. East of the Coppermine River and west of Bathurst Inlet lies 7,500 miles of unexplored land, which may be compared to half the size of Switzerland. Eastward from this, lying between the Arctic coast and Black's River, is an area of 31,000 square miles, or about equal to Ireland. Much larger than Great Britain and Ireland, and embracing 178,000 square miles, is the region bounded by Black's River, Great Slave Lake, Athabasca Lake, Hatchet and Reindeer Lakes, Churchill River, and the west coast of Hudson Bay. This country includes the barren grounds of the continent. Mr. J. B. Tyrell recently struck through this country on his trip to Fort Churchill, on the Churchill River, but could only make a preliminary exploration. On the south coast of Hudson Bay, between the Severn and Attawapishkat Rivers, is an area 22,000 square miles in extent, or larger than Nova Scotia; and lying between Trout Lake, Lac Seul, and the Albany River is another 15,000 square miles of unexplored land.

"South and east of James Bay and nearer to large centres of population than any other unexplored region is a tract of

35,000 square miles, which may be compared in size to Portugal.

"The most easterly area is the greatest of all. It comprises almost the entire interior of the Labrador peninsula or Northwest Territory, in all 289,000 square miles, or more than twice as much as Great Britain and Ireland. Two or three years ago, Mr. A. P. Lowe made a line of exploration and survey into the interior of this vast region, and the same gentleman also traveled inland up the Hamilton River; but with these exceptions the country may be regarded as practically unexplored.

"The Arctic islands will add an area of several hundred thousand square miles of unexplored land."

How far Guns can be Heard.

Professor Hughes has collected a number of cases showing the great distance at which the firing of heavy guns can be heard. For instance, during the battle of Camperdown in 1797, the firing of the guns was heard in Hull, two hundred miles off. The sound of the guns fired at the siege of Sebastopol was heard at Kerten, which is 158 miles away. During the Civil War the roar of the guns at Bull Run was perceptible at Lexington in Virginia, 125 miles away. When the Alabama was sunk nine miles off Cherbourg in 1864 the sound of the guns was heard 108 miles off and 125 miles off respectively.

The great naval review in Spithead in 1867 was held in rough, boisterous weather, but the report of the guns traveled to Castle Frome, which is distant 110 miles. In July of last year a sham fight took place between two portions of the French fleet at Cherbourg. The number of vessels engaged was forty-three, including thirteen of the largest and most modern battleships in the world. The next day the English newspapers came out with accounts of a series of supposed earthquake shocks felt shortly after 10 P.M.—the time of the fight—at different places along the southern coast, from Torquay to Bognor. Professor Hughes, being opposed to the seismic origin of these shocks, made special inquiry concerning them of a large number of persons. Though a few persons in the open air asserted that a tremor was felt, the great majority stated that the sound traveled through the air and not through the ground. Windows rattled loudly without there being any movement of the floor, and at Lancing (one hundred miles from Cherbourg) observers placing their hands on the wall felt it distinctly vibrating, the noise causing a drumming in the ears. The sound was heard to the east and west along the English coast at all the equal distances from Cherbourg. At all the places mentioned by Professor Hughes the air vibrations were strong enough to make the windows shake and rattle, and there are accounts of this or a similar effect being observed at Plymouth, 123 miles off, and at Menheniot, 136 miles away. At the latter place the sudden rattle of a large window was heard about the time of the beginning of the firing, but it was unaccompanied by any sound.—*Boston Transcript*.

I need not leave the jostling world,
Or wait 'till daily tasks are o'er,
To fold my palms in secret prayer
Within the close-shut closet door.

When I have banished wayward thoughts,
Of sinful works the fruitful seed,
When folly wins my ear no more,
The closet door is shut indeed!

One hearkening, even, cannot know
When I have crossed the threshold o'er,
For He alone, who hears my prayer,
Has heard the shutting of the door.

HARRIET McEWEEN KIMBALL.

The Lectures.

At Pana, Ill.

About every seat in the parquet and dress circle at the New Grand Opera House was filled last night (Tuesday, May 28) by the people of our city to listen to Judge William G. Ewing of Chicago, lecture on Christian Science.

The Judge arrived on the five o'clock evening train and was met by Mayor Corman and the editor of the *Palladium*, and driven to the home of Mr. Swallow, where he remained until nearly eight o'clock, when he was accompanied to the Opera House by Mayor Corman and the Hon. J. W. Kitchell.

A few minutes after eight o'clock the Judge and Mr. Kitchell appeared on the stage when Mr. Kitchell introduced the distinguished judge.

Mr. Kitchell's introductory remarks were as follows:—

Perhaps it is not necessary, I trust not inappropriate, to say that I have been chosen by the Christian Scientists of this city to discharge this pleasant office, not because of any supposed approval on my part of the doctrines, or of conformity to the practice, of Christian Science, but rather, be it said, in spite of my scepticism with respect to its distinguishing features, and of the vast results claimed by its advocates.

Herbert Spencer, one of the most profound writers on philosophy, sociology, and other kindred subjects, of this, or possibly of any age, has briefly defined science to be a higher development of common knowledge; and elsewhere he has shown with clearness that in religious beliefs, even the most diverse, there are recognized underlying truths in which all coincide; that there is an element of truth in each.

I am glad to be able to say that so far as my knowledge of the doctrines of Christian Science extends, there is much to commend. It would be strange indeed if this were not so. Who, for example, would wish to cavil at the sublime declaration that God is Truth and Love? Certain it is that many of the brighter minds, of the purest men and women of our day, are earnest supporters of Christian Science, and some have gained honorable distinction in the varied walks of life. Among them none maintains a more enviable position than he who is to enlighten us to-night on this not too well understood theme. As a lawyer he had won success at the bar; as a judge he had proved himself able and conscientious. It would appear that he has abandoned his profession to become the guide and instructor of his fellow-men in respect to the new found faith. The fair fame he has so justly achieved is a guarantee that he will bring the best of his ability into a new field. Should we be convinced by his facts and reasonings that Christian Science is the one thing needful to lead us into pure, healthful, happy, virtuous lives, and best fit us for the life beyond, let us have the courage to accept it and joyfully follow in his footsteps. But if we be not so convinced,—if we cannot admit his premises or must doubt his conclusions,—let us at least grant him the protection of that same mantle of Christian charity under which all love to dwell.

It is not necessary to bespeak for him a patient hearing: his own eloquence and power will command that. Permit me, then, to introduce to you Hon. William G. Ewing of Chicago.—*Pana Daily Palladium*.

At Toronto, Ont.

A magnificent audience gathered at the Christian Science Church on Queen Avenue last night (Monday, June 3) to hear Hon. William G. Ewing of Chicago, one of the most eloquent exponents of the faith. In evidence of the wonderful strides Christian Science has made in this city were the facts that the large auditorium of the church was

packed almost to suffocation, that the audience included some of the best-known people in the city, and that when at the conclusion those who during the past ten years had been benefited by Christian Science, were asked to stand, many hundreds were seen to rise.

Hon. Mr. Ewing, who a few years ago left the Superior bench of Illinois to become a teacher of the faith, is a most gifted orator, with a face singularly like some portraits of the late Cardinal Newman. The Reader of the church, Mr. John H. Stewart, introduced Mr. E. F. Clarke, M.P., as chairman of the evening.

Mr. Clarke said he felt it a great honor to be present to meet such a distinguished speaker as Judge Ewing. He was not very well acquainted with Christian Science, but all could applaud the courage and sacrifice of a man who had stepped down from a place of high honor and emolument to preach the doctrines he believed to be true. At a time when so many were at the turning of the ways, when so many were slipping their anchors, the utterances of such a man were entitled to respectful consideration.

Hon. Judge Ewing, in commencing his address, said that in no country could be found freer or more thoughtful audiences than those he had met with in Canada. He evoked applause also by alluding to the late Queen as one who had made womanhood queenly and queenhood magnificently womanly.—*The Mail and Empire.*

At Goshen, Ind.

Judge William G. Ewing lectured on Christian Science to a large and representative audience at the Irwin Opera House Monday evening, April 8, 1901. The lecture did much to break down prejudice and invite inquiry.

Judge Ewing was introduced by Hon. A. S. Zook in the following manner:—

Nearly twenty centuries have rolled away since the words: "Prove all things; hold fast that which is good," were written by Paul in the city of Athens and transmitted by the speediest mail route to Macedonia and there read by those agreeable in faith with Paul. Thinking therefore is demanded of all men. Had thinking ceased long years ago a darkness as of midnight would have rested on the world. If all those learned professors of the Alexandrian University had said, "The world has thought enough, let thinking cease hereafter," and, parrot-like, repeated the thoughts and sentences already coined and formed and nothing more, decay and final barbarism must have been the pass. Had the leaders of the world of thought eighty, sixty, fifty years ago ceased their thinking, we to-day might not speak telegraphically around the world. Adherence to the time-honored admonition, "Prove all things," may cause a dissolution of the mists of error and enable people to see eye to eye. A society in our midst is known to be composed of thinking people, namely, Christian Scientists. One of the lecturers on the doctrine they inculcate, Judge Ewing of Chicago, whom I have known professionally many years, will grace this platform and speak to this splendid audience on the tenets of those believers.—*Correspondence.*

At Belleville, Ont.

Judge Ewing of Chicago, lectured in the Opera House last night (Tuesday, June 4), before a large audience, on Christian Science. His address was carefully prepared and well delivered. Full of quotations from Holy Writ, fairly flowing over with beautiful imagery, apt similes, and epigrammatic sentences, the speaker's address was, from an oratorical and perhaps, sentimental, point of view, a decided success. Judge Ewing has an impressive appearance. His earnestness and general tone of sincere conviction made a deep impression on a large majority of the ladies and gentlemen who heard him last night.

His Worship Mayor Graham was the chairman, and in introducing the lecturer he said that many of them were familiar with the subject of the evening. He was not himself. He had been identified with two churches, Methodist and Presbyterian, but believed there was room in Belleville and Canada for any denomination which was desirous of serving God. They would be pleased to hear more about Christian Science, and if there was a better way of serving God than they knew of at present they would all, he was sure, be glad to find it out. A Christian Scientist, as he understood it, was a Scientific Christian.

Daily Intelligencer.

Notices.

Communion Service at the Mother Church

THE Communion service of the Mother Church in Boston, Mass., will be held on June 23, 1901, instead of July 7, as previously announced.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

Oldest Christian Monument in China.

The oldest Christian monument in China dates from the eighth century. Few Americans probably are aware that missionaries penetrated into China so long ago as that. Inasmuch as some thirteen hundred years have passed since then, and no marked advance has been made in converting the Chinese, the prospect of eventual success seems poor.

This is the Nestorian tablet or Syro-Chinese monument which stands one mile outside the gate of Singan-fu in Shen-si. The story it tells is that of the fortunes of the Nestorian mission in China between the years 636 and 781. It sets forth the dogmas of Christianity, records the history of Christian effort in China, and adds a sort of metrical thanksgiving to God and to the emperors who favored the Christian cause.

All trace of the mission has vanished except only this monument. It was unearthed in 1625, and copies of its inscription were sent to various capitals of Europe, exciting great interest at the time, and nowhere more than in London. Two lines of Syriac run down the left and right side of the Chinese. There is also Syriac writing at the foot. Recent visitors have found that the stone is in good preservation, and rubbings which have been taken attest its perfection. The Syriac characters composing the signatures of Olopim and his associates add to its interest. In 1859 a Chinaman rebuilt the tablet into the brick wall where it had once stood outside the city. The material is a coarse marble. A considerable controversy has raged round this interesting relic, but the weight of evidence now inclines toward the conclusion that it is genuine.

New York Journal.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Inspiration.

As used in theology the word Inspiration is employed to indicate a *modus operandi* whereby God imparts to man some message or prophecy. The most prevalent theory is that in times past God selected various persons to whom He dictated certain words or statements in order to make known His will or judgment, and that this was done by way of special enactment or interposition.

It has also been assumed that God limited the exercise of this particular function of His changeless nature to a few men out of the countless millions who lived during what has been called Bible times. The wellnigh universal thought concerning the inspiration of the Holy Scriptures is that God dictated to the different writers the express statements contained therein, and that for this reason every word must be regarded as inspired. Moreover, it is assumed that all Scriptural inspiration ceased with the Revelation of St. John. Such superficial views of revelation do not define any *modus operandi* whatever, or presuppose any special preparation, or mental or spiritual volition on the part of the writer. They seem to go no further than to suppose that God selected the man and told him just what to say. Furthermore, they involve the supposition that God ceased to communicate with man eighteen centuries ago; that He ceased to reveal the truth and to impart His word; in fine, that He stopped inspiring men with the knowledge of His will, His nature, and His law.

It is not strange that such blind reasoning should lead to the conclusion that no utterances of man have been inspired, save those which are contained in the Bible.

Christian Science teaches a far more rational and satisfying sense of inspiration and revelation than has prevailed for centuries. According to this Science there is, and always has been, the truth about everything, including God, man, and the universe. This truth is infinite, eternal, and ever-present, and Jesus said of it, "Ye shall know the truth, and the truth shall make you free."

All the truth that has ever touched mankind has found its way to the consciousness of different individuals. The real mental or spiritual process by which it has been accomplished would be better understood if it were described as perception, discernment, or discovery.

If the statement that two and two are four be true, then the discernment of that true statement is precisely the same as though it should be said that the person perceived or discovered it, or was inspired with or by the knowledge of it, or that it was revealed to him. All these words, such as revelation, perception, discernment, inspiration, and discovery, used in this sense, mean the same thing and indicate an individual insight, grasp, or mental perception or knowledge concerning that which is true.

The inspiration of the Scriptural writers was by way of divine impartation of the ever-present truth, but it was also measured by the spiritual capacity of the writer to clearly discern the scope, nature, and fulness of the truth. Hence, the Bible, which contains the inspired word of God, represents the individual, and sometimes defective, perception thereof, and is not in every particular equivalent to the

dictated messages of Deity. To know the truth or to discern the truth is to be inspired. To know any truth, or to discover anew any truth, is to be inspired, and so long as the knowledge of the truth touches the mind of man, just so long will he continue to be inspired. The words inspiration and revelation should therefore be understood to refer to a perpetual relationship between God and man. If inspiration was ever natural to God and man it is natural now, because their relations never change. God is the same yesterday, to-day, and forever.

The world has prayed for centuries that the truth might be revealed. Inasmuch as truth is omnipresent, the *rationale* of such a prayer should include the desire that the truth shall be discerned, comprehended, and lived. This prayer of the ages is equivalent to the admission that man does not yet know the truth. To the extent that the prayer is answered, it is because the truth is perceived and because the one who thus perceives it is inspired. Indeed, such perception constitutes the inspiration, and *vice versa*.

Christian Science declares itself to be the truth about God, man, and the universe, or the Science of Being. To thus declare itself and then admit that it did not reach humanity by way of scientific discovery or spiritual discernment; to admit, indeed, that it was not by way of inspiration, would be to impeach and undo its very self. Hence the logical statement that because Christian Science is true it has come to this age as a revelation.

This conclusion does not mean that every word of "Science and Health with Key to the Scriptures" has been dictated by God, but rather that its statement of principle, rule, and practice is in consequence of revelation or discovery, and that all utterances which are in accord therewith are at least collateral to such revelation, and in manifestation thereof.

The Trend of Thought

THE student of the philosophy of history looks behind the incidents, the phenomena, of the world's progress, to find in the mental attitude the trend of thought which has dominated the people, and especially the leadership of a given period, the final and sufficient explanation of historic movements and events. He recognizes that the world's struggles but objectify the clashing of ideas, the strife of opinions, and whether by the friction which culminates in great crises and revolutions, or by the quiet illumination and guidance of education and discovery; whether by the impelling conditions which precipitate the struggle for "the survival of the fittest," or by the winsome attractions of a high ideal, humanity has steadily, though with varying speed, advanced toward the higher civilization expressed in universal freedom and economic well-being.

Religious development and progress have been kindred. The most varying, if not vagrant, concepts of spiritual truth have found expression in multiplied sectarian organizations whose dissonances have contributed many a tragic chapter to the story of humanity's noblest aspirations. Nevertheless, despite all the bitter discussion, all the conceited and intolerant wrangling, the Truth, in the interest of which so much unspiritual zeal has been shown, has advanced with stately and irresistible step.

St. Paul, in his letter to the Philippians, declares that in his time some indeed preached Christ even of envy and strife; yet, he adds, "Notwithstanding, every way, whether in pretence, or in truth, Christ is preached; and I therein do rejoice, yea, and will rejoice."

One of the most interesting aspects of this subject is revealed in the fact that, in their assertion and maintenance of their differences, men have often been struggling for an end which has been wholly swallowed up and lost sight of, in the consummation of an infinitely broader.

more vital movement, to which they have, all unconsciously, but in an important sense, contributed. The barons who wrested the *Magna Charta* from King John as little dreamed that they were insuring the realization of all that democracy stands for to-day, as did George III. that he was promoting the cause of freedom and independence in his endeavor to coerce the American colonies. The success of revolutionary thought, if that thought be true, has always been hastened by the antagonism of its enemies, quite as surely as by the loyalty of its friends.

To-day, in the stir which the demand for a larger personal freedom, a more spiritual interpretation of nature, of the Scriptures, and of man, has awakened, it is peculiarly interesting to Christian Scientists to note evidences on every hand that without thought, much less intent, the most loyal adherents to traditional religious opinions, are contributing very effectively to the furtherance of ideas which, when expressed by the so-called unorthodox, they are ever ready to condemn and combat.

To illustrate: Among the "Religious Items" of a late number of the *Sentinel* there appeared the following clipping from a leading sectarian publication:—

"Why cannot we learn our Lord's lesson, and give by anticipation the encouraging and prophetic names to qualities that exist as yet only in embryo, visible, perchance, only to the eye of faith and hope? To call our children dull and stupid and foolish will often go a good way toward making them such. . . . Call a man a saint, though he is only a saint in the making and the process is just begun, and you help to hasten the process and have your share in the joy over the finished product. . . . Call every man by that which is noblest and best in him, and you help to create the qualities that God will crown."

This publication is a severe critic of Christian Science, and yet it is here educating its readers up to the apprehension of one of the fundamental truths of Christian Science; viz., that every one should be held in thought and appealed to upon the plane of his best self, his spiritual individuality as a child of God.

Another denominational paper which has heaped opprobrium and contempt upon Christian Science thought, has recently declared that "Fifty years ago most people would have regarded him as a fool who should say that touch, sight, and hearing represented nothing but mental states. Now such knowledge is commonplace." And it is probable that no purpose whatever was entertained of leading its readers to see the reasonableness of another great truth emphasized by Christian Science; namely, that we are altogether deceived by the senses respecting the nature of the external world; that "all is infinite Mind and its infinite manifestation" (*Science and Health*, p. 464); and that the only ground for the assertion of the reality of matter is the self-contradicted claim that sense perception is entirely trustworthy.

The surety and rapidity with which the seed of truth grows—and all unconsciously to the soil sometimes—is seen in another clipping from an exchange which reveals a very near approach to Science thought, and the declaration of which would have been unqualifiedly objected to in the recent past.

It says, "The things that seem so real to our physical senses, are not as real as we have believed them to be. That is, their reality is entirely dependent upon ethereal, spiritual, or celestial forces that hold them together, propel them, and give them all the qualities of weight, size, color, form, etc., by which we are enabled to recognize and distinguish them. In other words, the real things of the universe are not those which our eyes have seen and our hands handled, but the finer and more potent forces of nature that men are only just beginning to recognize. This is what Jesus meant when he said 'Judge not according to the appearance, but judge righteous judgment.' 'God

hath chosen the foolish things of the world to confound the wise.'"

Kindred disclosures of Truth's recognition are found on wellnigh every page of current religious literature, and our excerpts from them, which appear on the "Religious Items" page of the *Sentinel*, will prove very interesting to all inquirers into the promise and trend of religious thought. Very slowly but surely the world is awakening to the fact that Truth is all-pervasive, all-penetrative, all-conquering.

"The mills of God grind slowly," but they never pause, never cease to break down and remove the matrix of human opinion and disclose the unsullied gems. Little by little, through the irresistible impact of love and, as well, through the turmoil and travail into which earnest but misguided hearts have been precipitated, the knowledge of the demonstrable truth is coming to men, and the light, which has already dawned for many, will ultimately illuminate and gladden all the earth.

Despatches appear in the daily newspapers from Germany to the effect that the Emperor of Germany has become a convert to Christian Science, and that he disfavours the attacks which have recently been made upon it by some of the German clergy.

We do not know if this report be true, but we should be glad to know that, in any event, his Majesty so far favors religious tolerance and liberty in his realm that he opposes unjust attacks upon any religious system. In doing so he would set a fine example of Christian charity for the clergy in his dominions as well as for some in our own beloved country.

The *Boston Herald*, in its editorial columns, laconically says:—

"Whether or not Christian Science is a 'humbug' it certainly is getting to be one of the big bugs in religious circles."

In a more recent number of the *Herald* we find this editorial bit:—

"Religious discussions being carried on to-day remind us that when Christian Science becomes the universally accepted cult, drugs will be a drug on the market."

Among the Churches.

New Quarters at Waterloo, Ia.

The opening services of the new Christian Science Hall in the rooms on the second floor of the Syndicate Building were held yesterday (Sunday, May 12) at 10.45 and the service was repeated at three in the afternoon for the benefit of visiting Scientists and others from the city who could not be present at the earlier service. Mr. and Mrs. F. R. Davis, the Readers, conducted the exercises, which were impressive. At the morning service Mrs. Arch Williams presided at the organ and Roy Davis played a violin solo. In the afternoon Bruce Davis presided at the organ and Paul Davis sang. The exercises apart from the music consisted of the reading of Scriptural texts and portions of the Christian Science text-book. Preliminary to these was the reading of the following by Mrs. Davis. It is a history and explanation of the work.

In the early fall of 1892 four persons began holding Christian Science services in a private residence in Waterloo. They had seen the wonderful healing power of Christian Science and were eager to bear witness to the Truth. They perceived and were ready to demonstrate that God's power has never waned, and that Truth is the same, yesterday, to-day, and forever. The prophetic

words of Isaiah came to them with peculiar force: "The people that walked in darkness have seen a great light; they that dwell in the land of the shadow of death, upon them hath the light shined."

As the society of worshipers increased in numbers it became necessary to move to larger quarters. In the spring of 1895 we rented a room for public services. This room would now be wholly inadequate to accommodate our congregation. The growing number of attendants at our services brought about another change, so in March, 1899, we were incorporated under the laws of the state of Iowa as First Church of Christ, Scientist, Waterloo, Iowa. In order that we might have a place of worship exclusively our own, we began, a year ago, to look for a suitable hall, and were so fortunate as to secure the beautiful room we now occupy. When the time came to furnish the room, we were privileged to prove the power of divine Love. Our funds came in without solicitation, each member giving what he could, the amount of his contribution being known only to himself. It was found that the supply met the need, so that we are able to open our hall free from debt. This room we now consecrate to the glory of God and the furtherance of His cause in Christian Science, casting out sin and sickness.

In this room will be held the regular Sunday morning services of the Christian Science denomination. The Sunday sermon of this church, as given by the impersonal pastor, the Bible and "Science and Health with Key to the Scriptures," is identical all over the world wherever Christian Science services are held. All who wish to come are welcome here. They are welcome also to the Wednesday evening meetings of the church, where they may hear testimonies as to what Christian Science does for us daily in overcoming all forms of discord, sin, sickness, worry, business care—all the myriad forms of disease that perplex mortal man. They may learn how these things are done through the understanding and demonstration of divine Principle, as set forth in the Christian Science textbook, "Science and Health with Key to the Scriptures." In this room we hope soon to open a reading room where Christian Science literature can be procured, and where inquirers can learn what Christian Science is.

Waterloo Courier.

Organization at York, Neb.

The members of the Christian Science Society held a special meeting April 3, 1901, for the purpose of effecting a church organization. A month later all the details had been attended to and First Church of Christ, Scientist, of York, Neb., with thirteen charter members, became an established fact in the history of this great onward movement of religious thought. By-laws were adopted and articles of incorporation were placed on record in the office of the county clerk.

We have Wednesday evening meetings, also Sunday School for the children.

It has been said that "no Christian Science Church has ever languished; all have prospered and grown more or less rapidly from the beginning." We fully realize that our progress depends wholly on our faithfulness and obedience to Principle.—L. S. T., *Clerk.*

Organization at Butte, Mont.

We are pleased to say that after conducting regular services as a Christian Science Society for fifteen months, we have organized a church. April 25, 1901, we organized the Second Church of Christ, Scientist, of Butte, Mont. Articles of incorporation have been filed with the Secretary of State, and a charter received.—EDITH H. CARR, *Clerk.*

Selected Articles.

Christian Science and Faith Cure.

To the Editor of the *Brooklyn Eagle*:—

May I be allowed to make the differentiation between Christian Scientists and faith curists, which your editorial in the issue of May 22 fails to make?

So called faith cure is mere blind belief, unsustained by any logical chain of reasoning. It may satisfy society in its early stages of religious thought, but modern men and women demand an argument that convinces. This is supplied by Christian Science, which does not merely bid the sick believe they can be healed, but explains why they have a right to expect this blessed consummation.

Jesus said: "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." Such faith must be based upon some logical process of reasoning. Now Christian Science declares that sickness is a mental concept only. That is not saying that sickness does not exist, but that it exists as a belief only. The question then arises, Is this belief an eternal and indestructible fact, or is it a temporary delusion capable of destruction? If it is an eternal and indestructible fact, it cannot be overthrown; but if it is a temporary delusion, then it can and ought to be set aside, in order that health and harmony may be re-established.

Christian Scientists in every case try to separate the momentary falsehood from the everlasting Truth, and they believe that every evidence of discord belongs to the realm of the false, while harmony is the only true and eternal state of consciousness. The desire to live in accordance with these aspirations must be a noble one. Your correspondent of May 20 is not warranted, therefore, in speaking of Christian Science as "mysticism, exorcism, and fakirism." Nobody is obliged to take Christian Science treatment, or to attend Christian Science churches.

The hundreds of thousands who compose the Christian Science denomination are recruited from all ranks of society, and from the various occupations. Many of them are practical business men, controlling large financial interests; others are to be found in literature and the arts; many of its women manage big households successfully. It is not logical to accuse such overwhelming numbers of active citizens of believing in "mysticism, exorcism, and fakirism." If they did not receive the benefits they desired, they would leave Christian Science very promptly.

Your correspondent would be entitled to the same love and gratitude which is extended to the Discoverer and Founder of Christian Science, had he labored as long and as successfully in behalf of humanity as she has.

The question of a personal God resolves itself into a matter of definition. If by person is meant a Being having outline and form, then Christian Scientists cannot accept the term as applying to God, for God is infinite, and cannot be limited. But if the term person is made equivalent to an infinite Being, your correspondent may rest assured that Christian Scientists believe in a personal God. They also believe in the divinity of Christ, but they distinguish this title, which means the Anointed, from the man Jesus to whom it was applied. A little closer study of Science and Health will, I feel sure, convince your correspondent that it is indeed a "Key to the Scriptures," in more ways than he can imagine at present.

W. D. McCRACKAN.

In the *Brooklyn Daily Eagle*.

Religion is the very respiration of all faithful and loving toil; and to detach it for minutes specially reserved is like proposing to take your walk in the morning and do your breathing in the afternoon.—JAMES MARTINEAU.

From our Contributors.

Smile and Sing.

BY ANNIE MARIE BLISS.

SMILE, little sister, when all seems wrong,
Shorten the long day with a song.

Show your light in the darkened place,
And see it reflect in another's face.

It's as easy to sing as it is to fret,
Think happy thoughts and the gloom forget.

Hundreds are walking the self-same road,
Lose your own, easing another's load.

Stretch out a hand to those at your side,
Lead them to Heaven's door open wide.

A smile is the hinge on which it swings,
And God's own messenger, a heart that sings.

Love.

BY JENNIE BAIRD SCHOOLEY.

To understand the spiritual import of the word Love is the earnest desire of every true Christian Scientist, and it is vitally important that each day find us holding a higher, truer conception of Love and more fully demonstrating its sublime power.

The question that confronts many sincere seekers for light, is this: "If God is Love, why does He afflict His children, refusing to answer their earnest prayers for deliverance from the bondage of sin and suffering? Why such disparity of blessings? Some so scantily cared for, and others, no more worthy, so bountifully blessed?"

Christian Science tears away the false conception that God is revengeful, visiting afflictions upon His children. It unfolds the impartiality and impersonality of the Father's wondrous love and ever watchful care for His little ones. As the all-pervading sunlight enters the hovel as well as the palace, so the eternal light of divine Love is ever shining for all, even for the consciousness darkened by sin and sorrow. Is there not a joy in knowing that God, the almighty Love, is not responsible for man's struggles with sin and suffering? That His changeless goodness renders it impossible for Him to know evil?

Christian Science reveals the great work to be done in self. It discloses that which is excluding us from the warmth and protection of divine Love. The belief that there is life, substance, and intelligence in matter, forces the conclusion of a life and self apart from God. This belief makes matter a reality. Having full faith in material means for our health and support, we separate ourselves from the presence of divine Love. Our text-book, "Science and Health with Key to the Scriptures," teaches us that man has no life apart from God; it unfolds the reality of life eternal and reveals the fact that man's "life is hid with Christ in God." This understanding brings freedom. It destroys the false self, teaching us that life is simply living Good,—living Love,—which, demonstrated, is life eternal.

As we awaken to an insatiable love for good we lose all pleasure in evil. The works of the flesh—envyings, emulations, and strife—give place to the fruits of the Spirit,—love, joy, peace, etc. We should not desire the false sense of love which blinds us to the heart's innumerable errors, and which leads us into a state of self-deception; but we should strive for the true conception of love which

is ever chiseling away at the rough marble of the counterfeit man and revealing the Christ-man, upright and perfect.

Divine Love, in proportion as it is understood and demonstrated, quiets fear, ameliorates pain, assuages sorrow; in truth, all discordant conditions disappear in a peace that passeth understanding.

Christian Scientists are striving for that love which "thinketh no evil;" which forgets self in loving God and in laboring for our fellow-man. Self-love engenders strife. Selfless love opens the door of our consciousness for the divine Love which heals the sick and binds up the broken-hearted, ushering man into the kingdom of love upon earth. Unselfish love looks not to mortals for appreciation and gratitude, but labors on unrewarded, save in the consciousness of having forgotten self in laboring for others. The reward comes from the "Father of lights, with whom is no variableness, neither shadow of turning." This reward is a satisfied heart, joy that we can shed healing and happiness on the troubled pathway of suffering, sorrowing ones. This joy is possessed by all who abide in that love which "seeketh not her own, is not easily provoked;" that "rejoiceth not in iniquity, but rejoiceth in the Truth."

Thoughts.

BY GEORGE L. BRETT.

ON page 105 of "Miscellaneous Writings" we find these words: "Truth destroys error. Nothing appears to the physical senses but their own subjective state of thought. The senses join issue with error, and pity what has no right either to be pitied or to exist, and what does not exist in Science. Destroy the thought of sin, sickness, and death, and you destroy their existence. 'Whatsoever a man soweth, that shall he also reap.'"

How little do we realize that the questionable thoughts which we so often, consciously or unconsciously, harbor in our minds are the forerunners of the unhappy conditions that must follow. Later, those conditions seem to govern us, in that we are afraid of them, try to flee from them, and worry over them. If we wished to paint a beautiful picture we would surely think it very foolish to use or allow to be used bad materials (or thoughts) in its construction, and yet are we not just as foolish respecting other things?

The weather may be contrary to what we would like or are expecting, and thinking it ought to be different, we declare there can be no business, and are troubled. We make a law and suffer by that law, making not only ourselves but others miserable. Things are thoughts, and not anything can be made without thought. Reverse it. Thoughts are things to the so-called physical senses, and real to the mind entertaining them, just so long as we believe them to have objective existence. These thoughts need not be manifest as matter to seem real. For example: when riding my wheel at night, a shadow in the roadway has looked so much like an obstruction that in trying to avoid it I have been thrown to the ground, when all the time it was nothing but a shadow. Just so long as we believe ourselves to be something of ourselves, an existence apart from God, a mind separate from the Divine Mind, that thought of itself, like an obstruction in our path, brings darkness to our consciousness, and with darkness, fear.

Rising above the clouds (beliefs of life and intelligence in matter), we find light, harmony. How can we expect to get a good thing (thought) out of a bad thing, or expect good results in an undertaking that we are declaring we cannot do. In our business relations we are apt to regard our creditors or debtors in a false light, forgetting that Jesus said, "Love one another."

If we try to start right each day, and think good thoughts we shall find that good thoughts bring good things. When thinking good thoughts, God, the all Power, is with us, for He is the Source of all and in all.

We, who are trying to be Christian Scientists, cannot be too thankful to God and to our Leader for this beautiful Truth as revealed in "Science and Health with Key to the Scriptures," whereby we may read the Scriptures understandingly and find in them happiness and eternal life. If we abide in Love we shall find that Love thoughts will and must destroy all that is not Love. Let us not deceive ourselves. "If a man thinketh himself to be something, when he is nothing, he deceiveth himself."

What do we Mean by "Church"?

BY MAE P. BENEDICT.

A SHORT time ago I was reading the definition of "Church" in Science and Health: "The structure of Truth and Love; whatever rests upon and proceeds from divine Principle" (p. 574). After reading it again and again, I thought: "What does that mean to me?" "What is a church, or the church?"

In the building of a church, as in other structures, certain necessary steps are to be considered. First of these is the architect and his plans, then the location or site for the building. For our architect we have our infinite Creator—Divine Love—and His wonderful plan of life. In our own individual consciousness Truth finds the ground upon which it may build.

Next comes the foundation, we naturally think. But does it? Must not the ground be cleared of all obstructions? Must not our hearts be cleansed and purified, freed from the weeds and stones of prejudice, creeds, envy, malice, jealousy, and all unrighteous thoughts, until we are willing to say with David: "Create in me a clean heart, O God; and renew a right spirit within me." This may be marked by many a hard struggle to uproot the false beliefs of years, the heavy stones of education and habit; but all-powerful Truth conquers, and the ground is cleared for the beautiful building—"the structure of Truth and Love," "built upon the foundation of the apostles and prophets, Jesus Christ himself being the chief cornerstone."

Then with stones hewn of love, prayer, humility, obedience, and patience, the work goes on. Sometimes one may become heavy and be dropped, only to be picked up again and put in place; others may require many a hard struggle before they are set, but finally the whole is complete,—a beautiful demonstration of Love, reflection of the perfect Infinite. This is the Church founded by Christ—universal—giving promise of the realization of the kingdom of heaven, and to which he referred when he said, "And other sheep I have, which are not of this fold: them also I must bring, and they shall hear my voice; and there shall be one fold, and one shepherd."

Error the Separator.

BY EMMA I. SCHAPER.

Is not this a good name for error? For what is there that it does not claim to separate? It separates mind from life, as in the structural form of a tree. A tree or any plant supposed to have life, but no mind. But Life is Mind.

It separates power from intelligence, as in gravity and other matter forces. The sun, it says, has the power to attract, but is itself not conscious of the fact.

This desk on which I am writing, or this house that shelters me from storm and unkindness, what are they?

They claim to be ideas; non-intelligent ideas expressed in silent, non-intelligent substance. Substance is Intelligence.

How it divides and sub-divides the one eternal Ego! These pseudo egos it sometimes calls "you," sometimes, "I." Some are supposed to live at one time, and some at another; some here, some there. Whereas God, the one and only "I Am" is omnipresent and always has been.

It claims in mortal man to have goodness without intelligence or intelligence without goodness. But goodness is the expression of the only Intelligence.

It even claims to separate thought from expression. Mortal man can have a thought but he need not necessarily give it expression. Then the many modes of expression: language, art, music, motion, all in themselves non-intelligent, separate. Truth's expression is one; it is its word, its melody, beauty, harmony: "Hear, O Israel: The Lord our God is one Lord."

Mind, the incomparable, the immaculate! How is it misconstrued in this world of matter! "They parted my raiment among them." How many phases of mental development these material eyes seem to discern: instead of the perfection of divine Mind, the instinct of the animal, the many gradations of human sense and consciousness.

And how the love, the joy of God, are clothed in human misconceptions by these same deceived senses. But only in seeming; for illusion can never rob God of His own, the eternal, moral, substance qualities.

So we might go on indefinitely. But where will it end, in unity? The material sciences try to answer the question which they have never successfully handled, "What is the relation between these myriad manifestations?" Psychology asks, "What is the relation between mind and substance?" Physiology, "the relation between life and substance?" Physics, "between substance, power, quality?" Sociology, "between man and his neighbor?" And so forth.

We know they cannot solve our problem. We might say to them as Jesus said to the rich young man: One thing ye lack. They must sell all that they have—exchange their material concepts for spiritual ideas, and find the solution in Intelligence, the infinite unity of Divine Science.

An Illustration.

BY J. E. FELLERS.

NOTHING is plainer to the Christian Scientist than that error manifests itself in the belief of disease. It is equally plain that error is manifest in blasphemy and idle gossip. We have all observed how quickly the presence of a modest woman will silence the manifest error in the promiscuous crowd gathered on the street corner where she may chance to be passing. Her influence drives error into its hiding place for a time, notwithstanding the fact that the revellers have little desire to part company with it entirely.

Why then should some people think it a thing incredible that the presence of a devout, consistent, and godly Christian Scientist should reflect that Christ Spirit which destroys the belief of pain and suffering? The error which manifests itself in the motley crowd is temporarily silenced by the presence of womanly virtue, but the error manifesting itself in the belief of disease is destroyed by Truth or the Christ Principle reflected by the Scientists.

To shape the whole future is not our problem, but only to shape faithfully a small part of it according to rules already known. It is perhaps possible for each of us, who will with due earnestness inquire, to ascertain clearly what he, for his own part, ought to do: this let him with true heart do, and continue doing. The general issue will, as it has always done, rest well with a higher intelligence than ours.

CARLYLE.

Testimonies.

Saved after Operations had Failed.

I became a sufferer when our child, now fourteen years old, was born. Three years after that, we discovered a tumor. My husband became alarmed and sent for our family physician. He said there was nothing to do, but perform an operation. I was examined by two different professors, and they said the same thing. I thought, if it were God's will, I would go through the operation.

While the professors prepared everything, I sat in another room with my sisters. They asked me if I did not fear. I said, "No; if God wants me to go through it, I will." They all wept. As I was called to the operating table, my thought was, that Jesus is the only physician.

After the operation, I felt worse than ever before. My tongue was swollen like a ball, I could not talk; if I tried to talk, I would groan from the pain. I had to motion for anything I wanted.

The first visitor at my bedside was my minister. I could not speak to him, but he prayed lovingly. After he finished, he asked me if we had good doctors. My husband told him that we had the best physicians we could get.

They published in the Dutch weekly papers that I had passed death's door. I grew gradually worse. The doctors told my husband that I had to be operated upon again, and again, and that I should never get over it.

I felt so much worse after the operation than before, that I thought I would not go through it again. I bore the suffering without my husband's knowledge. Then my eyes became so painful that I had to go to the eye dispensary. My left eye was operated upon, but that did me no good. I wore glasses, but they did not relieve me.

At this time we moved next door to a Christian Scientist. The first Sunday afternoon, we were sitting out on our front porch, when my new neighbor called me. I went to her. We talked about my suffering, she said to me, "I believe in prayer, don't you?" I said, "Yes; my minister prayed often for me, but it did not seem to do any good." Then she said, "The Bible teaches us if the prayers are not answered they are in vain." I stopped to think what she had said. She then told me how Christian Science had saved her from an operation, and that I could be healed through it. "God is the same yesterday, to-day, and forever. He healed centuries ago and He is the same to-day." That conversation did me so much good that the following Sunday I went to church with her; and that first sermon I heard was sufficient for me. I knew Christian Science was what I was looking for.

I then took treatment; my healing was very slow. I bought "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, but could not read it. The thoughts came to me, that the Holy Ghost would teach me, and lead me into all Truth. There is nothing lacking in Truth. I got comfort in every way. When I sat down to read the Bible and Science and Health it was clear to me that it was the key which opens the Bible.

When I withdrew from my church, the minister came three or four times a week, to try to get back "the lost sheep," as he called me.

The second year I was in Science, my husband became dissatisfied with me for taking our little girl to the Christian Science Church. He said he was going to investigate the church in which I was bringing up the child. When he did investigate, he was satisfied, and never would let our little girl stay at home from church or Sunday School.

So we can see what Christian Science can do for us. It has lifted me out of the depths of misery.

MRS. TIENE HOUSINGER, Chicago, Ill.

Christian Science a most Effectual Remedy.

We have found Christian Science of such value in overcoming both mental and physical difficulties, that I am glad to add my testimony to the many already given through your columns. We have used nothing but this method of treatment in our family for about four years, and having five children, it has been proved to us again and again that "Love never faileth." We have been able to overcome many errors through the understanding of Truth as gained from the study of the Bible and Science and Health. At other times, when error has confronted us in seemingly more alarming proportions, we have felt it necessary to telegraph for assistance to my teacher in Chicago, and it has always been quickly demonstrated to us that God, Life, Truth, Love, the only Healer, is omnipresent and omnipotent. We have had colds, fevers, measles, in quite severe manifestations to combat, but they have been quickly routed by Truth.

A case of croup, which was dispelled through a sense of the nearness of omnipotent Good, in the earliest months of the study of Science, was one proof of the efficacy of this system in an emergency. One of the children awoke one night gasping for breath in that belief which is such a frightful one to a mother. It seemed to demand such instant relief and we were such beginners in Science that thought turned to the remedies before used; then I felt that if God is ever-present He is here now, and turned right to Him as being Omnipotent. In a very few moments our little girl was quietly asleep, and has never had any manifestation of croup since, nor has it affected any others of the children, although we have had some struggles against its symptoms. We find much to overcome, but we do feel that we shall be transformed through the renewing of our mind, and there is certainly every encouragement to press on with such a wise and loving Leader as Mrs. Eddy and the constant helps received from our publications.

Living as we do at a small station where there are no other Scientists, the nearest being in Missoula twenty-seven miles away, we do greatly appreciate all the Mother's works as well as the publications issued by the Publishing Society.

I must say, having had experience with both *materia medica* and Christian Science treatment, that while I respect those who are honestly trying to do their best to relieve suffering, I feel that Christian Science is so far ahead of medical methods as to admit of no comparison. At its first touch general conditions are bettered. We have found it so desirable that we are embracing every opportunity to present it to those who will receive.

JESSIE E. SLOWEN, Arlee, Mont.

How the Light Disperses the Darkness.

Christian Science is the love of God sent to light the dark places of the world. When it came to me, my sorrow vanished, my sickness and pain gave place to joy, peace, and love.

For thirty years I suffered with many troubles, and I finally became a chronic invalid. The last six months I had indigestion and bowel trouble. This seemed to be more than any mortal could bear. I grew weaker every day and at last the doctor gave me up. He said I must go to the beach. I went several times but came home without receiving any benefit. The medicine, the beach, and all earthly help had failed. I thought the next place for me would be the cemetery, but that night it occurred to me to go to a Christian Scientist. I knew nothing about their strength at that time; I only knew that there was such a faith. The next day I said to my daughter I would go to Riverside to the nearest Scientist if I could get some one to go with me. I was not able to go by myself on account of being both sick and blind.

My daughter went with me early the following morning. By ten o'clock I was with the healer who helped me at once. At four o'clock I felt perfectly well, and these words came very forcibly to me, "No man can do this," and it rang through my mind for weeks. I thought what a wonderful faith this Christian Science must be. I had not heard much of Christian Science, for I was so quickly healed that no book learning on that good work was given me either before or after I was healed, nor had I a friend to tell me of this wonderful blessing. I thought, I will learn and study and see what it is, for I know it is the very thing that I seemed to search for in my Bible.

Christian Science at first seemed to me like a little light, as I thought of it, but it grew broader and broader and higher and higher, until it filled the people and the houses and the towns, and after all it filled immensity. I stood in awe and utmost astonishment to know what this great light was. It seemed to say, it is the love of God. If at any time, I was enveloped in sorrow, sickness, darkness, or pain, I would go to Christian Science with its great light and it would shine it all away. How its great arm of Love banishes fear and even death! It filled me with joy and peace such as no tongue can ever describe. I am in my seventy-fourth year and am now a well woman.

JOANNA FUQUA, Pomona, Cal.

Healed by Reading Science and Health.

It is nearly four years since Christian Science was brought to my notice by the miraculous (as it seemed to me then) recovery of a friend who had been an invalid for several years. She lent me "Science and Health with Key to the Scriptures," and rather timidly (as she knew I was not at all religious) suggested my reading it.

The book seemed to rend me. However, I could not lay it down. I devoured it, and thought it the most powerful work I had ever read.

I had suffered for nine or ten years from a very troublesome and painful disease in my throat, and had tried every remedy. The late Sir Morell Mackenzie and many other specialists told me that it was incurable, and the only way to keep the disease in check was to have my throat cauterized every three months. This caused me very great pain. I had, however, given up worrying about it, for I thought, "What can't be cured must be endured." To my intense surprise, shortly after beginning to study Science and Health, I felt that my throat was perfectly well, and from that time till now I have not felt it.

I am able to read aloud for hours at a time and sing, which formerly I was quite unable to do. This healing has been a very great comfort to me, for it has enabled me to work entirely in the Master's vineyard with a joyful and grateful heart. I am indeed grateful to Mrs. Eddy for the wondrous light that she has been the means of shedding upon us. It is now my privilege and joy to take the same Truth to others who are equally in bondage, either physically or mentally.

FLORENCE COUTTS FOWLIE, Manchester, Eng.

Lifted from Helpless Invalidism.

Three years ago I was lifted from helpless invalidism to health and strength through Christian Science. I had been under medical treatment almost continually for six years, suffering from indigestion and nervousness, a most unhappy condition to be in; but through the faithful and loving patience of a Scientist I was taught to know that God is Life eternal, and that there can be no sickness and misery in God or His creation, which always has been, and always will be, perfect.

My recovery was somewhat slow on account of my doubts and fears, as I was afraid to trust God wholly. I had

been educated to distrust on account of the many failures I had encountered in material means, which always were failures, one after another.

After being absent some months under treatment, I came back so changed that my best friends when meeting me on the street did not recognize me, as I looked the very picture of health.

I am sometimes surprised that people, who know all about my case, being sick themselves, do not at once begin to investigate Christian Science, but try everything else in order to get relief.

We are having services every Sunday, and many now are becoming interested. I have been thinking for some time that I should write a few lines for the *Sentinel*, which I always read with interest, deriving great benefit therefrom. I hope that some searcher after health may read my message and be led to the blessed Truth which shall make him free.—A. A. SANDVEN, Willmar, Minn.

Glasses Needed no Longer.

I have worn glasses from childhood. About twenty years ago the celebrated optician, Dr. Knapp of New York City, examined my eyes and said the best he could do was to give me two different pairs of spectacles. The trouble was diagnosed as "old sight," but an unusual case for one so young, and he asked permission for many prominent physicians to examine the eyes, to which I gave consent. I was told if I lived long enough I should be blind.

About four years ago I consulted Professor Stafford, who examined my eyes, and he, too, called in several physicians to view what he termed a remarkable case. He concluded to give me compound glasses, and required that I should have my eyes examined each year.

I began Science treatment in November, 1900, and although I required glasses in my daily occupation of sewing, I was able to leave them off entirely after nine treatments. I have continued taking treatment irregularly, having had in all about thirty, and now I have the ability to thread needles and read easily, and all pain has disappeared. I have improved otherwise, and especially in the matter of weariness. I have been a church member for many years, but the new light thrown on the Bible and the teaching of a practical life and Christian experience found in the writings of Mrs. Eddy have led me to leave the old church for the new.—EMILY MAST, New York, N. Y.

A Proof of God's Power.

It is with great joy and gratitude that I give my testimony of the great good that has come to me through Christian Science.

About two months ago I was taken with smallpox. Two physicians sent by the city diagnosed the case "confluent smallpox," and said positively no meat or fat of any kind should be eaten, and that I would have to be greased, etc., to get well.

I asked for treatment from a loyal Scientist. There was never a dose of medicine brought to the house as the guard can truthfully say. I ate fat meat, turnip greens, and anything else I could get. I was never greased at any time or in any way. One of my little daughters had the same type of smallpox as myself; my wife and other daughter had varioloid, but Christian Science treatment from the same dear practitioner brought us safely through.

I was visited daily by the Scientist until quarantined, but I was then able to sit up. Through the Scientist's clear realization of God's allness she was untouched.

I am surely grateful for Truth, and deem this last demonstration wonderful indeed.

S. V. BURKS, Dallas, Tex.

Religious Items.

The (Baptist) *Standard* quotes the following on "Envy:" "Among the sins that very frequently allure into perilous paths prominently stands envy. Out of selfish, unholly pride grows resentment which too often bears this poisonous fruit. Yet it seems to change from fruit into a cruel fiend. How it soured the life and marred the character of Voltaire, who displayed it so offensively in his continued effort to detract from the sublimity of Corneille and the charm of Racine. The strength and ugliness of envy were manifest in severing the beautiful friendship once existing between those two fathers of Anglo-Saxon poetry, Chaucer and Gower. Controlled by this demon, it is said that Dryden could never speak of Otway, his rival, with kindness; and even the giant-minded Leibnitz on all occasions would refer slightly to Locke's Essay, and fiercely strove to overthrow Newton's system. What wonder, then, that lesser minds should be assailed by it? Even Christians indulge it without realizing what it is and how base it may make them. Let us be large enough and sufficiently Christ-like to rejoice with those more highly favored than ourselves. There is not a particle of envy in our Lord. If we would walk with Christ we must give it no place within."

Rev. T. Harwood Pattison of the Rochester Theological Seminary, in an address on "The Bible in the Twentieth Century," reported in the (Baptist) *Standard* says: "The form in which this message from God reaches us is of the first moment. Here you see a printed book. It does not change with the passing years. It is not at the mercy of speech as is the homily of the preacher. It does not shift its ground as does public opinion. Every advance, therefore, in recovering a pure Bible is a return to rock truth; to the clearer understanding of the mind of God himself. As a printed book the Bible has always led the field. Even up to 1490 it exceeded in the amount of printing all other books put together. A thousand editions of the Bible in whole or in part were issued in the first half century of the history of printing. From that time onward the Bible has continued to be the best-known book in the world. That which is best known is also best guarded. The printed page has taken the place of the manuscript parchment. Errors which were formerly inevitable in transmission are now practically impossible. The Book is fitter than it has ever been to submit itself to the examination of the age to which it comes."

"The Relation of the Church of England to the Wealthy Classes" is just at present a topic of discussion in the English religious journals. The *Church Times* is quoted by the (Episcopalian) *Church Standard* as follows: "The English Church not merely fails to fulfil its mission to the wealthy and educated portion of the community, but scarcely recognizes that it has a mission to fulfil. Large sums of money, and a complex machinery, and strenuous labor are employed to bring the Gospel to the poor. We scheme and toil for the educational, social, physical, and spiritual welfare. Yet, even the man with £10,000 a year has, after all, a soul to be saved, and the responsibility of the Church on his behalf will not be discharged when he has been induced to give an East window, or to buy a new heating apparatus. . . . The personal claims of Christ cannot be compounded for by a money payment."

In an editorial the *Universalist Leader* says: "If one really loves his friends, he will seek opportunities to serve them for love's sweet sake, and his highest satisfaction will be to prove himself really useful and helpful to them. But to love one's friends is not enough. Surely it must be right to give our heart's best to these; but there are the unlovely and the unfriendly, the lonely and desolate, who are really starving (though they may not know it) for the sunshine of some one's compassion, some one's pitying love. What right have we, who are so rich in friends to deny them this solace? The

Christian name is not ours if we are satisfied to love those who love us, to serve those who minister to us. Selfishness is our master and not the Saviour who has loved us with a perfect love, and whom we have promised to love and serve."

In one of its editorials the (Unitarian) *Christian Register* says: "Hope naturally springs from faith, as the blossom from the bud. Each one's ability and freedom to move out on his own line, with his own faculties and his own training, to do better, to be better, to see better, to have better,—that is the whole of individual right and prosperity, that is social hope. Modern society knows no other inspiration. Hope that is not based on faith is not hope at all, but is a restless, greedy ambition. The end of education both in the family and in the school, should be to create not only great powers for great achievements, but great hopes; and nothing in education should be allowed to interfere with the conviction that the world and society, in all its affairs, can be and must be improved."

D. S. Gregory, D.D., says in the *Homiletic Review*: "Law-givers and reformers, poets and prophets, the apostles and Christ himself, all unite to portray and to impress the universal sinfulness, moral corruption, and spiritual blindness and deadness of mankind. Now if this is man's condition, it is manifest that he must be brought to realize it before he can have any conscious need of salvation. The preliminary and preparatory message of the preacher has therefore been in all ages that of Isaiah: 'Let the wicked forsake his way, and the unrighteous man his thoughts: and let him return unto the Lord.' Man must first be roused to a sense of sin and of its sinfulness. Just here, in its failure to do its first work, is to be found the fundamental defect in present-day preaching, and a main reason for its lack of effectiveness in saving men."

The Rev. Hiram Vrooman says in the (Swedenborgian) *New-Church Messenger*: "In our unregenerate state we are subject to all kinds of spiritual ills, and one by one these spiritual impurities come to the surface in the hours of temptation. The Lord is our great Physician and He prescribes remedies for our afflictions in His written Word. The instructions of this great Physician are to be obeyed, His remedies are to be taken. It is not enough for us to say, I believe in God, I believe in the divinity of the Bible, I believe in the two great commandments. We must act during each hour of wakefulness, whether at church, at home, at business, on the street, or in solitude—act in harmony with the religious truth which we understand."

A writer in the (Baptist) *Watchman* says: "A conscientious man who is entrusted with the property of other people feels a grave sense of responsibility for its judicious management. But we do not always realize that the happiness of those who are bound to us by various ties of nature or affection is largely in our keeping, and that we can bring them blessing or misery by our attitude or conduct. . . . Husband and wife are each prone to forget that the other's happiness is in his or her keeping. One who would scorn to misuse another's property will yet squander another's happiness by a surly, morose, or unappreciative disposition. The simple recognition of this truth will go far to make us responsive to the duties growing out of it."

A writer in the *New Church Independent* says: "All the opportunities for right living which we use as our own, shall be filled with heavenly love. According to our faith, so it shall be unto us. If we conform to the required conditions, and trust the Lord in large measure, we shall be filled accordingly. The Lord always flows in according to the room prepared to receive Him. There is no limit to the blessings we receive, but the limit of the vessels we bring, or the opportunities we improve. They who trust and prepare the way for large things shall re-

ceive them. The Lord is able to do for us exceedingly abundantly, and will do so if we prepare Him room."

The *Boston Transcript* says: "Translation of the Bible into Philippine dialects is going on under the joint supervision of the Bible societies of this country and England. Translations thus far completed are St. Luke in Bicol, and the Acts and St. Matthew in Tagalog. These belong to the British and Foreign Bible Society, which had, when Admiral Dewey took Manila, ten thousand copies of the Acts of the Apostles, in Tagalog, lying in bond in Hong Kong. They had lain there for a dozen years, the Spanish Government not permitting Protestant Bible agencies to enter the Philippines. The battle of Manila Bay effected the release of these copies of the Acts."

Henry Ward Beecher once said: "A week filled up with selfishness and a Sabbath stuffed full of religious exercises will make a good Pharisee but a poor Christian. There are many persons who think Sunday is a sponge with which to wipe out the sins of the week. Now God's altar stands from Sunday to Sunday, and the seventh day is no more for religion than any other. It is for rest. The whole seven are for religion and one of them for rest."

The *New-Church Messenger* says: "It is much easier to think about the beauty and truthfulness of the Lord's instructions than to apply them—than to live by them."

LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies, two cents each, post-paid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Theory vs. Realization. Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

- Cloth binding, each \$3.18
- Two to Twelve books to one address, each, prepaid . . . 3.00
- Twelve or more books to one address, each, prepaid . . . 2.75
- Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
- Twelve or more to one address, each, prepaid 3.75
- Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid . . . 5.00
- Twelve or more to one address, each, prepaid 4.75
- Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
- Twelve or more to one address, each, prepaid 5.75
- Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS.

- A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions. Price (cloth) each, prepaid \$2.25
- Twelve or more books to one address, each, prepaid . . . 2.00
- Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid . . . 4.00
- Twelve or more to one address, each, prepaid 3.75
- Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
- Twelve or more to one address, each, prepaid 4.75
- Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
- No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTIAS.

- An illustrated poem.
- Single book, prepaid \$3.00
- Twelve or more books to one address, each, prepaid . . . 2.50

RETROSPECTION AND INTROSPECTION.

- A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen: \$9.00 per dozen, all prepaid.

PULPIT AND PRESS.

- A unique work of importance in the history and to the readers of Christian Science: containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Price by mail, \$1.06; \$5.00 half dozen: \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

- It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MIS-ION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL: 50 pages, cloth covers, red edges. Price by mail, 55 cents: \$2.50 half dozen: \$4.50 per dozen. Leather covers (pocket), \$1.00 each: \$5.00 half dozen: \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

- An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents: \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

- The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers: 21 pages. Price by mail, 26 cents: per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

- The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents: per dozen, \$2.50, prepaid.

NO AND YES.

- A brief statement of very important points in Christian Science: 56 pages. Pebbled cloth covers. Price by mail, 27 cents: \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

- A sermon delivered in Boston: 17 pages. Paper covers. Price by mail, 21 cents: \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD.

- A sermon delivered in Boston: 14 pages. Paper covers. Price by mail, 21 cents: \$2.00 per dozen, prepaid.

FEED MY SHEEP.

- Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy: \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

Political and Governmental.

A Manila press dispatch says that Prince Poniatowski, a San Franciscan, has secured from the Sultan of Sulu an absolute concession for fifty years, ending with the year 1950, of the island of Paragua. It is reported that the prince has formed a \$10,000,000 company and is making plans for the most thorough exploitation of the timber, mining, rubber, and pearl industries of the island and the development of shipping. The scheme also embodies a plan for the building of roads and harbor improvements. The representative of Prince Poniatowski in Manila, John Anthony, presented the documents to the Philippine Commission and asked for an indorsement of the plan. The question involves the agreement of General Bates with the sultan, and also the validity of the sultan's jurisdiction and authority, which occupied an uncertain status with Spain and afterward with the United States.

In consequence of the action of the American Government through a treasury order of March 9 last, applying tariff restrictions against Russian petroleum imported into this country, the Russian Minister of Finance, M. de Witte, has issued an order dated June 7th, imposing the high tariff rate of the Russian schedule on American white resin or calfin, galapote, white resin, under article 82 of the Russian tariff law, and increasing the rate on American bleycies under article 173 of the Russian laws. This action is entirely apart from that taken in connection with the Russian sugar, and is a new development in the discriminatory duties imposed by this Government and the retaliatory duties imposed by Russia.

The London *Daily Mail* in an editorial advocates giving the United States every facility to construct the Nicaraguan Canal, providing its neutrality and an open door is guaranteed. "It is quite immaterial," the article says, "whether the canal be fortified or not, because any enemy wishing to use the canal against the wishes of the United States would find herself engaged in a disastrous adventure. A ton of dynamite judiciously applied would bottle him up in Lake Nicaragua until the war was over." The article also urges the retention of Pauncefote in Washington till this and other questions are settled.

The following changes in diplomatic posts were announced June 17: Francis B. Loomis, Minister to Venezuela, has been transferred to be Minister to Portugal, vice John N. Irwin of Iowa, resigned; Herbert W. Brown of New York, present Minister to Persia has been transferred to Caracas, succeeding Mr. Loomis as Minister to Venezuela; Lloyd C. Griscom of Pennsylvania, present first secretary of the legation at

Constantinople, has been made Minister to Persia.

The cruiser Newark, homeward-bound from Manila, has been assigned to the Boston Navy Yard for an overhauling at an expense of about \$500,000, which will practically amount to the ship's being rebuilt and modernized. While built within the past ten years, the advance in naval architecture and ordnance have been so great that the Newark is no longer in the class of efficient war ships.

The Virginia constitutional convention, which has been much criticised for refusing to take the oath declaring all men equal, for fear it would interfere with their purpose to disfranchise the Negro, has found a precedent. Records show that the convention of 1868 which framed the present constitution, refused to take an oath and that General Schofield, the military governor, consented to their action.

The application for new buildings at the United States Naval Academy at Annapolis includes \$400,000 for a chapel. There are only about 266 naval cadets, and the sum provided for a chapel to accommodate this number of men is regarded as extravagant.

A new political party was organized in Kansas City last week at a meeting composed chiefly of men who have been affiliated with the various factions of the Populist movement. The platform adopted includes the leading Populist doctrines.

A new type of submarine boat, capable of cruising on the water under the waves, and crawling around on the bottom of the ocean, is now before the expert board of the Navy Department for consideration.

Foreign News.

Jean de Bloch, the Russian publicist, whose book on the futility of war between the great powers made a great stir in Europe two years ago, now offers the following prediction regarding China: "China will be a mighty world power within a generation. The allied invasion of the Chinese Empire has accomplished but one tangible and abiding thing. It has federated a great and patriotic people as indissolubly as did Bismarck the States of the German Empire, and awakened in them a sentiment of aggressive nationalism. Perhaps the new China will never menace the political Powers of the world, but it will certainly revolutionize international commercial conditions. I expect to see the day when Chinese traders will drive out of the Oriental markets all the nations now assuming exclusive rights there."

The building of underground railroads in London has been found in one or two instances to affect noticeably the foundations of lofty and heavy structures. It has been shown that the pinnacle of the Bow Church steeple in Cheapside is now twenty-three inches out of the perpendicular, and this, according to Archdeacon Sinclair, is owing to the excavations in connection with the building of the two-penny tube. This statement is being widely circulated through London, and many estimates are being made of the damage that might possibly be done to St. Paul's Cathedral by the proposed City-Piccadilly tube.

The Czar of Russia signalized the birth of his fourth daughter last week by issuing a ukase commuting the punishment of the riotous students. Some of them are exempted from further military service, and others are credited with their period of punishment as part of their regular military service.

Industry and Commerce.

Some of the leading life insurance companies are writing policies containing the following total abstinence clause: "By desire of the assured, this contract is placed in our total abstinence class, and if in force at the end of the accumulation period the dividend then apportioned will be determined by the

experience of the society on policies belonging to the said total abstinence class." It is an experiment to determine whether abstainers live longer than drinkers, other things being equal. The new policy is the result of a petition to the companies by Senator Frye and others, it is said.

The enormous wheat crop in Kansas and Oklahoma is bringing grain buyers of foreign countries to Kansas. They declare that there is little promise of a large wheat crop in France this year, and Kansas wheat is famous in France for good flour. The French importers will go to Oklahoma and will arrange for shipping by way of the Gulf of Mexico.

Glowing reports of Manitoba's spring wheat crop show that the crop will exceed 40,000,000 bushels. Some estimates go as high as 50,000,000. The growth is about two weeks further advanced than a year ago. The recent rains greatly improved it. Besides the Manitoba crop, the Canadian Northwest Territories will raise about 10,000,000 of wheat this year.

King Edward has announced his intention of following his mother's example in paying the income tax, the same as his subjects. Queen Victoria voluntarily paid the tax from the time it was established in 1842 until she died.

General News.

A London press dispatch says: "Sir Harry Hamilton Johnson, special commissioner for the Uganda Protectorate, has returned to London after an absence of two years. He brings stories of Uganda rivalling Henry M. Stanley's description of 'Darkest Africa.' Sir Harry relates that the country surrounding Moantalgon is totally depopulated as the result of inter-tribal wars, and is consequently marvelously stocked with big game as tame as English park deer. Zebras and antelopes can be approached to within ten yards. Elephants and rhinoceroses are also abundant, and according to Sir Harry, lions in Uganda are too busy eating hartebeeste to notice a passing caravan. The prehistoric giraffe has been discovered in this country by the commissioners, who propose to maintain the region referred to as a national park."

Lick Observatory sent a three-foot mirror, a Newtonian glass, to Professor J. A. Brashear, instrument and lens-maker of Allegheny, Pa., to be changed to a Cassegrain glass for work on the coming Southern expedition. Owing to the delicate task the observatory assumed all risk of breakage. While Professor Brashear was drilling a three-inch hole in the mirror, it broke into many pieces. He will go to work on a new one, but six weeks will be required after the glass is cast. The broken mirror weighed four hundred pounds and was worth three thousand dollars.

John D. Rockefeller, through President Schurman, has donated \$250,000 to Cornell University on condition that an equal amount be contributed by others. The \$500,000, when secured, will be used for providing additional accommodations for instruction and research.

The United States Minister to China, Edwin H. Conger, received the honorary degree of LL.D. from Tufts College on June 19. On the same day Brown University conferred the honorary degree of LL.D. on Lieutenant-General Nelson A. Miles.

President McKinley cannot attend the Harvard commencement exercises, and the custom of the college of conferring degrees only upon persons present will be adhered to. Thus the President will not receive an LL.D. from Harvard this year.

Major George W. Littlefield of Austin, Tex., is probably the largest individual landowner in the United States. His ranch and farm holdings in Texas and New Mexico aggregate about 1,250,000 acres.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Comets and Stars now Prominent.

Some Celestial Bodies that are Attracting Attention.

If, as the poet has written,—

No unregarded star
Contracts its light
Into so small a character
Removed far from our human sight,
But if we steadfast look,
We shall discern
In it, as in some holy book,
How men may heavenly knowledge learn,

it may be of interest to the reader to review some of the most recent observations which are occupying the attention of practical explorers of the heavens.

Astronomers of the southern hemisphere have been greatly interested in a comet, whose discovery was announced to the Harvard College observatory in the following astronomical cipher telegram: "Unmades Holk Queenstown turmeric usual Cape April hotbox amenidad corcomer zero catamount Gill." This strange medley, translated, is: "A very bright comet discovered by Holk at Queenstown, April 23, was observed at Cape Town by Gill, April 24." Within a few days it was independently discovered at the Harvard station at Arequipa, in a position southeast of that at the time of the first discovery. From two observations made on May 3 and 4 at the Cape of Good Hope, it was apparent that the comet was rapidly traveling north and would soon be visible in the northern hemisphere. At that time it is described as circular, about one minute in diameter and brighter than the third magnitude; its nucleus was well formed, and its tail more than two degrees in length. From an orbit of the comet computed from the three observations made at the Cape, it was found that its distance from the sun was about one fourth that of the earth from the sun; or, twenty-three million miles. On May 14, at the Lick observatory, the comet was for the first time observed in the northern hemisphere. It was then rapidly growing fainter, and is now practically invisible in all but the largest telescopes, and in them only under the most favorable conditions of cloudlessness. At Chamberlin observatory repeated attempts to find the comet, when at its brightest, were unsuccessful, owing to the clouds which obscured that portion of the sky.

The series of observations for determining the distance of the sun from the earth, by means of the asteroid Eros, is concluded; but it has become evident that this remarkable little planet presents other and entirely unexpected points of interest to astronomers. It has not only been indicated that it is well adapted to the investigation of certain properties of light, but recent observations have shown that the brightness of Eros is variable, changing through a range of one and a half magnitudes in about six hours. It has been suggested that this variability may be caused by Eros' rapid rotation and motion in its orbit, bringing into view portions of the surface which possess different powers of reflecting light.

Very recently a French astronomer has deduced from a series of observations a theory that Eros really has a satellite, whose diameter bears to that of the principal body the ratio of two to three, and that these two bodies successively occult each other as they revolve about their common centre of gravity in a small orbit, which is very little more eccentric than that of the moon, and whose plane passes through the earth. Astronomers have proved that, in order to account for the great fluctuation in the light of Eros, the components of the little system must be elongated in the line of their centres. On account of the motions of the earth and Eros, the position of the plane of the orbit will vary with reference to us, giving rise to changes in Eros' variability. In fact, recent observations made at the Harvard College observatory show that during the spring the range of variation in Eros' light has actually been diminishing, and has now become zero. Whether the periodic variations of brightness will recur is an interesting question to be answered only by further observation.

The new star in Perseus, which in the course of but a few days blazed forth from invisibility with brilliancy and splendor hardly rivaled in the heavens, has proved worthy of the attention of even the most distinguished students of celestial mysteries. Nova Persei, as this unannounced luminary is termed, was discovered early in the morning of February 22 by Dr. T. D. Anderson, an amateur astronomer of Edinburgh, Scotland, whose reputation as the discoverer of Nova Aurigæ and other variables is well established. The discovery was at once reported to the Scottish royal observatory, and a search the following evening revealed the celestial stranger in the position indicated by Dr. Anderson. Observers on the night of the 23d were surprised to find that it had shot up to a degree of brightness greater than that of Capella, and surpassed only by Sirius, the shining watch-dog of the Southern sky.

It is interesting to note that the star was independently, but tardily, discovered by several American observers, and within a few days the attention of the astronomical world was centred upon it. Not the least remarkable fact relating to the Nova is that photographic surveys of this region of the sky, made by Mr. Stanley Williams only twenty-eight hours before its discovery by Dr. Anderson, although registering stars of the 12th magnitude—i.e., stars two hundred and fifty times as faint as those just visible to the naked eye—showed no indication of the presence of the new star. Yet within three days its brilliancy probably having been multiplied by one hundred thousand, it was close to the Pole Star in brightness, and two days later demanded instant recognition as the most brilliant star in the northern hemisphere. It has since declined rapidly, but with marked fluctuations, of which the most noticeable was between March 25 and 26, when its brightness rose 1.3 magnitudes. It is now visible.

The color of the new star has also been subject to changes which may be connected with the accompanying variations of magnitude. At the time of discovery it was bluish white in color, but rapidly became tinged with yellow, deepening

into vivid orange with flashes of crimson. Nova Persei belongs to a small but curious class of celestial objects, the first of which was recorded by Pliny as early as 134 B.C.; to this class also belong the wonderful star of Tycho Brahe in 1572 and Anderson's Nova Aurigæ in 1892. While the new star of 1901 did not attain the splendor of Tycho's star, it easily takes rank as the brightest of its character observed in the last three centuries; and, unlike similar stars, experienced its enormous increase in brightness after its discovery.

Naturally, the question arises, what has caused this singular intrusion among the fixed stars of the heavens? Doubtless the Nova, which can by no means be considered a really new star, previously existed as a dark or faintly luminous body, which through some unknown agency has flashed up in transitory splendor and rapidly died away. So verily, little star, you have left us, "wondering what you are." Whether its increased brilliancy may have been the visible result of some internal disturbance in the star itself, or the after-effect of a collision of meteoric swarms of different densities, we cannot say. A very probable explanation of the phenomenon might be that the invisible star dashing into some of the masses of gaseous matter which are so numerous in the region of the Milky Way, has augmented its light because of the great heat so generated.

In the *Denver Republican*.

Government Plans for Silk Raising.

"I SHALL ask Congress to give me ten thousand dollars for the purpose of making experiments in the raising of silkworms and the production of raw silk," said Secretary of Agriculture Wilson the other day. "Last year we imported more than forty-five million dollars worth of raw silk, which, according to my notion, might just as well have been produced in this country. Some day, perhaps, we may produce all the silk we require for our own uses, but first it is necessary that we shall learn something more about the business than we know at present.

"Silk culture is not, and never has been, an exceedingly remunerative business, but it adds vast wealth to the nations engaged in it, for the simple reason that it can be pursued by the humblest and poorest, requiring only small outlay. There are hundreds of thousands of families in the United States to-day which would be glad to add a few dollars to their annual income by giving light and easy employment for a few months each year to the more aged, to the young, and especially to the women of the family, who may have no other means of employing their time profitably. This holds true especially of the people of the Southern States, which are pre-eminently adapted to silk culture. The girls of the farm, who devote a little time each year to the raising of cocoons, may not earn as much as their brothers in the field, but they may earn something, and that something represents an increase of income.

"The raising of a few pounds of cocoons each year does not materially interfere with the household and other duties that now engage the time of the farm girls, and it is by each household raising a few pounds of cocoons that silk culture must be carried on in this country, as it has always been in other countries. In France, I am told, cocoons are regularly produced by more than one hundred and fifty thousand families.

"Raw silk is a product of the cheapest labor in foreign countries, it is true; but no country has cheaper labor than we have available in the southern states, and there is no reason why the people in that section should not turn their attention to picking mulberry leaves and feeding silkworms. Meanwhile, the more intelligent might learn

how to reel the silk. All such business could be attended to in April and May, when there is no cotton-picking. Children who are unable to do heavy field work could be employed at such labor, thus making some earnings and acquiring habits of industry.

"Experiments in this direction have been made by the government before, and unsuccessfully, but exactly the same thing may be said of tea-raising, which, after a previous failure, is now prospering. We are demonstrating that tea can be grown profitably in the South, the leaves being gathered by children whose parents are delighted with the addition made by these earnings to the family income. This class of labor can be employed to pick mulberry leaves and feed silkworms. High ability to direct the work and cheap labor to execute it afford a combination that ought to make the production of silk a success in the United States.

"There are people out in Utah at the present time who are raising silkworms from year to year, growing mulberry leaves for their food, and actually producing silk and weaving it into cloths for family use. It would be a simple matter to employ some of these experienced persons as teachers of the art in the southern states. At first, as a matter of course, we should need some protection for the infant industry, and Congress ought to put a suitable import duty on foreign raw silk, in order that our own producers might have a fair chance. Then, when we have made a success of the business, the tariff might be taken off."

The experts at the Department of Agriculture say that a great advantage enjoyed by people in the Southern States with regard to raising silkworms is the inexhaustible supply of leaves of the osage orange, which is furnished by thousands of miles of hedges of that plant. Americans are superior in average intelligence to Europeans, as well as in ingenuity, and will be quick to improve on old-world methods. Besides, in this country the barns and outhouses are more spacious and commodious, affording better accommodation for the industry. As for the osage orange, its leaves have been found to be as good food for silkworms as mulberry leaves, and the silk produced on this diet is of the finest quality. The two species of mulberry, native to the United States, the "red" and the "small-leaved," are neither of them suitable for silkworms, but foreign varieties have been imported, and grow well on this side of the water.

The silkworm, as everybody knows, is the larva of a moth. There are several species, which spin silk of different qualities, none of which, however, unites strength and fineness so admirably as the variety which has been under cultivation for centuries. Naturally, the utmost efforts have been made to improve the silk-producing qualities of the insect by selecting the most capable specimens from generation to generation, and thus it is found that, as compared with its wild relations, the cultivated species constructs a cocoon vastly disproportionate to the size of the worm that makes it or of the moth that issues from it. Other peculiarities, appearing accidentally, have been perpetuated by breeding, and now there are nearly as many "races" of the silkworm as of the dog. In fact, the silkworm is a true domesticated animal, and it has even lost the power of flight (when in the moth stage), while showing no desire to escape from confinement so long as it is kept supplied with leaves.

The eggs of the silkworm are nearly spherical and about the size of turnip seeds. Each female produces on an average from three hundred to four hundred of them, about twenty thousand making an ounce in weight. When the infant worm has gnawed its way out (a slight clicking

sound being heard a short time in advance), it proceeds to develop a wonderful appetite, consuming its own weight of leaves every day while growing. As soon as the insect has attained full growth, it becomes restless, stops feeding, and throws out silken threads. The silk is formed in a fluid condition, and issues from the body of the worm in a glutinous state—apparently in a single thread. Out of this silk the animal constructs its cocoon, from three to five days being consumed in the process, and shuts itself up inside the dainty box, from which it expects to emerge in due time as a moth.

When the moth is ready to come out, having passed through the chrysalis stage to accomplish the transformation, it moistens the end of the cocoon with a liquid secretion and pushes its way through the silken envelope. This process is liable to break some of the silken strands, and hence the plan adopted by growers is to steam the cocoons until the inclosed insects are presumably dead. Then, whenever convenient, the silk may be wound off. The outer silk, known as "floss," is used for carding, being loose of texture; but the inner cocoon is tough, strong, compact, and composed of a continuous thread, which is not wound in concentric circles, but irregularly in short figure of eight loops.

A room in which silkworms are reared ought to be well ventilated and warm in winter. If only a few of the insects are to be reared, all operations can be performed in trays on tables, but if the work is conducted on any considerable scale, there should be an arrangement of deep and numerous shelves ranging one above another from floor to ceiling. Before being used, the shelves should be covered with strong brown paper. The eggs, when about to hatch, are spread out on clean paper thinly, and over them are laid small pieces of ordinary mosquito netting, over which are scattered a few finely cut leaves. The new-born worms at once pass through the meshes of the net in search of food, and the whole can then be easily removed to the place where they are to pass the first stage of their existence.

Food should be furnished as fast as it is eaten by the worms, and special care is to be taken to guard against ants and other predatory insects, which attack the silk-makers. Precautions must also be adopted against rats and mice, which are always eager to get at the silkworms.

When at length the worms begin to lose appetite and throw out silk, it is time for the grower to construct little arches of twigs between the shelves for the spinning of the cocoons. When this has been done the worms promptly mount into the branches and begin to spin. Care has to be taken to prevent any two or three of them from making a double or triple cocoon, which would be unfit for weaving. Eight days later the cocoons may be gathered, the loose or floss silk removed from the firm inner pods, and the latter sorted. The very best of the cocoons are picked out to provide living moths for egg-laying for the next year.

Special Correspondent for the *Boston Herald*.

When we gain a victory, moral or mental, when we subdue a passion or achieve a thought, let the conquest be decisive. Let the question be settled, the idea mastered, the doubt decided forever. Let there be no fear of future difficulty. If the serpent lie across our path and we must kill it to pass, let the blow be struck straight and strong; let us lift the body and see that it be really dead, lest when we pass this way again to-morrow it may lift its foul head, and hiss and frighten us from the pathway out among thorns and briars, wandering from our way, torn and tired with our struggles, ashamed of the wretched shiftlessness which is only a specimen of our moral and mental lives.—PHILLIPS BROOKS.

Selected Articles.

Regarding Life Insurance.

OWING to a report that certain life insurance companies are discussing the advisability of discriminating against Christian Scientists, the *Chicago Daily News* recently interviewed the local insurance men as to their personal views on the question. We make the following extracts from the published report of the investigation.

J. W. Jackson, general manager of the Home Life Insurance Company, said:—

"This company has taken no step in regard to the question. We proceed on the theory that self-preservation is the first and most powerful law of nature, and we believe that if a man has the sense to get his life insured he certainly has enough sense to take care of his life. It is a self-evident proposition that people generally have such an interest in their own lives as will induce them to adopt the most effective measures for their own preservation, and I think the life insurance business may be safely conducted on that theory."

J. D. James, general agent of the Prudential Insurance Company, said:—

"I am not a Christian Scientist, but I have been brought up against so many physical demonstrations of its workings in the cases of relatives and personal friends that I have the highest respect for the belief, and I will say that I will write a Christian Scientist every time I get a chance. Instead of being bad risks, they are good risks, if for no other reason than that their habits are correct. I have never seen a follower of the belief who had any vicious habits. I have never seen one who used tobacco or liquor. Of course, the life insurance companies will consider this question purely as one of business.

"The objection to writing such persons is based on the assumption that by refusing medical aid they hazard their chances of living out the natural span of life, and that the death rate is greater among them than among those who use medicine. The result of my own observation is precisely the contrary. Some of my relatives and several of my friends who have been given up to die by the doctors—some of them years ago—are to-day sound and well as the result of Christian Science treatment. I have seen the changes in them myself, and I tell you it was marvelous.

"One man I know who for years was a hopeless cripple, suffering from curvature of the spine. He had not walked for years, and had been treated by the best doctors in the country. Finally, when the doctors told him that he would not live three months longer, as an eleventh-hour resort, he tried Christian Science. He was completely healed in a remarkably short time, and is to-day alive and well. I know of a number of cases similar to that one. In fact, I have never known of a failure to heal on the part of the Scientists with whom I am acquainted."

Archibald McLellan, a Christian Scientist, said:—

"This is simply a question of business for the life insurance companies, I should say, and one over which Christian Scientists are not worrying. It will be settled by those concerns, it is safe to say, as they determine all other methods of business policy, after investigation and with full knowledge of the facts. They will find upon investigation that Christian Science prolongs life, instead of shortening it. A good many of their policies would have been cashed long ago if it had not been for Science. I know of one case in point where a man was given up by his physicians fourteen years ago to die. He was treated by a Scientist and healed, and as a result his insurance has not been paid yet. He is alive and hearty to-day. From time to time we see reports in the newspapers of the deaths of persons under Christian Science treatment, and in the greater part of these cases investigation will show that

Christian Science was not employed at all. All sorts of quackery and charlatanry are labeled Christian Science. It is no doubt due to such cases as these that this inquiry has been aroused among the life insurance companies."

Healed by Christian Science.

A ROCKFORD friend of Mr. Arthur Chapman, formerly of the *Register-Gazette*, now Sunday editor of the *Denver Republican*, has received a letter regarding a recent severe illness and its influence on his religious belief, with permission to read it to friends here. The following is the portion of the letter bearing on that subject.

"I suppose you know that I had a serious attack of typhoid fever awhile ago. I worked at the office until I could hardly drag one foot after the other, thinking I merely had a touch of grip and could shake it off by will power, which I then mistook for Christian Science. Consequently, when I finally gave up I was a physical wreck and simply collapsed all at once. I went down to one hundred pounds, a loss of thirty-five pounds from my normal weight.

"You know I had been in sympathy with Christian Science for a long time, but I was not what you would call a Scientist, as I knew little or nothing about it, and was sceptical on many points. When I was asked which I would have, however, I chose Science in preference to the doctor, and I firmly believe that I owe my life to that choice. It took me quite a while in my sickness to undergo a spiritual change, though the physical improvement under treatment was rapid.

"The Second Reader of the Science Church here brought me to a realization of everything, however. He made a couple of calls, mere friendly visits he termed them, as he was not my regular healer, but at the second visit he completely cured a bad lung, from which I had been coughing for weeks. I had not been able to breathe well, on account of that lung, and it was the greatest fear I had. The cure was instantaneous and complete, and my lungs are perfectly sound now.

"The typhoid fever was overcome in a hardly less remarkable way, as I was at work in six weeks from the time I was taken sick, feeling strong enough to climb three flights of stairs and write editorials all day. Now I feel better than I have in years, and am putting on flesh at a rate that astonishes even the folks who see me every day, and who consequently would not be supposed to note any change. I eat everything, and have done so since about the third week of my illness, which I think is something remarkable for a typhoid fever patient. Anyway, the folks next door, who had to nurse their son through weeks and weeks of illness, and then saw him hobble about like a cripple for weeks afterward, are simply amazed at my progress. They prophesied all sorts of dire things on account of my rashness, but nothing has happened yet, and I am feeling better every day.

"Naturally, I feel grateful to Christian Science, and, as we are all in harmony on the subject, you can imagine that there is a pretty happy family out here. We also feel grateful to you for having first interested Lillian in the subject and, through her, having brought the rest of us into the fold. Mrs. Eddy's book, in its illumination of the Bible, is making me see what a mistaken individual I was to take up with agnosticism and infidelity and to scoff at what I did not understand. The mere cure of my physical ailments I regard as nothing compared to the new view of life which is opening to me through this religion of combined beauty and common sense.

"I have found that when Science comes in one way, selfishness, malice, hatred, and all their kindred evils fly out the other. For instance, my first act on getting back to work was to shake hands with a fellow employe with whom

I had not spoken for weeks. I simply could not help doing so, as I felt at peace with all the world, and he was part of that world. I do not know of any more enemies, but if I find them I will be glad to proffer my hand as to a brother. In this way all the discords of human life must fly before harmony, when harmony has been rightly understood by the individual mind. All petty annoyances must do likewise, and I believe Christian Science will benefit a man in business and financially, as it will enable him to grasp only the larger and more important things and let the trifles go where they belong, into nothingness."

Rockford (Ill.) Daily Register-Gazette.

Upholds Christian Science.

To the Editor:—In your issue of May 15 you print a dispatch from New York briefly outlining a series of attacks on Christian Science at a meeting of Methodist ministers. The basis of a good deal of this opposition seems to be the large number of women who are being healed by and converted to Christian Science—"ignorant persons—more especially women," says Professor Weir. Christian Scientists gladly acknowledge the preponderance of women in their congregations, and would ask our Methodist brothers where the grand old Methodist Church would be to-day without the moral, spiritual, and financial support of its good women. It comes with very bad grace from the lips of any divine to decry a religion on the ground that it appeals to the pure thought of woman.

While admitting that women do form a majority of our congregations, we boldly state that at no meetings of any of the so-called Orthodox churches can be found so large a proportion of men. Do not take my word for it. Go to the next Christian Science meeting that you can find opportunity to attend and verify my statement with a casual glance, or by actual count. At Sunday services or at Wednesday evening testimonial meetings you will find that an average of thirty-five per cent of the attendants are men.

A few other statements simply cancel themselves like plus and minus quantities in an equation. In one breath we are characterized as "ignorant persons—mostly women," and in another the movement is called "intellectualism gone mad." Here is a transformation accredited to us which surpasses many physical wonders—ignorance gone intellectually mad.

Again, "Science and Health with Key to the Scriptures" is criticised because of its frequent revisions. In none of these revisions has the basis of reasoning been changed, or the principle thereof been altered. Mrs. Eddy, although the Founder of a religious movement unparalleled in history, thus meekly alludes to herself and her work on page ix of the preface to Science and Health:—

"To-day, though rejoicing in some progress, she finds herself still a willing disciple at the heavenly gate, waiting for the Mind of Christ."

While there have been numerous changes in the wording of the book, persistent efforts to state spiritual truths clearly to a material age, there has been no alteration of the fundamental statement on which this church was founded thirty-five years ago: viz., the absolute allness and omnipotence of God.

Christian Science comes as an angel of mercy, bearing healing on its wings, and no amount of misrepresentation can shake the loyalty of those whom it has saved physically, morally, and spiritually, nor frighten away the hungry ones of earth who have wearied of the empty husks of a postponed salvation, to be realized after death.

ARCHIBALD McLELLAN.

The Lectures.

At Chillicothe, Ill.

An attentive, and at the end a well-pleased audience listened to the lecture (on Christian Science) given by Dr. Silas J. Sawyer at Kelly's Hall Friday evening (May 31).

Mr. I. T. Kahn introduced the speaker in these words:—

"Only a few years ago, had you asked me whether or not I believed in God, I could only have said no. I saw the purest of persons lying in pain, confirmed invalids. I saw the aspiring youth cut down in the very prime of life; children deformed from the day of their birth; I saw the little infant, pure as the driven snow, torn from its mother's breast; all this charged to the one we were asked to adore as God.

"It was no wonder that I could not consent to believe that a being, at whose doors such accusations could be laid, was God. When God was revealed to me through the study of Christian Science, and I found that He was Love, not hate; that He was Good, and not the author of sin, sickness, and death, it took no effort on my part, not only to believe, but to know God, and abide with Him in spirit and truth.

"The freedom, happiness, and spiritual uplifting which come with this Christ knowledge, and of which I have been made a partaker, makes me feel grateful for your presence here to-night; for to me it foretells that happy day when all shall be of one Mind, and that, the Mind of Christ.

"I am sure that in the bottom of your hearts, each one of you is a true reformer; that is, you are looking for the betterment of mankind; and, my friends, I would implore you to lay aside any prejudice you may possibly have held in the past, and in this way prepare yourselves to hear what the lecturer has to say.

"He comes to us as a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass. I now have the pleasure of introducing to you Mr. Silas J. Sawyer, C.S.D."

Chillicothe Enquirer.

At Bridgeport, Conn.

A large number of Christian Scientists and those who are interested in that faith gathered at the Park City Theatre last evening (Tuesday, June 11) to hear an address by the Hon. William G. Ewing of Chicago. The address was given under the auspices of First Church of Christ, Scientist, of this city.

The body of the house was well filled. Attorney Daniel Davenport presided. He said in introducing the speaker:

"It gives me pleasure to participate in any exercises in which the Christian religion has a part. We know what that religion has done for the world. It affords me especial gratification on this occasion to address an audience composed of intelligent, cultured, and educated people, gathered to hear this speaker on the subject of Christian Science.

"I trust that I approach this subject with the same tolerance that I accord any other branch of the Christian religion. They (the Christian Scientists) have the same old faith as others: the belief in the God of Abraham, Isaac, and Jacob; the belief in the same Saviour, the belief in the same Creator, though I am convinced that they do not have the same fear of Him that we had in our childhood.

"I listened to this gentleman thirteen years ago, when he was speaking on political issues, and now, when his theme is one of much higher import, I believe we shall find profit in listening to him. It gives me much pleasure to introduce Judge William G. Ewing of Chicago."

Morning Telegram-Union.

Poem.

[Translated from a German book written more than two hundred years ago.]

God's spirit falls on me
As dew drops on a rose,
If I but, like a rose,
My heart to Him unclose.

The soul wherein God dwells—
What church can holier be?—
Becomes a walking tent
Of heavenly majesty.

Lo! in the silent night
A child to God is born,
And all is brought again
That e'er was lost or lorn.

Could but thy soul, O man,
Become a silent night,
God would be born in thee,
And set all things aright.

In all eternity no tone
Can be so sweet
As where man's heart with God
In unison doth beat.

Whate'er thou lovest, man,
That, too, become thou must;
God, if thou lovest God,
Dust, if thou lovest dust.

Ah! would the heart be but
A manger for the birth,
God would then once more
Become a child of earth.

Notices.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

If there be Better—and the dream of it,
The longing for it, shows that there must be—
It is not in ourselves; it is the God
Beyond, whom our souls seek; the search is prayer.
More life we ask of Him who is the Life.

LUCY LARCOM.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Communion Service.

ACCORDING to announcement, the annual Communion service of the Mother Church was observed Sunday, June 23. Notwithstanding the fact that the *Sentinel* of the week before contained the announcement that the service would be held on July 7, the attendance was as large as on any previous occasion, the estimate being that there were not less than eight thousand at the four services. Doubtless there would have been a much larger attendance but for the change of notice and the shortness of the time.

It was announced originally that there would be three services held, one beginning at 9 A.M., another at 12 M., another at 3 P.M. It soon became apparent, however, that these three services would not suffice to accommodate all who desired to attend. Therefore, at the noon service it was announced that there would be another service held at 7 P.M.

At the first three services the auditorium was filled to its utmost capacity, and at the last service, at seven o'clock, there were perhaps two hundred persons standing.

After the organ voluntary, hymn 166 of the Christian Science Hymnal was sung by the congregation, which was followed by a Scripture lesson selected from the 2nd, 21st, and 22nd chapters of Revelation; the verses selected reading consecutively as follows:—

Chapter 2 : 17: "He that hath an ear, let him hear what the Spirit saith unto the churches; To him that overcometh will I give to eat of the hidden manna, and will give him a white stone, and in the stone a new name written, which no man knoweth saving he that receiveth it."

Chapter 21 : 1-7, 10, 11, 22-27: "And I saw a new heaven and a new earth: for the first heaven and the first earth were passed away; and there was no more sea. And I John saw the holy city, new Jerusalem, coming down from God out of heaven, prepared as a bride adorned for her husband. And I heard a great voice out of heaven saying, Behold, the tabernacle of God is with men, and he will dwell with them, and they shall be his people, and God himself shall be with them, and be their God. And God shall wipe away all tears from their eyes; and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away. And he that sat upon the throne said, Behold, I make all things new. And he said unto me, Write: for these words are true and faithful. And he said unto me, It is done. I am Alpha and Omega, the beginning and the end. I will give unto him that is athirst of the fountain of the water of life freely. He that overcometh shall inherit all things; and I will be his God, and he shall be my son. . . . And he carried me away in the spirit to a great and high mountain, and shewed me that great city, the holy Jerusalem, descending out of heaven from God, having the glory of God: and her light was like unto a stone most precious, even like a jasper stone, clear as crystal. . . . And I saw no temple therein: for the Lord God Almighty and the Lamb are the temple of it. And the city had no need of the sun, neither of the moon, to shine in it: for the glory of God did lighten it, and the

Lamb is the light thereof. And the nations of them which are saved shall walk in the light of it: and the kings of the earth do bring their glory and honor into it. And the gates of it shall not be shut at all by day: for there shall be no night there. And they shall bring the glory and honor of the nations into it. And there shall in no wise enter into it anything that defileth, neither whatsoever worketh abomination, or maketh a lie: but they which are written in the Lamb's book of life."

Chapter 22 : 16, 17: "I Jesus have sent mine angel to testify unto you these things in the churches. I am the root and the offspring of David, and the bright and morning star. And the Spirit and the bride say, Come. And let him that heareth say, Come. And let him that is athirst come. And whosoever will, let him take the water of life freely."

This was followed by the usual prayer. The Communion Hymn, No. 178, by the Rev. Mary Baker G. Eddy, was then sung by the congregation. The First Reader gave the necessary notices and also stated that there had been admitted to membership in the Mother Church, at the June meeting of this year, 2,496 new members, the largest ever admitted at any one time, making the total present church membership 21,631. The church tenets were then read. Following a solo sung by Miss Whittier, Mr. John W. Reeder, First Reader of the Roxbury branch, read the Rev. Mary Baker G. Eddy's message to the Church the reading of which occupied upwards of an hour and a half. At the conclusion of the reading of the message the First Reader extended an invitation to all present, whether communicants of the Mother Church or not, to bow in silent communion, after which the Doxology, prepared by the Rev. Mary Baker G. Eddy, was sung, which is as follows:—

Be thou, O God, exalted high;
And as Thy glory fills the sky,
So let it be on earth displayed,
Till Thou art here and now obeyed.

The meeting closed by the usual reading of the Scientific Statement of Being and the correlative passages from 1st John 3rd, and the benediction.

The above constituted the order of services held at nine and twelve o'clock. At the three and seven o'clock service, after the reading of our Leader's message, the First Reader stated that it was his privilege and pleasure to read to the congregation an acknowledgment of this grand message, and to present it for their approval or otherwise. It was then read, and the First Reader requested all who approved it to express their assent by rising. The congregation arose *en masse*, thus spontaneously and unanimously showing their approval of the deep expression of love and gratitude contained in the letter of acknowledgment.

The letter is as follows:—

Beloved Leader and Mother:—Deeply impressed with the strong, true, living, and loving words of your message which has been read at our Annual Communion service to-day, we beg to express, though most inadequately, our sense of gratitude and thankfulness.

We are sure that in its comprehensiveness and completeness, and its opportune definition and declaration of Christian Science, you have never spoken to us and to the world more convincingly and effectually.

We are profoundly moved by its appeal, and its disclosure to us of the contrast between the true ideal and our present achievements begets the deepest humility in all our hearts.

Your steadfast, unflinching loyalty to the supreme aspirations and ends of Christian Science, your unflinching spirit of self-sacrifice and Mother-love for every child, however wayward and unworthy, your insistent adherence to wisdom and truth in every hour and every exigency, these touch and quicken us to a degree we cannot express.

We are impelled by your words to the manifestation of a higher, more genuine, more consistent, more loving life, and we thank you for holding us thus steadily and firmly to the spiritual significance and purpose of our high calling; and it is our sincere desire, our earnest prayer, that as never before we may evince in the days to come, our love to God, our loyalty to the supreme demands of Christian Science, and our unfeigned affection for you, by living more unselfish, more spiritual, more transparently pure and loving Christian lives; for we know that thus and thus alone we may prove worthy your untiring devotion in our behalf, and of the inheritance, in Jesus Christ, which through your unique and loving constancy has been committed to us.

To the Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

In behalf of the members of the Mother Church. Edward P. Bates, Boston; Edward A. Kimball, Chicago, Ill.; Septimus J. Hanna, Boston; Dunmore, London; John B. Willis, Allston; William P. McKenzie, Cambridge; Mrs. Caroline V. Ferguson, Florence, Italy; Irving C. Tomlinson, Concord, N. H.; Mrs. Sue H. Mims, Atlanta, Ga.; Mrs. Ruth B. Ewing, Chicago, Ill.; Mrs. Marjorie Colles, Ireland; Mrs. Sara Pike Conger, Pekin, China; Miss Helen L. Swasey, Washington, D. C.; Mrs. Annie M. Knott, Detroit, Mich.; Mrs. Augusta E. Stetson, New York; Mrs. Laura Lathrop, New York; Miss Sue Ella Bradshaw, San Francisco, Cal.; Mrs. Rose E. Cochran, Edinburgh, Scot.; Ormond Higman, Ottawa, Ont.; Mlle. Alphonsine Demarez, Paris, France, committee."

This letter so fully and beautifully refers to the message that there seems nothing further left to be said of it. It will be duly published in pamphlet form for the benefit of all interested.

The following account of these services, published in the *Boston Herald* of Monday, June 24, is so full and correct that its republication is hereby made with great pleasure. The other Boston papers also contained full accounts of the services. The *Herald* published our Leader's address in full. Following is the *Herald's* account of the services:—

The temple of Christian Science, the "Mother Church" of all that now dot the four quarters of this land and lands across the sea, was thronged yesterday with four great congregations of worshipers from far and near who came to attend the annual Communion and to listen reverently to the message of the Founder of the denomination and the exponent of its doctrine, the Rev. Mary Baker G. Eddy.

Morning, afternoon, and evening saw the spacious and beautiful First Church of Christ, Scientist, at Falmouth and Norway Streets, filled to the doors with devotees of Christian Science from many lands. There were titled personages present from European countries, as well as persons of humbler social rank from across the seas, and Americans from almost every state in the Union. It is estimated that eight thousand persons attended one or the other of the four services.

The special feature of the simple services was the message from the pastor emeritus and Founder of the church. In this message Mrs. Eddy made an exhaustive review of the history of Christian Science, undertaking to explain the principles of the belief, notably in several respects where it has been assailed from certain quarters by critics regarded as more or less hostile.

By some, the address was taken as a final word from her on the matter—at least one that should cover some time—and, so far as critics were concerned, she said, in the course of her message, that Christian Scientists, after all, were too busy carrying on the work they found to do to permit of interruptions from the critics. Her message was regarded, however, as something considerably more than

an answer to critics in that, for the greater part of the discourse, she made no reference, directly or indirectly, to criticism, but simply told what Christian Science is and what it is not, according to her teachings.

Among the things which she said Christian Science is not, are mesmerism, hypnotism, and various other "isms," of a more or less easily defined nature. She insisted upon its resulting in health, happiness, and immortality, and the exclusion of sin and error in mind and body.

An important feature of the Communion was the reading, at the close of the afternoon and evening services, of a memorial of thanks and loyalty, to be sent Mrs. Eddy. It was signed by a number of persons prominent in the faith in this and other countries, and, after being read to the members gathered in the church, it was approved by a rising vote.

The reading of the message occupied an hour and a half; but, so great was the interest on the part not only of the members of the church, but of those present who were not Christian Scientists, that only in a few instances did any one leave before the conclusion, although many stood during the entire service, which lasted a little over two hours.

The "Mother's room," a beautiful apartment fitted up by the children of the church as a testimonial of affection to Mrs. Eddy, was, as usual, visited by large numbers after each service.

The church was filled with the fragrance of flowers and green plants. In the corners and niches of the stairway they met the eye on every side, and the pulpit and raised platform were banked high with hydrangeas, rhododendrons, and graceful ferns. The worshipers were clad quite in harmony with the scene, the light summer costumes of the women giving it an added charm.

The services began, as announced, at 9 A.M., at noon, and at 3 P.M., but so many were there who could not gain admittance at these hours that an evening service was held, in addition to those announced. Long before the hour set for beginning the morning service, the edifice was filled and hundreds were gathered in the vestry below, where they waited through the morning service so they might not be too late for the noon meeting. Well it was that they did, for, as long as an hour before noon a crowd had gathered, extending far out into the streets approaching the church entrances. None were admitted to the auditorium, however, until every one who had attended the preceding service had left the building. Then the ushers admitted all who could be accommodated either with seats or with standing room on the floor or in the galleries.

At each of the four services it is estimated that about two thousand persons were present; and, as it is inferred that not many attended more than one service—the general understanding being that all the room available was needed—about eight thousand persons may be assumed to have participated in the Communion.

For some reason not announced definitely the annual Communion of the church this year had been postponed from its regular day, the second Sunday in June, to yesterday, and on that account, many of those who had come from a distance could not remain, but returned to their homes some days ago. Despite this fact, the attendance was as great as at any previous annual Communion of the Mother Church.

Among those present were: From London, T. von Hoderberg, the Earl and Countess of Dunmore, Lady Victoria Murray, Lady Mildred Murray, Mr. and Mrs. William N. Miller, K. C.; Miss Gertrude Cowper, Mrs. Maude P. Miller, Miss Ada Lawrence, and Fletcher L. Williams; from Manchester, Eng., Miss Elizabeth B. Potts.

From Scotland there were Lady Ramsay, wife of Sir James Ramsay, and the Misses Lilius and Mary Ramsay of Bamff; Mr. and Mrs. Richmond I. Cochrane of Glasgow; Mrs. Eva McNair, Miss Maggie Thomson, and Mrs. Pel-

ham Cochrane of Edinburgh; Mrs. Marjorie Colles of Mt. Eagle, Ire. Mille. Alphonsine Demarez of Paris, and Mrs. W. T. James of Paget, Bermuda, were also present.

Among the Canadians present were Mr. and Mrs. Milton Austin of Winnipeg, Man.; Mr. and Mrs. Ormond Higman, Miss Madge Higman, Andrew Masson, Mrs. Wilson, Mrs. M. Biggs, and Miss Welch of Ottawa; James Sheridan and Mrs. Sadie Sheridan of Gananoque, Ont.; Mrs. S. U. Williams of Berlin, Ont.; Mr. and Mrs. C. E. Wilson of Hamilton, Ont.; Mrs. Edna Robb of London, Ont.; R. Moden and Mrs. Nellie Longhed of Toronto.

Notable among the Americans present was Mrs. Sara Pike Conger, wife of the American minister to China.

The services were conducted by Judge Septimus J. Hanna, the regular First Reader of the Mother Church. On the platform were Mrs. Eldora O. Gragg, the Second Reader, and John W. Reeder, who delivered Mrs. Eddy's address. Mr. Reeder is the First Reader at the Roxbury Church of the denomination. The special music and singing were in charge of Stephen Townsend, as precentor.

After the voluntary, Guilman's sixth sonata, by the organist of the church, Albert F. Conant, selections were read by Judge Hanna from Revelations. Then came silent prayer, followed by the audible repetition of the Lord's Prayer and its spiritual interpretation according to the Christian Science text-book. The congregation then sang together the Communion hymn, the words of which were written by Mrs. Eddy.

The offertory was Guilman's "Pastorale," after which a solo, "Be of Good Comfort," by Cowen, was given by Miss Harriet Whittier, the regular soprano at the church.

Incidents of the First Members' Meeting.

THE semi-annual meeting of the First Members of the Mother Church was held at the usual time. One of the pleasant incidents thereof was the following letter to the Rev. Mary Baker G. Eddy:—

Boston, Mass., June 22, 1901.

Beloved Leader, Teacher, and Mother:—The First Members of The First Church of Christ, Scientist, assembled at their Annual Meeting, desire, as their first order of business, to send to you a message of greeting and love. Acknowledging God and the supremacy of His individual government in the affairs of mankind; declaring our adherence to the teachings of the Bible and our acceptance of the divine Christ; we recognize how God has been made known through the revelation of Christian Science and by your own ministry in this age; and that your fidelity to Truth and faithful continuance in well-doing, have made it possible for us to become the beneficiaries of Christian Science.

We rejoice in the growing recognition on the part of the world of this ministry; of the beauty of the Gospel of Christian Science, and of its power to elevate mankind, heal disease, and reconcile man to the abandonment of sin.

We are grateful for the example shown us in your demonstrations of Christian Science, and that its whole aim and object is to save and liberate mankind and not to condemn.

We are grateful to find from your example and ministry that nothing short of the redemption of the world can be our ideal in our Christian endeavors.

We feel that congratulation may be expressed in view of the sturdy, honest, and genuine growth of the Cause, and we rejoice in the revival and progress in this and other lands of primitive Christianity with its healing from sickness and sin.

At this hour we wish humbly to declare our earnest desire and purpose to achieve and maintain in our lives

and bearing towards others that high ideal of Christian character which appeals to us in Christian Science; and we shall strive to seek, in all things and at all times, to follow the footsteps of Jesus Christ, the great Wayshower.

DUNMORE, *Chairman.*

Another pleasing incident was the following resolution expressive of appreciation of the Earl of Dunmore's good work in presenting to the King of England resolutions of the Mother Church relating to the lamented death of Queen Victoria:—

Whereas, The First Church of Christ, Scientist, in Boston, Mass., at a meeting called for that purpose, January 31, 1901, unanimously passed resolutions embodying a letter from the Rev. Mary Baker G. Eddy, expressing the deep sorrow and sympathy of the Christian Scientists on the occasion of the deeply lamented death of Her Majesty Queen Victoria; and,

Whereas, a copy of said resolutions was duly engrossed and transmitted to the Right Honorable, the Earl of Dunmore, to be by him presented to His Majesty King Edward VII.; and,

Whereas, Lord Dunmore kindly made known to His Majesty, King Edward VII., that the said resolutions were in his hands, and in response thereto was informed that His Majesty was graciously pleased to receive the same, expressing at the same time his high appreciation thereof; and,

Whereas, afterward due official acknowledgment of the receipt of said resolutions was made by His Majesty the King through the Foreign Office of Great Britain, signed by the Marquis of Lansdowne, Secretary of State for Foreign Affairs, which acknowledgment is couched in most gracious terms,

Therefore, be it resolved by the First Members of the Mother Church, in Annual Meeting assembled,

That, on behalf of our beloved and revered Leader, the Rev. Mary Baker G. Eddy, and of the entire body of Christian Scientists whose desires were so efficiently carried out, we hereby express to His Lordship, the Earl of Dunmore, our deep appreciation of his kindly offices, and extend to him our sincere congratulations upon the marked success which attended his endeavors.

The Test of Character.

THERE is no better test of character than the estimate in which one is held in his own neighborhood, city, or state, among his immediate friends and associates. They have means and opportunities of knowing and measuring one's worth, or lack of worth, not possessed by others.

It is certain, therefore, that he who stands well with his neighbors,—with those who know him best,—be he humble and obscure or great and distinguished, is worthy the respect and confidence of all others, and in due measure will have it.

We who know intimately the facts and circumstances surrounding the private life and character of the Rev. Mary Baker G. Eddy, are glad to have that life and character gauged by this test, as well as by that of her world-wide career as a religious evangelist, and the faithful servant of God in establishing a system of healing Truth for the benefit of her fellow-beings.

As one among many evidences of the esteem for Mrs. Eddy by her home citizens, we mention the fact that the local press of the city wherein she resides, have only words of kindness and respect for her and her life of Christian devoutness. If occasionally a person, impelled by misapprehension or by malice, seeks to publish an attack upon Mrs. Eddy or upon Christian Science, they are quietly but firmly told by the publishers that their columns are closed to anything unfriendly and unjust to one of Mrs. Eddy's well-known goodness and purity of life.

Only recently, the editor of an old and representative periodical of the state, published at Concord, was importuned by a person unfriendly to Christian Science to publish an article in the nature of an attack upon Mrs. Eddy and Christian Science, but he was politely told by the management that nothing of that kind could appear in their columns. In thus doing these gentlemen are but reflecting the prevailing sentiment.

This attitude on the part of a neighbor of Mrs. Eddy speaks volumes in support of our proposition that our neighbors, of all others, are best fitted to judge of our private life and character.

Concord as a Resort in June.

A RECENT number of *The Concord Evening Monitor* contains the following editorial upon the subject of "Concord as a Resort in June." The editor's suggestions as to the advisability of establishing driveways in and around the beautiful capital of New Hampshire are certainly worthy of serious consideration and prompt action on the part of all who are interested in that state and its capital:—

Visitors at Concord are frequently remarking upon the improved street leading to the home of Mrs. Eddy, to whom the city is so greatly indebted for this excellent driveway. It has not been without its object lesson in stimulating our citizens to demand better roads. The beauty of Concord at this season of the year is something upon which every stranger comments. It would require but small effort on the part of our people to popularize Concord as a resort for the month of June and make it equal to some of the suburban towns about Boston. June is too early for people to go to the mountains or the seashore, yet there are thousands of people in the large cities who begin their sojourning for the summer in this month, and some as early as May, making first for some place which has the convenience of railroads and the beauties of rural surroundings.

A fact not always appreciated by the people of Concord, and perhaps not known to all, is the beauty and variety of the drives leading out of the city. They are a source of constant delight to visitors who have been entertained that way, or who, while whiling away an idle hour, have driven to the country round about. There is no locality in New Hampshire which has greater natural advantages for an early summer resort than Concord. The train service to Boston gives ample opportunity for one to go and come, spending the business day in Boston and the evenings at Concord. One thing that attracts summer visitors is the drives about a locality, and to have good driving there must be good highways.

What Mrs. Eddy has so generously done for the road leading to her home should be continued. The policy of the highway department should be to do work of a permanent character each year. The present highway commissioner adopted a policy of this kind some three years or more ago, and a part of the highway appropriation was set aside for this purpose. We may not be able to build so extensively each year as was done on Pleasant Street through Mrs. Eddy's efforts, but something can be done. To stimulate the gifts of public-spirited citizens there should be manifested a desire for improvement on the part of the city in this work. Good roads would mean business for Concord. Thousands of people come here every year, being drawn here by reason of the city being the home of Mrs. Eddy and by reason of the location of St. Paul's school within our limits. They are all, or nearly all of them, people of means. Why may not some of them be induced to spend the month of June in Concord as well as to spend it in other localities prior to summering at the mountains or the seashore? Coming to Concord for June, they are likely to remain in New Hampshire for the entire season.

What will add most to the natural beauties of Concord? Good highways leading out of the city. In one of the towns of Merrimack County a prominent citizen was made highway surveyor of his district a few years ago as a joke. He accepted the office and began building an excellent highway running in opposite directions from the centre of his own premises. When complaint was made at his partiality to himself, his reply was, "Let the people elect some one else next year, and let my successor follow my example. Eventually we shall have good roads." It was an object lesson which was not without its good effects. Perhaps it was not a wise course to pursue, but it serves a purpose. There must always be a beginning. We have had that beginning on the Pleasant Street road. If we would stimulate individual enterprise and liberality, we should show an appreciation by doing for ourselves and by welcoming all efforts to improve our highways. If an individual wishes to improve the highway in front of his premises, hold out to him every encouragement, for what is for his benefit is also for the public good. The public spirit of our citizens has been shown repeatedly, and in no way can it manifest itself to better advantage to promote the interests of Concord than by improving our streets and highways.

Epidemic of Suicides.

ENTITLED as above, the following comes from Emporia, Kansas, through *The Topeka Daily Capital*:—

"Mayor Morse of Emporia formally asked the editors of Emporia papers to-day to refrain from publishing details of suicides. He said that the publication of details of suicides had caused the alarming epidemic of suicides in this community in the last two years. Beginning with that of Charles Cross, president of the wrecked First National Bank of Emporia, suicides have averaged almost one a month. During the past six months the number has increased, and last night the papers printed the details of three attempts in two days, making ten in the last two months.

"I have consulted the Board of Health," said Mayor Morse to-day, "and I believe that if the Emporia papers do not comply with my request I have a right to stop summarily the publication of these suicide details under the law providing for the suppression of epidemics. There is clearly an epidemic in town; it is mental, but none the less deadly. Its contagion may be clearly shown to come from the suggestion—what is known in medicine as the psychic suggestion—found in the publication of the details of suicides. If the paper on which these local papers are printed had been kept in a place infected with smallpox I could demand that the papers quit using that paper or stop publication. If they spread another contagion, the contagion suggestion of suicide, I believe the liberty of the press is not to be considered before the public welfare, and that the courts would sustain me in using force to prevent the publication of papers containing matter clearly deleterious to the public health. However, no such steps need be taken. Mr. White of the *Gazette*, Mr. Strong of the *Republican*, and Mr. Yearout of the *Times* are in sympathy with me in this movement, and will suppress details of suicides until the epidemic subsides."

This is certainly one of the significant signs of the times. It is a recognition of the great fact that there is such a thing as mental contagion, which is one of the leading tenets of Christian Science in its diagnoses of disease. We are pleased to note this evidence of thoughtfulness and progress on the part of the Kansas officials in question, as well as the medical gentlemen who compose the Board of Health. However much these gentlemen may believe themselves to be opposed to Christian Science and its practical

teachings, by this action they impliedly admit that to this extent at least Christian Science is a rational and effective modern agency in the way of preventing the spread of contagious disease.

The teaching of Christian Science upon this subject is that the more a given disease is put out into the human mind, the greater the fear of that particular disease and the greater the liability to the manifestation thereof upon the human body. Suicide is not less a disease than other forms of human discord or mental inharmony, and the same law which obtains with reference to the spread of this disease is related as well to every other, more especially those diseases which are believed to be contagious or infectious.

We trust the day is not distant when Boards of Health, physicians, and our public officials generally, as well as newspaper managers and editors, will awaken to this supremely important fact and take similar steps for the suppression of every kind of news that tends to influence and inflame the general thought to the injury of mankind. If the publication of suicide tends toward creating epidemics of suicide, what shall be said of murders, divorces, domestic infelicities of various kinds, as well as every manner of criminality and vice? These are all forms of sickness and disease. Therefore, what is true of these is equally true of physical diseases, so-called. They are all governed by the same law. There is here suggested a deep and vital and far-reaching question of philosophy for the serious consideration of all thinking people, but especially for physicians and those at the head of our educational institutions, and publicists of every kind. Let us hope that the thought-wave set in motion by the authorities of Emporia may speedily reach around the world. A diseased and suffering humanity is crying out for just such a savior as this.

A Letter from Germany.

THE following letter addressed to the President of the Mother Church was sent to be read at the Annual Church Meeting. That event having been postponed until the autumn, Mr. Bates has given us permission to publish the same, which we gladly do, as it contains much of interest to us all.

We call attention to an interesting fact in this letter. It will be observed that the membership of this branch at the date of writing was eleven. At the following Communion there were to be received into membership eleven more—an increase of just one hundred per cent. While the numbers are small the ratio of increase is almost unprecedentedly large. Certainly a very healthful growth.

Habsburger, Strasse 12, Berlin, Germany.

May 30, 1901.

E. P. Bates, C.S.D., President, First Church of Christ, Scientist, Boston, Mass.

Dear Mr. Bates:—First Church of Christ, Scientist, Berlin, sends greeting to the Mother Church on this happy occasion of the Annual Meeting. Although we cannot be with you in person, we will be in the same place (Mind) with one accord. The branch here is in a healthy condition. The work was opened in October, 1899, with English services only; and we were very happy if we had a congregation of twenty in those days. Many Germans came for healing, and in January following a few German meetings were held. At these times one of the lectures delivered by a member of the Board of Lectureship in the United States, was read, having been translated and read from manuscript which was afterward destroyed. A little later regular Sunday service was begun. At first one of the Dresden students came over each Sunday and read Science and Health, translating it from the book; but after a few weeks one of our number began reading, and still continues to do so.

In October, 1900, we organized a church under the laws of Germany. The police department treated us with the greatest courtesy. They asked for a copy of our regulations, creed, etc., to place on file. I sent them one of the printed slips, with the tenets of the Mother Church, stating that this is a branch of that church, so our tenets form a part of the official records of this Empire. The slips of which I speak are those furnished by the Publishing Society. We began with eleven members, and at our semi-annual Communion service in June we shall add eleven more, making a total of twenty-two. We have four services per week (two German and two English) and a Sunday School. Our English congregation averages about fifty, the German congregation averages seventy-five on Sunday and from one hundred to one hundred and fifty at the week meetings. It is difficult for the Germans to obtain release from their state church, so their demonstration is not as simple as ours. A German who is not confirmed cannot sign a legal contract, according to present laws. Notwithstanding the claim of difficulty in language we have sold a goodly number of books; one hundred and five copies of "Science and Health with Key to the Scriptures" (two thirds of them pocket editions). "Miscellaneous Writings" and all the other books by our Leader, Mary Baker G. Eddy, in proportion. Much healing work is being done. Many earnest seekers come to inquire about this wonderful revelation of Truth; for these strong, earnest thinkers have grown weary of a theology that must be taken entirely on faith, and are reaching out for a demonstrable Christianity. They realize that they have found it in Christian Science. Although to mortal sense far away from Christian Science centres, our Leader's books and the *Journal, Sentinel*, and *Quarterly* destroy all sense of isolation.

Our every trial teaches us more of the magnitude of the work and demonstration of our Leader, and gives us more love for her and greater desire to follow faithfully in her footsteps. We thank also the editors and Publishing Society for their loving service, through which so much good comes to us all.

Yours in Truth,

FRANCES THURBER SEAL.

As to Railroad Fares.

WE gladly give space to the following letter of explanation relative to railroad fares. No one, under the circumstances, will attach any blame to the railroad companies.

Chicago, June 21, 1901.

Dear Brother:—I have just sent you a telegram upon the request of Mr. W. B. Jerome, General Western Passenger Agent of the N. Y. C. & H. R. R. R., which road you may know controls the greater part of the business between Chicago and Boston. One reason for Mr. Jerome's request is that several carloads of Christian Scientists from the West and Northwest arrived in Chicago this morning expecting to purchase tickets for the round trip for a fare and one third, and many of them seemed to have a feeling that it was within the power of the railroad people in Chicago to make the rate, and that failure to do so was unfair to them. Another reason is that Mr. Jerome feels that our interests in the matter of obtaining reduced rates for the annual meeting, or for any future occasion, may be prejudiced by the unfounded complaints of people who do not realize that it takes time to perfect arrangements for a reduced rate.

Mr. Jerome is one of the congregation of First Church of Christ, Scientist, in this city, is very much interested in Christian Scientists obtaining every concession to which they are rightfully entitled, and personally has taken great pains to acquaint other railroad officials with the fact that not one of the tickets sold at a reduced rate for last year's

Communion found its way into a scalper's office or was misused in any way. It seems to me to be reasonable that his request for an announcement that no blame attaches to the railroad companies should be complied with. He thought that if an announcement could be made through the *Sentinel*, it would reach everybody.

Sincerely yours in Truth,
ARCHIBALD McLELLAN.

Titled Visitors to First Church.

THE annual Communion service of the Christian Scientists will, it was announced last evening, be held next Sunday, instead of July 7 as formerly published. The Communion service held in the Mother Church in Boston each year calls together from all over the world teachers and believers in the faith. It has become an annual pilgrimage of large proportions, and many prominent members of the church have already arrived.

England sends a large number, conspicuous among them being members of the nobility.

The Earl of Dunmore is the most prominent titled Briton in Boston for the purpose of attending the Communion. The earl is a Highlander and has traveled in nearly every country of the world.

He has also been a hunter of renown.

He is accompanied by his wife, the countess, and his two daughters, Lady Victoria Murray and Lady Mildred Murray.

In the party also are Lady Ramsay, wife of Sir James Ramsay; Miss Lillian Ramsay, Miss Mary Ramsay, William N. Miller, K. C., a retired London lawyer and the First Reader of the London Church; Mrs. Miller, Mrs. Majorie Colles of Mount Eagle, Ireland, and Mr. and Mrs. Richmond I. Cochrane of Edinburgh.

Besides the British party, a German count is expected to be present.—*Boston Post*, June 20.

What they are Accomplishing.

To the Editor of *The Herald*.

One of the preachers of the city has given to the general public through your courtesy a dissertation on what he calls the humbugs of Christian Science. Now, if some Christian Scientist will return the compliment by reciting what he considers the humbugs of the religious philosophy and theology of that preacher, we shall have a completer illustration of the confusion that exists in the minds of equally good people respecting what they call the truth.

Meanwhile, let any one who cares to witness what is the distinctively religious phenomenon of Boston be present on Wednesday evenings at the Christian Science Church on Falmouth Street. If any other religious society in the city was crowding its church building with twelve hundred intelligent and evidently very happy people at a week evening service, year in and year out, it would be the talk of the town. The observer will also conclude that he is brought face to face with genuine spiritual experiences. I am not a Christian Scientist.

Boston, June 11, 1901.

UNITARIAN.

A party of fifty prominent doctors of New York was on its way to attend a convention of physicians at St. Paul this week, when one of the number was taken ill, and despite the earnest efforts and repeated consultations of his forty-nine warm, personal friends, every one of whom was deeply schooled in the history and science of medicine, the sick man, after a good many hours of suffering, died. Had these men been Christian Science healers instead of regular practitioners, their unsuccessful effort to cure might have occasioned much more comment.—*Boston Herald*.

Testimonies.

Effects of Poison Oak Overcome.

While camping on a little creek down in the Indian Territory, with my husband and two small children, my little girl went down on the bank of the creek to dig around what we call the red bud bush, as the roots of it are said to be nice for tooth brushes.

The child not knowing the difference, pulled up the poison oak root, brought it into the tent, and we all three took a piece from it. In about fifteen minutes my husband came in and told us we were chewing poison oak.

I immediately declared the Truth, as best I could, and the children and their father went down to see if the poison oak grew there, and found any quantity of it.

My little girl had been poisoned by it several times before that, and had been healed by Christian Science. Whenever she went on the creeks or in the woods her face and hands would be affected by it. We were a long way from any healer, and the river being up between us and the Post Office, I found myself alone with God. I began treatment at once, and realized that God, our loving Father, is all we need in hours of affliction and trouble, and that He is all, and in Him all things are pure and perfect, and very soon the fear began to disappear.

Early the next morning there was a breaking out in the little girl's mouth and on her lips and face and hands; and in three days, she could not slip a thin knife blade between her teeth. On the ninth day she could eat anything she wanted, and in a short time the skin all peeled off and not a scar remained, except three small purple spots on her cheek, no larger than a small pea. They broke out after we arrived home in Chickasha. My sister put turpentine on it, and the little girl said there would never have been a scar there if auntie had not put that turpentine on her cheek, and she is very indignant over it. The poison oak broke out in my mouth and the little boy's mouth, and on our hands and faces, something like heat, but disappeared in about five days. It never became swollen or inflamed. Not one of us, not even the little girl, lost one moment of sleep from it.

Oh, how great and grand is Christian Science! I can say that I am truly thankful to God and to Mrs. Eddy for it. I have only been in Science four years, but have been greatly benefited by it in many ways.

MRS. MARY E. TERRELL, Chickasha, I. T.

Saved from Injury.

We have had such a beautiful demonstration of the power of Truth lately that I feel that some other mother may be helped by the little that I can give.

Some three weeks ago, one morning in getting the little ones off to school when Hugh said good-bye, I called to him and told him to say the Scientific Statement of Being on the way to school, and went about my work with the thought that Truth would answer all questions and supply all. I thought no more about the children until time for school to be out. Somehow I thought of Hugh and noticed that he was a little late by the clock. After a while I saw him coming. I observed that he was very pale and saw that something had happened, but sat still and began to realize the Truth. When he came in I asked him what made his clothes dusty, and he said a boy pushed him, but would say no more.

After a while the other children came home and spoke of what they had heard on the street, but we thought nothing of it. They ate their dinner and went to school, and no one could have told that anything had happened. No one knew but Hugh, and he didn't tell.

On Saturday my husband went into one of the stores

and was asked if that was his boy who was run over by a log wagon. Chester and Glenn were with him and answered, yes. The man went on to tell that his brother-in-law had a number of boys on the wagon with him and that Hugh was sitting beside him when one of the little boys pushed Hugh and he fell at the horses' feet. Before the horses could be stopped, the front wheel of the wagon ran over his body below the arms. It seemed as though the horses were frightened; anyway the man went on. Some of the boys picked Hugh up and carried him a little way and then he started and ran off home. The man was so worried he could not sleep for thinking of it that night, and when he was told that the boy went to school and was not hurt one bit, they said it was a miracle.

There was not a bruise, not the least manifestation of error, except that he was very pale and cold, and that was soon gone.—NAOMI M. WHITESELL, Eaton, O.

A Remarkable Case of Healing.

I feel I must tell of a wonderful case of healing through Christian Science. I had often heard my husband speak of a friend in sympathetic terms, remarking, "He is going through what I did with you,—the care and worry of an invalid wife." One day in September, 1900, on coming home he said, "I just left Mr. — feeling very blue, he had just come from the station, after seeing a medical specialist off whom he had called to see his wife. The specialist told him nothing could be done for his wife and that she could live only a short time."

After my husband told me this, I could not resist the desire to write and tell this woman how Christian Science had, in 1896, brought me back to a happy life after the doctors had given me only a few hours to live. I was suffering from Bright's disease, locomotor ataxia, and paralysis.

My letter reached her when all hope had been given up, and she drank in the Truth therein as a little child. She must have, for her seven cancers began to heal at once, and by December were all healed. She had no treatment. I had never met her at the time of writing the letter. She sent for me and I went to see her, two weeks after I wrote her, taking some Christian Science literature.

So, my dear co-workers, listen to the prompting to do good, as we know not how gladly it may be received nor the happiness we may bring to others and ourselves thereby.

Christian Science does bring happiness and "peace that passeth all understanding," not only by the physical healing but by the uplifting of the thought into purer channels. This I know from experience.

MRS. E. DELLA WOOD, Elmira, N. Y.

Healed of Nervous Prostration.

It is somewhat over three years since I was healed of nervous prostration and other troubles through Christian Science. I had been an invalid seven years, the last two and a half years were spent in bed. I was able to sit up but little. I was taken to the hospital and went through an operation. For a time I seemed to be improving. I could sit up some of the time and walk across my room. After five months I was brought home, as the doctors had done all they could do. I was completely discouraged, but my husband wished me to try Christian Science, as I was growing worse again. To please him, I consented. My healing was very slow at first; but now I do not know how I ever lived without Science. I have gained a little understanding and have been able to help others and myself a great many times. I am very thankful to Mrs. Eddy, for it is through her that we have this Truth and understanding of God.—MRS. F. B. PIERCE, Silver Creek, N. Y.

Christian Science and Obstetrics.

I send you two letters, which will tell for themselves, of a beautiful demonstration. I never saw either the gentleman or his wife, but he was a patient of mine some seven or eight weeks ago, and was healed through absent treatment of a severe case of quinsy sore throat. Seeing such good results they determined to try Christian Science when their little child was anticipated, and the result has demonstrated yet more fully to them that God is a very present help in time of need.—E. R. H., Helena, Mont.

Bozeman, Mont., December 27, 1900.

My Dear Mr. H—:—Our little girl arrived last night, and both mother and baby are doing nicely. We had company in the evening, which wife was entirely free to enjoy. At about nine o'clock she asked me to call the nurse, and a little after half past nine a daughter was welcomed to our house with very little discomfort and very great joy. Before twelve o'clock we were all abed and asleep. Will write you again to-morrow:

Sincerely yours,
C. C.

Bozeman, Mont., December 29, 1900.

My Dear Mr. H—:—Wife and baby getting along nicely. Thanks to Christian Science. You may discontinue treatment on receipt of this letter. As soon as I get time I will write you more freely. Quote me price on one copy Science and Health.

Sincerely yours,
C. C.

All Needs Supplied.

When listening to the testimonies given at one of the Wednesday evening meetings, the text, "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 490), was frequently repeated. I had often repeated it to myself in my daily needs, but that evening a new interpretation of the passage came to me. I saw how I could make it a reality for myself and help others.

Before this I had thought of the words as meaning, God looks after me and protects me, being a power for good, but outside myself. That evening it came to me like a flash that for me it means, In the degree that I reflect Divine Love in thought and act, is every human need supplied; for I am then not withholding any good thing from my brother.

And so it is individual work that brings us consciously into the kingdom where we have all; and that work is in all ways reflecting the Father's love which is helping others to see this beautiful reality; this omnipresent, all-mighty power.—W. L. M., Boston, Mass.

Operation not Necessary

Two years ago I was on the brink of despair. I had consulted five leading physicians in our city, and the only relief they offered was through an operation. I was suffering from what they called a fistula and chronic hemorrhoids. So great was my suffering that I did not think life worth living. I made preparations for an operation and started to visit my parents, knowing that the operation was delicate and dangerous. On my way home the thought came to me, that I had not given Christian Science a chance. I went directly to the home of a Scientist, laid my case before him, and gave up the thought of an operation.

In less than two weeks I was healed, and have been able through the study of Science and Health to overcome quickly the headache and other ills.

H. G., Beloit, Wis.

Religious Items.

"Wilderness Christians. Who are They?" is the title of an article by M. L. Rugg in the (Baptist) *Standard* which contains the following: "Who are they? They are those who have crossed the Red Sea of redemption out of the Egypt of their sins, but have not gone up and possessed the Canaan of Christian blessings. A wilderness Christian is a disobedient Christian. He is satisfied to just get out of Egypt when God has commanded him to go up and take the promised land. He tarries when God commands him to go forward. He turns back before dangers when God has promised to give him the victory. A wilderness Christian is an unhappy Christian. God did not intend the wilderness to dwell in, only to pass through. It is hot, and parched, and barren. There are serpents that bite and beasts that devour. There are foes ever ready to assail the unguarded camp and disease ever present to destroy. No wonder the wilderness Christian is a murmurer and a fault-finder. The wilderness Christian is a useless Christian. . . . He is worse than useless, for his disobedient, unhappy life hinders others in the way."

Concluding an article dealing with the alleged growing feebleness of Christian character among college men, the (Unitarian) *Christian Register* says: "Do we need a revival of Puritanism on a higher plane? Discarding formalisms about dress and language, there was in the different evolutions of old Puritanism—of Quakerism and of Methodism—a stronger, truer life, a determination to 'stand up for God,' we can see nothing better to hope for than a new Puritanism inspiring our social and business life, and filling us with a will to do the right, let come what will come. We can get a glimpse of what the old reformers meant, when they spoke of 'mere morality,' and demanded 'godliness.' The fault was not altogether their own that godliness often became an outside show, even a cloak for inner scampishness. The great fact remains that in those days there was a sincerity of purpose, and there were mighty men and women raised up who 'walked with God.' Our institutionalism must not blind us to the fact that the key of a great humanity is not intellectual mechanism, but purposeful godliness."

Rev. E. A. Dunning, in an article on "The Risen Life" in *The Congregationalist*, says: "The Bible is the most optimistic of all literature. It begins with a picture of God looking on everything that He had made, 'and behold, it was very good.' It ends with a vision of God on His throne, saying, 'Behold, I make all things new.' The Old Testament prophets never blinked the wickedness of their times, never glossed the deceitfulness of the individual human heart, the rottenness of society, or the corruption of government. Sometimes they were for the moment overwhelmed by the baseness and moral blindness of their fellow-men. But over and beyond all these they saw, as we sometimes see on a fresh spring morning after a night of storm, new skies and a new earth, the creation of God. Jesus Christ came to proclaim the same vision, with clearer and more confident tones, and his apostles took up the tidings with unfaltering assurance. Whenever the book of Revelation may have been written, it takes its place properly at the end of the catalogue because it is the crown of faith in the world renewed."

In a sermon on the "New Epoch of Faith," published in the *Universalist Leader*, the Rev. F. W. Betts says: "The superficial critics smile at millennial dreams. It were wiser to ask why the greatest prophet of Israel, Isaiah, the greatest philosopher of Greece, Plato, and the greatest of men, Jesus, put into language a dream of life? Why Abram left Chaldaea; why Moses left Egypt; why John believed in a new Jerusalem. More in a 'Utopia,' and Lytton in 'The Coming Race'? Why men of every age and race, from John the Baptist to Prince Kropotkin, insist on martyrdom for an ideal? Why Kossuth,

Mazzini, Lamennais, Father McGlynn, Henry George, and ten thousand others surrender peace and comfort to battle for a vision of the soul? Why, despite faults, failures, and sins the most powerful force in your soul and mine is some idea of right, some vision of good, some romantic dream of life?"

Among the "Notes and Comments" in the (Baptist) *Watchman* is the following: "Professor George Adam Smith, in the new 'Encyclopaedia Biblica,' expressed the 'hope that nobody will go to Beersheba looking for the 'seven wells,'" from which it was formerly believed that the place took its name. The *Interior*, however, calls attention to the fact that Professor George L. Robinson of McCormack Seminary prints in the *Biblical World* descriptions of all the seven wells, as he himself found them last year, and publishes photogravures of six. The seventh had been filled in, but the curbing remained. All of which, our contemporary says, reminds us that it may not be safe to trust critics as to the historicity of Abraham who cannot be trusted as to the reality and number of his wells still visible and actually in use."

In an editorial on "Self-Pity" the (Baptist) *Standard* says: "Few tendencies are more unfavorable to the development of a strong character than self-pity. It is the besetting sin of weak men and women, arising from a form of selfishness, growing with astonishing rapidity, and speedily undermining manliness and womanliness. To resist firmly the very beginnings of this weakness is the only way to guard against ultimate spiritual disaster. For once allowed a place in daily thought, the disposition to dwell on limitations and disappointments soon overspreads the whole horizon with the gray fog of discontent. Sunshine fades, gladness forsakes the voice, the will falters. No man can look the world boldly in the face . . . who spends his idle moments consoling himself for real or fancied wrongs of fortune."

In a thoughtful sermon concerning the mission of Jesus, published in the (Unitarian) *Christian Register*, the Rev. Horatio Stebbins, D.D., says: "Out of his provincial experience, before our modern science was born, he unfolded the truth that anticipates all science; and the noblest natures find in him the true interpretation of their being and the justification of the existence of the human world. The nature of true religion is not changed at the beginning of a new century; and while the world is moving fast and the times are full of trouble, the light is ever on the mountain tops, the eternal coming of the kingdom of God."

In an editorial on "The Chief Meanings of Miracles," *The Congregationalist* says: "Our Lord himself gave thanks that his power in the raising of Lazarus might be used as an incentive to belief. The atmosphere of divine authority joined with divine unselfishness and sympathy, which surrounded the earthly life of Jesus is still an atmosphere in which a reverence grows which leads to faith and love. In his wonder-working and his self-restraint, his power and sympathy, he stands revealed as the Lord who, being lifted up, draws all men unto him."

The *Evangelical Messenger* says: "An even, persevering type of the Christian life is essential to religious happiness and usefulness. To be out of the way much of the time and to be vacillating between right and wrong is a very unsatisfactory state of heart and mind. Some people are in such a tangle as to their relation to the Church and the world that they are in real misery. They find little comfort in their religion because there is so little of it; and they cannot enjoy the world because of the restraints of their profession and Church relation."

The *Universalist Leader* says: "A song in one's heart, a smile upon one's lips, a cheery, wholesome message of good-will in one's tongue, are wonderful helps to all kinds of people. There are so many burdens

of sorrow and care and poverty and sin; so many doubting, discouraged, tempted hearts. To comfort and to make strong, to lift up and to bless, are these not missions worth while? Try it, friend, and prove how truly your own heart and mind are cheered and made brave by your very endeavor to carry sunshine into dark places."

The (Swedenborgian) *New-Church Messenger* says: "There is an element of self-life about the natural conception of self-sacrifice, which the spiritual man should seek sedulously to avoid. There is a thought of merit or martyrdom, or of differentiation from others, which is most inimical to a true and interior spiritual state. Man should take the blessings of life which justly and properly come to him, like a child breathing the air; and he should administer them as a sacred trust, placed in his hands by the Lord."

Horace Bushnell says: "The only real and Christian way of purity is to live in the open world and not be of it, and keep the soul unspotted from it. There are no fires that will melt out our drossy and corrupt particles like God's refining fires of duty and trial, living, as He sends us to live, in the open field of the world's sins and sorrows, its plausibilities and lies, its persecutions, animosities, and fears, its eager delight and bitter wants."

The *Watchman* says that there are about twelve hundred Armenians in Worcester, Mass., and they have a Protestant church with a pastor who is a graduate of Euphrates College.

RULES TO BE OBSERVED.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

We especially request our contributors to write plainly, and only on one side of the paper.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair brotherly consideration, when we request the field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

- Cloth binding, each \$3.18
- Two to Twelve books to one address, each, prepaid . . . 3.00
- Twelve or more books to one address, each, prepaid . . . 2.75
- Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
- Twelve or more to one address, each, prepaid 3.75
- Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid . . . 5.00
- Twelve or more to one address, each, prepaid 4.75
- Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
- Twelve or more to one address, each, prepaid 5.75
- Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS.

A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

- Price (cloth) each, prepaid \$2.25
- Twelve or more books to one address, each, prepaid . . . 2.00
- Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid . . . 4.00
- Twelve or more to one address, each, prepaid 3.75
- Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
- Twelve or more to one address, each, prepaid 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS.

An illustrated poem,

- Single book, prepaid \$3.00
- Twelve or more books to one address, each, prepaid . . . 2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.
Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

Political and Governmental.

The advanced course in naval architecture heretofore pursued by the Naval Academy graduates prior to commission in the construction corps at some of the leading European institutes, because of the superior facilities afforded, which were not believed to be available at home, is hereafter to be given these young men at the Massachusetts Institute of Technology, where a course of study is to be followed equalling that offered by Greenwich, the Ecole Polytechnique, Glasgow and other famous schools in England and France.

By the arrival of the transport Kilpatrick at San Francisco June 27, the last of the volunteer regiments from the Philippines was landed on United States soil before the end of June, as was intended by the War Department. The Forty-Third Regiment was recruited at Fort Ethan Allen, Vt., and is composed almost entirely of Massachusetts, Vermont, and New Hampshire men.

At the expiration of its lease of power by act of the Legislature, the Philadelphia Public Building Commission made a report of its expenditures on the famous City Hall, from August 5, 1870, to June 26, 1901. The total was \$24,313,445.43. The building is not finished.

The survey of harbors in Cuba by the Navy Department to ascertain the best locations for United States naval stations has been virtually completed. The sites recommended are: Nipe Bay, Guantanamo Bay, Cienfuegos harbor, and Havana harbor.

Foreign News.

Consul Mahin of Reichenberg writes that Dr. Alexander Von Peez made a noteworthy contribution to the Munich *Allgemeine Zeitung*, in which he says: "Not China and not the Transvaal war, but the race between the great industrial countries—England, Germany, and the United States—forms the highest interest of the future. Slowly has England grown commercially, more rapidly has Germany risen after gaining political unity and establishing the protective system; but like a storm is the forward movement of the United States. The three competing countries now suffer from obstacles which hinder their free movement. Germany has China, England the Transvaal, America the Philippines. Appearances indicate that the United States will be the first to throw off its burden. After that country shall be free from the Philippine war, its industrial advance upon Europe will be fully manifested."

Archbishop Keane, who has recently returned from a visit to Ireland, is quoted as follows regarding the political situation: "England is gradually giving Ireland home

rule. After all, Englishmen love fair play and ultimately they will yield to Ireland everything that fair play demands. Englishmen will continue to liberalize their policy until not only Ireland but Scotland and Wales will have their own parliaments. Then these countries, knit together geographically, as the distant English colonies never can be, will be represented in an imperial parliament which shall knit them together politically. The world will see in these isles a second realization of the American system of government."

The Boers are once more overrunning Cape Colony to the alarm of the residents and the annoyance of the British generals. A force three thousand strong attacked Richmond on June 25, and an engagement ensued lasting twelve hours, when hostilities ceased on account of darkness, leaving the Boers in such positions of advantage that the capture of the town on the following day was expected; but learning of the approach of British re-inforcements, the besiegers withdrew in the night.

The complete census returns for Paris give a total of 2,714,968. These show an increase of only 177,234 inhabitants since the previous enumeration of five years ago. These figures represent what is known as the "legal" population, i.e., residents whether in or out of the city on the night of enumeration, but not strangers or transients.

The Czar of Russia has freed all newspapers and other periodicals from all warnings, interdictions, and punishments, and has decreed that such warnings and interdictions expire hereafter within definite periods.

A royal proclamation was read in London on June 28, announcing that the coronation of the King will take place in June, 1902.

Industry and Commerce.

The Pennsylvania Railroad has secured control of the Cambria Steel Company, and it is understood that both the Cambria and the Pennsylvania Steel Companies will continue to be operated independently. The acquisition of the Cambria Company gives to the interests connected with the railroad company control of two important steel companies which have been independent of the United States Steel Corporation, control of the Pennsylvania Steel Company having passed a short time ago. Both companies are large manufacturers of steel products. In steel rails, the output of the Cambria and the Pennsylvania and Maryland Steel Companies, the last named being owned by the Pennsylvania Steel Company, is between one-quarter and one-fifth of the total of the companies combined in the United States Steel Corporation. No competition between the Pennsylvania Railroad interests and the United States Steel Corporation in the field of Steel making is expected.

The official announcement is made by J. P. Morgan & Co. that the United States Steel Corporation has purchased the Shelby Steel Tube Company, the most formidable competitor of the National Tube Company, already owned by the United States Steel Corporation. The purchase means the elimination of an important rival of the United States Steel Corporation and the entire control of the tube business of the latter. The Shelby Company is a consolidation of ten minor steel companies. It is capitalized at \$15,000,000, of which \$6,000,000 is seven per cent cumulative preferred, and \$9,000,000 common stock.

On June 26 a contract was awarded to the Fore River Ship and Engine Company at Quincy Point for the construction of a seven-masted schooner, to be built entirely of steel and to be ready for launching about the end of next February. The new vessel will be the largest of the kind afloat. Her masts will be of metal and she will be heated and steered by steam, and lighted by electricity. The total cost will not be less than \$250,000.

It has been definitely settled that the Ger-

man Kaiser will have a new yacht built in this country. Smith & Barbey have received an order through the German embassy in Washington to design a yacht somewhat on the lines of the Induna, the American yacht now owned by the Emperor. The new vessel will measure about 120 feet on the water line, which is ten feet longer than the Induna.

For the first time in its history a loan offered by the city of Philadelphia went begging last week. Bids were opened on June 24, for a \$9,000,000 city loan. Only one bid was received and the loan consequently failed. The reason of the failure was that the rate of interest offered, 3 per cent., was too low to attract investors.

The Dominion Government is interested in the establishment of a fast steamship service between Canadian ports and Great Britain, and has been negotiating with an American who offers to furnish ships that will give a 30-knot service. Such a service would revolutionize the transatlantic passenger traffic.

Bolckaw, Vaughn & Co. of Middleboro, England, have installed the open hearth process of steel making in their works for which they pay the Carnegie Steel Company \$500,000 and a royalty on every ton of steel they make.

General News.

Harvard University conferred the honorary degree of doctor of laws upon the following men on June 26: Judge William Caleb Loring of the Massachusetts Supreme Court; Henry S. Pritchett, president of the Massachusetts Institute of Technology; Jacobus H. von't Hoff of Berlin, the greatest living physical chemist; Judge James T. Mitchell of the Pennsylvania Supreme Court; Charles P. Sargent, first director of the Arnold Arboretum; Wayne MacVeagh of Philadelphia, an eminent lawyer and critic; Theodore von Holleben, ambassador of Germany to the United States; James Ford Rhodes, historian.

A St. Louis press dispatch says that the board of directors of the Louisiana Purchase Exposition Company has selected Forest Park site of 668 acres for the projected world's fair, subject only to the approval of the national committee. The site is in the most beautiful part of the city. More than one-third of the entire site is level ground, and the highest point is 186 feet above the city. It is crossed by the River des Peres and ten creeks and there are three handsome artificial lakes. If need be 450 acres of extra land are also available for the fair.

In a truly remarkable essay on what the *Academy* calls "The Busy and Abominable Bee," M. Maeterlinck speaks of the creature's masterpiece, the hexagonal cell, as something touching perfection in an imperfect world. The cell in the comb, he says, has a perfection that all the geniuses in the world, were they to meet in conclave, could in no way enhance. "No living creature, not even man, has achieved, in the centre of his sphere, what the bee has achieved in her own."

A food vegetable, cultivated in tropical Africa by the natives, has been recently analyzed by expert French chemists and found to contain in its natural state all the chemical properties of a perfect nutriment, which is a rare distinction. The plant is called woandsu by African negroes. It has been introduced in Southern Asia and in Brazil.

In the annual Yale-Harvard eight-oared varsity boat race held at New London June 27, Yale won by less than two boat lengths. Yale's time for the four miles being 23 minutes and 37 seconds. Harvard's time was eight seconds slower.

At the commencement exercises June 26, it was announced that J. Pierpont Morgan had given \$1,000,000 to the Harvard Medical School.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Among the Churches.

Opening Services at Tacoma, Wash.

A large audience attended the service opening First Church of Christ, Scientist, to public worship yesterday morning (Sunday, June 2). Every seat in the auditorium was taken and space in the rear was filled in with extra chairs, which were all occupied before the service began. The doors were thrown open an hour before eleven o'clock, and many *en route* to other churches paused in curiosity to take a glance into the cheery interior, showing the deep interest taken in the opening of this new church, a church whose rapid growth and successful completion marks an advance in Christian Science thought in Tacoma which those not directly interested had scarcely conceived.

It is a beautiful church; not imposing or stately or representing much of financial outlay, but attractive, graceful in design, and in its interior arrangement and decoration beautifully simple and artistic.

It is not a large church. The auditorium will seat but three or four hundred, but it is ample for present purposes and may easily be adapted to larger needs when the growth of the church makes enlargement imperative.

In style of architecture the church is modified colonial. It was the design of a Tacoma architect, Mr. J. G. Proctor, and the entire work has been the result of his artistic taste. The walls are tinted a restful shade of green, lighting up toward the ceiling into a softened maize. The ceiling is maize color, and the general effect is exceedingly artistic.

In shape the auditorium is nearly square, with the exception of the space back of the Readers' desk, which is rounded to admit a pipe organ. The centre of the church is given a cathedral-like appearance on a small scale by a row of classic looking columns supporting a ceiling considerably higher than that on each side. A row of electric lights placed at intervals at the top outline this court-like space, and at night, when the lights are turned on, the result is very good; better than a central blaze from chandeliers, always more or less trying to the eyes. The lamps on the platform are tall and handsome, one on each side of the pulpit in standards of wrought brass, with a cluster of three lights softened behind glazed shades. The columns are finished in a soft cream tint, which harmonizes admirably with the color scheme of the walls.

Back of the Readers' desks, outlined against the curving green wall, are the words, "God is Love," in large gold letters, flanked by inscriptions, in smaller type, from the Bible and from Mrs. Eddy's book, *Science and Health*—on the right, "Come unto me, all ye that labor and are heavy laden, and I will give you rest," signed underneath by the simple word "Jesus;" and on the left, "Divine love always has met, and always will meet, every human need," signed "Mary Baker G. Eddy."

These three inscriptions are so pronounced in position that they strike and hold the eye the moment the church is entered.

The aisles are carpeted in green to match the walls. The

seats are the ordinary theatre chairs placed in gradually ascending tiers, each row standing on a platform, raised several inches higher than the one in front. They are without upholstery and are simply oiled to bring out the natural beauty of the wood.

The service followed closely the order observed in other churches with the exception of the sermon, which in Christian Science Churches is conspicuous by its absence. They have no preachers, the service consisting entirely of music and Scriptural passages, with supplementary readings from "*Science and Health with Key to the Scriptures.*"

Yesterday morning's service was conducted by the Readers in charge, Mrs. S. P. Weaver and Mr. C. F. Kraft.

In the evening the church was again crowded, a large delegation from Seattle and other points being in attendance. Mrs. Blanche Hogue of Portland, First Reader of First Church, Portland, and Mr. David Ogden of the same city, formerly of Tacoma and a charter member of the Tacoma Church, conducted the service, assisted by Seattle Readers, Mr. and Mrs. Allen H. Armstrong.

Music for morning and evening was furnished by Mrs. Davenport, Mrs. Gaston, and Messrs. Buckmaster and Harigan. Mrs. Lovell presided at the organ, assisted by Miss Jeanette Kraft.—*Tacoma Evening News.*

Mrs. Ella L. Weaver delivered the following address:—

Friends:—Before taking up our regular lesson, it gives me great pleasure to extend to you, in behalf of First Church of Christ, Scientist, of Tacoma, a cordial, loving welcome. As we look upon our pleasant surroundings, we know that in this step a forward movement has been made in the interest of our Cause.

To our fellow-workers, visiting Scientists, we realize in your presence a visible manifestation of Love and your loyalty to the cause of Christian Science.

To the home friends and to those unacquainted with the teachings we represent, we appreciate your presence and thank you for your kindly interest, and may such a thought of love for God and our fellow-man go forth that all may desire to know more of this Truth, the Truth which wars only with sin, disease, and death, never with Life, Truth, and Love. May those seeking health and happiness, find both in the true understanding of God, our refuge and strength in every time of trouble.

In our text-book, "*Science and Health with Key to the Scriptures*" by Rev. Mary Baker G. Eddy, p. 574, we find church defined as "The structure of Truth and Love; whatever rests upon and proceeds from divine Principle. The church is that institution which affords proof of its utility, and is found elevating the race, rousing the dormant understanding from material beliefs, to the apprehension of spiritual ideas and the demonstration of Divine Science, thereby casting out devils, or error, and healing the sick."

The Church of Christ, Scientist, stands for right in all things and in no way departs from the teachings of the Bible, as witness our first church tenet: "As adherents of Truth, we take the Scriptures for our guide to eternal life" (*Science and Health with Key to the Scriptures* by Mary Baker G. Eddy, p. 493). All over the world it is fulfilling

a mission of love, reforming the sinner, bringing to the sick and sorrowing, health, happiness, and life.

The first Christian Science Church was organized in the year 1879 with twenty-six members. Its growth has been a most remarkable one, as to-day it has a membership of nearly twenty thousand [the present membership is 21,631], and about five hundred organized branch churches in the United States, Canada, Great Britain, Germany, France, Australia, and Mexico.

Our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, first published in 1875, is now in its 212th edition of one thousand copies each.

By no means least of the stones in the building of the Temple of Christian Science, is the physical as well as the spiritual healing, for it is a practical religion, and if God destroys sin and forgives the sinner, should it be thought incredible that He heal the sick and afflicted? The teaching of Christian Science lifts the thought higher, improves mankind physically, morally, and spiritually, teaches us how to keep the commandments: "Thou shalt love the Lord thy God with all thy soul and with all thy mind, and thy neighbor as thyself," brings to our consciousness the true brotherhood of man, destroys the love of sin and the fear of disease, and robs the grave of its victory.

The theology and medicine of Christian Science are one, governed by one infinite Principle. We say, in the words of Gamaliel, "If this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

We do not question the right of others to choose for themselves any system of theology or healing which seems right to them, and meanwhile we ourselves are striving to do good, in the way which to us seems right. We do not seek to fill our churches by proselyting.

We know that no honest seeker after truth ever accepts, without question, a statement for or against it, but will investigate for himself and prove all things, holding fast that which is good. We invite such investigation for Christian Science.

In "Miscellaneous Writings" by Mary Baker G. Eddy, p. 224, we read, "Then, we should go forth into life with the smallest expectations, but with the largest patience; with a keen relish for and appreciation of everything beautiful, great, and good; but with a temper so genial, that the friction of the world shall not wear upon our sensibilities; with an equanimity so settled, that no passing breath nor accidental disturbance shall agitate or ruffle it; with a charity broad enough to cover the whole world's evil, and sweet enough to neutralize what is bitter in it,—determined not to be offended when no wrong is meant, nor even when it is, unless the offence be against God."

For such teachings our hearts are filled with love and gratitude to our Leader, and to her untiring efforts are due the great blessings of Christian Science to-day; through her faithfulness and love, her patient obedience to the one God, divine Principle, are our demonstrations made possible. In times of trial we find her words of loving counsel able to turn our thoughts away from material sense to Soul, the ever-presence of divine Love.

To the dear home band who have labored so faithfully, I would say, Let us not think our work completed in the building of this church, it must be sustained by divine Love, for Love alone brings forth perfection.

I can find no more fitting thoughts with which to begin our work in our new home than those of our Leader in "Miscellaneous Writings," p. 155: "Sacrifice self to bless one another, even as God has blessed you. Forget self in laboring for mankind; then will you woo the weary wanderer to your door, win the pilgrim and stranger to your church, and find access to the heart of humanity. While pressing meekly on, be faithful, be valiant in the Christian's warfare, and peace will crown your joy."

The Work at Manchester, N. H.

On the evening of June 11, our new and prettily furnished reading room was formally opened to the public. Our local workers have for a long time felt the need of more suitable and centrally located quarters.

The first of May we took possession of a large, well-lighted and heated room on the corner of Elm and Manchester Streets, in the very heart of the business section. Contributions and furnishings at once began to come in. Of the money contributed a large rug (thirteen by nineteen) was purchased, others contributed chairs, pictures, plants, couch, stands, clock, and large centre table covered with the writings of Mrs. Eddy and the publications of The Christian Science Publishing Society. A Scientist of Concord, N. H., whose business is located here, kindly gave us the use of a piano. Just over this instrument hangs the picture which Christian Scientists are bringing to the attention of the whole world, Strutt's "A Little Child Shall Lead Them." Other pictures, such as the "Sistine Madonna," Hoffman's "Christ," and the "Mother Church" fill spaces on the walls.

The entire arrangement and color of the furnishings give the impression of cheerfulness, harmony, and quietness. The prevailing color is green with a shade of brown which harmonizes with the oak furnishings.

The following is a clipping taken from the *Manchester Mirror* of June 12: "Last evening the new reading and reception rooms of the local association of Christian Scientists in Merchants' Exchange Building at the corner of Elm and Manchester Streets, were opened and received their formal dedication. There were a large number of the members and invited guests in attendance, and the affair passed off in a most enjoyable manner. Among the visitors was a delegation from Concord, N. H., who were royally entertained by the local members. The visiting party was in charge of the Rev. Irving C. Tomlinson. The rooms were open to the public early in the evening and an informal reception was conducted between the hours of eight and ten. During the evening several musical selections were given at intervals. The Rev. Charles D. Reynolds, First Reader of the local church, in a few remarks introduced Mr. Tomlinson whose congratulatory words were encouraging and appropriate."

The visiting Scientists arriving in Manchester an hour and a half before the hour appointed for the reception, a trolley car was chartered and a ride was taken to Lake Massabesic. Among the visiting Scientists present were representatives from Los Angeles and San Francisco, Cal., Marion, O., Lockport, N. Y., and Cambridge, Mass.

In establishing this reading room, together with the encouragement given by the kind words and cheerful presence of the visiting brethren, we have been strengthened and are going forward in the work of building God's church.—ANNIE F. BAKER, Clerk.

In this connection the following letter to our Leader will be read with interest.

June 11, 1901.

Beloved Mother:—You will be glad to hear the good news from Manchester. Twenty of your Concord children, and five others who are here from abroad, to-night attended the informal opening of the new reading rooms in the Queen City. These new rooms are centrally located, conveniently arranged, and beautifully furnished.

The united band of Manchester Scientists were out in full force, and with their visitors filled the large rooms. Among those present from the First City of the state were Judge and Mrs. Fellows, Mrs. Putney, wife of the editor of the *Mirror*, Mrs. Frizzell, wife of one of the editors of the *Union*, Mr. Libby, principal of the High School, and his wife.

Rev. Mr. Reynolds made an ideal host and he was ably

assisted by the local workers. The Manchester Scientists seemed very grateful to divine Love for this gift to them, and they seemed to appreciate the visit of their Concord brethren. We were all blessed by this interchange of brotherliness. How kind divine Love is to us all.

I. C. TOMLINSON.

Fourth Church of Christ, Scientist, of Chicago.

One year ago Easter morning, Fourth Church of Christ, Scientist, of Chicago, held its first service in Marlowe Theatre, Englewood. The organization of this church was made necessary by the overcrowded condition at the services of First Church, and was effected in a manner similar to Second and Third Churches in the North and West Divisions of the city respectively.

A congregation of about five hundred attended the opening service Easter morning, but this church organization took from First Church a membership of one hundred and twenty, and an average attendance of about three hundred.

In one year the membership has almost doubled, and the congregation has likewise grown in proportion at both the Sunday and Wednesday evening services.

In March, this year, a lecture was given by Judge William G. Ewing, who was introduced by Mr. Orville T. Bright, County Superintendent of Schools. The building, which seats twelve hundred, was crowded before the hour appointed.

For more than an hour this large gathering listened in attentive silence to the message destined to sweep away the popular misconceptions of Christian Science, and to declare the known God. The attendance at the services increased noticeably after this lecture. At our Wednesday evening meetings it is learned that the glad story is both heard and heeded, that mankind is being cleansed through the Word which is spoken.

It would be difficult to tell in this article of the numbers who are lifting their voices in gratitude and praise at these meetings. They tell of release from the bondage of disease; of release from the yoke of sin; of sorrow and despair lifted; of all manner of discord destroyed by supreme Good.

With joy we say that the short history of this church furnishes a sublime lesson in obedience and love. Since the day of organization, the earnest, devoted work of its members, their love for one another, and desire to obey each and every injunction, have all wrought out the fulfillment of the Scripture, "Be ye glad and rejoice forever in that which I create; for, behold, I create Jerusalem a rejoicing, and her people a joy."

SAPPHO E. PRENTISS, Clerk.

Good Report from Helena, Mont.

First Church of Christ, Scientist, celebrated the anniversary of its first year of organization on March 19, 1901, and is pleased to report growth along all lines in the Christian Science work. We now have a membership of forty-five, and an attendance of from seventy-five to eighty, sixteen new members were admitted during the first twelve months, and four at our last Communion in June.

A reading room was opened in connection with our church on Monday, June 11, 1900, from which time until March 19, 1901, business amounting to \$470.55 was transacted. Seventy-three copies of "Science and Health with Key to the Scriptures" were sold, thirty-six copies of which were five-dollar editions, some eight hundred copies of "Christian Science History," and several thousand tracts and lectures were distributed.

Christian Science has had a few earnest adherents here for a number of years, and the society held meetings during 1899. March 19, 1900, the church was organized with twenty-five charter members, and May 23, 1900, First

Church of Christ, Scientist, of Helena, Mont., was incorporated under the laws of the state.

This branch church of the parent vine, realizes that its healthy and sure growth is due to its strict adherence to divine Principle, therefore we desire to send words of gratitude to our Leader, through the columns of the *Sentinel*, for what she has done to give us an understanding of the straight and narrow way, which leads to eternal harmony.—THEODORE R. HINSDALE.

Communion Service at Rockford, Ill.

Communion services were celebrated by First Church of Christ, Scientist, Sunday morning. The occasion was marked by an attendance that required the full seating capacity of the Knights of Pythias Hall, in which the services of the church are held.

The gain this religious body is making in Rockford as elsewhere was shown by the addition of four names to the church roll. In the membership of the local church is included a fine representation of business men, placing the work here on a substantial footing that is gratifying to all friends of the cause. The Sunday congregation was made up of intelligent men and women who have not jumped blindly at a creed but have made a careful study of Christian Science and have adopted it because they believe it to be the Truth.

The services are simple but impressive, and consist of a worship not of outward show but from the heart. The Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, are the only preachers.

Prayer without ceasing, silent, aspiring, deep-hearted, is said to be especially the custom of Christian Scientists. Such prayer overcomes evil, heals disease; binds up the broken, torn hearts of earth, and widens the mind's horizon. Prayer of this sort brings the thoughts of man into oneness with the divine Mind, and the worship of God becomes the daily reflection of the Mind which moves only in Love's grooves, and thus governs all in harmony.

The communion service proper differs from other churches in that neither bread nor wine is used. Love, pure and undefiled, is the genius of Christian Science. The Communion consists only of a silent prayer on bended knee, ending with the Lord's Prayer in unison.

Rockford Daily Register-Gazette.

Reading Rooms at Washington, D. C.

Members of First Church of Christ, Scientist, of this city opened their new reading rooms, in the Bond Building, yesterday afternoon (Sunday, June 16). The rooms, five in number, are on the third floor and are handsomely furnished. Palms and other plants adorn the windows and pictures hang on the walls. The rooms are free to the public and are intended to be a centre from which Christian Science may be explained to inquirers, as well as a resting place where strangers of the faith visiting the city and members of the local church may congregate. All Christian Science literature will be kept at the rooms.

The opening exercises yesterday were well attended, notwithstanding a pouring rain. Appropriate remarks were made by Capt. John F. Linscott, First Reader of the church; Mrs. K. P. Borland, Second Reader; Prof. Crowell, and others. After prayer and singing of Mrs. Eddy's hymn, "Shepherd, show me how to go," those present examined the rooms. All were loud in their expressions of appreciation.—*Washington Post*.

Truth, at last, shall reign:
The cradle-song of Christ was never sung in vain!
WHITTIER.

The Lectures.

At Fitzgerald, Ga.

The Opera House was comfortably filled with an intelligent class of people on Tuesday evening of last week (June 11), when Mrs. Sue Harper Mims gave her lecture on Christian Science. The rostrum was bedecked with potted plants and cut flowers, which seemed an appropriate setting for the sweet-faced, white-haired, motherly woman who gracefully stepped to the front when introduced by Colonel Jay in a few well-chosen words.

That the audience was interested was evidenced by the close attention to her well-modulated voice and tones of earnestness for over an hour.—*Irwin County Citizen*.

Colonel Jay's introductory remarks were as follows:—

"*Ladies and Gentlemen*:—I take great pleasure in presenting to you this evening a lady who occupies a high social position in Georgia; yet who, by reason of her love for God and humanity, turns aside from the pleasures and honors incident to her station, to lead others in the way of Life and to ameliorate the sufferings of mankind. After listening to her address, I am sure you will agree with me that she is a woman with a mission and a message. While there may, or may not, exist differences of opinion as between myself and the lady whom I have the honor of presenting to this intelligent audience, and as between the audience and the speaker concerning her religious views, the time is far past in the history of the world for men to cherish a spirit of intolerance for the views of others upon scientific, sociological, or religious subjects; and I feel quite sure that you will give the speaker that respectful and thoughtful attention to which she is entitled. In the earliest ages of the creation the decree of Almighty God went forth, "let there be light;" and there has never, from that day to this, been any good reason why man should abrogate that divine fiat. That religious or scientific system or cult which will not bear the searchlight of investigation and truth is unworthy of this enlightened age.

"Permit me, ladies and gentlemen, to present to you Mrs. Livingston Mims, wife of the honored mayor of the city of Atlanta."

The attendance at the lecture was upwards of five hundred, which we consider very good indeed considering that Fitzgerald is a town of only twenty-five hundred inhabitants.—*Correspondence*.

Science and Health in the Royal University at Upsala.

Royal University Library, Upsala, May 6, 1901.

Dear Miss L.:—I beg to acknowledge with best thanks the receipt of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, which you have been so good as to present to the Royal University of Upsala.

I have the honor to be, Dear Miss,

Your obedient servant,

CLAES ANNERSTEDT.

Chief Librarian of the University.

PILLSBURY FREE LIBRARY, WARNER, N. H.

The Trustees of the Pillsbury Free Library have received from Mr. and Mrs. W. W. W. of Boston, the following books: "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and "Miscellaneous Writings" by Mary Baker G. Eddy, a gift to the Library, for which they make a grateful acknowledgment.

(The librarian adds her personal thanks for their kind interest in the Library).

MARY BARTLETT HARRIS, Librarian.

May 11, 1901.

Testimonies Given at Toronto, Can.

THE following testimonies were given at the regular Wednesday evening meetings of First Church of Christ, Scientist, Toronto.

A lady told of one who had been afflicted with heart failure, and had written to a Christian Scientist in a neighboring city for treatment, as there were no Scientists where she lived. On a Saturday the Scientist wrote her that she would take up the case immediately. Next day the patient walked to church, a distance of over a mile. Formerly she had to take the street car if she went a few blocks. She gives all the credit for her healing to Christian Science.

Another lady told of a friend who had run a needle into her finger under the nail. She suffered from the pain for several days, but the remedies she applied did not relieve her. She then asked for Christian Science treatment, which was given. The pain left her at once and she felt it no more.

A gentleman said: "Christian Science not only enables me to appreciate the Bible much more than I used to, but it has also enabled me to understand it better than formerly. In the 91st Psalm I see perfect immunity from all kinds of disease and danger; we are safe from the 'pestilence that walketh in darkness' and from 'the destruction that wasteth at noonday,' 'there shall no evil befall thee, neither shall any plague come nigh thy dwelling.' The Christian should see that the Bible teaches one to turn to God for physical help as well as for moral and spiritual help."

Another speaker said that two months ago a lady came to Toronto for treatment. Jaundice was one of the diseases from which she was suffering, and her nails had a chalky deposit on them. She knew nothing of Christian Science but felt that medicine could do no more for her. Very soon after treatment the pain in her side had gone. After four or five weeks the chalky deposit on her nails left also. After having been treated about a week the patient spoke of two ruptures, which she had not mentioned before because she thought there was no cure for them. Before leaving the city the pain had entirely gone from them, and one of them had ceased to protrude. The patient was a woman about sixty years of age, and when she read the Christian Science tenets she said it was the first time in her life that she felt she could subscribe to the tenets of any church, although she always had been a church attendant. The Christian Science tenets showed her a God of Love.

Another told of a gentleman who some years ago was healed of tumor on the brain. His physicians could do nothing more for him at the time he tried Christian Science. That was about ten years ago. The speaker said, "I had the pleasure of meeting him again this summer, and he is a living monument to the power of Truth to destroy tumor on the brain."

The same gentleman told of a young man who was healed of cancer in the head. He had been six months in the county hospital, and when he came to Christian Science his head was in a plaster of paris box. The odor was so strong from this disease that he could not be allowed in the house where other patients were. In five weeks that young man was healed. That was about five years ago, and he is well to-day.

Another case spoken of was that of a young man who had been struck by lightning. He had doctored for about four years for this, and had wasted away almost to a skeleton. In about a month he was healed, and is hearty and well now.

A business man said he had been healed by Christian Science of hay fever, from which he had suffered for years.

A little boy's testimony: "I was cleaning my bicycle and

got my fingers and nails jammed badly in the sprocket wheel. Two of the nails were cut across. After one treatment the fingers pained no more, and the nails did not even come off. I have also had twenty-four cavities in my teeth filled without suffering."

A letter was read from a soldier in a distant city as follows: "I cannot commence to let you know how very thankful I am for having been led to the Truth. After I left Toronto I was taken with pneumonia. I sent for absent treatment and inside of two weeks was back at duty. About two weeks ago I was put in charge of a guard of four men over a man who was afflicted with insanity. He was tied down on a bed. The first thing I did was to untie him, then I proclaimed the Truth to the best of my knowledge. After I had treated him twice I took him out for a walk around the yard. Every one wanted to know how it was that I was the only one who could let him up. I told them it was Christian Science, and if they would only lead an upright life, as Science and Health teaches us, that they could do the same. One day I was down at the rifle practice marking, and one of the bullets struck an iron disk, then glanced and struck me in the forearm, making a flesh wound. I treated myself, and inside of two days no one could find where the bullet had entered, and I am very thankful for Christian Science. Every evening I sit down on my cot and study the Sunday lesson. I find great benefit from reading Science and Health. I have read it through three times, and each time it helps me more than before."

A lady said she knew of a woman who had a large lump in her breast which disappeared in less than a week under Christian Science treatment. Also a case of dropsy that had lasted more than a year, under the light of Christian Science disappeared in about three days. "But most of all," the speaker said, "Christian Science helps us in overcoming sin. I speak personally when I say that one has a large field for this work in one's own consciousness, and I give thanks to God and to Christian Science for the overcoming power."

Another lady said, "I am very thankful for my little knowledge of Christian Science. My little boy was last week bitten by a dog in the fleshy part of his leg. When I had succeeded in quieting the boy I treated him. The leg was stiff that night, but the next day my boy was running about well."

Another testimony: "More than eight years ago a young man told me that it would be to my advantage to have Christian Science treatment. It would be too long a story to tell what I thought of Christian Science at that time. Like many another I had lost faith in almost everything. Eventually I decided to have treatment. From my appearance to-night you might be surprised to know that I ever needed help physically. There was a time when I felt that there was no use in doctoring any more, as the physicians seemed to be unable to do anything for me. I received considerable treatment for I had a great deal to overcome. In the eight years that I have had the pleasure of calling myself a Christian Scientist I have been able to help myself and those in my own home in many cases of sickness. I have found Christian Science a well of water whose waters fail not."

A gentleman telling why he was grateful for Christian Science said that last December he had his wife treated. She had had two operations performed, but was no better, and the doctors said it would be necessary to undergo another operation. "We had not much faith in Christian Science, but tried it, and my wife was healed in a short time. I was also healed when suffering from a bad attack of the grip. Christian Science has also taken away my desire for tobacco. I had tried many times to give up the

use of tobacco, but was unable to do so. My two children were healed of the croup last winter by Christian Science treatment.

Another gentleman said: "Of the truth of Christian Science I have no doubt. Christian Science means infinitely more to me now than it did eleven years ago when I first investigated it. I have had repeated proofs of the power of Truth to heal, for in our family it has been our only help for years. Only last week I needed physical help to be able to continue my work, and I found that our God fails not, but is ever-present Love that heals disease."

A lady said: "Christian Science has been a great benefit to me and my family. It has not only healed sickness, but it has also prevented it. Twice last winter at different times my two sons felt unable to go to their work in the morning as they thought they had the grip. They had treatment and were able to go at noon. I have a friend who was healed in three weeks' treatment of a cancer. Her doctors had said that nothing but an operation could save her. In three months from the time of her treatment by Christian Science she had gained thirty pounds."

A gentleman testified to having been cured of the desire for strong drink. He said that about two years ago a friend had spoken to him of Christian Science. He said, "I did not need Science for physical health but I did need the Truth to enable me to overcome strong drink which I had indulged for years. It is now about two years since I had a desire for liquor or tobacco. I had used tobacco for nearly thirty years. I am twenty pounds heavier than before I was treated by Christian Science, and I have a contented mind."

Another gentleman said: "It is nearly nine years since I first heard of Christian Science. It has been our only help in sickness and trouble in that time. We all have better health than we had under *materia medica*, and not that alone, we are learning a higher way to serve our God. We are learning a more practical way. We are learning that really God is Love, and an ever-present help in time of trouble."

Notices.

New Application Blank.

A new form of application blank for membership with the Mother Church has been prepared, which can be had by applying to the clerk, 30 Norway Street, Boston, Mass. It is desired that hereafter the new form shall be used.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

He who prays in Christ's name must pray Christ's prayer: "Not my will, but thine, be done."

ALEXANDER MACLAREN.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Corrections.

WE desire to correct the following errors which appeared in our Leader's message to the Mother Church on Communion Sunday as published in the *Boston Herald*, June 24, 1901.

Page nine, column three, fourth paragraph, the phrase "his external selfhood" in the second sentence should read "his eternal selfhood."

In column six, fourth paragraph, the statement that for several years Mrs. Eddy allowed her students thirty per cent on the sales of her books, should read *fifty* per cent.

In the same column, next to last paragraph, the first sentence should read, "Christian Scientists can neither kill people by their practice, nor by *preventing* [not "permitting"] the early employment of an M. D."

Meeting at Tremont Temple.

THE usual Wednesday evening meeting of June 26, was held in Tremont Temple instead of the Mother Church, the attendance being so large that the auditorium of the Mother Church was wholly inadequate. Tremont Temple was filled and the meeting was one of the most interesting of the kind ever held in Boston. It was opened by singing the familiar hymn, "Nearer, my God, to Thee," after which was read, by the First Reader of the Mother Church, the 96th Psalm and a selection from page 191 of "Science and Health with Key to the Scriptures," followed by the usual silent prayer and the Lord's Prayer. After this "Shepherd, show me how to go" was inspiringly sung by the great audience. The First Reader briefly opened the meeting with words of welcome and congratulation, and read the following message from Mrs. Eddy, published in the *New York Journal* of June 26:—

"Please say through the *New York Journal* to the Christian Scientists of New York City and of the world at large that I was happy to receive the call of about three thousand believers of my faith in this city, and that I was rejoiced at the appropriate **beauty of time and place** that greeted them.

"I am especially desirous that it should be understood that this was no festal occasion, no formal church ceremonial, but simply my acquiescence in the request of my church members that they might see the Mother of Christian Science.

"The brevity of my remarks to-day was due to a desire on my part that the important sentiments uttered in my annual message to the Church last Sunday should not be confused with other issues, but should be emphasized in the minds of all present here to-day.

"MARY BAKER G. EDDY."

The First Reader then introduced the Earl of Dunmore as a distinguished member of the nobility of England who, by reason of his wide experience in the business and social world, had enjoyed exceptional opportunities for applying Christian Science in various practical ways.

Lord Dunmore, on being introduced, spoke substantially as follows:—

"I feel that I should be very much wanting in gratitude to our beloved Mother and Leader were I to fail to testify to the many great benefits that have accrued to me since I first came into Christian Science. To enumerate them all for you, or to attempt to describe one fourth part of what Christian Science has done for me, both **morally and physically**, during the past four or five years, would be impossible to-night in the brief time that is allotted to us to speak. I will, therefore, confine myself to relating an experience that I had last year.

"Never before had the allness of God and the nothingness of man been brought so vividly to my consciousness as it was last year in a little island in the South Pacific, which is used as a convict settlement, where business kept me for twelve months. The population was composed of two classes, natives and convicts. The natives were ignorant savages, many of them still cannibals and a great many of them suffering from leprosy.

"As if our cup were not already filled to overflowing, the black plague came to visit the island, and ravaged it for seven months. To live through all of this, and to demonstrate the unreality of these surroundings, was the task set me. Then it was that I found that Christian Science could fill those gaps in my hitherto lonely life, and the more I learned of Christian Science the less friendless did I feel.

"During the months that the plague raged I was face to face with death several times, and had it not been for Christian Science I am sure I would have shared in the panic that struck every one else. I went back and forth to my office every day, although it was in the most infected district, and I saw people dying all around me. Some of the people, even in my office, died; but, owing to the teachings and blessings of Christian Science, I never had any fear whatever."

Lord Dunmore was followed by Edward P. Bates, C.S.D., the retiring president of the Mother Church, who dwelt briefly upon the necessity of spreading Christian Science literature before the people. Mr. Bates said in part:—

"We have had a great feast. During this Communion season we have received blessings greater than on such occasions in the past. Perhaps it is because we were better prepared for the table. We have received much, and therefore much is expected of us. When we go back over the Field we can give Christian Science to our neighbors; it is for them to decide whether or not they will accept it. Our literature should be given to those who wish it, not to those who do not. We all have neighbors who do wish it, and this Truth should be given to sick and suffering humanity throughout the world."

A gentleman from Poughkeepsie, New York, then gave an interesting testimony of the healing of a child. He said the little fellow was paralyzed from birth and the physicians said he would always be weak-minded. One of the Readers of the church there was called to treat him and he was instantly healed. That night when his father came home, the little feet that had not moved for eight months were kicking in the air. The child and the parents slept well that night for the first time in a long while. The boy is now four years old and his parents are members of the Christian Science Church.

Miss Lilius Ramsay of Edinburgh, Scotland, gave an interesting account of the starting of the church in that city. She told also of a young clerk who had suffered so badly from nervous prostration that he could scarcely walk across the street. He became addicted to the drink habit, which fastened itself upon him so that he could not shake it off. After a while he had to be kept in solitary confinement. She said he was cured of his appetite for liquor during one conversation with his employer, a Christian Scientist. Christian Science was not even mentioned, but the em-

ployer was so filled with the spirit of Truth that the other man was healed. She told of an atheist who became a Christian Scientist, and she said he was now healing others.

A gentleman from New York spoke of the marked way in which the practical application of the teaching of Christian Science had been beneficial in business experiences.

Lady Ramsay of Scotland said that Christian Science had healed her of many severe troubles, and that her healing came from simply reading the text-book, "Science and Health with Key to the Scriptures." It was, she said, the best thing that had ever come to her in all her life. She related the healing of a boy from epilepsy, and other remarkable cures, moral and physical, which had come under her observation. She told also how the peasantry in her neighborhood were becoming interested in Christian Science, stating that she was holding services for the benefit of the servants of her household and the peasantry each Sabbath at her own home, dwelling somewhat upon the great help these services were and the ready simplicity with which the Truth was received by and taken into the lives of these simple-hearted people.

Mrs. Frances King of Memphis, Tennessee, related a remarkable case of Christian Science surgery. Without going into the details of this case, we will simply say that the power which could produce such a result as that testified to in this instance is none other than a divine and almighty power. It deeply touched all present.

One of the most interesting testimonials was that of Mr. Jacob Shields of Warsaw, Indiana. Mr. Shields has been a Christian Scientist, he said, for about sixteen months. When he first considered the doctrine he subjected it to a severe test before deciding to accept it. The test was subdivided into five heads: First, evolution of the doctrine; Second, the personnel of the church; Third, an application of the hypothesis; Fourth, the application of science, and, Fifth, a determination if any human phenomena could account for the healing.

"As to the application of the hypothesis," he went on, after discussing the other points, "I tried it and came out with health. I was healed of a painful rupture, and my eyesight was restored after I had been obliged to wear glasses for sixteen years. I set to work to study the application of Science, and in the sixteen months that I have been called on to practise Christian Science I have been able to furnish proof that is indisputable; at least fifteen cases of grip have been cured within one or two days; one man was cured of heart disease who had not had a well day for fifteen years; a child ten years old was cured in one treatment of inflammation of the kidneys, and another child of nine years was cured by one treatment who had been ill nearly all its life.

"Perhaps you don't all realize," continued Mr. Shields, "what it means to do business in a Christian method in a clothing store? But I told my salesmen they must sell cotton for cotton and wool for wool, and my business has prospered and increased."

Mrs. Sara Pike Conger, wife of Hon. Edwin H. Conger, American minister to China, spoke most feelingly of the help Christian Science and Christian Science prayers were to her and to the legationers during the terrible siege through which they passed. Mrs. Conger said in part:—

"Dear brothers and sisters, I desire to express a little of my sincere gratitude for the great part you took to help the besieged in Pekin. You did better than you knew. The united prayers of all nations and all Christians helped to hold up our spirits, and to make us see and feel and know that God was with us, protecting and sustaining us.

"The fatherhood of God and the brotherhood of man came nearer to being realized than ever before. We lived ten years in one in 1900. It was an awful test, but the beautiful will that bore the cross called His mighty army to help us. Remember, no good thought is ever lost, and

remember, too, that the end is not yet. We as Christian Scientists know in part what this means. Well did I know that the precious Mother and her faithful children were with us in our trial, and I gave out such gratitude as I never knew how to give out before."

The Rev. S. E. Simonsen of Brooklyn, N. Y., for many years a prominent Methodist minister, related in a most interesting way his experience in coming into Christian Science; the struggles through which he had passed after becoming convinced of its truth, and his final acceptance of it and public stand for it. He touchingly and tenderly referred to his former church connections and labors, and how, in taking this step, he was only moving in advance of his former experience.

Rabbi Max Wertheimer, Ph.D., of Dayton, Ohio, dwelt eloquently upon the causes which led him to renounce his former religion with all its tender associations and come boldly out before the world as an adherent and advocate of Christian Science. This step meant all to him and was taken only after long and mature deliberation. He, like Mr. Shields who preceded him, spoke of the great benefit Christian Science had been to many Jewish people and the grand Messianic work that it would yet accomplish for their race.

Mr. B. S. Josselyn of Louisville, Ky., a prominent railroad man, spoke on behalf of railroad men, giving some interesting facts as to the manner in which employes of the railroad company with which he is connected have become interested in, and practically applied to their lives and work, the teachings of Christian Science.

Prof. Theodore F. Seward of New York, Secretary of the Baron Hirsch Monument Association, spoke earnestly and broadly of this great spiritual wave that was attracting the attention of the whole world, and also referred to the work that was being accomplished among the adherents of the Jewish faith, making some weighty prophecies as to the future.

Mlle. Demarez of Paris related an incident of the curing of a child of a well-known French general, through Christian Science treatment. This child's case had been pronounced entirely hopeless by leading physicians.

Mr. Gale of San Francisco gave an interesting testimony; also Mrs. Young of California, and several others present.

Every second of the time was occupied in a most interesting way, scarcely an idle word being uttered up to the moment of adjournment, which was at 9.30.

Before closing the meeting, the First Reader read the following notice relative to railroad fares:—

"In buying tickets for the return, ask for a receipt showing the form, number, and route of the ticket, and on reaching home ask the ticket agent who sold them the ticket to Boston to take the matter up through his general passenger agent for the return of the two-thirds fare.

"If this is done, and the correspondence comes through the General Passenger Agents of the intermediate lines and they assent to it, the Boston terminal lines will adjust the matter.

"It is absolutely necessary that they return over exactly the same route by which they came, or even this much cannot be done.

"The Canadian Pacific have notified the Boston and Maine to take care of their people."

The Meeting at Concord.

We republish from the *Daily Patriot* of Concord, N. H., the following interesting account of the Wednesday evening meeting there—June 26.

The regular meeting last night at Christian Science Hall was an overflowing one. Besides the usual large number from Concord, visitors were present from this and foreign lands. The opening services were conducted by the First

Reader, Rev. Irving C. Tomlinson, and consisted of readings from the Bible and the text-book of Christian Science, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. The congregational singing was spirited and inspiring.

Introductory to the testimonies of the congregation, Rev. Mr. Tomlinson read the concluding paragraphs of Mrs. Eddy's Annual Message, wherein believers are exhorted to be steadfast in the faith, to overcome evil with good, to strictly obey the laws that be, and to follow their Leader only so far as she follows Christ. The reverent testimonies from a large number not only acknowledged the marvelous healing of sickness and sin, but confessed to the renewed life which was day by day deepening in their experience. They told of their deep appreciation of their visit to Concord and all voiced their gratitude to God and their sincere regard for their beloved Leader.

The Visit to Pleasant View.

It is estimated that about three thousand Christian Scientists were present at Pleasant View, the home of the Rev. Mary Baker G. Eddy, Tuesday, June 25. A large number of Scientists had gone to Concord the day before. Many of these—amounting, according to some estimates, to about seventeen hundred—remained over until the next day and were of course among those who were present. The others were conveyed to Concord by the regular trains and three special trains. It is needless to say that the occasion was a most enjoyable one and deeply appreciated by all, but especially by those who for the first time looked upon our Leader's face and her beautiful and harmonious home.

The visitors went directly from the station to Pleasant View, so that from the early forenoon until evening the lawns and shaded walks about the residence were the scene of the life and activity manifested by the large numbers present.

At a few moments before two o'clock our Leader appeared on the northeast balcony of her residence, with erect form and sprightly step. She stepped out upon the balcony and smiled benignantly upon the great assemblage of those she loves and who love her, and in clear and distinct tones, which were heard by all, she addressed them briefly, saying they had sufficiently heard from her through her message, and after looking upon their dear faces, she would return to her studio.

She also appeared a few moments later on the front piazza of her residence, bowing her acknowledgments to her students, and again at the regular hour for her daily drive she appeared, stepped into her carriage, and was driven away from the grounds through the crowd.

This gracious and kindly action on the part of Mrs. Eddy was a fitting conclusion of the Communion season. It will remain always a sweet memory to all who were present.

The *Boston Globe* thus speaks of Mrs. Eddy's appearances upon this occasion:—

"Mary Baker G. Eddy walked out upon the balcony, far above the heads of her people, at just 1.55. Her step was firm. Her manner was impressive. Her movement was graceful as viewed against the background of sky and the swaying branches of trees, swaying because a slight breeze had risen from the valley that stretched away to the distant hills.

"She was attired in what might have been satin or silk, figured, and cut *en traine*. Upon her white hair rested a bonnet, with fluttering blue and old gold trimmings. The number of her years were in no way denoted by her garments.

"Not a cheer arose; not a pair of hands clapped; it was

not in such fashion of the world that the Scientists showed the enthusiasm that was within them or expressed their sentiment of love and their admiration for their Leader with her white hair.

"There was a decorous sort of scamper for the driveway in front of the mansion. But once did eagerness to see and to be close to the Mother at the time of her departure from the grounds lead to any action which was unseemly. That was when a group of girls thoughtlessly and ruthlessly rushed across a bed of flowers in order to reach a place close to the pillars of the *porte cochere*.

"We don't want to injure Mother's flowers," cried a stout gentleman from Boston, in a tone that was full of tenderness and pathos, and the incident ended.

"At 2.05 Mary Baker G. Eddy appeared on the front porch. Her age was more apparent, for she was nearer to the guests than before, yet she seemed to be in excellent physical condition for one whose years have been so many. She tarried in sight for a moment and threw a kiss. Again she withdrew into the white mansion.

"The coach arrived from the stable.

"At 2.10 Mary Baker G. Eddy made her third and last appearance in the presence of the assembled pilgrims from the four corners of the earth.

THE *Concord Evening Monitor* gave a detailed account of the visit and Mrs. Eddy's appearance. We make the following extracts:—

Concord has been honored to-day by the presence of thousands of visitors, representing every state in the Union, our island possessions, and many lands beyond the sea, and all bound together by the ties of Christian Science, whose Founder and Discoverer, the Rev. Mary Baker G. Eddy, makes her home here, and by whose invitation the visitors had come.

It is customary during the Communion week of the Mother Church in Boston, which occurs annually in June, for many hundreds of Christian Scientists who attend the services in Boston, to visit Concord, but it is only rarely that they come in such numbers as were present to-day, or that they are privileged, as they are to-day, to be greeted by the loved and venerated Leader of their faith.

Following the annual Communion of the Mother Church, which was held in Boston on Sunday, many Christian Scientists came to Concord yesterday and spent the day very pleasantly in driving about the city, in visiting Mrs. Eddy's birthplace in Bow, in interchanging greetings with old acquaintances, and in forming new friendships. These visitors had proposed returning to Boston last night, but it became known that the church members were to visit Pleasant View to-day and the vanguard hastily determined to remain here. This determination not only exhausted all the available accommodations at the city hotels and lodging houses, but caused generous drafts to be made upon the hospitality of private residences, which was freely offered. In addition, the local market in toilet articles, none of which the visitors had brought, took a sudden boom, nearly depleting the stocks of city tradesmen.

With the first trains of the morning additional arrivals poured into the city, two special trains from Boston swelling the tide to huge proportions. The total number of visitors cannot be less than three thousand, and for their transportation to Pleasant View all sorts and conditions of vehicles were pressed into the service. The first special arrived here at 11.40, and brought nearly a thousand Scientists.

The members of the party were received at the station by the Rev. Irving C. Tomlinson, First Reader of First Church of Christ, Scientist, in Concord, and by Dr. Alfred E. Baker, who conducted the guests to carriages which were driven directly to Pleasant View. The visitors were conveyed thither for the most part in hacks, barges, passen-

ger wagons, and all sorts of conveyances that could be called into service. Many rode on the street cars as far as the electric line extended in the direction of the Mecca sought, and walked the remainder of the distance, about a mile; while the remainder covered the whole distance on foot.

The beautiful weather contributed not a little to the pleasures of the occasion, and on arriving at Pleasant View the freedom of the estate was tendered to the visitors, who greatly enjoyed strolling about the handsome grounds and admiring the beautiful and inspiring outlook, by virtue of which Pleasant View is so rightly named.

It was apparent to every person within sight and hearing of the house that Mrs. Eddy was in excellent health and spirits, glad of the opportunity to greet her followers, rejoicing in the appropriate beauty of the time and place.

For the next half hour the people resumed their attitude of patient waiting, all being desirous to see Mrs. Eddy start upon the drive she has taken for so many afternoons since her residence in Concord. At half past two the carriage was brought around to the *porte cochere*, Mrs. Eddy entered and was driven away, once more bowing her acknowledgments to the throngs that lined the roadway.

The grounds were then thrown open to the visitors, and after viewing to their heart's content the beauties of the residence, the thousands of people started back to the city and thence to their far scattered homes.

One of the most notable annual pilgrimages that the world sees was once more completed.

The excellent account of the visit which was published in *The Daily Patriot*, a Concord evening paper, was in part as follows:—

The annual pilgrimage of the followers of the Christian Science faith to Pleasant View, the home of the Rev. Mary Baker G. Eddy, took place to-day.

It is a reasonable estimate that the visitors numbered from twenty-five hundred to three thousand, quite as large a crowd, probably, as was ever assembled in the beautiful grounds that surround the home of the Founder and Leader of the church.

The members of the church came to the city in large numbers from Boston on Monday, intending to return at night. They came unprepared for a night's sojourn, and in consequence a demand was made upon local dealers for the necessary articles of toilet, which pretty nearly depleted their stocks. Hotels and boarding houses were overflowed with guests, and many sought the hospitality of private residences, which was cordially given.

With the arrival of the first train from Boston, this morning, the tide of visitors began flowing in, and was at flood when the first special from that city reached here at 11.40, bearing nearly a thousand. All the regular trains were overcrowded with Scientists, and in every case extra cars were attached to the trains to meet the extraordinary demand for accommodation.

Attached to the White Mountain express, which was due here at 11.20, and was delayed somewhat by the conditions of the day, were two Pullman cars bearing the leaders and distinguished members of the church in this country and Europe.

The morning was beautiful, but exceedingly hot, rivaling in temperature the Fourth of July, three years ago, when the first assembling of Christian Scientists at the invitation of the Founder and Discoverer of their cherished religion occurred.

At a few minutes before two o'clock the waiting thousands were marshalled into place beneath the northeast balcony of the house. There, just as the hour struck, the erect and queenly form of the Mother was seen to appear, and an instant hush fell upon the multitude.

She, for whose greeting the throng had come so far and waited so patiently, advanced to the railing and gazed into the upturned faces beneath her. Her eyes kindled at the sight, and she smiled a welcome before the formal bowing of her head in greeting. Then she spoke, slowly and clearly, and the great audience literally hung upon her words.

Once more the keen gaze swept the human arc beneath and about her. Again the Mother bowed her head, this time in farewell, and the great crowd stood in silence till she had withdrawn from the balcony. They had seen the Founder of their faith and the sight was well worth to them the journey and the waiting.

Sensible Remarks.

THE editor of *The Sunday Herald* of Omaha, Neb., in a recent issue, referring to a suggestion by one of its Iowa contemporaries that possibly the fact that Mrs. Conger, the estimable wife of the Hon. E. H. Conger, was a well-known Christian Scientist, might have had something to do with her husband's failure to get a majority of delegates to the state convention to support him for the nomination for governor, makes the following sensible remarks relative to the spirit that would dictate such a charge:—

"It may be true that the fact that Mrs. Conger is a Christian Scientist operated against her husband's candidacy where that fact was known. Indeed, it is very probable that the prejudice against Christian Scientists is strong enough to defeat the husband, father, brother, or it may be, the grandson or the great-grandson of a Christian Scientist. Accepting this as correct, it is a sad commentary on the intelligence of the age. However we may differ with the Christian Scientist's method of treating human ailments, there is nothing in the life of the average Christian Scientist to justify serious criticism. Wherever you find a Christian Science Church there you find faith, hope, and charity, and 'the greatest of these' is practised in a most substantial way. There are a number of Christian Scientists in this community, and there is no organization within this city that contributes more to the poor than does the Christian Science organization in Omaha. There is no class of people in this city whose members are more devoted than the class known as Christian Scientists, and who give practical and substantial relief to human beings in need.

"The *World-Herald* is a great believer in castor oil, and on certain occasions, in its opinion, calomel is a very handy thing to have around the house. But if it be admitted that a faith like that of the Christian Scientist is the faith of a fanatic, if it be admitted that the methods of the Christian Scientist are the methods of the absurd, even so, that absurdity and that fanaticism become virtues in comparison with that abominable prejudice that would ostracize a man or a woman because of his religious belief.

"There must indeed be something radically wrong with the boasted intelligence of this day when men can harbor such bitter resentment as is shown in some quarters toward the Christian Scientists. If it be true that some people have died under this peculiar treatment, it is also true that the men and women who believe in that treatment have accomplished in the way of charity considerably more good in this life than they have injury; and any man or woman who can truthfully say that he has accomplished more good than evil, need not write failure after his life."

We do not understand that the delegates to the Iowa convention have determined in advance their choice of a candidate for governor. Probably not. Therefore it is not known that the rumors referred to by *The Sunday Herald* have any foundation in fact.

Dedication of Third Church at Chicago.

AN important event in the history of the Christian Science movement in Chicago will be the dedication, on July 14, of the new church edifice in the west division of the city, corner of Washington Boulevard and Leavitt Street, known as Third Church of Christ, Scientist, of Chicago. Each of the three great divisions of this western metropolis is now provided with a large and beautiful Christian Science Church edifice.

The four dedicatory services, at 9 and 11 A.M., and 3 and 7.45 P.M., will be conducted by the Readers of the First Second, Third, and Fourth Churches of Christ, Scientist, of Chicago, in the order named. Also the soloists from the four churches will take part in the services.

The building has a seating capacity of fifteen hundred, and a cordial invitation to attend these services is extended to all.

To Our Helpers.

THE value of our publications is largely determined by the quality of the contributions which come to us from the Field, and this fact should command the attention of all Christian Scientists. Every realization of Truth, every inspiring thought, every clear and satisfactory demonstration is given us to give, to enjoy and profit by for ourselves in the measure of its ministry through us to others.

The realization of the purpose and ideals of the editors involves the co-operation of a great body of Scientists whose helpfulness we greatly appreciate and we bespeak their continued interest and assistance. Those of our contributors who have not been accustomed to writing, will do well to submit their efforts to the best criticism they may command, then recast and rewrite accordingly.

Articles should be written on large size paper, using but one side of each sheet, and in as legible a hand as possible.

We scarcely need to add that no word should be written that is not prompted by love, and that every flavor of contention, disputation, and self-gratifying criticism should be eliminated.

Many who write us are mindful of all these things, some are not, but all will indulge us, we are sure, in this periodical reminder that whatever is worth the undertaking, is worth the doing well in love.

Success.

AN active Christian Scientist of Chicago, who is also a prominent and successful business man, sends us the following thought-gem upon the subject of Success:—

"As I lay awake this morning, my thoughts reverted to the 23rd and 91st Psalms. I also recalled an enquiry which had been made of me at one time concerning a third person, wherein one asked: 'If so and so is such a good Christian Scientist, why is it he has not had greater success in his business?' and I answered that if he would define 'success' I might be able to answer his question.

"Jesus said at one time to Martha that she was troubled and careful about a great many things, but that there was only one thing needful. So we, to-day, allow ourselves to be perplexed and worried about many things, when in reality there is but 'one thing needful,' and what we should do is to make the choice that Mary made and choose the 'one thing needful.' While thus musing, the following message was given to me:—

"Success is not properly measured by the accumulation of dollars, but by the understanding of the Principle of Being which enables the demonstration of Truth, Love, Life, 'for in Him we live, and move, and have our being, and when we have demonstrated this, then we have attained Success,—the 'one thing needful.'"

Message from Mrs. Eddy.

FOUR large congregations assembled for successive but identical services of the annual Communion at the Christian Science Church, Norway and Falmouth Streets, on Sunday (June 23), and in all probably nine thousand people, at least, heard the long message from the Founder and Leader of the Christian Science movement, Mary Baker G. Eddy. This message took up an hour and a half at each service as read by John W. Reeder, First Reader of the Roxbury Church, and it was largely an explanation of the Christian Science idea of God; a statement of the reasons why evil mental suggestion would in time be made amenable to the laws of the land; and a closing word of advice and exhortation to her followers.

Judge S. J. Hanna conducted all the services, at 9 A.M., noon, 3, and 7 P.M. The service was much the same as usual, except that the reading of the Lesson-Sermon was omitted and its place taken by the message, and near the end of the service came the communion, at which the whole assembly bowed in silent prayer, concluding with the audible repetition of the Lord's Prayer. The seats for the first service began to fill as early as 7.30 A.M., and long before each of the later services the throng in waiting to enter crowded stairways and vestibule, and reached even out on the sidewalks. Confusion was avoided by having the church emptied each time through the doors at the sides of the auditorium, leaving the others for the entering congregation.

Judge Hanna announced that the number admitted to the church at this Communion was 2,496, making the total membership in the Mother Church, as that in this city is called, 21,631. Many of these, of course, are also admitted to membership in one of the branch churches in this or some other country. A considerable number of those in the congregations Sunday were from foreign countries, and after the last service a message expressing gratitude and appreciation, sent from the church to Mrs. Eddy at her home in Concord, N. H., bore these signatures: Edward P. Bates of Boston; Edward A. Kimball of Chicago; Septimus J. Hanna of Boston; Earl Dunmore of London; John B. Willis of Allston; William P. McKenzie of Cambridge; Mrs. Caroline V. Ferguson of Florence, Italy; Irving C. Tomlinson of Concord, N. H.; Mrs. Sue H. Mims of Atlanta, Ga.; Mrs. Ruth B. Ewing of Chicago; Mrs. Majorie Colles of Ireland; Mrs. Sara Pike Conger of Pekin, China; Miss Helen L. Swasey of Washington; Mrs. Annie M. Knott of Detroit; Mrs. Augusta E. Stetson and Mrs. Laura Lathrop of New York; Miss Sue Ella Bradshaw of San Francisco; Mrs. Rose E. Cochrane of Edinburgh, Scotland; Ormond Higman of Ottawa, and Mlle. Alphonsine Demarez of Paris.

Boston Evening Transcript.

A Card of Thanks.

At the semi-annual meeting of First Church of Christ, Scientist, held in Christian Science Hall, Thursday evening, June 27, 1901, it was unanimously voted that the hearty thanks of this church be extended to the citizens of Concord for the courtesy shown to the Christian Scientists who visited this city on Tuesday of this week, at the invitation of our Leader, the Reverend Mary Baker Eddy.

IRVING C. TOMLINSON, *President.*
MABEL C. GAGE, *Clerk.*

Christianity might be called love in action. It makes itself visible in character. But it never stops there, for a Christianity that is vital enough to be seen in the life goes out ceaselessly in some unselfish form of ministry.

Selected.

From Our Contributors.

Fatherhood of God and Brotherhood of Man.

BY HENRY L. UPTON.

A THOUGHT which has been very helpful to me, since taking up the study of Christian Science, is the fatherhood of God and the brotherhood of man.

In considering this subject let us turn to the Scriptures, which were given to us by the holy men of God, who wrote as they were inspired by the Holy Ghost, and study them carefully and prayerfully, in connection with our text-book, "Science and Health with Key to the Scriptures."

It is written, "God created man in his own image, in the image of God created he him." "The Lord he is God: it is he that hath made us, and not we ourselves." "Have we not all one Father? hath not one God created us?" "Call no man your father upon the earth: for one is your Father, which is in heaven." By considering these passages in the light of Christian Science, it is evident that God is our Father,—yea, more than that, He is our Mother, our All-in-all; for He is the *only* Creator, the only Source from which we derive our real life. Paul says, "One God and Father of all, who is above all, and through all, and in you all."

We are taught in Christian Science that "our Father which art in Heaven" is a God, who is Life, Truth, Love. He is omnipotent, omniscient, and omnipresent. He is "The mighty God, The everlasting Father, The Prince of Peace," the One "altogether lovely," who "guards and guides, and feeds and folds" all His children.

But to acknowledge God as our Father and prove ourselves His children, we must live in accordance with His will, allow no power but divine Love to govern us, and have that Mind "which was also in Christ Jesus." It means that we shall model our thoughts after His thoughts, seek humbly the throne of grace, and there with honest and pure hearts be taught of God. To enter into close relation with our divine Parent, who is Spirit, we must turn our gaze from the mortal and temporal to the grand realities of the divine Life, to "the things which are not seen," but "are eternal."

Jesus said, "It is the spirit that quickeneth; the flesh profiteth nothing." We must overcome evil in *all* its forms before we can awake in His likeness and realize in the highest and truest sense that "out of Zion, the perfection of beauty, God hath shined."

How can all men be brothers? By acknowledging that they all have one and the same Father, God; then they will see that all are of one fold, having one Shepherd.

When we regard our fellow-man as a child of God we shall see in him only those things which are lovely and lovable, knowing that where God is no evil can exist.

When we are willing to be governed, and willing to have our brother governed, by God, giving up all selfish and wicked devices, letting God's "will be done in earth, as it is in Heaven," we shall find in each one only the reflection of Life, Truth, and Love.

If we were all of one heart and of one soul: never saying that ought of the things which we possess were our own, but having all things in common; knowing that "every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning," we then should know "how good and how pleasant it is for brethren to dwell together in unity."

If we would but realize that man, in the likeness of God, is *incorruptible* and *indestructible*, that the Prince of Peace is the Maker and Ruler of all that is real, we should have no trouble in realizing that unspeakable peace which must come from knowing the fatherhood of God and the brotherhood of man.

How we Know.

BY C. A. P.

CHRISTIAN SCIENTISTS are frequently asked "How, do you know that the teachings of Mrs. Eddy are correct?" The natural reply is, "Because when the rules as laid down by her in Science and Health and other writings are followed, the proper result is reached." Let us state a short example:—

The Rule.—On page 442, Science and Health, we read: "Christian Science silences human will, quiets material thought with Truth and Love, and illustrates the unlabored motion of the divine energy in healing the sick." In that never-to-be-forgotten message addressed "Beloved Christian Scientists," Mrs. Eddy says: "Keep your minds so filled with Truth and Love that sin, disease, and death cannot enter them. . . . And not only yourself are safe, but all whom your thoughts rest upon are thereby benefited." Again, in the prayer "and may Thy Word, in Christian Science, enrich the affections of all mankind, and govern them!"

The Application.—In a large establishment, where a great many men are employed, one man, from his belief in the power of the air to affect him injuriously, suffered continually with sore throat, to the extent of being incapacitated to pursue his vocation one and sometimes two days each week. From a financial view point this meant four dollars each day he was absent. The management of the office was very lenient and considerate, and endeavored to alleviate the trouble by moving his desk from one location to another, but to no avail—he carried his belief with him and it was manifested. The matter was brought to the notice of two Christian Scientists, and they talked it over. They decided they would call the attention of their fellow-worker to Christian Science, and advise him of the good which had resulted to them from its practice. Then the question arose as to which should be the one to mention it. This phase of the matter was handled scientifically, the result being an agreement that the one should do it to whom the occasion was presented—the idea being that Principle would direct.

The Result.—The occasion never arose. This happened something over a year ago and that man has not lost a day since on account of his throat. The rule had been applied—the human will had been silenced with Mind—the unlabored motion of Truth had quieted material thought, and the result was the healing of the sick—harmony made manifest. The minds of the two Scientists had been filled with Truth and Love, and he upon whom their thought had rested had been benefited—proving our Leader's words quoted above.

True Riches.

BY G. S. H.

How clearly and unmistakably Peter brought out the sense of what constitutes true riches in the healing of the impotent man at the gate of the temple called Beautiful.

Men and women are looking to stocks and bonds, houses and lands, silver and gold as the evidences of wealth, and are struggling and contending, some filling their barns full, others falling behind in the race, as was evidently the case with the lame man who lay daily at the entrance to the temple asking alms.

Peter and John approach the temple at the hour of prayer. At the entrance we see this helpless cripple, lame from birth, a picture of poverty and wretchedness. He asks Peter and John for alms, Peter replies, "Look on us," and gaining from them the expectancy of some great good; feeling, no doubt, their thought of abundance, he gives heed, and in that giving heed he received more than all the

wealth of the world could buy. How refreshing was the expression of Peter, how full of scorn for the material, how rich with a great Truth, when he said: "Silver and gold have I none; but such as I have give I thee: In the name of Jesus Christ of Nazareth rise up and walk." and the man "leaping up stood, and walked, and entered with them into the temple, walking, and leaping, and praising God." Now this wealth that was so freely given by Peter is ours to-day. Christian Science has brought to the world the realization of an unfailing, inexhaustible fountain of riches, and the understanding that enables us to draw upon this fountain for every need and for every trouble.

In Peter's words to those who crowded around in wonder at the healing of the lame man, we see the clear leading toward this fountain of all good, toward God as the Healer. He said, "Why look ye so earnestly on us, as though by our power or holiness we had made this man to walk?" Then in clear, unmistakable words he gave them to understand that it was faith or knowledge of the Truth as brought by Christ Jesus that had "given him this perfect soundness."

Christian Science is again unfolding the great truth that Jesus expounded. Jesus proved man's oneness with the Father, and we, through the understanding that comes from a study of the Bible and our text-book, "Science and Health with Key to the Scriptures," grow into a fuller knowledge of Christ, have more "faith in his name," and see more clearly the unity of man and God. And we shall be able to reflect the riches of our inheritance to all mankind. As this great "love the father hath bestowed upon us" breaks upon our consciousness in all its fulness, we shall not only heal ourselves, but we shall speak to the sick, the poor, the lame, the downcast, words of authority such as Peter spoke, when he said to the impotent man, "rise and walk," and everywhere we shall see evidences of a new day dawning, rich with the promises of the power which God bestows upon them that receive Him.

Conflicting Forces.

BY R. C. M.

HE who perceives the first faint glimmer of light, radiating from the Truth as revealed in Science and Health, feels a thrill of joy such as was never before experienced. He knows not why, but life at once commences to take on new aspects. Especially is this true when some physical ailment has been destroyed.

But this first stage reached, difficulties at once arise. The poor mortal, who, with his first small glimpse of Truth, thought himself so strong, now begins to recognize every mistake of thought, word, and deed; and to feel the depressing influence of mortal mind. Perhaps outside influence weights his consciousness or he again feels the pang of some old error, and recoils from the Herculean task which confronts him.

He may for a time hesitate in his upward course. But conscience awakened by the power of Truth, soon whips him back to the realization of the nothingness of his life apart from God, and he contemplates the work before him. He catches a faint ray of the glory which awaits the victor; he sees the noble result which has been realized by his brothers, and soon one by one obstacles begin to melt away in the warm light of the eternal Love. Prejudice gives way to generous and loving interest; and seeming pleasures of sense gradually give place to the unspeakable joy of a life hid with God, divine Love. At last he begins to realize his nothingness apart from Principle, his emptiness without his God.

Though he may yet stumble and fall, and get on with bleeding and weary footsteps, he gradually gains the un-

derstanding, the loving trust which looks first to the One altogether lovely, the one omnipotent Being and Principle of the Universe, of which he knows himself to be the harmonious reflection. His awakening spiritual consciousness is his individuality, his true self, a consciousness expressing Divine Mind, the Principle of everlasting life. This is man, and what joy, confidence, and strength such a realization brings in the hour of darkness! What joy-crowned reward results from each period of struggle with the errors of material sense!

To such is the overjoying hope of that final realization, when the conflicting forces of mortal mind shall become but empty vapors, and man stands erect at last, the perfect likeness of Divine Mind, to dwell forever in the presence of his God, in the Kingdom of divine Love.

A Thought of the Resurrection.

BY ELIZA H. PLACE.

I WAS thinking early Easter morning of the Resurrection and of the experience of the two Marys, who were first privileged to see the risen Christ. I recalled in this connection the last chapter of Saint Mark, and pictured the two women going early to the sepulchre to pay their loving tribute and anoint the body of him whom they so dearly loved.

The fear inherent in their human nature tried to discourage them and they said, "Who shall roll us away the stone from the door of the sepulchre?" But lo, their effort was rewarded, and when they reached the sepulchre the stone was already rolled away. An angel, rebuking their material thought, said, "Why seek ye the living among the dead?" and pointed them to where they would find the risen Christ.

This taught me a grand lesson. We often wish we could see the Christ more clearly, could have a fuller understanding of Truth and do better work. Mortal mind, with all its claims to envy, jealousy, and hatred of Truth, tries to hide the Christ from our consciousness and make us believe there is some stone, some obstacle, which prevents us from discerning Truth. Should we not learn a lesson from the Marys, and know if we have such a love for Christ that we are willing to rise up early, put forth our best endeavor, and sacrifice materiality for the full realization of the Truth, that we shall be rewarded as they were, and that the stone, the seeming obstacle, will be removed? Angel thoughts will assure us that mortal mind cannot hide our Christ in a sepulchre, for the Truth is already risen, is ever-present and all-powerful. Angel thoughts will make plain the way, as shown in our text-book, Science and Health, and we shall find the Christ, Truth, risen in our consciousness.

THE testimony "Many Reasons for Praising God," which was published on page 657 of the *Sentinel* for June 13, was an extract from a letter written by a lady living at Atlantic Highlands, N. J. The letter was addressed to Mrs. Florence B. Dean of Danielson, Conn., by whom it was forwarded to us. This accounts for the fact that it was inadvertently credited to Mrs. Dean instead of the writer of the experience.

Acknowledgment of the goodness of God is a part of every true prayer, and as we utter our thanksgiving, both for what we have always known as blessings, and for what we did not once realize to be such but are now understanding more completely, the gratitude for the past brings with it a calm and loving committal of the future to Him who has guided us all the way from the beginning.

TIMOTHY DWIGHT.

Religious Items.

In a sermon on "Happiness and Unhappiness," based on the account of Jesus' appearance to the disciples at the lakeside after his resurrection, the Rev. I. W. Cate, a Universalist clergyman, says: "The change wrought in the disciples by the appearance of Jesus was the difference between listless drudgery and joyful service, between unhappiness and happiness. The secret of it is the secret which will solve the great question of satisfied living. Jesus supplied for his disciples an overmastering motive. As yet it was spasmodic and intermittent, because it had not taken full possession, and because they had not yet learned to walk by faith instead of by sight. But his absence has taught them how much he was to them, that he had in their three years of companionship raised the tone of their lives and inspired them with such hopes, and opened up such vistas of spiritual beauty, that to abandon these new ideals was to sink into despair, and to live for them was to find their highest satisfaction."

James H. Pettee, in an article in *The Congregationalist and Christian World* on "Japan Within and Without," says: "Japan's Emperor has a grandson; the prince imperial has a son; the nation has three generations of royalty or 'three living emperors to reverence,' as yesterday I heard one impassioned speaker express it. Japan does well to give glad welcome to the royal infant. For the first time in hundreds of years purity in family life has been observed in the imperial palace and monogamous marriages received the sanction of the court. At last, as predicted a year ago when the crown prince was so auspiciously married, Japan has turned her back upon one more feature of Chinese teaching and adopted the Western Christian standard of family ethics. Japanese orators not only express great satisfaction over this auspicious event early in the first year of the new century, but they predict that when the prince reaches a proper age he will be sent around the world on a tour of observation, and a few go so far as to voice the expectation that it will be as a Christian prince. May it so come to pass!"

The Rev. F. W. Perkins says in the *Universalist Leader*: "The Old Testament stories are unlike other stories in that they have been used by men whose sole interest was in religion, and who used them as the natural instrumentality for teaching the great truths which God had taught them. We study them, not to learn science, but to learn and have enforced the foundation truths of religion. Many other valuable sources of religious suggestion are open to us, but we study the Old Testament stories because to Israel was given the mission of seeing and declaring the root idea, and without the idea at its root the religion of any man or any time, though it may have many beautiful elements, will be but a feeble sentimentalism and will at last wither and die. That idea is that God is 'the Eternal who loveth righteousness,' and His simple, but unyielding demand is that men 'cease to do evil, learn to do well.'"

From a convention address by Bishop Morrison of the Episcopal Church, published in the *Church Standard*, we selected the following paragraph: "If we hold these truths and witness to these facts, then beyond all other religious bodies we ought to have an acknowledged influence on the life of the community. To be righteous, kind-hearted, helpful, charitable men; to carry out into the affairs of life the application of what we believe to be profoundly interested in all that makes for human well-being, to have men feel that we are the friends of all good causes and helpful enterprises, to be profoundly interested in men and all that touches their life—this is the consistent application of our principles, the spiritual fruit of the seed we sow. Only as we make better men and women, only as we reach the great world with loving sympathy and helpfulness, shall we succeed in drawing men to the Church."

A writer in the *Homiletic Review* says: "Mercy and truth." This combination of words and the attributes they represent is found in the entire Word of God no less than fifteen times, and the points at which it is found together are significant, like turning points in a road where a signboard indicates the right path. It would very richly repay any student to trace and compare the instances of such recurrence, and note the development of doctrine from beginning to end—"grace and truth" being the New Testament equivalent. This phrase, as it is found in the Old Testament, denotes the whole fruit of God's eternal purposes of love toward mankind, which at first were found only in promise, but at length found fulfillment in Christ."

The *New York Observer* says: "The devil is an adept in the art of distracting people from the chief business of life by means of all manner of wayside shows, signs, and bewilderments. He is a great hand to try to impose on humanity the sort of bondage which Emerson termed 'the tyranny of trifles.' But we as wise believers are not to be ignorant of his devices, knowing that one at least among the numerous definitions of the successful man that might be offered is this—the man who cannot be distracted or disturbed."

The *Universalist Leader* says: "The good and holy lives while the base and impure dies. And so it is that Christ still lives and those promises of his are perennial. Through the different gradations of life and time, through wars and revolutions persevering all, surmounting all, notwithstanding the admixture of burdensome falsehoods and follies, still it lives, and with its beneficent spirit we move and have our being. All down the ages, some God-inspired souls have handed it on in word and spirit, when nations fain would forget and drop back into paganism."

A writer in the *Sunday School Times* says: "Right persistence is moral strength; obstinate persistence is moral weakness. Says a philosopher, 'Obstinacy is will asserting itself without being able to justify itself.' The will that cannot justify its deeds on high moral grounds is a dangerous one, because it is a strong physical force let loose on the world without moral control. Moral control is the highest form of strength, and he who is without this need not credit his weakness of obstinacy with the strength of moral persistence."

The *Congregationalist* quotes the following by George Matheson: "No day will help thee if thou art not in the spirit of the day. The holiest Sabbath rest will be nothing to thee if thou hast not rest within. What to thee are the memorial songs of resurrection if thine own spirit be dead? What to thee are the prayers of the assembled throng if thou hast ceased to feel that there is anything worth desiring? What to thee is the stillness of the outward calm if it is but thy leisure hour for inward strife?"

In an editorial on "Unchristian Anxiety" the (Baptist) *Examiner* says: "It is so easy to fall into the habit of anxiety. Many Christians go through life worrying and fretting over things that never happen, or, if in the providence of God they do come to pass, could be far more easily borne had the moral strength not been sapped by needless forebodings. Such anxious foreboding is really distrust of God, and hence unworthy of the Christian."

The *Congregationalist* says: "The Methodist Episcopal Twentieth Century Thankoffering thus far amounts to \$11,095,895, of which \$5,001,000 has gone to paying debts on various kinds of church property, \$4,476,324 to educational institutions, \$1,020,000 to denominational charities and philanthropies, and only \$6,000 to missions. The remainder is divided among conference claimants and church extension work. The total is superb; the apportionment is significant."

The New York (Methodist) *Christian Advocate* says editorially: "A careful study of the statistics of the Church reveal an alarming discrepancy between our gain in probationers and loss in membership. The number of probationers who do not become full members in the Church would make a denomination of no mean proportions if it were possible to assemble them into an organization."

A writer in the *Universalist Leader* says: "Only the builders live the ages. Only they who have acted and achieved can wear the crown of glory. As a tiller clears his fields, so did Jesus preach against the lies and iniquities of the people. An iconoclast against erroneous law and false prophets was he, that the temple of man might be purged of sin before the true God could enter."

The (Baptist) *Examiner* quotes Alexander McLaren as saying: "Nothing is small that can be done from a mighty motive. The least action of life can be as surely done from the loftiest motive as the highest and the noblest. Faithfulness measures acts as God measures them. True conscientiousness deals with our duties as God deals with them."

The *Examiner* quotes the following: "Go, cheerfully, in faith, keeping your heart quietly dependent on the Lord, and in the end you will surely behold and sing of His goodness. Though tossed on a sea of troubles you may anchor on the firm foundation of God, which standeth sure."

LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Theory vs. Realization. Is Christian Science an Opinion? Practicability of Christian Science.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$6.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS.

A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.	
Price, cloth, each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.	

CHRIST AND CHRISTMAS.

An illustrated poem.	
Single book, prepaid	\$3.00
Twelve or more books to one address, each, prepaid . .	2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science: containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 50 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum: One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12 1/2 cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photographure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 72 pp. SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE. 63 pp.

MR. KIMBALL'S LECTURE. 33 pp.

HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

THE BUSWELL TRIAL. 24 pp.

Editor. Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.05.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.
Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

It is reported that Postmaster General Smith will shortly issue an order requiring a stricter enforcement of the postal laws regarding second class mail matter. In his annual report for 1899 the postmaster general stated that "fully one-half of all the matter mailed as second class and paid for at the pound rate is not properly second class within the intent of the law, and ought justly to be paid for at the third class rate." The second class matter now embraces nearly three-fourths of the entire weight of all mail matter, and yet it brings in a revenue of less than \$4,000,000 a year out of the entire postal revenue of more than \$110,000,000. While it contains about three-fourths of all the weight, it furnishes only about one thirtieth of the revenue. To handle and carry the second class matter costs fully \$60,000,000 a year above what the government receives for handling and carrying it.

As a result of the amendment in the war revenue tax act which went into effect July 1, it is no longer necessary to pay taxes on the following: Bank checks, bills of lading for export, bonds or obligations by guarantee company, certificates of damage, certificates of deposit, certificates not otherwise specified, charter party, chewing gum, commercial brokers, sight drafts, express receipts, insurance—life, marine, and fire, lease, manifest for custom-house entry, mortgage for conveyance in trust, order for payment of money on sight or demand, perfumery and cosmetics, power of attorney to vote, power of attorney to sell, promissory notes, proprietary medicines, protest, telegraph message, telephone message, United States money orders, warehouse receipts.

July 4 the military regime in the Philippines gave way to civil administration. The volunteer army organized for service in the Philippines two years ago, went out of existence June 30. Of the volunteers sent out only sixty-five per cent are returning. Sickness, casualties, and retirement to accept civil appointments accounting for the other thirty-five per cent. When all the changes ordered have been effected the army of occupation will consist of twenty-five thousand regulars and twelve thousand native soldiers. The civil administration of affairs has been blocked out by the Philippine Commission with great pains and is now about to be put to the test.

The Government receipts during the fiscal year ending June 30, amounted to \$585,848,309, and the disbursements \$509,983,310 leaving a surplus of \$75,864,999. The cost of the war was \$144,620,590. The total disbursements for the year were \$22,269,519 in excess of those for last year. The public debt, less cash in the treasury, amounted to

\$1,044,739,120, a decrease during the month of June of \$17,737,374.

July 1 more than eight million dollars became available for repair work on naval ships. About one million dollars a month will be spent to rush repairs in the important navy-yards on the Atlantic and Pacific, and also at the smaller stations near Manila.

The Hon. Charles G. Dawes, comptroller of the currency, has tendered his resignation to take effect October 1. Mr. Dawes is candidate for election to the United States Senate from Illinois, to succeed William E. Mason, whose term expires March 4, 1903.

It is thought that the special commission of five, appointed by General Wood to revise the Cuban tariff will complete their work in a few weeks. The schedules may be made public about September 1 and will probably take effect October 1.

Major General W. R. Shafter went on the retired list at noon June 30. The command of the department of California was transferred to Major General S. M. B. Young.

President and Mrs. McKinley are at Canton, O., where they will spend the summer. They will probably not return to Washington until the autumn.

Sixty-nine thousand six hundred and twelve new names were added to the pension rolls during the past year.

Since April 1, Secretary Gage has paid out about \$17,500,000 for the purchase of unmatured bonds.

Judge William H. Taft of Ohio became Civil Governor of the Philippines July 4.

Foreign.

The British and Chinese sections of Peking were formally transferred to the Chinese July 1. The Germans, British, and Japanese retain some supervision over the city and are responsible for the settlement of quarrels between the foreigners.

Arrangements are being made for the return of the court. Orders have been given for the rebuilding of two of the large gates of the city. The cost of this work is estimated at one million taels for each gate. The merchants in the ruined portion of the city are rebuilding, showing that they expect the court to return.

July 1 was one of the great days of the exposition at Buffalo, as it witnessed the dedication of the Canadian building. July 1 is sometimes called the Canadian Fourth of July. It is the anniversary of the confederation of the eastern provinces on July 1, 1867, by which act the Dominion of Canada was formed, and is therefore observed as Dominion Day. It is a distinctive Canadian holiday and is observed all over the Dominion.

Transoceanic navigation has necessitated the deepening of the Suez Canal about thirty feet. Vessels of large tonnage, like some of those of the present day, were practically unknown at the opening of the canal and the present depth does not accommodate them.

A report has been received from London to the effect that the Boer leaders declare that great progress has been made in the war during the past three months, and that they will accept no terms short of independence.

It has been announced in the House of Commons that a bill will soon be introduced changing the title of the King so as to more clearly recognize his sovereignty over the entire British empire.

July 4, the Porto Rican Assembly, in joint session, unanimously passed the free trade resolution. Fifteen minutes later it was signed by Governor Allen.

Industrial and Commercial.

The Illinois Central Railway recently retired two hundred employees under a plan approved by President Stuyvesant Fish and General Manager Harman. The pensions are based on the average monthly pay of the employees during the last ten years of their service. They are allowed monthly one per cent of this amount for each year of their total service. If one of the men retired had been employed by the road forty years and his average pay for the last ten years has been one hundred dollars a month his pension will be forty per cent of one hundred dollars, or forty dollars a month. The age limit is fixed at seventy years, at which all officers and employees must be retired. Employees between the ages of sixty-one and seventy years, who are incapacitated by age for further service, may be retired on a pension on a finding of the pension board, created for putting into practical operation this pension system.

J. P. Morgan Company have purchased the Northern Pacific Steamship Company and the Washington and Alaska Steamship Company. By this purchase Morgan & Co. have a complete transportation system around the world. It comprises the Leyland Line from New York to London, the Glen and Northern Pacific Steamship Line from London to Tacoma, and the Northern Pacific, Burlington, and Erie Railroads from Tacoma to New York.

The Bourne Mills Corporation of Fall River, Mass., paid its twenty-fourth consecutive semi-annual profit sharing dividend to the employees July 3. It amounted to three per cent of the wages earned the past six months. During the time the mills have been trying the profit sharing plan they have doubled their capacity, and now have about eighty thousand spindles.

It costs from fifty to seventy-five thousand dollars for one of the big Atlantic liners, like the St. Paul to make a voyage. This is thirty-five per cent more than for a ship of the same class and speed sailing under a foreign flag. The chief difference is in the wages and accommodations of the crew.

The Chinese minister, Wu Ting Fang, was the orator of the day at Philadelphia July 4. He was given a most cordial greeting. The keynote of his address was that patriotism should stand for the love of mankind.

A new law which went into effect July 1 in Illinois imposes the death penalty for kidnapping. Hazing has been classed as a criminal offence, punishable with fine and imprisonment.

The first mill in Georgia to be operated exclusively by electricity was started July 4 at Columbus.

General.

Settlers in the Kiowa, Comanche, and Wichita reservations to be opened this fall will draw for place in the reservation instead of running for claims as has been the custom heretofore. Every one who wishes to become a bona fide settler may go to the nearest local land office and prove his right. If he can do this he will be given a chance in the drawing and the number he draws will determine his place in the order of the selection of homesteads.

The Pan-American Bible Study Congress has set apart Wednesday, July 24, for a symposium on the special aspect of Bible study. Rev. James M. Gray, D.D., of Boston will give the leading address of that day.

The Harvard summer school opened July 5 with about seven hundred students. Eighty-five from Cuba will be in attendance.

Five thousand public school teachers attended the opening session of the State Teachers' Association at Buffalo July 5.

The desert of Sahara embraces 2,500,000 square miles.

Polar Explorations.

Six Great Expeditions in Progress.

NEARLY four hundred and fifty years have passed since the first polar (arctic) expedition, in 1553, and the first half of this century's opening year finds the mystery surrounding the poles still unsolved. Whether the latter half will disclose what has been an objective of human effort for so long a period, or will add materially to our information about the polar regions, remains to be shown, but, at all events, strenuous efforts are being put forth to break their eternal solitude.

No less than six great expeditions are in progress to explore the arctic and antarctic regions, and, benefiting by the hard-won experience of centuries, the explorers are all filled with hope for a successful consummation of their labors. Added to the three expeditions under Stein, Sverdrup, and Peary, members of which are now in the arctics, there will be at least three new exploring parties outfitted for renewed attempts upon the North Pole—one Russian and two American. It is reported that Mr. Walter Wellman, who has already made two unsuccessful efforts to reach the arctic pole, intends to make another trial. But the most completely equipped will be the Baldwin-Ziegler expedition, which has been so extensively advertised and for many months past in preparation. At a recent farewell dinner tendered Mr. Baldwin by the Peary Arctic Club in New York, his definite plans were for the first time given to the public when he said, upon being presented with a small American flag: "I am firmly convinced that this flag will be carried to victory in this expedition. The starting point will be Franz-Josef Land, and our party will be sufficient in number to avail ourselves of every resource in the land in the way of food by hunting bears and other animals. We shall begin our journey across the ice with four hundred dogs and fifteen Siberian ponies, and, with the assistance of these, I believe it will be possible to achieve the object we shall set out to accomplish."

These remarks were made on the eve of Mr. Baldwin's departure for Scotland, where are being fitted out the two vessels, the flagship *America* and supply ship *Frithjof*, in which will start from Tromso, Norway. Franz-Josef Land was discovered in the seventeenth century and has already been made the base of operations against the common goal of polar expeditions. It was for three years the field of the Jackson-Harmsworth expedition; from the sea northeast and north, respectively, of this land, Nansen and the Duke of Abruzzi made their nearest approaches to the pole.

Far distant from the scene of Mr. Baldwin's prospective operations is gallant Lieutenant Peary, who passed the winter of 1899-1900 at Etah, on the Greenland coast, and when last heard from was painfully pursuing his course toward the pole. Of all arctic explorers none has displayed more indomitable courage than Peary, who, crippled as he

is by the amputation of nearly all his toes, was at last accounts still bent upon achieving his purpose of discovering the pole or perishing in the attempt. Interest in his expedition is revived by the announced dispatch next month of the relief ship *Erik*, the fifth vessel to be sent into the great north by the Peary Arctic Club, following after the *Windward*, which, as may be recalled in this connection, sailed last midsummer on the same quest. No information has been received of the *Windward* since she reached northern waters, having on board the intrepid wife and daughter of the explorer. She may have reached the destined port or may have been wrecked, but, though no tidings have come back, there is no apprehension on the part of those who dispatched her, as she was to be held by Peary or returned, as he might elect. When last heard from, March 30, 1900, Peary was at Fort Conger, Greely's old quarters, which, by the way, he found exactly as left by the survivors of that unfortunate expedition more than fifteen years before. Hopes are entertained that Lieutenant Peary has already reached the pole, but the continued absence of the *Windward* without tidings argues either against this possibility or that she has been icebound on the coast of Greenland, if not actually wrecked.

Captain Otto Sverdrup, leader of the Norwegian expedition of 1898, who was master of Nansen's *Fram* in her famous drift voyage in the Arctic Sea, intended to make his way out during the coming summer, but he, too, may be detained by the ice.

The Russians announced two years ago that they would dispatch the great ice crushing steamer *Yermak* poleward; but, though on its experimental trip it succeeded in forcing its way through field ice five feet thick and nearly through another estimated at twenty-five feet in thickness before brought to a standstill, its efficiency in the ice cap of the poles may well be questioned. It was reported a few months ago that one Captain Bernier, a Canadian arctic navigator, was to command an expedition this summer. Then, again, there has been the mention of an Austrian submarine boat, which is to reach the pole by diving under the ice and thus avoiding obstacles which have hitherto proved insuperable.

But it is not altogether in the direction of the arctic pole that endeavor is to be made this summer, for a most determined attempt will be made toward solving the vexed problem of the antarctics. At least two important expeditions will be undertaken—one British and the other German. They will be practically simultaneous in their initiatives and will act harmoniously, having but one object—the thorough exploration of the Antarctic Ocean and continent so far as possible. The antarctic region is to be divided into four great "quadrants"—two on the Australasian side and two on the Cape Horn and Cape of Good Hope side—each expedition taking two quadrants as its particular province. The new ship, the *Discovery*, in which the British expedition is to sail, was launched last March and is said to be the very first vessel built in Great Britain expressly for the purpose of polar research. All the others,

from the time of, say, Frobisher in 1576 to the present, were obtained either from the naval class or merchant marine already built and refitted for their special service.

The Discovery, however, is the sixth of her name to engage in polar voyages. She is exceptionally strong, built of seasoned oak, 172 feet long, thirty-three broad, and with a displacement of 1,750 tons. The total cost of the expedition is estimated at five hundred thousand dollars, of which amount the British government contributes less than half. She was launched from the same shipyards in Dundee, Scotland, in which the whalers for the Baldwin-Ziegler expedition are being refitted. The captain of the Discovery is Commander R. F. Scott, and the head of the scientific staff is Professor J. W. Gregory, now holding the chair of geology in the Melbourne University, Australia, from which point the final start will be made. The ship will be provisioned for three years, and the German vessel for the same time, though equipped for two years. The German ship has just been built at Kiel and resembles the celebrated Fram, although said to be a better sea boat. She will sail under the leadership of Professor Erik von Drygalski for Cape Town, Africa, thence for the little known Kerguelin Island, where a party will be left for scientific observation, the main company proceeding to Victoria Land for winter quarters. Full results are not expected from these two expeditions until the summer of 1903 or 1904, though partial reports may be sent out before the various parties are picked up and brought home.

A third antarctic expedition is Swedish, led by Dr. Otto Nordenskjöld, a nephew of the famous explorer of that name, who, first of all arctic voyagers, accomplished the "northeast passage" in the Vega, 1878-9. His vessel will be a renovated whaler, the Antarctic, and the total cost of his expedition is put at less than \$40,000. He purposes to reach the antarctics via Tierra del Fuego and the Falkland Isles, and utilize the antarctic summer months, which will be those of the northern winter. All three expeditions are commanded by experienced men and take out full corps of scientists, so that their reports will be awaited with a reasonable expectation of valuable results.

Hitherto the greatest efforts of explorers have been directed toward the arctics, as they are more accessible from centres of population and outfitting stations. They are also inhabited, while the antarctics are uninhabited, and, while their flora and fauna are similar in general features and the waters of the latter abound in animal life, the southern land masses have no such means of sustenance as the polar bear, the musk ox, etc., which are found far up in the higher latitudes.

In the preliminary voyages toward either pole the distance to be covered by the arctic explorers will not be more than three fourths, generally speaking, of that necessary for reaching the antarctics. The former regions have been longer known, even as the Atlantic was navigated long before the Pacific was discovered. It was the famous Captain Cook who discovered the southern region, in 1773-5, on his second voyage circumnavigating the globe in the vicinity of the antarctic circle. Nearly fifty years later another British navigator, Waddell, penetrated to the parallel of 74 degrees 15 minutes south latitude. The United States expedition under Captain Wilkes in 1840 sighted a large continent, but was prevented from landing by an impassable barrier of ice. A British expedition in 1839-43, led by Captain Ross, penetrated as far as 78 south latitude and brought to light the volcanic mountain called by him the Erebus. Volcanic action has been found in the antarctics, but not in the arctics. Quite fifty years elapsed before the next decisive exploration of the Antarctic, when C. E. Borchgrevink in 1895 claimed to have been the first to land on the antarctic mainland. He was

sent out again in the Southern Cross in 1898, landing on the coast of Victoria Land February 28, 1899, and attaining the farthest south of any explorer. Still he added but fifty miles to the latitude claimed by Ross fifty years before, and found his land exploration barred by vast glaciated volcanoes. At about the same time a Belgian expedition in the Belgica—1897-9—was the first ever to pass the winter in the antarctics, having been frozen in a full year, emerging about five hundred miles west of the point at which the ship entered the ice. An American, Mr. Frederick A. Cook of Brooklyn, was with this expedition as ethnologist, and has published an account of the voyage. The last book on the antarctics to appear is that of Borchgrevink, so that the literature of the subject is comparatively full and up to date.

In a résumé of what has been accomplished it will be noticed that the north pole has been more nearly approached than its southern antipode, Nansen's farthest north in 1893-6 of 86 degrees 14 minutes and D'Abruzzi's alleged farthest north of 86 degrees 33 minutes reducing the distance to about two hundred and forty statute miles, while the south pole is eight degrees farther away. The surroundings of the latter are deemed impregnable, yet under the combined attacks upon both the arctic and antarctic, conducted mainly by men of Norse and Saxon origin, it would seem that the borean, if not the austral, region should disclose its secrets this year if ever they are to be revealed.

CHANNING A. BARTOW.

In the *Topeka Capital*.

A New Motor Fire Engine.

ACCORDING to the *Municipal Journal* of London, Eng., the leading local government paper of the great metropolis of Great Britain, the motor fire engine seems destined to play an important part in English fire-extinguishing methods. The *Journal* says:—

"This change from the horse to motor fire engines has met with much favor by the London fire department, which is inclined to resign horse power in favor of motive. A first-class self-propelled steam fire engine was constructed by the experienced firm of Merryweather and Sons at their Greenwich works for a fire department in India. Before being dispatched to that country the machine underwent several severe tests in South London very satisfactorily. On one occasion it ascended Blackheath, one of the steepest hills in or around London, at the rate of ten miles per hour; while on the more level roads it maintained a speed of from fifteen to twenty miles per hour without any undue strain on its working powers. The machine is propelled by means of an arrangement of spur gearing, which enables an intermediate shaft to be worked when disconnected with the fire pumps. This counter-shaft is provided with balance gear, and revolves the rear wheels by means of strong roller chains. The steering machinery comprises a handwheel placed on the right-hand side of the driver's seat, actuating a vertical shaft which is connected to the fore-carriage, a small sprocket wheel and roller chain being provided for this purpose. The pumps have a capacity of three hundred gallons per minute, and can force a jet to a height of one hundred and fifty feet. The steering-wheel, steam regulating lever, reversing lever, and brake are all within easy reach of a man sitting on the off-side on the front, and an auxiliary brake is provided to work with a screw and handwheel at the back. Accommodation is provided for the usual complement of firemen, hose, and gear. When fully equipped with fuel, coal, water, and the firemen, the entire weight is under three tons. Steam can be raised from cold water to working pressure in six minutes from the time of lighting the fire."

The Lectures.

At Muscatine, Ia.

Judge Ewing of Chicago, who appeared at the Grand Opera House last evening (Friday, June 28), delivered an address free from all offensive characteristics. He is in appearance and in his language and manner a man who creates a favorable opinion and inspires respect not only for himself but for the cause he advocates. He was first interested in Christian Science by being healed of asthma and other physical troubles. He had been given up by physicians, and had gone to Virginia to see if the climate would not help him, when a friend who had been cured by Christian Science persuaded him to take treatment, which he did. In three days he was perfectly cured and returned to his office and work. This was sixteen years ago, since which time he has not lost three days.

A good audience of representative people greeted the speaker, who was introduced by Attorney Detwiler, who prefaced his introduction by saying that he had always supposed that Christian Science had to do only with the body, but he found that it dealt with the soul as well; that in many places Christian Science was still in the stage of ridicule, but he believed that the people of Muscatine would give a respectful hearing; that they were disposed to hear a cause, then consider and decide in accordance with the dictates of their consciences. "The speaker will address you in his own way. One of the means employed by Christian Scientists to present their cause to the public is by lectures. They have a great mission which will be presented by Judge Ewing."

He began his address by saying that forty-one years ago he had spoken during the memorable campaign between the little giant, Stephen A. Douglas, and Abraham Lincoln, in Muscatine. Since that time he had passed through several times, but never stopped; that he saw a very marked difference in the appearance of the place to-day and the place then; that the difference in the field of thought was as different as in the material world.

Muscatine Daily News Tribune.

At Alpena, Mich.

Hon. Judge W. G. Ewing of Chicago, a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, of Boston, entertained a large audience at the Opera House last night (Monday, June 24) with an address on Christian Science.

Judge Ewing enjoys the distinction of being one of the ablest jurists of the West, an honor to which he attained through his ability as a foremost exponent of the law. He enjoys also a national reputation through his political career and through having served with great honor and distinction as a United States district judge.

The excellent gentleman is of a very striking appearance. Being well along in years his gray hair lends reverence to a countenance which beams with kindly and benevolent expression. His lecture for the most part was delivered in a calm and dispassionate manner.

He declared himself heart and soul in love with his subject, his religion, which fifteen years ago snatched him from the brink of the grave. He stated the principles of the Science in short, concise forms, so that his hearers would have no doubt as to the good properties of his religion.

He spoke for an hour and fifteen minutes, during which time his large audience was held in rapt attention.

The local Christian Science congregation are being congratulated on procuring so able an exponent of their doctrines to address an Alpena audience.

Judge Ewing was introduced to the audience by Attorney

C. R. Henry in his usual pleasing manner, by a few well-directed words, in which he paid the gentleman a high tribute for his success as a jurist and platform speaker.

The Alpena Evening News.

At Hillsdale, Mich.

The address by Judge Ewing of Chicago, in Sutton's Hall, Friday evening (May 31) under the auspices of the Christian Scientists of this city, was well attended and admirable from beginning to end. The address was chaste, scholarly, and founded wholly upon the teachings and examples of the Master. The criticisms against Christian Scientists to-day seem to be because of their too literal acceptance and practice of the Master's commands. We give on the first page of this issue a liberal synopsis of the address. We would be glad to present it in full to our readers.—*Hillsdale Leader.*

Lectures at Other Places.

McGregor, Ia.—William G. Ewing, May 7.

Concord's Hospitality.

IF the hospitable people of Concord experienced the truth of the statement that "it is more blessed to give than to receive," theirs must have been a happy state of mind on the days of the twenty-fourth and twenty-fifth of June.

Speaking as one of the recipients of Concord's hospitality, I know the rich enjoyment we felt in the occasion that called out the friendliest possible treatment of a throng of unexpected visitors. On Monday, June the twenty-fourth, in the neighborhood of a thousand Christian Scientists from far and near, found themselves the surprised and surprising guests of Concord for an all-night visit. It happened in this wise. Each individual Scientist of this one thousand strong wished to visit Concord for the all-sufficient reason that in this beautiful city is the home of the beloved Founder and Leader of Christian Science.

Upon reaching Concord it was announced from headquarters that an opportunity to visit Pleasant View, the home of Rev. Mary Baker G. Eddy would be given to the Christian Scientists on the following day, Tuesday. This news meant the finding of entertainment over night for the large numbers already gathered, who, unless compelled, could not afford to miss this opportunity in which to express to Mrs. Eddy their love and gratitude, and in return, to receive her tender recognition?

Concord was equal to the exigency. It was a delight to witness the cordiality and kindness of Concord's best citizens. Beautiful and friendly homes, never before opened to strangers, were filled to the full with Scientists. Tuesday we exchanged pleasant experiences. Even on the street and in the electric a general good-will seemed to prevail. Passing pedestrians not only gave information asked, but offered to do more. Cab-men volunteered useful hints. Two gentlemen in discussion on the street corner when asked a question by my friend insisted upon dropping their conversation and supplied our answer by telephoning from a neighboring pharmacy. We would thank the resident Christian Scientists, whose prompt solicitude for our comfort sounded the bugle-call to action in our behalf. It is rumored that Concord did a lively business in some lines by reason of our enforced visit by night. Tuesday's throngs who came on several "specials," listened with interest to our recitals.

Thus in our memories cluster around this blessed Communion season cherished recollections of Concord's hospitality.—HELEN A. NIXON.

An Aerial Trolley.

THE proposed system of electrical transportation known as "telpherage" (Greek *tele* far, and *pherein* to carry), to which much attention is being directed, was invented some years since, but has only recently been brought into prominence. It is an elevated cable system in which, like the electric car, the traveler is propelled by its own motor. The following description is taken from the *Electrical World and Engineer*:—

The telpher travels along a bearing cable and takes current by rolling contact from a lighter wire suspended just above it. Either a single unit telpher or a double unit may be employed for the work, with or without a trailer, the single unit consisting of two small enclosed motors and the double unit of four motors. The hanging or slinging arrangements attached to the telfers or the trailers are of a great variety of shapes and styles, adapted to the transportation of all kinds of loose or easily divisible material, such as bags, barrels, coal, bricks, fruit, etc.; while a ready combination of one or two trailers lends itself easily to the transportation of long pieces, such as lumber, rails, tubes, drain-pipe, etc. One of the most remarkable things in connection with the work is to witness the manner in which telpher units of not to exceed one fourth to one half horse-power will travel at a rate of five or six miles an hour with loads of several hundred pounds on lines running around sharp curves and even up steep inclines. The current consumption is surprisingly small.

At the present time, in addition to the production of its apparatus, the company has found it a task of no mean description to attend to all the applications which have poured in upon it from commercial and engineering concerns for agencies, and these, both domestic and foreign, are being assigned as rapidly as possible. The development has attracted the liveliest interest abroad, and was recently investigated by the engineers of a leading English electrical firm; while one of the requests from Russia came from Prince Hilkoff, who desires to equip several miles with the system, which is obviously much lighter and cheaper to construct than railroads, while it does not encroach in any way on highway rights and does not impose any difficulties as to crossings, etc., along the routes it traverses. The utilization of the system for transporting mail and express matter has already been taken up, and applications have been received from managers of telephone and trolley lines, who see in this light and flexible electrical system a means of getting an additional service out of their pole lines, while at the same time subserving for purposes of varied freight transportation the necessities of the districts they cover. The conveyance of mail matter is peculiarly within the function of this apparatus, as letters and papers can be concentrated into very small bulk for transportation, and the deliveries can be made with great frequency where, under existing conditions, the postman can go over his route but once or twice a day at the most.

In connection with the handling of mail matter it may be stated that the company has already been invited to consider the question of transporting mail in cities by means of underground tube systems, where the conditions would if anything be even more favorable than the aerial lines. At the present time mail in transit from post-office to railway depot is subject to all the vicissitudes of interruption by street blockade, weather, etc., and is frequently delayed on that account. The use of pneumatic power has already been tried in this direction, but it is plain that in this field, as in others, electricity will readily prove its superiority and be generally adopted for such work. In the mean time the company has its hands more than full of propositions for equipping wharves and docks, railroad depots, factories, plantations, mines, and a host of other establishments where goods have to be transported continuously in relatively

small bulk; and it is only reasonable to predict that we shall now see the fruition of the work in this new industry, which was attempted even before the electric railway began its great development, and which may be said to have awaited the perfecting of apparatus and details not available in the earlier days. Except so far as it may do some of the work hitherto assigned to cable haulage systems, telpherage appears to cut out an entirely new province of its own, and it thus gives opportunity for considerable utilization of current and motive power, as well as new and profitable employment of capital.

Recent Developments of the United States Mail.

"Now that every postman in the United States and all the rural free-delivery carriers are limited walking postoffices for the additional purpose of registering mail matter, I will give you a point or two of value about this, one of the most important offshoots of the people's branch of the government which are imperfectly understood, and in some communities not understood at all," said a postoffice official.

"In the first place, articles of value should not be sent through the mails unregistered. If an article is of any value at all it is worth the small fee the government demands for its safe transmission and its insurance up to the amount of ten dollars, which amount of indemnity it is proposed to increase to thirty dollars.

"One reason why the people have not registered their letters to greater extent is because a trip to the postoffice was necessary. The innovation of walking postoffices has been tried now long enough to demonstrate its success, and the people should patronize them. These additions swell the number of postoffices in the country for this purpose up to over ninety-five thousand, as there are 76,600 regular offices, over 16,400 carriers, and the remainder is made up of substations and rural free-delivery carriers. The postal service is certainly extending.

"That the people at large are appreciating Uncle Sam's system of registration, with its chain of checks and the earmarks of some kind of evidence against every man who handles a valuable letter or package registered, is shown by the fact that 1,300,000 registered packages were mailed last year, an increase of a quarter of a million over the preceding year. Of these 198,000 went to our friends across the sea, an increase of 41,000. Large as this percentage is, it is not large enough by one hundred per cent. Packages are especially liable to miscarry, and if the public wish to save pecuniary loss and much trouble and correspondence, use the registered mail.

"If persons of an economical turn of mind wish to know how easily the pennies accumulate in small sums when paid over and over again, let them be cheerful in the thought that the government collected last year in payments of eight cents each \$1,238,000, an increase of \$158,000 over the year previous, on 12,000,000 domestic and 1,875,000 foreign letters. In addition, the government transported and registered free over three million pieces of mail, a large portion of which originated and was delivered in Washington. That the government has done some business in the registry branch in twenty years is shown by the fact that it has registered 216,300,000 pieces of mail in that time.

"The system of checks and counterchecks adopted to safeguard the public's property is about complete, when it is borne in mind that out of all this great total of individual pieces carried a loss of but eighty-seven was chargeable to depredations by postal employees, and only 174 pieces were lost because of the carelessness of the clerks. In fact 7,165 complaints of loss were received, and of the 4,900 investigated only 1,700 were found to constitute an actual loss, and of these 1,130 were chargeable to burning and

wrecking of postoffices, postal cars, steamboats, and to minor accidental causes. Out of these 1,700 cases of loss, in 1,340 recovery was effected in one way or another to the owners.

"A loss of but three thousandths of one per cent is truly remarkable, considering the great amount of business done, distance covered, and the dozens of hands through which each piece of mail must pass.

"The government liberally patronizes its own registry service, and sends large sums of money from point to point, especially out of Washington, as well as articles of value. The Treasury Department transmitted last year in actual money value \$1,371,000,000 in this manner, and some of it was cash sent to the Philippines, without the loss of a penny. To this vast amount should be added money values to the sum of three hundred million from the Postoffice Department, while the other executive departments, also avail themselves of the system to a large aggregate annual amount."

Washington Star.

Great Men with Great Hearts.

SPEAKING of the moral and kindly aspects of the late Ex-President Harrison's nature, Mr. Ferdinand Cowle Iglehart writes as follows, in a late number of *Success*.

I once went from New York to Washington to request President Harrison to appoint a friend to an important judicial office, for life. The President received me kindly, and, after I had made a statement of facts in behalf of my friend, he said: "That appointment has given me more trouble of mind than any other in my gift, not excepting memberships in my cabinet. At least a dozen good men are urged for the position. I have narrowed the list down to two men,—the one in whose interest you have come, and another from the northern part of the state. It is the choice between these two men that has troubled me. Both have brilliant minds, both are able lawyers, both are men of the highest integrity, both are intimate personal friends, and both have rendered signal service in the campaign. I have taken the matter to bed with me, and have lost more than one hour's sleep over it."

I said: "Mr. President, knowing you as well as I do, I am surprised to hear you speak as you do, and am as much delighted as surprised. You are, perhaps, aware that you, like John Sherman and Senator Edmunds, are credited by the public with having a heart, but a heart largely under the control of the intellect."

"Yes," he said, "I know that; but how little we are understood in this regard! Let me give you an incident about Senator Edmunds that will illustrate my thought. There was an important bill to be considered in the Senate, in which I had an especial interest, and I said: 'Senator Edmunds, I want you to be sure to be present this afternoon to help me with my measure.' He replied: 'I shall not be there.' 'You must,' I said. 'I cannot,' he determinedly continued: 'I have an invalid daughter, you know, who is the idol of my heart. I am trying to make life just as happy for her as possible. I promised to read to her this afternoon, and I intend to do so, if the wheels of the government stand still.' The senator's eyes were full of tears as he talked, and I said to myself that, while people think Edmunds as cold as an iceberg, they do not know him; his heart is as warm and tender as a woman's. Like the senator, I do not wear my heart on my sleeve, but a little farther below the surface."

As the President related the pathetic incident, I looked into his face and noticed that his own eyes were moist. I said to myself: "How easy it is to misjudge others,—to consider as cold as ice a nature which is, in reality, tender and warm!" The President's kindness of heart put me in a good condition to bear the disappointment that came to me a few days afterwards, in the fact that the other man had been given the office.

Women Growing Taller.

UNDER the above heading the *Montgomery (Ala.) Advertiser* editorially breathes forth the following somewhat alarming sentiment:—

Charles Dana Gipson has made a discovery that may mean awful possibilities for the future. He declares that modern habits and diet on the part of the female contingent of the country are causing the girls of America to gradually increase in height, and that the average stature has increased at least two inches during the last ten years. We do not know that the girls will make any change in their food or their manner of life, and if they do not where is it to end? In the course of another century man will have to look up to woman literally, as he now does figuratively, and she will be the boss of the outfit, in fact as well as in theory. A nation of women over two yards in height on an average is not a pleasant possibility, but Gipson argues that it will be a fact in two or three generations from this. It is a subject to command the serious attention of statesmen and scientists.

But what can science or male humanity do about it? If it is the fashion or fad to indulge in lengthening diet, or to practise stretching exercise, the women will do it if it causes future generations of their sex to run up into the atmosphere like Jack's beanstalk. Mr. Gipson attributes this tendency to grow upward to the dietetic habits and outdoor exercise which prevail of late years, and appears to think it will keep on in the same direction. There is probably a limit to human growth, but that limit may not be reached till all American women will reach a height of six feet or over.

After all, however, if Mr. Gipson insists that his theory is true, can he not devise a plan by which the men will also grow upward, so as to keep up a fair average? A nation of giants and giantesses will not be a bad thing, provided the two sexes keep up with each other, so that neither would have a great advantage over the other.

Notices.

Our Leader's Message.

The annual message to the Mother Church of the Rev. Mary Baker G. Eddy, will not be published in our periodicals, but will appear in pamphlet form.

Due notice of its readiness for circulation, with price, etc., will be given.

Services at Chelsea, Mass.

During the months of July and August the Sunday services of First Church of Christ, Scientist, Chelsea, Mass., will be held at 7.30 P.M.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Christian Science has no Secrets.

CHRISTIAN SCIENCE has no secrets to withhold from the world. On the contrary, its very mission is to make known to mankind those things which have been kept secret—that is, which have been unknown—from the foundation of the world. Christian Science is a revelation, and a revelation of truth is not a suppression of truth.

For thirty-five years, the world-known Discoverer and Founder of Christian Science, the Rev. Mary Baker Eddy, with marvelous zeal, has been laboring to reveal to her fellow-men all that she has learned of spiritual Truth.

To this end she wrote and published the great text-book, "Science and Health with Key to the Scriptures," which, in itself, contains in general terms the entire content of Christian Science. If Christian Science has any secrets they are found therein, and are open secrets.

To this end Mrs. Eddy wrote the various articles, extending over many years, which have been republished in book form under the title of "Miscellaneous Writings." This volume is largely in elucidation of the text-book, and therefore, more in detail than the former, divulges the secrets of Christian Science.

To this end Mrs. Eddy wrote that wonderful compendium of spiritual Truth, "Unity of Good," wherein are divulged some startling secrets—some of the mysteries of godliness—relative to the Divine Mind and His attitude toward sin. This volume, in an especial sense, treats of the deep secrets of sacred writ, of sayings therein which, in all ages, have been hard to understand and which have greatly troubled alike theologians, physicists, and philosophers. Nor is it too much to say that "Unity of Good" removes the veil of mystery in a way that has brought joy and a precious relief to many thousands of hungry hearts.

To this end Mrs. Eddy wrote several works supplementary to the text-book, among which we mention, in addition to the above, "Retrospection and Introspection," "Pulpit and Press," "Rudimental Divine Science," "No and Yes," "Christian Science *versus* Pantheism," "Christian Healing," "People's Idea of God," etc., in each of which the intelligent and disinterested reader has not the least difficulty in apprehending an honest, earnest effort to reveal such profound secrets as will help and heal all who will sincerely appropriate them to their own use.

To this end Mrs. Eddy, away back in 1883, established the monthly magazine called *The Christian Science Journal*, whose chief purpose is to divulge to all the world the secrets of healing sickness and sin, and to afford the healed and saved an opportunity thus publicly to tell how they were healed and saved. Ever since then, many thousands of thankful hearts have been sending forth their pæans of gladness through the pages of this magazine.

To this end was established the weekly newspaper called the *Christian Science Sentinel*, as a further means of spreading the secrets of Christian Science and permitting those who have been benefited by it to make known their experiences.

To this end was provided the system of public services, wherein are read, instead of sermons expressing the per-

sonal or sectarian views of the individual minister, a compact and well-arranged lesson-sermon. This is presented each Sabbath to the public ear, and in the Mother Church in Boston as well as many of the branch churches, the same lesson-sermon is read twice. These lesson-sermons are composed of Scriptural references selected to elucidate the subject of the lesson-sermon, with alternating correlative passages from the Christian Science text-book, the purpose of which is to enlighten the public on the subject of Christian Science and show its relation to the Scriptures.

In furtherance of this purpose the beautiful and substantial church edifice known as the Mother Church was erected in Boston. Many fine branch structures have also been erected in various parts of the country for a like purpose. In several hundred places in this country and in foreign countries, each Sabbath this lesson-sermon is given out to the world, so that the world may know what Christian Science is.

To this end Wednesday evening testimonial meetings are held, whereat all who wish have an opportunity to tell in public what Christian Science is, and what it has done and is doing for them and within their knowledge.

To this end a Board of Lectureship was established, composed of well-informed and able representatives of the Cause, who are doing all in their power to let the people know what Christian Science is.

To the same end, early in the history of the movement, Mrs. Eddy provided a system of teaching Christian Science, establishing a college for that purpose. The students of this college were sent forth as teachers, and by this means many thousands have been instructed in all branches of Christian Science. Even this more specific class teaching is only in elucidation of the text-book, "Science and Health with Key to the Scriptures," for, as Mrs. Eddy has frequently said, "It is all there."

We repeat, therefore: Christian Science has no secrets which it is not willing and anxious the world should know. The above-named intelligent means of propaganda are designed to make the world acquainted with Christian Science in all its minutiae.

In common with other Christian peoples Christian Scientists are laboring to exemplify, in every practical way, the precepts of the Golden Rule.

In every department of their labor, down to the minutest detail of business, the earnest purpose of the sincere Christian Scientist is to carry into the daily life the teaching embraced in the Decalogue and Sermon on the Mount. This they have been taught to do throughout their entire experience, and if the individual Scientist fails herein, he falls short of his teaching.

Christian Scientists, like all other mortals, have the world, the flesh, and evil to contend with, and the overcoming of these is the work of earnest striving and consistent Christian living. In no boastful sense do we say that in our opinion there is not a Christian body of people on earth who are more sincerely reaching toward the goal of a true Christianity than the adherents of the Church of Christ, Scientist.

Finally, then, Christian Scientists have no secrets save the secrets of godliness, and to make these known is their one intense desire.

Christian Treatment of Christian Science.

REV. W. H. MORRISON, pastor of the First Universalist Church of Brockton, Mass., recently delivered a sermon on "The Christian Way of Treating Christian Science." He selected for his text, "And now I say unto you, Refrain from these men and let them alone: for if this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God" (Acts, 5 : 38, 39).

The following synopsis, which appeared in the *Brockton Enterprise*, shows the spirit of the sermon:—

"A week ago last Monday the Boston newspapers were full of a sermon by Dr. Dixon of that city denouncing Christian Science. This sermon is one of many lately preached upon the theme, and all treat it in the most bitter and hostile manner. Indeed, from many sermons and articles in newspapers and magazines of late, it looks as though an organized movement had started to drive this form of belief off the face of the earth.

"In the light of these facts it seems to me a sermon on the Christian way of treating Christian Science is in order. First, let us consider the sins of Christian Science, according to what is said of it.

"It is not founded on the Bible.' Every church has been accused of the same sin.

"It is contrary to common sense.' If we believe some people this is true of every church.

"Mean people belong to it.' Mean people are in all churches.

"It is a money-making scheme.' There isn't a church in the world that hasn't had the same charge laid at its door.

"People have been made insane by it.' Other forms of religion have made people insane.

"People have died under the treatment of its doctors.' The same is true of every doctor.

"They are inconsistent.' Do you know of any one who is perfectly consistent?

"In a word, every sin charged against this sect has been charged against every sect that exists to-day. One more fact let us remember. People just as wise, just as great, and just as level-headed as are in this world are in the Christian Science Church, and they are our friends and neighbors. Now there are three methods of dealing with this sect. First, we can persecute it. This is unfair, for, as I have just shown, it is no greater sinner than any churches have been accused of being. Persecution has never done any good, as its history abundantly shows. On the contrary, it has always done grievous harm to the one so short-sighted as to use it. Second, we can gush over it and run after it in preference to all other sects because it is new. This is unfair to the other sects and just the way to foster evil and error if they exist. Third, we can neither denounce it nor gush over it, but treat it exactly the same as we treat all sects.

"Respect its followers and give it a fair field without any favors. This is the Christian way. Jesus said, 'By their fruits ye shall know them,' and again, 'Whatsoever ye would that men should do to you, do ye even so to them.' If Christian Science is a humbug this is the surest way to prove it. Truth never fears fair play but error always does. This is the only way of treating Christian Science if we are to get at the truth, keep our own self-respect and the respect of the world. The world is wide; there is room enough in it for all. Let us dwell together in harmony."

Mr. Morrison has ably epitomized the stages through which all advanced religious movements have passed.

The religious reformer has never escaped the charge that his advanced steps are antagonistic to the teachings of the Bible.

Radical or decided spiritual views have ever seemed contrary to the common-sense of those who are accustomed to view all things from a materialistic standpoint.

Religion, or Christianity, comes to save, not the righteous, but sinners. Hence it is true that some who unite with advanced religious movements are, according to the views of the world, accounted sinners or "mean people." Fortunately, the very mission of true Christianity is to reform and regenerate "mean people." The Christian Science teaching is that all sin is mean and all mortals, as such, are sinners. Hence the difference between people is simply one of degree. There is no perfection in mortal-

ity or mortal mind. Perfection is attained only as the mortal disappears, through its destruction, and immortality appears.

Mr. Morrison's deductions are not only apt, but in strict accord with the facts of history. We are glad to see the liberal clergy taking so consistent a stand as that of Mr. Morrison, and we continue to hope that ere long those clergymen who see great danger in Christian Science will more thoroughly and wisely investigate it, so that they too shall see in it a friendly Christian helper instead of a threatening foe.

The Striking Progress of Christian Science.

UNDER the above heading a recent issue of the *New York Sun* contains an editorial of considerable length from which we quote the following:—

"The meeting of Christian Scientists at their Mother Church at Boston, last Sunday, to commune together and to listen to a written address sent by Mrs. Eddy, the Founder of the cult, was an assemblage whose profound significance cannot be denied. So great was the attendance, estimated at ten thousand, that four different services identical in character had to be held during the day and evening in order to accommodate the crowd, and in it were representatives from European countries, some of them of social distinction.

"It is folly to pooh-pooh this Christian Science movement. As a practical manifestation of contemporary religious enthusiasm it has become of grave temporary importance, at least. Nor is its progress among obviously inferior minds and wild visionaries so remarkable as the appeal it is making to intelligences conventionally respectable. The message of Mrs. Eddy to her followers gives astonishing statistics of the growth of the Mother Church at Boston, which we must assume to be correct, in the absence of detailed contradiction. She tells of a membership in it of 21,631, and of a gain of 2,496 since November. All told, the cult has over five hundred organized churches, and by some of these, as we know by observation in New York and Chicago, for example, really imposing edifices of great cost have been erected. Where the money has come from for their rapid building has seemed a mystery, which may be explained by the assertion in the *Sun* by one of Mrs. Eddy's prominent followers that she expends a large part of the profits from the sale of her Science and Health, the text-book of the cult, in assisting in the propagation of its doctrines. In London, also, there is a prosperous Christian Science Church, and the circumstance that among the foreign representatives at the meeting at Boston on Sunday were included the Earl and Countess of Dunmore, Lady Victoria Murray, Lady Mildred Murray, and Lady Ramsay indicates very suggestively a social sphere into which the doctrines of Mrs. Eddy have penetrated.

"Obviously such a movement cannot be whistled down the wind. It is one of the most striking of the religious phenomena of our day, and it seems to be growing perhaps more remarkably than any other, outside of the greatest organized churches of Christendom."

The fact that the editor of so conservative a paper as the *New York Sun* has, by force of the circumstances, come to the above conclusion, is not only significant but gratifying to Christian Scientists. While Christian Scientists of themselves require no such endorsement at the hands of those outside the ranks, being so firmly grounded in the principles of their faith that they need no bolstering up, yet to have intelligent and thinking people awakened to the fact that Christian Science has become an important factor of the religious world cannot be otherwise than pleasing.

We are glad to notice also the kindly recognition of Mrs. Eddy's relation to the work, and her well-known generosity

in financially supporting the movement of which she is the head. The world is coming to understand and appreciate the wisdom of her course in laying a foundation, through her long years of labor, whereby she was enabled to render needed financial aid. This she has magnanimously done, and that the *Sun* should thus refer to her is especially gratifying to those who are familiar with the real situation.

An Interesting Interview.

THE following interview took place on Monday, June 24, 1901, between Lord Dunmore and a reporter of the *Boston Globe* who had been cabled to interview the Earl on behalf of the *London Daily Mail* and to cable five hundred words of the interview to the *Daily Mail*. We mention this as among the many evidences of the widespread interest taken in Christian Science at this time.

Question. Did you and your family come over here with any specific object connected with Christian Science?

Answer. We came over to attend the Communion and to go through the normal class of the Massachusetts Metaphysical College.

Question. Are you a First Member of the Mother Church?

Answer. I am.

Question. Are the First Members a representative body?

Answer. Yes, they are; and I think I am right in assuming that I was elected so that the English Christian Science Church should have a representative in the governing body of the Mother Church.

Question. Did you see the enormous crowds which thronged the Mother Church yesterday, and do you consider they were impelled there by curiosity or by spirituality?

Answer. I did. I attended the early communion service of the four services held yesterday, and out of the eight thousand people present, I do not believe there was one who was actuated by any other motive than implicit fidelity to the tenets of Christian Science and unswerving loyalty to their revered Leader.

Question. Is Christian Science destined to grow in perfection and power?

Answer. Christian Science is in itself already a perfect Science, and as its students arrive at a better understanding of it, they will themselves reach out toward perfection, and thus demonstrate its power.

Question. How do you regard Mrs. Eddy as a leader?

Answer. Have you studied her Message to her followers as read in the Mother Church yesterday? because if you have, you will need no reply to your question. It embodied such a wealth of wisdom, love, and charity as to commend it to all mankind.

Question. Are converts to Christian Science increasing in number?

Answer. Yes; all over the world. I have met them on both sides of the equator, even in the Sandwich Islands, and it has reached and is spreading in Australia.

Question. Are the moral teachings or the physical benefits most influential towards this growth?

Answer. As Christian Science becomes more carefully studied, better understood, and more widely spread, the moral element in it will always command a higher place in man's consciousness than the power of healing physical ailments only, but there is no doubt that thousands are attracted by the unquestionable healing powers of the Science.

Question. What should you say is the easier healed, sin or sickness?

Answer. Sickness, because a man is always ready enough to part with a physical ailment, but not so ready to part with his pet sin.

A Friendly Beacon.

WE copy from a recent issue of *The Beacon*, "a weekly magazine of helpfulness and hopefulness," edited and published by Mr. Huntington Smith, at 295 Washington St., Boston, the following words of "helpfulness and hopefulness" on behalf of Christian Science and Christian Scientists:—

The vigorous attacks upon Christian Science which are being made from the pulpit and which are appearing with noteworthy frequency in the medical journals, are doubtless actuated by excellent motives, but there is no good reason for believing that they will be especially efficacious in restricting the spread of this particular form of belief. It is all well enough to denounce Christian Science as the apotheosis of negation; to say that it is humbug, pure and simple; to declare that those who profess its teachings are mercenary because they take pay for their services; to assert that the so-called "cures" of Christian Science are the result of the hypnotic phenomenon known as auto-suggestion,—it is all very well to make this indictment in the most uncompromising terms, but the fact remains that the belief is taking a strong hold upon a large class of fairly intelligent people who find in it something that they have not found elsewhere. Christian Science, they say, gives them peace of mind; the ability to overcome evil; and by taking their thoughts away from the body and its ills gives them a mental freedom to which they have hitherto been strangers.

Now this may be largely delusion, but to the Christian Science adherent it is very real; and while ministers of the gospel and doctors of medicine denounce it, let them also ask themselves whether this outbreak of what they call fanaticism has not a legitimate cause, and whether they themselves are wholly without responsibility in the matter. If the people turn away from the traditional forms of belief and run after new and strange gods is it not fair to suppose that they have not been getting from the old doctrines the help that they demand? If the churches are to a certain extent losing their hold on the people, is it the fault of the people or is it because the churches themselves fail to give the people the comfort and strength they continually ask for? And if people are turning away from the doctors to new ways of healing, is it entirely because of their folly and stupidity, or is it partly at least because the doctors in pursuing the traditional methods have failed to give them relief from their physical ills?

Coming right down to the root of the matter, what people in general demand from religion is help to lead better lives and to meet with fortitude and even with cheerfulness the sorrows and trials of this present world. What they ask from doctors is counsel in the principles of right living, and wise and helpful advice and assistance in disease. If the churches, as the representatives of religion, have depended too much on creeds and too little on actual work for the uplifting and bettering of humanity; if the doctors, in their devotion to the *materia medica*, have failed to avail themselves as they might have done of the progress that has been made of late years in mental therapeutics,—if this be true, then reaction was inevitable. And after all, as Mark Twain observes, this is a free country, and every one has a right to make a fool of himself in his own way.

At any rate, setting aside the question of the truth or falsity of Christian Science, it is certain that nothing will be gained by wholesale denunciation. Whatever truth there is in it will endure and whatever there is in it of falsehood will die. To denounce it as a humbug and its followers as fools is unpardonable intolerance.

Let the ministers who are denouncing Christian Science so vehemently devote their time to studying ways and means

of making their own ministrations more helpful. Let the doctors who are writing so angrily to the medical journals about the absurdity of Christian Science "cures" make a rigorous investigation of the methods by which the supposed cures are brought about and the reality or falsity of the belief in them.

IN her remarks at the Wednesday evening meeting at Tremont Temple, June 26, Lady Ramsay, of Scotland, related the healing of a child from epilepsy. In the report of the meeting in our last issue we said that the patient was a boy, but we are informed that the case referred to was that of a girl. A boy in the same family had also been healed by Christian Science treatment, but it was the healing of the girl which was related at that time.

Among the Churches.

Semi-annual Communion at Concord, N. H.

The semi-annual communion and reception of members was celebrated on Sunday (June 30) by First Church of Christ, Scientist, at Christian Science Hall. The beautiful hall was crowded with the local congregation and visitors from abroad. Among those present were Mrs. Sara Pike Conger, wife of the minister to China; Mr. Edward P. Bates, president of the Mother Church in Boston, and Mrs. Bates; also Eugene H. Greene and a company of friends, from Providence, R. I. The pulpit was beautifully decorated with red and white roses, and these, together with a large quantity of mountain laurel, made the place a bower of floral decorations.

The services were conducted by First Reader, Rev. Irving C. Tomlinson, and the Second Reader, Miss Mary E. Tomlinson. The solos, which were beautifully rendered by Miss Villa Whitney White, were, "Come, Thou," words by Mary Baker G. Eddy, set to music by Laffen, and a German hymn of the sixteenth century, "O, Saviour mine." The hymns by the congregation, which were sung with much feeling, were, Bonar's "Here, O my Lord, I'd see Thee face to face," and "Saw ye my Saviour?" by Mary Baker G. Eddy. The Scripture reading was taken from the fourteenth chapter of First Corinthians, and the Responsive reading from the fourteenth chapter of Mark.

The subject of the sermon for the day was very appropriately, "The Sacrament," the text being: "Whether therefore ye eat or drink, or whatsoever ye do, do all to the glory of God" (1 Corinthians, 10:31). The sermon, as is true of all sermons preached in Christian Science Churches, consisted of citations from the Bible and from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. Following the sermon came the silent communion, which was a most impressive part of the ceremony, the congregation kneeling in silent prayer, and concluding by the repetition of the Lord's Prayer.

Thirteen new members were received into fellowship, making the total membership of the Concord Church one hundred and forty. As this church was first established February 22, 1899, with seventy-four members, the increase of about ninety per cent in this short time is indicative of the substantial growth of the cause in Concord.

The Daily Patriot.

Letter from Jacksonville, Fla.

Dear Brother:—The disastrous fire which recently swept over our city took away our little church, also the homes of nearly all our members. The action of the fire was most peculiar; the wind, which had been blowing in a direction from the city for a long while, suddenly changed about, forming almost a whirlwind, carrying masses of burn-

ing material for almost half a mile over the city; and the entire town, saving a small portion, was soon found to be one huge conflagration. It all occurred so quickly that the people were unable to think, and only a few saved more than the garments they had on their backs.

While the flames were still roaring, we found a place for our services the following Sabbath in the home of one of our members which was not destroyed. No services have been missed, and every Sunday morning and Wednesday evening the parlor, hall, stairway, and porch are filled with the faithful ones. There are no long faces, but all are endeavoring to count and recount their blessings. The most of the members saved Bibles, Science and Health, and Quarterlies, and we found among all three hymnals. With this nucleus we are now working as best we can, and hope to have another church home ere the winter is upon us.

Sincerely yours,

W. L. SPERRING.

A Word from Waterville, Me.

Although a little band of workers, in October, 1900, we rented G. A. R. Hall in Masonic Temple, in which to conduct our services, and this step forward proved a great blessing.

We wish to send our message of love and loyalty to our Cause. We are proving what our text-book, Science and Health by Mary Baker G. Eddy, says on p. 408: "Every trial of our faith in God makes us stronger." We are learning to "love one another," to stand more steadfast in Truth, and are trying to show by our lives what the understanding of Christian Science brings to mankind.

I wish to take this opportunity to express my love and gratitude to our Leader for reminding us in a "Word to the Wise" that "they also serve who only stand and wait." It brought to me the "Peace, be still," destroyed a sense of seeming responsibility, and enabled me to realize harmony in a truer sense than ever before.

We are most grateful to The Christian Science Publishing Society for their faithful labor, and for the many loving messages from the Field, which cheer us on our way. May we all "Watch" and prove by our deeds that the God of Abraham, Isaac, and Jacob still reigns.

MRS. IDA A. BUCK, Waterville, Me.

Improvements at Buffalo, N. Y.

Extensive improvements to the First Church of Christ, Scientist, have been completed, and Sunday (June 9) was the first day that the enlarged seating capacity was tested. Every seat was occupied.

Some time ago the First Church purchased the valuable Warren homestead, at North Street and Elmwood Avenue, and will construct a handsome church there. They found, however, that their increasing congregations made it imperative to enlarge the seating capacity of the present church, at Prospect Avenue and Jersey Street before making any plans to build the new church on the Warren property.

This was done, and during the past few weeks extensive improvements have been made. A balcony has been constructed, which, with other changes, increases the seating capacity by one hundred and fifty sittings. The church has been entirely redecorated, renovated, and recarpeted. But, despite the added number of seats, more will soon be needed, for every one was occupied Sunday morning.

Buffalo Courier.

God is a great God, and therefore he will be sought; he is a good God, and therefore he will be found.

JOHN MASON.

From our Contributors.

An Object Lesson.

BY MINNIE E. ERWIN.

A FEW months ago a small rubber plant was brought into our home. We were not familiar with the nature and habits of the plant nor with its processes of growth, and watched it with much interest. Above the few leaves was a leaf bud; for weeks we saw little change, and decided that its growth must be extremely slow.

One day a member of the family said, "There is surely something the matter with this bud." On examining it, I replied, "Yes, it looks as if it were blighted."

A few days later, the bud looked so shriveled and dry that my daughter thought she might as well remove it, as it was becoming unsightly. She took hold of it to break it off, when the outside came off in her fingers, revealing, as it seemed, a fresh green leaf closely folded. Pleased to find that instead of blight and death, life was being manifested, we still watched the growing bud.

After a few days we noticed again the same appearance of blight, and thinking this was the true leaf, we again feared that in some way unknown to us it had been injured. Soon we discovered that this was but another wrapping, and that the leaf within was slowly expanding. In a few days the covering was thrown off. Still a third time the process was repeated, the last time with rapid development of the leaf, the expansion of which quietly removed the last wrapping and revealed a perfect opening leaf with another tiny bud nestling in its folds.

I saw in this a beautiful type of the unfolding of the true nature under the influences of Truth and Love.

On page 579 of our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, the author gives this definition of Holy Ghost: "Holy Ghost. Divine Science; the developments of eternal Life, Truth, and Love."

The word develop not only expresses the idea of gradual growth and improvement, but also of forcing from a cover or envelope; thus, the gentle influences of Truth and Love, working in the human consciousness, begin to expand and develop the true or ideal nature, which, as it becomes manifest, gradually casts off the material envelopes of pride, selfishness, and all materiality.

We, in trying to help others, need to be likewise gardeners, knowing that growth is from within; understanding its processes; and able also to discern the false from the true. Waiting patiently, even though the growth seems slow, we know that as we reflect the sunlight of divine Love and distil the dews of Truth, the ideal nature will develop and expand until one by one the material coverings drop away. If we become impatient and with rude hand remove by force or human will that which seems unsightly, we may harm the delicate buddings of good, which are expanding into completeness, and thus prolong our work.

To human sense one patient may seem to express more of good than another, but in no case are we to be discouraged at appearances, for in every one is the germ of Truth, dormant now, it may be, but waiting for the very love that we are to reflect to rouse it to the activity of spiritual growth.

The seeds of Truth that we so lovingly drop into the human consciousness, germinate and grow into thoughts of good, and "God unfolds these thoughts, even as He opens the petals of a rose, to send their fragrance abroad" (Science and Health, p. 500). God works through His reflection. We are to reflect to brother man the love that has been given to us. More and more as we grow in the understanding of God will this reflected love partake of the divine nature of its Source. The more childlike and natural we are, the more unselfish and spontaneous in the

manifestation of true affection, the better transparencies are we for Love to shine through. The sweet, childlike spontaneity of love warms the cold soil of the human heart, until the seedlings of Truth begin to spring up, and expand, and the ideal character is revealed.

My lesson from the plant has given me many helpful thoughts; some of them I send out, hoping that they may encourage and cheer other workers in Love's garden.

Prison Work at Joliet, Ill.

BY W. F. AUSTIN.

IN August, 1899, there was one copy each of "Science and Health with Key to the Scriptures" and "Miscellaneous Writings" in the library of the Illinois State Penitentiary located at Joliet, Ill. Another copy of Science and Health had been placed there by the local church, but it had been mislaid and was not then in the library. Since that date other copies have been received, until now there are thirty-eight copies of Science and Health, five of "Miscellaneous Writings," and a large number of Christian Science Journals and Sentinels. These are all in constant use. Some ten or twelve of the books are owned by inmates. Co-operating with First Church of Christ, Scientist, here, the balance were contributed to the library by Christian Science Churches throughout the State of Illinois, together with personal friends of inmates and the Cause. There are at present twenty-two regular subscribers to the *Sentinel* and four to the *Journal*. Through the kindness of officers in charge, Journals and Sentinels are passed from cell to cell, thus offering to all who may wish to read an opportunity to do so.

There are fifteen or twenty inmates who are making a close study of Christian Science, and many more who are reading Science and Health. Some have read Science and Health through several times. Books from the library may be retained two weeks, but to those who desire it a special privilege of extended time is granted on Christian Science books. Some are aided in their study through correspondence with Christian Scientists.

The Readers of the local church have on two occasions conducted the regular service in the chapel and once in the woman's department. On these occasions solos were rendered by Scientists much to the appreciation of the large audiences (numbering between eight hundred and one thousand), which gave very close and respectful attention to the entire service.

There have been many demonstrations of the power of Truth among the prisoners. One man on leaving the prison a short time ago thanked me for calling his attention to Christian Science, saying that in the past six months, during which time he had been reading the literature, he had been greatly benefited and would certainly keep up the study when free.

Another man on leaving the institution also thanked me for talking to him of Christian Science, saying that his thought was so much better than it was before reading Christian Science literature that he intended to buy a copy of Science and Health and continue the study.

A number of physical difficulties have been overcome. One prisoner told of being struck in the eye with some hard substance. He said the thought came to him at once that God is All-in-all, and the pain left almost immediately. Rheumatism and various other physical ailments among the men have yielded to their declarations of Truth as found in Christian Science.

As an officer in the prison I greatly appreciate the fact that I have better discipline, obedience, and health among the men under my charge who study Christian Science.

I am also very grateful for much personal benefit received through Christian Science and thankful to all who have been instrumental in bringing this about.

Demonstration.

BY HERBERT W. BECK.

THE grand privilege of the Christian Scientist is the understanding that Spirit ever demonstrates its allness, and that matter ever demonstrates its nothingness through the false claim to the spiritual. Paul wrote to all awakening thought, "Prove all things; hold fast that which is good." Is this admonition followed in our daily lives? We must put to the test all that parades itself before us, holding only that which bears the stamp of eternity.

Christian Science has not come into our lives for the purpose of removing the ills of the flesh, so that we may enjoy, for a season, the illusion of the senses. For of what value is it to set a man free from some error if but to give him a wider sense of false freedom? Rather has it come to bring the realization that God's standard has never fallen, and that the perfection of man remains intact. The fruits of demonstration are indeed sweet when it sweeps away ignorance as found in sin or sickness; but demonstration in its highest sense is the proving to the world and to ourselves the Science of Being. We all fall far short of perfect demonstration, but we are all moving on towards instantaneous expressions of harmony.

A very necessary prelude to the high standard of the Master is, are we trying to conform Christian Science to our daily walk? or are we walking in the paths of Christian Science? The difference, perhaps, is not striking at a first glance, but it is one of vital importance to successful work.

The effort to satisfy the desires of material sense, to bring to pass what mortal belief considers harmony, is to endeavor to conform Christian Science to our daily lives, but conforming our lives to Christian Science is the direct opposite of this. In Truth all our needs are supplied and there is no lack. As Christian Scientists we desire the eternal realities of Being, and not that which is temporal and mutable.

When an illness arises, it is not merely the destroying of this wrong condition that is valuable, but the demonstration that it has no existence as a truth of God.

It is heaven we wish, and not a garden of Eden. We often err in judging between the want and the need. A mortal want does not find gratification through the Scientific treatment of Christian Science which has come not to fulfil but to destroy the wants of ignorance. Demonstration demands honesty, for God recognizes at once an honest desire and floods it with His own presence—Love.

"God is not mocked," and we can only accomplish the necessary "work—work—work—watch and pray" of our Leader as we are seeking to be in touch with Truth.

Again we repeat the thought, our greatest privilege is one of demonstration, or in other words, proof of the perfection of God and of our own individuality. "Set your affection on things above, not on things on the earth," "For where your treasure is, there will your heart be also."

How to Destroy a Fallen Brother.

Look shy at him, speak harshly and unkindly; accuse, blame, criminate, and threaten. Speak ill of him in his absence. Lose sight of all his excellences, and magnify his faults.

How to Restore a Fallen Brother.

Thou art in the boat. He has fallen overboard into the water, therefore don't push him with the oar, for he will only go farther from thee, or sink to rise no more; rather sail round him, enclose him in the gospel net or take him up in thy hands and lift him into the boat and speak kindly and comfortably to him, and remember that, by doing so, thou shalt "hide a multitude of sins."

*Christian Almanack of 1830.***Testimonies.****Thankful for the Revelation of Truth.**

In 1888 Christian Science found me an invalid suffering from nervous prostration and ulcerated stomach and bowels, brought on partly by strong medicine, and partly by worry and trouble.

For seven long years, I wandered in the wilderness of doubt and fear,—living in the past, borrowing trouble from the future and seeing nothing but darkness in the present, thinking that if there were a God He had forsaken me, or I had never understood Him aright. From childhood I was never satisfied with the explanation of who or what God was.

I believed Him to be a personal God, a God of vengeance and everlasting punishment. And why, was a problem I could not solve. The vague teaching of what a true Christian life should be here as regards every-day living, was not satisfying to me. How was I to know that I was right? I was conscientious and truthful, trying to do all the good I could, yet I believed there was a way by which we could distinguish between truth and error.

One line of reasoning induced other lines of thought. If God sent sickness and disease as a punishment, why did He want to punish me, when I had lived up to my highest sense? I lost faith in medicine, and grew worse under a doctor's treatment, and quit them both. My troubles grew worse with all my praying.

My prayers to an all-wise God seemed a solemn mockery. The Bible was a sealed book to me, so far as understanding it in its spiritual sense, and very contradictory in the literal sense. I had always felt afraid to say "Thy will be done," for fear God would send some great sorrow or trouble upon me, or take my companion from me in his sins, and he would be eternally lost. I arose from my prayer one night with an overwhelming sense of shame and disgust, for I saw my petition to an all-wise God was nonsense, a mockery.

I was at last convinced that I did not know how to pray, or what kind of a God I was praying to, and until I did, I resolved then and there, I would quit praying, quit reading my Bible, quit worrying about anything here or hereafter. If God was an all-wise and just God, all there was for me to do was to give myself and all into His hands, and let Him direct our paths. Then I was willing to say, "Thy will be done." Let come what might, I would trust all to God.

This resolve brought a calm, and peace of mind I had not known before. Not until after I came into Christian Science did I know that that was the only true prayer I had ever made. For seven long years, I had suffered, hoped, and trusted.

In 1888 Christian Science taught me that God is Life, Truth, and Love,—the one Mind, the one Intelligence, and all-power. It was then I could understand why He was the all-knowing and all-seeing God. It revealed such a flood of light to me, that it seemed for a while as if I knew all there was to know of Him. I knew it was the true light, and through that blessed light, I could understand God aright, and say, "Thy will be done." I knew it was through Christian Science only I could be healed.

Though my progress in Truth has been very slow, yet I would not take the world in exchange for it. I am trying to live in the way of Truth's appointing. And we thank God that this Truth has been revealed to us through "Science and Health with Key to the Scriptures."

I know all would like to know something of our little church down here in the mountain of Eureka Springs, Ark. We organized our church in 1896 with nine members. We have grown to twenty-three, taking in seven

of the Sunday School children last June. We are a happy and harmonious band of church workers. We have no church building of our own as yet, but we have started a building fund and it is growing little by little. In the course of the year 1900 we paid \$158.95 to The Christian Science Publishing Society for literature for our reading rooms. We sold books to the value of \$111.37 up to the last of December of the same year, which gave us a profit for our building fund.

We have a prosperous little Sunday School. The children demonstrate well. We also have a Christian Science day school with several children from the outside.

D. B., Eureka Springs, Ark.

Letter from Germany.

Karlsruhe, Baden, October 21, 1900.

Dear Mrs. W.:—I received the papers and the *Christian Science Quarterly*, and I thank you heartily for them. I study Christian Science every day; I read it early in the morning, in the evening, and during the day. I try to live in accordance with all those dear words of Light, Love, and Life. From day to day it becomes dearer to me, and I really think I never felt happier and stronger in all my life.

I have to work all day long—ten to twelve hours—at Greek and Latin. Formerly it happened very often that I was so tired after a short time that learning became an impossibility to me. I always suffered from headache, but since I began reading Science and Health I feel a new strength, and the courage to undergo all difficulties.

I think I liked Science from the very first moment I heard of it, the thoughts it expresses suit so very well my former religious conceptions. I think that only can be true religion which demonstrates itself in daily life, and elevates man to his spiritual being in God. In the papers I liked especially the articles, "To Students," "A Teacher's Experience," and the one "From the Christian Fathers." I read the beautiful words of St. Augustine over and over again. Last Sunday I read the lesson from the *Quarterly* and found in the combination of the verses many a beautiful and holy truth, which, until then, had been unknown to me.

I shall always thank you for all the happiness and strength which Christian Science has given me.

Affectionately yours,

CAROLA BARTH.

Results of Accident Entirely Overcome.

On the night of the twentieth of July, 1898, returning home from a Wednesday evening meeting, as I started to get off the car, which slowed up and then started with a sudden jerk, my foot caught in my dress, and I was thrown about four feet from the car. Finding I could not arise, I commenced to repeat the Scientific Statement of Being. I was asked, "Are you hurt?" My reply was, "I don't know." They asked me to stand up, but I could not do so. Then they lifted me and seated me in the car deciding to take me to the City Hall and have the ambulance take me home from there.

Four city doctors went home with me, and wanted to give me something to ease me until I got home, but I refused to take it. One of them made the remark, "You must be one of those Christian Scientists." I said, "Yes, I am studying it, and only wish I was a good one." As they carried me into the house on a stretcher, my husband said, "This is what I have been looking for the last two years, going to that Science Church after dark." The Scientist who kindly came home with me and stayed by me, went with the doctors into the yard, and they made the remark, "It's a pity! This poor old woman will never

walk again. She will either always have to be rolled in a chair or go on crutches." This statement was mentally denied by the Scientist. My hip was out of joint, the frontal bone was broken, and the knee cap was knocked loose, but I suffered no pain.

The next day I sent for a practitioner who came to see me every day for a month, and every other day the second month. I was in bed five weeks in all, and one day after I was up, sitting by the window studying my Bible Lesson, I stooped over to pick up a pencil, when I heard a noise as if a pebble had been thrown against the house, and when I put my hand on my hip I found it had gone back into place.

The back healed, the bones knit, and within one year I walked without crutches. All the regular treatments I had were during the first two months. After the accident the cord on the inside of my limb was drawn, so that my foot was thrown out, and I always walked that way. For the last few weeks I have been taking treatment of another Scientist for a trouble not in any way connected with this accident. One day about a week ago I was talking to her about the cord, and the next day I found that it was all right, and the foot had gone back in place. I cannot thank God enough for all He has done for me.—MARY L. FRYE, Denver, Col.

Help Received from the Quarterly.

I feel that I ought to acknowledge the benefit I have received from the *Christian Science Quarterly*. I was first brought into Christian Science by the healing of my eyes. For over three years I struggled along against the bitter opposition of my husband, who would allow me no literature and no acquaintance with any one connected with Science. At the end of this time I visited my mother. She had a *Christian Science Quarterly*, and after reading one of the lessons, Science and Health was opened to me, I had a copy of this text-book all the time, but I could not seem to understand it. My mother then subscribed for the *Quarterly* for me. Kind friends lent me the *Journal* and *Sentinel*, and I am happy to say that I have been enabled to earn enough money to renew my subscription to the *Quarterly*, and also to subscribe for the *Sentinel*. God is indeed Good and I feel sure that in His own good time I shall be able to have more of the rich blessings that our Leader and The Christian Science Publishing Society are giving so freely to the world.

Mrs. M. Z. F., Gallup, N. M.

A gentleman residing in the country came to me and requested me to treat his daughter for hereditary erysipelas. He said both her ears were swollen so badly that the neighbors told her that if she did not do something soon her ears would drop off. I took the case. The father remained in town over night, went home in the morning, and when he arrived the young lady's ears were nearly normal, and soon were all right. She had been reading Science and Health and is still reading. God will come in and sup with us and we with Him when we are ready to receive Him.

C. U. BENNETT, Walla Walla, Wash.

I was healed a year ago of a very serious trouble, cancer of the stomach. I am very grateful. Science found me very near death's door and my feet have been placed on a solid rock, bless God! I never have been able to use pen and ink till now, and never have used my right hand till now. Christian Science has truly done wonders for me.—KATIE THOMPSON, Carbonado, Wash.

Religious Items.

A ministerial correspondent in *The Congregationalist* boldly faces the question of Jesus' miracles, i.e., works of healing. He seems to admit that the belief in Christian healing in the time of Jesus can only be properly supported by healing in the churches in the present age. His argument is as follows:—

"The editorial in *The Congregationalist*, June 8, discussing the question whether the church needs miracles, marks an epoch in *The Congregationalist*. . . . Ought it not to be reiterated that Christ is greater than his alleged miracles, greater than any specialized records, greater than any ancient history of him? Miracles no longer attest him to us, whatever they may have been to his own age. His personality did not appear merely in the gospel records. The records were a comparatively late result of his personal greatness. They neither add anything to him nor subtract anything from him. . . . We ought to leave the credibility of ancient miracles to be determined largely by the quality and power of modern achievements in his name.

"It is a great question whether the church needs the ancient miracles. I, for one, do not know what to do with them. It is a greater question by far whether Christ is still working miracles. Modern records are more important than ancient ones, considered merely as history. What record of miracles is the church making now? If Christ is dead and works no longer, then we shall not care what he did in Palestine in the former days."

The (Episcopalian) *Church Standard* quotes the following from the "Reminiscence" of the Rev. William Rogers, a champion of popular education in England: One needs to pause and reflect sometimes to be sufficiently grateful for what has been accomplished. When I began my ministerial life nothing looked less likely than that education would some day be within the reach of every English child, and nothing certainly was more improbable than that its range would be as wide as it is now. Men did not realize that there was no darkness but ignorance. They saw darkness all around them, but they failed to see whence it came, and the few enthusiasts who labored for the children could never count on popular support. Schools were supported, of course, but mostly the motive was sectarian zeal; and I doubt if the thoughts even of many ardent educationalists often passed beyond the limits of their own efforts."

The (Baptist) *Watchman* prints a sermon by the Rev. Charles Cuthbert Hall, D.D., on "Knowledge of God and the Bible" which contains the following: "Can we know God in any real sense; and, if so, to what extent and by what means can this knowledge be increased? The importance of this question, in its bearing upon the religious life of the community cannot be overestimated. It is in vain that we erect religious institutions and multiply religious opportunities if in the depths of consciousness is a philosophical uncertainty regarding the fundamental proposition: the knowledge of God. The growth of the religious life is conditioned on the antecedent confidence that God may be known and known ever more deeply and fully. Nothing could be more reasonable than the statement of Scripture upon this point: 'He that cometh to God must believe that he is, and that he is a rewarder of them that diligently seek him.'"

In its column of editorial "Briefs" the *Universalist Leader* says: "The danger of a false step or a wrong act or a bad law is enhanced by the likelihood that its actor or enactor will pass through this means into alliance with evil. He has been on the other side, has stood up for clean hands and a pure heart and a just tongue. He has broken down his own defences now. The temptation to go into partnership with his deed is strong. He is silent where he used to speak. When he finds his tongue it is either to articulate a platitude or to say

something in apology for wrong. Thus he slips down the greased grooves of the moral incline until he is fully launched on the awful voyage of degeneracy. This is the evil of evil,—that carries its victim along with it and commits him, body and soul, to the course he hates. But resist the devil and he will flee from you."

Richard M. Vaughan says in the (Baptist) *Standard*: "There are two types of obligation that constrain the Christian to obedience and service; the obligation of the soldier to his commander, which grows out of a duty, a responsibility assumed, a danger to be met, and the obligation of love, which grows out of gratitude for benefits received and the recognition of kinship of soul. In some lives the military element will be dominant, in some the homage of love. They are not opposed to one another, but supplement one another. At different times one or the other will appeal more strongly to the disciple. When love loses its warmth, owing to neglect of the means of grace, even then the motive of obedience because one is a soldier in an army, a subject in a kingdom, loses none of its power. Even when we feel ourselves cold toward spiritual things, and the doing of religious tasks is irksome, we may recall ourselves to the right attitude by pressing this motive of obedience."

An editorial in the Young People's department of the *Universalist Leader* says: "When you are tempted to criticize a woman who talks loud and long, or to censure a man because he lacks in judgment, discretion would advise a quiet personal inquiry as to your own imperfections. It is certainly uncomely to imagine one's self free from defects; and an intelligent silence is not only merciful to others, but a safeguard to one's good sense. If one would be a bit more careful to acquaint himself with his own vagaries of conduct, and a bit more steadfast in correcting them, he would be less likely to observe faults in others, and more modest in drawing attention to them. One cannot cleanse a blot with blotted fingers."

The Hon. Wayne MacVeagh, in an address before the Harvard chapter of the Phi Beta Kappa Society recently, said: "It seems to me there is no better work to be done at present by an American university than to again unseal those fountains of idealism, where the human spirit has so often refreshed itself when weary of a too material age, to reawaken that enthusiasm for the moral law which we have all somehow lost, and to impress upon a people essentially noble, but now too deeply absorbed in the pursuit of wealth for wealth's sake, the advantages which the cherishing of ethical ideals may bring to all of us, even to those who pride themselves above all things upon being practical."

In a review of Dr. Elwood Worcester's recent book, "The Book of Genesis in the Light of Modern Knowledge," the (Episcopalian) *Church Standard* says: "It is as certain as anything in literature, ancient or modern, that Genesis is a compilation of different works, all very ancient, but some of them much more ancient than others, and all blended together by the uncritical hand of at least one later collector and editor. If Genesis were not a work of that kind, it simply could not belong to the age from which it professes to have come down; and so it may be said that the very proof of its composite character is likewise an evidence of its genuineness as a product of that distant time."

The (Unitarian) *Christian Register*, in an editorial headed by the question "Who Creates Our Ideals?" says: "This is really the most important social question that can be discussed, and it is a question that must be answered if we expect to escape social degeneration. It would not have been difficult one hundred years ago, or even seventy-five, to answer that the Church is doing this important work. But, whether we like to confess the fact or not, the Church at pres-

ent is doing something very different from its old work of moulding society and creating the ideals for our boys and girls."

The Rev. O. P. Gifford, D.D., says in the (Baptist) *Examiner*: "The Christian life, rightly lived, is a strenuous life. Christ calls no man to a life of ease. It is easier to be a fisherman than a fisher of men; easier to sit at the receipt of custom than to follow Christ; easier to accept things as they are than to turn the world upside down because it is wrong side up. Life means a struggle; when the struggle ceases life ends. The higher the life the harder the struggle."

Bishop Foss of the Methodist Episcopal Church, who carefully studied the recent Presbyterian General Assembly, calls attention to the fact that on the morning of the decisive debate the delegates sang Faber's hymn, in which occur the following lines:

But we make His love too narrow
By false limits of our own;
And we magnify His strictness
With a zeal He will not own.

The Congregationalist.

A writer in the (Baptist) *Watchman* says: "The lives of children are fashioned not so much by what is taught by parents as by what parents are. The hair-trigger temper, the broken promises and unbridled speech, are reproduced by unconscious imitation, while the precept upon precept, line upon line, have little or no effect whatever. We teach truthfulness by being truthful."

RULES TO BE OBSERVED.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quaterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

We especially request our contributors to write plainly and only on one side of the paper.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the *CHRISTIAN SCIENCE JOURNAL* since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding. No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem,
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription :

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription :

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale :

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

National.

Five hundred and sixty teachers will sail on the transport Thomas for the Philippines July 23. The salaries of the teachers will range from \$75 to \$125 a month, and before starting they will sign contracts for three years. A sample of the text-books which will be used in the islands has just been exhibited in the Insular Bureau. It contains a three-thousand-word history of the United States, the Constitution, and the Declaration of Independence, and a map of the country. The pages are printed alternately in Spanish and English.

Secretary Long has directed that the old steam frigate Minnesota now lying at the navy yard in Charlestown, Mass., be sold to the highest bidder. The Minnesota was one of the few Union vessels which escaped destruction from the Confederate monitor Merrimac during the Civil War. For many years her name has been on the naval lists more for sentimental reasons than anything else.

The total receipts from the war revenue act from July 13, 1898, the date the act went into effect, to May 31, 1901, amounted to \$310,053,363. For the first ten days of July the receipts of internal revenue were considerably larger than for the corresponding period of last year. In spite of the reductions which took effect with the beginning of the month.

The new Philippine tariff has received its finishing touches at the War Department, and will probably go into effect early next month. It is expected that the new law will produce annually \$15,000,000 revenue for the new insular government, and materially reduce imports from all countries, except Spain and the United States.

The Sultan of Turkey has finally paid the ninety-five thousand dollars claimed by the United States for damages to the property of the American missionaries in the Armenian massacres in 1893. Mr. Griscom of Philadelphia and Mr. Leishman of Pittsburgh, Pa., have the honor of securing the payment.

The Chinese Government, through Minister Wu Ting-fang, has filed a claim of indemnity to the amount of half a million dollars on account of alleged outrageous treatment of Chinese at Butte, Montana.

The registration of persons seeking homes in the Kiowa-Comanche country, Oklahoma, was begun at El Reno and Lawton July 10. The drawing will take place July 19.

The National Educational Association, which assembled at Detroit, Mich., last week, passed a resolution in favor of a National university.

The Navy Department has been informed that the battleship Maine will be launched at Cramps' shipyard at Philadelphia on the 25th inst.

After July 25 all exports from Porto Rico into the United States and all exports from the United States to Porto Rico will be free of duty.

Foreign.

Owing to opposition to Japan's request to increase her indemnity claim about four million dollars, there has resulted another delay in the settlement of affairs in China. Japan presented a claim of twenty-three million dollars, but when it became apparent that the powers would accept bonds from China in satisfaction of their claims, Japan announced that she could not sell her bonds at par, and would, consequently, sustain a heavy loss, as her claim represented actual money expended. She therefore proposed to increase her claim accordingly. The United States has taken no part in the opposition, but has declared that Japan's proposal meets with its approval.

Cheikib Bey, the new minister from Turkey to the United States, arrived in Washington July 8. He has never held a diplomatic post before, but has been chief of the cipher department of the Sultan, a most important position, which goes to none but the most tried and trusted of the Sultan's subjects.

A despatch from Peking says that the Forbidden City has been closed to the public, preparatory to refurnishing the palace for the court upon its return. The palace is the least injured of the imperial domiciles, and is virtually intact.

Prince Chun, the younger brother of Emperor Kwen Su, who has been selected formally to apologize at Berlin for the murder of Baron von Ketteler, left Peking July 12.

The American consul at Tientsin has sentenced three American looters to four years' imprisonment in the American jail at Shanghai.

President Kruger has abandoned his visit to the United States.

Industrial and Commercial.

The American Plough Company, with a capital of \$100,000, has been incorporated formally in New Jersey. This company is to be the nucleus of the combination of manufacturers of agricultural implements, with plants for the most part in the West, that has been practically completed. Among the concerns to be included in the combination are Deere & Co., Moline Ill.; Moline Plough Company, Rock Island Plough Company, Bettendorf Wheel Company, Parlin-Orendorf of Canton, Ill. the Morrison Manufacturing Company of Madison, Wis.; Fuller & Johnson, Madison, Wis.; the Syracuse Chilled Plow Company of Syracuse, N. Y.; B. F. Avery & Co., Louisville, Ky.; Bucher & Gidds, Canton, O.; the Peru Plough and Wheel Company, Peru, Ill.; the Pekin Plough Company of Pekin, Ill.; J. Harley Bradley, Chicago; Martin Kenman, Peoria, Ill. and the La Crosse Plough Company, La Crosse, Wis. To control the world's trade in the agricultural implements business, agencies will be established at every important place on the globe.

Delegates representing seventy-eight thousand workmen in all branches of the leather trade in this country and Canada, met at Philadelphia July 5, and formed the Amalgamated Leather Workers Association of America. The new international union will affiliate with the American Federation of Labor.

The Independent oil producers of Texas have contracted with the Neatia and Levy Ship and Engine Building Company of Philadelphia for the construction of two steel hulk oil steamships of eight hundred thousand gallons capacity.

The Republic Iron and Steel Company of Youngstown, O., has granted an advance in wages to take effect from July 1. About forty thousand employees are benefited by the increase.

Oklahoma is experiencing an oil boom. Twelve wells are now being sunk and six are in operation. The first of these was put down at Pawhuska four years ago.

The principal gas company of Chicago has pledged itself to pay three and one-half per cent of its gross receipts into the city treasury.

Canada's mineral production during the past year is valued at \$65,000,000, which greatly exceeds that of any preceding year.

The New York Court of Appeals says that the eight-hour provision in the labor law is constitutional.

The Houston Oil Company has been organized with a capitalization of \$30,000,000.

Telegraphic communication is now open between Seattle and Port Simpson, Alaska.

General.

The Young Men's Christian Association was organized in London June 6, 1844, by Sir George Williams, now senior member of the dry goods firm of Hitchcock, Williams, & Co. Mr. Williams will be eighty years old in December, but he goes to his office every day and exercises a general supervision of the business. When the Y. M. C. A. was organized it had only half a dozen members, now there are 7,200 associations with a membership of five hundred thousand, and owning upwards of \$20,000,000 worth of property.

There are eighty associations in London alone and over 350 in England. There is scarcely a civilized country in the world without an organization, and the international committee, whose headquarters are in New York, finds it necessary to employ a corps of sixty-one secretaries to do its business.

The twentieth international convention of the Christian Endeavor Society began at Cincinnati July 6, with the largest attendance on record. The annual report of the general secretary, John Willis Baer of Boston, shows that there are now 61,427 societies with nearly four million members.

During the year ending June 30, precious stones to the value of \$1,919,053 passed through the office of George W. Mindil, government expert on precious stones at New York.

Andrew Carnegie has offered to give \$750,000 to the city of San Francisco for a public library building if the city will furnish a suitable site and appropriate \$75,000 a year for maintenance.

As the result of a compromise, the educational features of the Buffalo Exposition are open to the public on Sunday during the afternoon and evening.

Jacob S. Rogers, the millionaire locomotive builder of Paterson, N. J., bequeathed \$8,000,000 to the Metropolitan Museum of Art in New York.

Mr. Carnegie's gift of ten million dollars to the University of Scotland is the largest ever made to any public institution in Great Britain.

The daily average attendance at the Pan-American Exposition during the month of June was over thirty-one thousand.

The general admission to the Pan-American Exposition on Sunday has been reduced from fifty cents to twenty-five cents.

A movement has been started to erect a monument in memory of the poet Whittier, at Amesbury, Mass.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, WATCH." *Jesus.*

Chicago as a Seaport City.

It would seem that the United States, with its extensive coast line on the Atlantic and Pacific and its numerous harbors from Maine to Florida and from Washington to southern California, had already a sufficiency of seaports, but there are citizens of Chicago who seem to think otherwise, and who have given evidence of their faith, not only in their city but in the future of this country, by building and launching several steamers for salt water service. The first vessel for this new venture was launched last December, and only four months later was steaming away for ocean ports from which it has always been believed Chicago was debarred by her situation as an inland city. On the 24th of April last the steamer Northwestern cleared from the port of Chicago for Liverpool, touching *en route* at Buffalo, Montreal, Sydney, and Cape Breton. The first salt water steamer to be built and launched at Chicago, the Northwestern, also had the honor of initiating the lake, canal, and ocean service between Chicago and all Europe.

The Northwestern was not, however, the first vessel to sail between Europe and Chicago, for the credit for that belongs, it is said, to some Norwegian sailors who nearly forty years ago brought over a small sloop from Norway laden with fish, disposing of the cargo at a profit. It is fitting that the first voyage over this route should be made by Norse sailors, for, it will be recalled, the first voyage from Europe to America was performed by Norse navigators a thousand years ago. They have ever been hardy fellows, these Norsemen, daring unknown seas and storm bound coasts with reckless bravery. In fact, if tradition and history be true, they sometimes went beyond their legitimate profession as mariners and did a little buccaneering, ravaging coasts which were supposed to be safe from piratical incursions and carrying fire and sword wherever they went.

In 1892 a small steamer made the voyage from Bergen, Norway, to Chicago, having been chartered by Mr. O. A. Thorp, an importer resident in the lake city, but a Norwegian by birth. She brought fish and cod liver oil and returned to Norway with a cargo of flour and grain. To her belongs the honor of having first brought a cargo to Chicago by steam from any port in Europe, and of having made the first round trip between these places. The time consumed by this steamer—the Wergeland—was forty-two days from Bergen to Chicago, great delays and much expense being experienced in the St. Lawrence canals and in the necessary transshipment of a portion of her freight.

Several other ventures of the kind were made by the enterprising importer, Mr. Thorp, but the products of Norway being limited mainly to "Cape Cod turkey" and the oil expressed therefrom, and Chicago's capacity for these useful products being in a measure limited, the profits were not vast.

It may be regarded in the nature of a curious coincidence that about this time another argosy sailed from Spain for Chicago—the caravels sent over by the Spanish government to attend the Chicago Exposition of 1893. Between

Spain and the Norseland is divided the credit for that great achievement, the discovery of America, although a distance in time of nearly five hundred years separates the voyages of Leif Ericsson and Christopher Columbus. The Norseman led the way, but did not sufficiently promulgate his discoveries, while Columbus came after and reaped the rewards of his venture by immediately proclaiming what he had found, and had expected to find, by crossing the Atlantic in his search for a northwest passage to Asia.

At last the northwest passage has been found, but it lies several degrees to the southward of the supposed route so long sought by Sir John Franklin and other arctic voyagers. It does not lie within the power of Chicago to claim the merits of an original discovery, but to her enterprising merchants belongs the credit of exploiting a field which has always been assumed as closed to her by a location so far removed from the coast line of the United States.

At the time the Northwestern was launched three other steamers of her class were under construction to constitute the initial line projected for intercontinental traffic. These vessels are two hundred and sixty feet in length, and with a capacity of about three thousand tons. They are not large as ocean liners go, and by the side of such leviathans as the Oceanic and Deutschland would appear mere pygmies, but they are as large as the conditions governing this traffic will permit, being restricted by the size of the canals through which they must pass to reach the ocean. They are owned and will be operated by the Northwestern Steamship Company, and are scheduled to make regular trips between the head of navigation on Lake Michigan and European ports during the season, the trip each way being expected to consume eighteen days. So the century finds Chicago ready to grasp fortune by the forelock and to assert her rights as a rival in the race for control of the vast carrying trade which centres at her port and is now conducted mainly through rail connections with Atlantic ports.

The vastness of this commerce need not be emphasized, for it is already granted. The only difficulties in the way are those of situation and environment, restrictions placed upon her by nature which will require herculean efforts on the part of her energetic citizens to overcome. That Chicago is ambitious goes without saying, that she has already overcome gigantic obstacles and forged to the front through the possession of a supreme capacity for farseeing enterprises will be readily allowed.

In this era of prosperity she finds herself forced to adopt extreme methods for moving the vast natural productions of the region of which she is the centre and which are poured into her granaries, stock and lumber yards from every side. If even a comparatively small amount of this surplus can be moved by the employment of steam vessels to relieve the threatened congestion of traffic, something will have been done toward solving a difficult problem. By the co-operation of Canada she is able at last to initiate her ocean service, and without it she would, for some time to come, at least, be bound hand and foot. Much is expected of her vast drainage canal, connecting Lake Michigan with the Father of Waters and the Gulf of Mexico, but at present

this route southwardly is not taken into consideration. The Atlantic can now be more directly reached through the great lakes and the series of canals inaugurated and constructed by the Canadian government. The great Welland canal alone has cost the Canadians nearly twenty-eight million dollars, and is more than twenty-six miles in length. Originally planned for small and light draft vessels, the Welland has been recently dredged to a depth of fourteen feet. It has no less than fifty-five locks, but vessels not over two hundred and fifty feet in length can go through them without material inconvenience, and the amount of freight annually passing that way has been given as a million tons.

The tonnage through the great Sault Ste. Marie canal, connecting Lakes Michigan and Huron, vastly exceeds this estimate, of course, and when completed, at a cost of nearly five million dollars, this artificial waterway was navigable by vessels carrying eighteen feet of water. The United States government built here a lock which was then the second largest in the world, and the annual tonnage is said to be greater than that which passes through the Suez Canal.

It is difficult to believe that the total tonnage of Chicago exceeds that of New York, but the vessels employed in the carrying trade, while small, are exceedingly numerous. While the St. Lawrence River is navigable for ocean steamers as far as Montreal, yet there is at present uninterrupted navigation open only for vessels drawing less than fourteen feet of water. This will cause a necessary transshipment of all cargoes in excess of two thousand or twenty-five hundred tons, which will materially add to the cost of transport and cause delay. The steamers are built with a carrying capacity of at least thirty-five hundred tons, and it is expected that they will be able to pick up additional freights when deep water ports are reached. Again, the water in the canals sometimes varies in depth, so that a ship loaded to extreme capacity might run aground and be delayed.

It was only last year that the Canadian government announced that vessels not over two hundred and sixty feet in length and drawing less than fourteen feet could pass unobstructedly through the canals from the lakes to the ocean. Chicago has been quick to avail herself of the privilege of becoming an inland seaport, if the term may be allowed, and her experiment will be watched with interest on both sides of the Atlantic.

In the *Fort Wayne Morning Journal-Gazette*.

Changes in State Capitals.

Most of the states have made a change in their capitals, a number of which are almost forgotten.

To begin with the thirteen original states, New Hampshire has changed its capital three times. For a long time Portsmouth was the capital, and all the royal governors lived there. During the revolution, and for several years afterward, the seat of government was at Exeter. It was only in 1808 that the capital was permanently established at Concord.

Rhode Island, the smallest of all the states of the Union, has two capitals—Providence and Newport. It originally had five, South Kingston, East Greenwich, and Bristol being included. The three latter were discontinued in the early part of the century. A new State House is being built at Providence, and by vote at this year's election Newport will lose its distinction as a capital.

Connecticut formerly had two capitals also. New Haven having been discontinued in 1887. The origin of these double capitals lies in the fact that the different towns were independent colonies, and after independence was de-

clared they refused, through local jealousy and pride, to surrender their distinctive prominence, and so each was made a state capital.

The original capital of New York was New York City. At one time the state had two capitals, New York City and Jamaica, L. I. Gradually the capital shifted to the north, to Poughkeepsie first, and subsequently to Kingston. Albany was made the capital in 1792.

Harrisburg has not always been the capital of Pennsylvania, this distinction having fallen to it in 1812. Previous to that date Lancaster was the capital for a number of years. The original capital was Philadelphia.

Virginia has had a succession of capitals, Jamestown, Williamsburg, and Richmond, the last dating from 1779.

West Virginia, which was taken from Virginia in 1862, established its first capital at Wheeling, which gave place after a number of years to Charlestown, its present capital.

Milledgeville was the original capital of Georgia, until superseded by Atlanta, after the close of the Civil War.

Tuscaloosa was the capital of Alabama before Montgomery was selected in 1847.

New Orleans for long time was the capital of Louisiana and for several years after the Civil War served as the seat of government until superseded by Baton Rouge.

Ohio was admitted into the Union in 1802, and Chillicothe was its first capital. Later, in 1836, the northern boundaries of the state were enlarged, which necessitated the selection of a more northerly capital, and Columbus was chosen.

In Michigan, Detroit, was originally the capital, but Lansing was selected later on account of its more central location.

Only a few people know that Corydon was once the capital of Indiana. Indianapolis was made the capital in 1825.

Vandalia was the capital of Illinois before the honor passed to Springfield.

Iowa City, not Des Moines, was the original capital of Iowa.

Topeka is the present capital of Kansas, but the first capital was Lecompton.

Omaha preceded Lincoln as the capital of Nebraska.

Virginia City was the capital of Nevada before the selection of Carson.

When Dakota was a territory Yankton was its capital, but on its admission into the Union as two separate states, Pierre, after some controversy, was established as the capital of South Dakota, and Bismarck as the capital of North Dakota.

While Florida was Spanish territory St. Augustine was the capital. Immediately after its admission into the Union Jacksonville was made the capital. The present capital is Tallahassee.

Tucson was at first the capital of Arizona Territory. It was succeeded by Prescott, which has given way to Phoenix, the present capital.

The capital of the United States has likewise been changed several times. It was originally New York, then Philadelphia, and finally Washington.—*Boston Herald*.

God calls on us in the plainest language to work with Him. Only our sin and our selfishness stand in the way. When we can renounce these and turn to Him with all our hearts, the barrier is broken that stood between us.

JOHN JAMES TAYLOR.

All things are movable. Therefore, we must be shaken out of things. But, because this is so, we have no need to fear, though much shaken: only let us hold fast to our God. He is the holy one, and from Him we have nothing to fear.

Selected Articles.

Christian Science Applied to Education.

It is generally conceded that education is not a pouring in, nor a storing away of information in the human mind, but rather the drawing out and setting in motion of the latent capabilities of the individual; that it is the building up and rounding out of true character,—cherishing and expanding those primal elements of real manhood and womanhood that make for righteousness, that enable one to be and to do that which is highest and best. We will go a little further and say, education is necessarily that drawing out of and away from the false sense of self in matter, in personality, whereby alone the full expressing of Good, or image of God, is made to appear.

To be educated, then, means to be in that state of mind in which all the qualities of good and all the faculties for doing good are brought into free and continual use; to have laid aside every weight of material limitation, and to be running the race of life in full possession of the power, freedom, and dominion which God has given His own. Such a condition of things, extending from the individual to the community, and ever increasing and multiplying until it includes the whole human family, must result in that reign of rightness, order, health, harmony, toward which all longing eyes, all aspiring hopes, are turned—"toward which the whole creation moves."

We believe this heavenly kingdom to be at hand, even as our Master and his herald and his followers all proclaimed; and we further aver that, in the understanding or knowledge of Christian Science, revealed to this age through its Discoverer and Founder—Rev. Mary Baker G. Eddy—we believe that we have the key to its inmost treasures.

We are well aware that this is a very large claim, but we are ready to substantiate it by what has already been and is being unfolded in this direction. *To know* is the main object in living. Since ever Plato said, "What thou see'st, that thou bee'st,"—and that other wise philosopher gave out his terse edict in two words, "Know thyself," knowledge has been generally regarded as the one thing needful—the "better part" that cannot be taken away.

But to know what? Did you ever stop to think that the only thing that can be known is Truth? We believe, and think we know, a host of things for a time; but presently upon further investigation, and with larger experience, we come to doubt and question our supposed knowledge, and finally to disbelieve and discard it altogether. Then we see it was only belief at best and not real knowledge, because it was not founded upon the Rock, Truth. This may be said of all the so-called sciences that are based upon a belief in matter. As the process of rejecting and revising goes on, each one of these sciences, so-called, undergoes such changes as to be scarcely recognizable from one generation to another. Their literature that is in vogue in one generation is quite out of date in the next. The young medical student fresh from school turns eagerly to the library left by his father, as to a rich legacy, to find there only two or three volumes that he can use in his profession.

So variable and transitory is all human knowledge that one is often reminded of the humorist's query, "What is the use of knowing so much, if what you know isn't so?" Well might the wisest man of his day, on the material plane, say, "This much do I know, that I know nothing."

In these days of liquefied air and purified thought, matter is rapidly losing its supposed consistency as substance, and material knowledge is being relegated to its proper place

among the superstitions of the past. Even to the sense of advanced material scientists, matter is rapidly dissolving under the more direct rays of Truth, and is being resolved into the original element—thought. Professor William Oswald, of the University of Leipsic, says: "Matter is a thing of thought, which we have constructed for ourselves, rather imperfectly, to represent what is permanent in the change of phenomena." It is the idea of Christian Science and all that is akin to it that gives the strongest impulse to all modern invention; for human thought, liberated from the belief that it is encased and entombed in matter, at once begins to shake off its self-imposed limitations, and lo! the wonders of inventive genius, that tend to overcome time and space, and to dispense with servile toil.

It is not the intent of this paper to criticise popular ideas on education, nor to decry present methods of inculcating them. Nobody knows better than educationists themselves the lack, the utter futility, of many of their efforts, and no one is seeking more devotedly to advance and perfect a cause. There is no one field in all the great work of the world where there is more need or a better opportunity for the most earnest and active co-operation of the best thought and effort.

In its own quiet, unobtrusive way, Christian Science is specifically doing its full share in this work. How is this being accomplished? First of all, Christian Science establishes the one great essential of all true progress, namely, the union of Science and Religion. As the name indicates, it is, primarily, knowledge of the Divine. It classifies all science, or true knowing, as divine; and so the two great avenues of understanding, Science and Religion, are merged into one; and because of recognizing and building upon this great fact, Christian Science as far transcends the popular educational systems of the day as the sun exceeds a tiny star in giving out light and heat. For Science and Religion are two that God hath joined together, and no man can safely put them asunder.

One may be ever so learned in the wisdom and ways of the world, and yet lack the very fundamentals of true education,—the awakening of lofty aspirations, the purifying and the exalting of the affections. The college-bred man may be an intellectual as well as a muscular athlete, but if the higher qualities, shown in reverence and love for God, Good, and its expression, in uprightness, unselfishness, purity, and fidelity of character, have not been called forth and exercised, he is still in dense ignorance of the essentials of life.

The Science that is religious because it is of God, and the Religion that is scientific because it is founded upon eternal fact, instead of fancy and blind faith, are welded into one sound and demonstrable doctrine or teaching, known as Christian Science. This is not a new invention in the realm of education, but a later discovery of the real import of the words and works of the Nazarene Teacher, and is attested by the same signs following. "My doctrine is not mine, but His that sent me. If any man will do His will, he shall know of the doctrine, whether it be of God, or whether I speak of myself."

This teaching reveals one great fundamental Principle, variously named Life, Truth, Mind, Love, Good, Intelligence, Substance, God,—a Being that is infinite, hence the *Only One*.

In this profoundly simple doctrine of the oneness of Mind, of Substance, of Life, of Love, is found a basis of action that overcomes the sense of friction and insures harmony. It annuls the false claim of power in hypnotism, mesmerism, spiritualism, and all systems based upon the theory of minds or spirits many.

Since God is Good and Infinite, to know God is to know Good only. Were we not from the first forbidden to know

both Good and Evil? "Of the tree of the knowledge of good and evil, thou shalt not eat of it."

Science eliminates the false supposition of an element of evil, that cannot exist in the omnipresence and omnipotence of God, and restores the pure, unadulterated knowledge of Good and its creation, pronounced by infinite Wisdom "very good." That Truth rightly understood and separated from illusion demonstrates harmonious and unending life, is being daily attested by countless proofs, and by their fruits they shall be known.

Is that then an insignificant phase of education that discloses the illusive character of evil and its operations, and unveils the exhaustless energy and harmony of one divine Mind, Good, thus restoring to man his God-given dominion over sin, disease, and death? "Acquaint now thyself with him [God], and be at peace." "Ye shall know the Truth, and the Truth shall make you free." "This is life eternal, that they might know Thee, the only true God, and Jesus Christ whom Thou hast sent."

Surely that knowledge which results in peace and freedom and immortality has a strong claim to the name of the "higher education," capable of bringing into manifestation the highest ideals of civilization.

It will be seen that the theories of Christian Science are more revolutionary than its methods. Mrs. Eddy says in "Science and Health with Key to the Scriptures" p. 255, "Mind is not necessarily dependent upon educational processes. It possesses of itself all beauty and poetry, and the power of expressing them." Yet she teaches us to "Emerge gently from matter into Spirit." We know that we can never get a perfect flower by ruthlessly tearing open the bud. The tender petals must unfold naturally in God's sunlight and air.

We would not close the schools, but would permeate all educational institutions with more spiritual thoughts, with higher ideals. We would foster a preference for those studies and pursuits that enable the learner to be absent from the body and to turn attention to the purer, more wholesome, more profitable contemplation of the deathless, limitless Soul.

True mental discipline lies not at all in the laborious conjugation of the verbs of a dead language, but in the living consciousness that God is the only Mind—that divine Intelligence, rather than human intellect, is the great thought force that moves the universe in paths of harmony and health. In humble, willing, loving obedience to this benign Presence and Power, teachers and pupils go into the school-room, sans headaches, sans chills, sans nerves, sans temper, sans everything that would retard the highest and best expression of Life and Mind.

Not physical force nor human will-power, but divine Love, rules the ideal school. That teacher or parent does most for the children intrusted to his care who guards his own thought most carefully against the superstitions of mortal sense, who rules out most completely all selfishness, pride, resentment, and tyranny, and who reflects most of the divine Love of the Master, who said, "Suffer the little children to come unto me, . . . for of such is the Kingdom of God."

The teacher himself should become as a little child and remain as a little child in purity and spirituality of thought, in nearness to God. The chief charm of childhood is its unconsciousness of self, and through the pure ideals of Christian Science this sweet quality is not only kept intact in the child, but it is retained throughout maturer years.

The world to-day presents the aspect of one great school, in which these practical and enduring lessons of life are

being taught. In this great school the pupils show forth the usual phases of discipleship. There are the earnest and diligent workers, who are winning the imperishable honors of their faithful scholarship. There are the indolent ones, who, lacking the energy to work out their own problems, are content to copy the answers from a neighboring slate. There are the rebellious ones, impatient of the needed rebuke, who either sulk away the hours or openly defy the authority of the teacher. There are the truants, too, unmindful of roll-call, still fishing in the streams of sense for material pleasure and profit.

With one and all the teacher works and waits in tender, unending love and patience, knowing that

Truth is sure and can afford to wait
Our slow perception (error ebbs and flows),
Her essence is eternal, and she knows
The world must swing round to her, soon or late.

A needy world cannot afford to neglect such opportunities, neither can it long be kept from such a boon by pride or prejudice.

In little more than thirty years since its discovery, thousands have become the firm adherents of this faith, and now the genuine school of Christian Science that acknowledges Mrs. Eddy as its Leader is making most strong and rapid strides in popular favor.

In 1875 Mrs. Eddy's book, "Science and Health with Key to the Scriptures," the first and only authorized text-book on this subject, was published. The verdict was, "It is decidedly original, but will never be read." Suffice it to say, this work has appeared in two hundred and twelve editions, of one thousand copies each. Other works have been added by the same author, and three periodicals are now issued, for all of which there is a rapidly increasing demand.

A Board of Lectureship, consisting of well-qualified speakers, has been sent out into the field to present the claims of Christian Science in such a way as to disarm prejudice and make known its true worth.

By reason of the marked liberality of the press in fully reporting these lectures, still larger numbers are reached. Through wisely arranged plans, the department of teaching Christian Science has been greatly extended, so that many more may be thoroughly equipped for the work.

Besides these lines of advancement, the world has before it a perpetual object lesson in the practical work of healing the sick and reforming the sinner. Churches, in which the gospel of healing is taught and practised, are multiplying with marked rapidity. The first was established in Boston in 1879, and now there are about five hundred in prosperous condition. Through the peculiar method of our church service, in which the entire congregation is expected to participate, our people are turned to closer and more general study of the Bible.

Ours being a Christian nation, we may well ponder the precepts of the Christian's text-book, the Word of God, and give it a prominent place in our study. No class of people is more devoted to the Bible than the Christian Scientists, for they have learned to regard it—not as a history of the past, nor a prophecy of the future, but as a revelation of eternal Truth, that applies in full force to the needs of this present time.

Christian Science has taught the world how to pray, even to obey the Scriptural injunction, "Pray without ceasing," in constant, silent communion with God, to offer the effectual, fervent prayer that heals the sick and reforms the sinner. "The prayer of faith shall save the sick," saith the Scripture; and the Master, who taught us how to pray, showed by precept and example that this healing, saving prayer was not an attempt to inform infinite Wisdom, nor to petition infinite Love, but the exercise of understanding

and ability to demonstrate man's unity with God, as divine and imperishable Life and Substance.

Christian Science teaches how to live the life that is really worth living, above the reach of material pleasure or pain, on the table-lands of peace, that the world neither giveth nor taketh away. How many would gladly quell the ravages of pain, of weakness or disease, if they only knew how! Who would not curb the angry word, the hasty deed, the passionate thought, if he only knew how? Who does not long to throttle the demons of temptation, of appetite, of wrong desire, which threaten his happiness, his health, his sense of life? But he does not know how, and mankind in general, through ignorance and fear, yields itself a helpless, hopeless victim to such severe task-masters.

Christian Science teaches how to grapple with and conquer the besetments of evil—physical, mental, moral, social, political—evil in all the multifarious forms, by the allness of Good.

Of course it is quite beyond the scope of a paper like this to give any detailed information as to how such grand results are achieved. To that end we recommend acquaintance with the leader of this great movement,—Rev. Mary Baker Eddy,—close and constant study of her text-book and other works, in connection with the Bible, and association with those who, through study and demonstration, have made some progress in this line of light.

Then you will find that you, too, can prove the spiritual power of the undaunted thought of Truth to supplant any and every suggestion of evil; can prove that Love is omnipotent to save to the uttermost.

While we join with all patriotic souls in praise of and devotion to our beloved land, we point to that better country, which our world will be, when uplifted humanity, touched by divine Truth and Love, shall shake off the fetters of false bondage to ignorance, limitation, and sin, and shall rise to fulness of life in Christ, because "The earth shall be filled with the knowledge of the Lord, as the waters cover the sea."

MARY BROOKINS.
In *The Courant*.

A Word for Christian Science.

THERE seems to be a strange misconception as to the teaching of Christian Science. There is a confusion of thought in classifying the so-called "New Thought" with Christian Science. Both do indeed recognize that the time has come when all Christianity and all enlightened thought must recognize a spiritual, unerring law governing man and the universe. That law, according to St. Paul, is the "law of the Spirit of life in Christ Jesus" which "hath made me free from the law of sin and death."

One can no more legislate against, nor hinder the spiritual growth of man to a higher conception of Christian life and its divine power to heal and save, than he can legislate or hinder the development of electricity as it yields more and more its subtle force to the uses and dominion of man.

Christian Science does not say that "God is all, and evil is unreal," and then leave the question there.

Evil is real to the human sense, but as it is not and cannot be an element or part of the divine consciousness, or Christ-mind, we are assured that we can overcome and destroy it. It is not a part of the divine plan, and is therefore defined by St. John as "lawlessness"—something outside of the divine law, therefore unreal to the divine or spiritual sense. Jesus defined it as a lie, liar, and father of lies. I suppose that no persons in the world have so acute a sense of sin as the Christian Scientist, and no church has so strict a code of morals, so rigidly enforced. These misapprehensions of what Christian Science teaches should be corrected conscientiously, then these denunciations of Christian Science would cease. I feel sure that it is all due to this misunderstanding.

Christian Science heals by destroying sin, recognizing it as an element of the human mind to be destroyed by the Christ mind. Paul said: Let us have the mind that was in Christ. "Now are we the sons of God," is St. John's recognition of the Science of Being. It is true that many of the learned and gifted in this and other lands are converts to this glorious Truth, but generally it is not the wealthy or self-indulgent classes, for it is a religion requiring the most rigid self-denial. One must be out of self to do the works.

Our Atlanta church is not made up of a wealthy or fashionable class; yet it is free from debt of any kind, and daily gives proof of its divine origin by doing the works required by the Master as proofs of discipleship.

"Shew me thy faith without thy works, and I will shew thee my faith by my works."

One has truly said that this new religion is born of a woman. Mary Baker Eddy did discern the ever-present operation of this spiritual law, the same yesterday, to-day, and forever, as the Science of Christianity. Its results have been a million people redeemed from hopeless invalidism, or the law of sin and disease; agnostics and infidels made devout Christians, drunkards reclaimed, the Bible become the daily chart of a divine life, thousands regenerated, the power of Christ demonstrated as a redeeming power as in primitive Christianity. A discriminating public can decide if this be the power of good or evil.

"By their fruits ye shall know them," Jesus said, and Jesus is the exemplar, the ideal held constantly in the mind of Christian Scientists.

SUE H. MIMS.

In the *Atlanta Journal*.

Notices.

New Application Blank.

A new form of application blank for membership with the Mother Church has been prepared, which can be had by applying to the clerk, 30 Norway Street, Boston, Mass. It is desired that hereafter the new form shall be used.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

God, having witnesses to choose for all the ages of the world, chose men. And for this end he did not set apart some race of moral giants, quite above the level of our common life, but men of like passions with ourselves, tried as we are tried and overcoming as we may overcome. And in this age the call is for the common man, like you and me, to take the place of common, ordinary men who have borne witness and gone to their reward.—*Selected*.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

An Interesting Letter.

EARLY in June the Hon. Henry Robinson, postmaster of Concord, received a letter from a lady in Seattle, Washington, asking whether he had ever declared that the Discoverer and Founder of Christian Science does not exist.

Mr. Robinson's reply was of much interest and value, especially in view of sensational statements which have been circulated through the country to the effect that the Rev. Mrs. Eddy is a myth, so far as present existence is concerned. The letter was as follows:—

UNITED STATES POST-OFFICE.
Concord, New Hampshire.
HENRY ROBINSON, P. M.

June 8, 1900.

Mrs. J. J. Post, Hotel Vendome, Seattle, Washington.

Dear Madam:—Oh, no! The postmaster at this city never said, even in the sheerest jest, that Mrs. Mary Baker Eddy, the Discoverer and Founder of Christian Science, does not exist.

He, of all men, has tangible proof of her positive verity. She gave her own signature, in petition to the President of the United States, for his reappointment as postmaster. He has in many ways been a beneficiary of her good favor and grace. She is a noble, beautiful woman, the most remarkable of the century, a radiant spirit indeed, and, moreover, a veritable, highly respected, public-spirited, patriotic, and charitable citizen of this, my native city.

As former mayor, and as postmaster, past and present, I have had audience at her home, Pleasant View (only a mile away from the city proper), and have had the honor and inspiration of personal interviews with her. She has kindly entrusted to my keeping certain biographical data as to herself, and I am proud to say that I have been otherwise appreciably recognized by her. I have all her books, given me by herself, and I have contributed to the newspaper press, and to various periodicals, favorable articles upon her. When she appeared in our own Christian Science Hall, in this city, I attended in behalf of the newspaper press, writing the article on her matchless discourse there, which went the rounds of the newspapers of the country.

To have it said that I doubt her existence, is, however, no more absurd and ridiculous than many of the stories told of her, but such is my personal respect and regard and official relations, that it touches my sensibilities, for a moment, and I am grieved; otherwise, I would not so seriously answer your apparently candid enquiry.

Within fifty feet of where I am now dictating this letter, in plain sight of everybody, Mrs. Eddy, with great punctuality, rides by in her carriage, every day, bowing graciously to the townspeople whom she knows, and, although they are not all Christian Scientists, I dare say there is not one of them who would not contend for her, and resent the slightest indignity or imputation upon her. She frequently stops near the front of my own home, to smile and speak to my little children playing there, and that anybody of ordinary intelligence should, for a moment, doubt her existence, strikes us, who know her well, as startlingly absurd.

Hundreds of Christian Scientists have been here, during this very week, to see her, her home, and the city in which she resides. One might as well ask if there really is such a man as President McKinley, or ever was such a woman as Queen Victoria. Mrs. Eddy is not only a president and a queen, but one of our own fellow-citizens, a good neighbor, and a very valuable friend, one of us in many senses. While I am not myself an avowed disciple of Christian Science, I am, nevertheless, much interested in it and its achievements. I have had much to do with Christian Scientists, and have found them invariably upright and intellectual, as well as spiritual, people, and they have been very courteous and considerate toward me, and I have never let fall any remark such as might have given rise to the annoying error on somebody's part, to which you have kindly called my attention.

I have the honor to be,

Yours very respectfully,

HENRY ROBINSON, Postmaster.

With deep pleasure we republish from the *Patriot* the above graphic letter of Postmaster Robinson. One would think the perusal of it, by the persons who have been silly enough to circulate the falsehood, would cause their cheeks to tinge with the blush of shame and humiliation.

Avoid the Appearance of Evil.

THE teaching of Christian Science is the teaching of Christianity pure and simple. Moses as the author of the Ten Commandments and Jesus as the author of the Sermon on the Mount, were the personal exponents of the religious precepts which form the basis of Christian Science teaching. In their personality they reflected God as Divine Principle. That is to say, they taught and proved God to be the universal Mind, the controlling force, the Omnipotence of the universe. He was the one and only God—the great I AM—of Moses' teaching, and the one Father—the one and only Good—of Jesus' teachings.

The teachings of Moses and Jesus are amplified in the Christian Science text-book, "Science and Health with Key to the Scriptures," and shown forth throughout Mrs. Eddy's writings. The Ten Commandments and the Sermon on the Mount are wonderfully epitomized in the Tenets of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. No one can read these Tenets without seeing this. Think of the depth of meaning contained in the words: "We solemnly promise to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus, to love one another, and to be meek, merciful, just, and pure."

Here, we say, are the Ten Commandments and the Sermon on the Mount in a few words. To have in us the Mind that Jesus had; is to reflect the divine character which Jesus reflected; to be governed by God as he was governed by God; to work as he worked, pray as he prayed, heal as he healed, rebuke and destroy sin as he rebuked and destroyed it; and generally to follow him as he said all must do who could hope to get into the kingdom of God.

Are we doing this when we become so careless or darkened that we not only do not avoid evil, but forget to avoid the appearance of evil? If we were sincerely striving to obey the Church Tenets to which we have solemnly subscribed, would we get into such a deep mesmeric sleep that, in this condition, we are led to do things which, even in our normal, mortal mind, condition we would turn from with loathing and horror?

Think of this deeply, seriously, constantly. Think also of the solemnity of the obligation involved in the promise "to love one another, and to be meek, merciful, just, and pure." What an infinity of righteous living is here con-

tained! If we fulfil this obligation, we have truly in us the Mind of Christ.

Do we fulfil it by so acting that we bring reproach upon ourselves, and upon our Cause? Shall we shield our improper acts under the specious plea of "good motives"?

Good motives lead to good acts, not to bad acts. We may be sure that when conduct is wrong, motive is wrong. By their *acts* ye shall know them. Good motives will never excuse bad acts. This is an eternal law. Let us remember and heed it. Let us also awaken to a keener sense of the obligation we assumed when we signed the Church Tenets and were admitted to membership in the Mother Church. Let us know it was not an idle ceremony; that the Tenets mean what they say; that the obligation we took is sacred and eternal; that we cannot disregard or trifle with it and yet expect recognition as consistent and faithful members of the Church and disciples of Christian Science.

Aye! truly, let us *strive, watch, and pray*, for that Mind to be in us which was also in Christ Jesus. Then we shall neither do evil nor appear to do evil.

Overcoming not Overlooking.

THERE is a wide distinction between *overcoming* evil and *overlooking* evil. The tendency toward the belief that evil may be overcome by overlooking it is great, and unless constantly and carefully guarded, will become a "strong delusion," blighting in its effects and disastrous in its results.

One can never prove the powerlessness of evil by refusing to recognize its claims or by ignoring it as unworthy of notice. On the human plane, evil is indeed an awful delusion. It is all that stands between mankind and God. It is all that shuts out of human consciousness the understanding of divine Truth. It is all that hinders the demonstration of divine power in healing sickness and sin. It is all that keeps one out of the kingdom of heaven—that is, all that prevents harmony from being established upon earth. It is the source of all that worketh abomination or maketh a lie. It is the serpent of Eden, the Satan of the Bible, the great Red Dragon of Revelation. It is all that is comprehended in the words sin, sickness, death, and hell.

The only sense in which it is unreal is that it is not of God,—never had, has not now, and never shall have, place in the divine nature and purpose.

How absurd, then, to think or talk of overcoming evil by overlooking evil.

The Visit to Pleasant View.

THE *New York Journal* of Sunday, July 7, publishes an interesting account of the visit of Christian Scientists to the home of Rev. Mary Baker G. Eddy on June 25. It also publishes in full her annual message to the church. The account is accompanied with copious illustrations of her residence and scenes attendant upon this visit. We extract the following from the *Journal*:—

A remarkable visit to the home of Mrs. Mary Baker G. Eddy followed the delivery of her annual message in Boston to the countless Christian Scientists who take their inspiration from her. Mrs. Eddy, affectionately known to her disciples as Mother, lives in a beautiful white mansion at Concord, N. H., called Pleasant View. Hither her followers journeyed to show their personal devotion to her, after enjoying the benefit of her spiritual message.

Over three thousand persons went to Concord. Three special trains of ten cars each ran to Concord on the great day, in addition to the ordinary service.

The visitors came from all corners of the earth. They represented every class and condition of life, among them being members of the most exclusive and intellectual circles of Boston. The distance from the city to Mrs. Eddy's home

is two miles, and some even walked the entire way in the bright sun, with the thermometer at ninety, and made no complaint.

They were admitted to the grounds of Pleasant View at ten o'clock in the morning and spent several hours examining the many objects of interest there, especially those used by Mrs. Eddy. Among these was the little boat with a cross and crown at the bow in which she rides upon the lake in her estate.

Some excitement was caused at half past twelve by the report that Mrs. Eddy was about to appear to her followers, but this proved to be unfounded. It was not until about two o'clock that she came out upon the balcony of her house. Then the vast throng pressed around her, anxious not to miss one word or look of the Mother.

She came out upon the balcony with a firm, strong step. Her manner and bearing were majestic. She looked wonderfully well in spite of her eighty years. She was simply, but handsomely, attired in a silk dress, and wore a blue bonnet with gold trimmings.

Half an hour later the crowd again caught a glimpse of Mrs. Eddy as she came out of the house to enter her carriage. All uncovered their heads until she drove away.

The visitors were then at liberty to resume their wanderings through the grounds. The majority of them spent the rest of the afternoon in this manner. They enjoyed themselves very much, for the grounds are charming. There were many very young men and women among the visitors, who gathered flowers by the brink of the lake. The visitors were very well bred and well behaved, and when some young people accidentally trampled on a flower hedge they were quickly brought to order by the others.

At the close of the afternoon the three thousand visitors dispersed toward the various quarters of the globe with their faith in Christian Science strongly fortified.

Christian Science Doctrine.

WHETHER our good friend, *The Watchman*, a Baptist journal, is aware of it or not, the sentiments contained in the following articles—"A Sunny Disposition," and "The Sanctity of Home"—are in exact accord with the Christian Science doctrine.

A SUNNY DISPOSITION.

You will find in the books devoted to such subjects many counsels as to the unwisdom of setting young children bad examples in the home. The orderliness and courtesy, for example, that are manifest in the habits of the older members of the household will be reflected in the conduct of the little children. Indeed, it sometimes seems as if precept of all kinds could be safely discarded for example. Especially is this true in regard to the prevailing mood of the child's inner life. Whether it is morose or happy, irritable or cheerful, largely depends on the prevailing atmosphere of the home. The sunny disposition is not wholly, or even chiefly, perhaps, a matter of inborn temperament. It is largely a reflection of the conditions of early childhood. When the mother's tone and manner are irritable and petulant, when the father is impatient and censorious, the conditions of the home are fatal to that inner serenity and good cheer that are so important to a happy and useful life. Parents often practise painful self-denials in order to give their children peculiar educational advantages; but there are few things that any school can give any child that are of such priceless worth as a pleasant disposition, the serene and cheerful temper that, like the sunbeam, transforms everything it touches. The self-restraint of parents in controlling their own petulance and irritability would often be worth as much to children as the self-denial which enables them to give their sons and daughters superior advantages.

THE SANCTITY OF HOME.

Surely this "new era" of light regard for marriage bonds might be checked in its inroads upon the happiness of our generation, if at their own firesides children found their parents dealt vigorously with the terrible intrusion of divorce cases into the common conversation of the family, and that a light or joking allusion to broken faith and wrecked homes was treated as a desecration.

A girl who has learned from babyhood that the first duty of a woman is to build up and repair the bulwarks of home, does not wantonly offend even a trying or an erring husband. And if from her earliest recollection she has been taught to despise the levity and extravagance and vanity which come between wives and their offended husbands, she is not likely to fall into the snares these evils set for her.

And from the mother to her sons may come those gentle unveilings of the nature of feminine hearts which shall help them to realize, before experience teaches, their mysterious, inexplicable fancies and desires. Here may they be taught to be tender of nervous fears, forgiving of the exactions made by a love so eager that it is never satisfied with less than all, gentle to the demands which are not meant to be selfish and extravagant, but arise simply from ignorance of values either of time or money.

Mrs. Conger not There.

WE gladly republish from the *New York Journal* the following self-explanatory letter of Mrs. Sara Pike Conger, and, on behalf of Mrs. Conger, with whose estimable life and character we are well enough acquainted to speak intelligently, we herewith express our appreciation of the act of the proprietor of the *Journal* in publishing a correction of the aspersion in question as well as its friendly apology.

No one of Mrs. Conger's many thousands of friends would, for a moment, believe her guilty of the act insinuated.

Boston, Mass., June 28.

Editor Evening Journal:—My attention has been called to an article appearing in your issue of June 26, entitled, "Americans the Looters," wherein it is charged that a party composed of the Belgian and Italian Ambassadors, Lady McDonald, and the Secretary of the British Legation, visited the palace on a pass issued by General Chaffee. There were others—Americans—with the party. Also that while in the palace Sir Claude McDonald said: "Members of the party wished to break open a storeroom. My secretary protested, saying General Chaffee would object. The breaking open was continued, and, to show their disapproval, the two Ambassadors and Lady McDonald left the party."

The article thus concludes: "Sir Claude refused to discuss the report that it was the wife of the American Minister who had caused the storeroom to be broken open."

This is a subtle and most unfair way of charging me with looting, or at least of leaving as the only fair inference that I was the person who caused the storeroom to be broken open.

This charge is absolutely false. I was not of the party, knew nothing whatever of the affair, and was not in the remotest degree responsible for it.

Moreover, it was well known to all at the legations that I was conscientiously opposed to looting in any form. I ask you to do me the justice of publishing this correction, and that you give it prominence in your newspaper.

SARA PIKE CONGER.

The *Evening Journal* gladly prints Mrs. Conger's letter. The insinuation in the article referred to did Mrs. Conger a great injustice.

Among the Churches.

Larger Quarters at Houston, Tex.

For some time past the members of the congregation of the Christian Science denomination, known as the Second Church of Christ, Scientist, whose place of worship is on Main Street, between McKinney and Lamar Avenues, have felt the necessity of making arrangements for larger quarters, as for several weeks many were compelled to stand during the services. Accordingly arrangement was made for additional land, and plans drawn for the enlargement of the present building, increasing the seating capacity to about three times what it is at present.

Messrs. Rue & Dunbar have prepared plans and specifications, and the contract for making the improvements has been awarded to Phil H. Wagner. Work will be commenced within the next few days.

The new church will be located on the present site and will be of frame construction, 38x70 feet. The main entrance will be through an entrance porch, and from there to a right and left vestibule opening into the auditorium, which is 35x51 feet, exclusive of the rostrum, which is in an arched alcove. On each side of the alcove are retiring rooms. The side entrance will be at the rear of the auditorium. The inside of the building is to be wainscoted and the auditorium is to have a cove ceiling. The building is to be lighted by gas and electricity and is to have noiseless fans. The windows are to be of art glass, the one in front to have an emblematic design. The exterior is to be weather-boarded to the cornice line and the towers above the cornice line are to be shingled. The main tower is to have balconies on four sides. The roof of the building is to be covered with metal shingles.

The growth of this church can be summed up in a few words. About the middle of May, 1898, a few believers in Christian Science assembled in the sitting-room of the present leader of this church, organized a Christian Science association, and afterward secured a charter from the state in the name of the Second Church of Christ, Scientist, of Houston, Texas. In a few weeks the attendance increased to such an extent that it became necessary to remove to larger quarters, and the present church building was constructed. The first service was held therein on September 4, 1898, since which date the attendance and membership have steadily increased, until they have outgrown the present building.—*Houston Daily Post*.

Reading Room at Prescott, Ariz.

At the close of the services of the Christian Science Church in Prescott last Sunday evening (April 28) the reading rooms provided by the members of the Christian Science Society and their friends, in Prescott, were thrown open to the public use, the announcement being made by the First Reader in the church, in the following brief remarks:—

Friends:—In line with the announcement this evening, may I briefly say a word or two suggested by the change into our new and pleasant rooms which are to be our church home for the present.

From the attendance here to-day it is quite evident we shall, at an early day, be arranging for more extended and commodious quarters.

Progression and advancement is the unwritten declaration of Christian Science and the law of omnipotent Mind.

In 1866, Mary Baker Eddy discovered Christian Science. Now her followers are numbered by thousands, including persons of noble rank, in high places, and in the common walks of life.

Canada, Great Britain, Republic of Mexico, China, France, Germany, Switzerland, Hawaii, and the Philip-

pine Islands are sending to the United States testimonials of the rapid spread of Christian Science abroad.

In 1890 there were ninety-four Christian Science church societies. Ten years later they numbered six hundred.

In 1890 there were thirty-three chartered Christian Science educational institutions; in 1901 there are seventy-nine.

In 1890 fifty thousand copies of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, were in circulation. To-day there are upwards of two hundred and five thousand.

One year ago there were twenty-seven Christian Science reading rooms; now they number three hundred—one more being added to-day.

Prescott unqualifiedly is in the front rank in material growth and advancement. She is by no means behind in advanced spiritual thought. You need not be surprised when I say there are scores of people now in Prescott who are inquiring and engaged in the study of and earnestly investigating Christian Science.

It is not my purpose nor is it in my place to speak here of the ethics or theology of Christian Science thought, learning, and practice, or of its practical use and adaptation to every-day life; but I will say that these cheerful and pleasant rooms have been provided by the members of the Christian Science Society and their friends in Prescott, and liberally supplied with authorized Christian Science literature for the pleasure and benefit of the public, as well as for themselves, and I take pleasure in announcing that they are to-day thrown open to the public, who are cordially invited to their use free of charge.

It is not the purpose or intention to make objectionable importunities or press our friends to accept our invitation; but all who are pleased to be with us, or wish to inquire into or become acquainted with the teachings and benefits of the Christian Science system, will be cheerfully and respectfully received and always made welcome.

These rooms will be open to the public daily, Sundays excepted, from the hours of 10 to 12 in the forenoon and 2 to 4 in the afternoon, a cordial invitation being extended to every one.—*Arizona Daily Journal-Miner.*

Society Organized at Portsmouth, N. H.

On the 26th of last April the Christian Scientists of Portsmouth organized into a society, thus gaining strength through unified action.

The members, consisting of eighteen, elected the usual officers and Readers.

A notice of this action was sent to the daily papers together with an announcement of the regular Sunday and mid-week services, and was graciously received and printed by them. The fact was also stated that there was Christian Science literature for free distribution to all desiring the same.—*ADA G. WHITE, Portsmouth, N. H.*

Over the field when the day is fair,

The sower scatters the seed abroad,
Stays not to mark where it falls, his care

But to leave it with his God,
Who sendeth the rain and the sun's bright rays,
And a hundred-fold in the harvest days.

So a kindly word and a kindly deed,
If done and spoken in time of need,

By a true, pure heart to a brother astray,
Lonely and fainting on life's highway,

At last in the harvest of years are found,
Where only kind deeds and kind words abound.

JOHN FULLERTON.

Method.

BY J. B. TWISS.

RIGHT method means success.

Business men have this maxim forced home to them constantly by precept and experience. It is the method of successful men in any line of business that is most studied and copied by thinking people.

Teachers, artists, ministers, housewives, farmers, mechanics, bookkeepers, all, from the highest spiritual worker to the hewer of wood and drawer of water, do effective work in proportion to the correctness of the method used.

There is need of method in a higher sense. The source and spring of all action is thought. If thought be right, the resulting action will be harmonious, effective, correct.

Humanity has long been conscious of a need of some method to control thought not hitherto generally known.

The business man has read in his Bible, "Blessed are the pure in heart: for they shall see God," yet has seen clearly no feasible method to become and remain pure in heart, and still do business. Notwithstanding the fact that the determination to be and remain pure is often lost sight of in the rush and strife and greed of business, yet he feels there ought to be some method whereby even the business man may be pure.

His sense of what ought to be is correct, and not a few business men to-day can tell him that this method is now attainable.

The Christian student has read that he who thinks evil is at heart a criminal already, and wonders, perhaps, by what method evil can be checked before it enters and controls thought, knowing from sad experience that human will-power is often inadequate, yet evil surely must be checked in the thought to meet the exact requirements of Christ's precepts.

To-day such a method can be learned and practised, perhaps as easily, certainly with more harmony and joy, than a good moral life can be led by former methods.

By precept and parable, with varied phrase and repeated emphasis, Christ taught us all the necessity of watchfulness against the time the Son of man shall come. "Therefore be ye also ready: for in such an hour as ye think not the Son of man cometh." Ready for what? not death, as I used to interpret it; but ready to receive Truth. Ready to give up old convictions and receive with childlike trust new methods, new revelations of Truth.

He has come, "He stands at the door and knocks" with new unfoldings of Truth, new methods of controlling thought, of making and keeping pure the heart; and he brings healing in his wings and beauty in his presence. Are you ready to receive him into a heart hungering and thirsting after righteousness? and still ready to continue to watch with most improved methods against all evil, and still watch daily for new unfoldings of his Truth that shall continue through eternity in one continuous revelation of the Infinite God who is All-in-all?

These improved methods for gaining purity and freedom from sin are learned in Science and Health, and a million people who have read that book and learned these methods unite to-day in a grand chorus of joyous testimony that in these methods there is freedom, indeed, from all the ills and evils of other methods, enabling the business man to do a more successful business than before and on a higher Christian plane. The artist, teacher, housewife, mechanic, the laborer in any field of right doing is enabled to do his work more easily, more perfectly, without friction and worry, but with happiness and harmony in every action.

This is Christian Science—Scientific Christianity, with

scientific methods and scientifically Christian effects upon character, business, health, and all right effort.

"The time for thinkers has come" in religion as in business; and the time for the wise use of right methods has come, methods applicable alike to business and to religious practice.

"Be ye therefore perfect, even as your Father which is in heaven is perfect."

The Annual Communion Season.

BY C. W. CHADWICK.

For three consecutive years it has been my privilege to attend the Annual Communion service in the Mother Church, and each time I have returned home with a happier heart, and with renewed animation and determination to do better work in the Master's vineyard. Each year latent errors have been unearthed and repented of, bringing to individual consciousness a higher and purer sense of Life and its eternal demands.

Our last Communion has brought to us manifold blessings, so that we can all return to our respective fields of labor and there let our daily lives attest our gratitude for what divine Love has done and can do for us as individuals and for the whole world. I for one feel more thankful than ever before to our beloved Leader for her unselfish and untiring efforts in behalf of all humanity. Incomplete indeed would be my gratitude if it did not embody a correct and just estimate of her selfless mission to the world. It is more patent to my thought than ever before, how that many a poor, suffering mortal, through a false concept of Mrs. Eddy as the Discoverer of Christian Science to this age, bars his own door to an understanding of the Science and to the manifold blessings it brings; and I can say from the standpoint of honest conviction that Christian Scientists are not worshipping Mrs. Eddy's personality. The Spirit of Truth and Love made manifest during our last Communion has given me authority to make this statement. Her comprehensive message to her church, fraught with compassionate love, the quiet and orderly pilgrimage of some three thousand of the students to her home in Concord, unaccompanied by any of the too common manifestations of hero worship, the heavenly uplifting, the joy and peace, that have come to us through these experiences, are convincing evidence to me of the power and presence of the *impersonal* Christ, Truth, chastening our wavering affections and directing thought heavenward.

This large gathering of people during Communion week, coming from the four corners of the earth, perhaps means vastly more to Christian Scientists than to the world at large, but its holy influence will be felt far and near. Never before was the quickening Spirit more in evidence. Expressions of love and good-will greeted us at every turn. All seemed anxious to extend a helping hand, to share with others the blessings they had received. This manifestation of love in lifting one another's burdens is the healing balm that binds up the broken-hearted and wipes away all tears. No one present could have failed to sense the aroma of such an atmosphere. It was proof to me that all were abiding "under the shadow of the Almighty."

I for one can return to my post of duty strengthened and encouraged to work for the upbuilding of our sacred Cause. I know that my mental horizon has been broadened, for every passage of Scripture comes to me in a clearer light, while the pages of "Science and Health with Key to the Scriptures" seem more luminous than ever before with Truth and Love.

The Wednesday evening meeting following Communion Sunday, held in Tremont Temple, was most helpful and encouraging, and evidenced the continued growth of our

Cause, and the thorough practicability of Christian Science in the affairs of every-day life. No Truth-seeker could have listened to the experiences there given and have doubted for one moment the adaptability of Christian Science to the needs of humanity.

In closing I would express my thankfulness to our faithful workers at headquarters, for their steadfast devotion and loyalty, and for their words of encouragement to the Field at large, realizing, as I do, that every battle won by them makes our burdens so much the lighter.

The Undivided Garment.

BY ELLA W. HOAG.

It is sometimes complained of Christian Science, that its teachings fail to recognize good outside of its own especial domain and its own followers.

On the contrary, my experience is that, understanding it better and better, my appreciation of the good accomplished by others is enhanced an hundredfold.

A strong example of this is in the changed thought entertained toward the various church denominations.

Before accepting Christian Science, I had been for many years a devoted member of the Congregational Church, and while I thought I had much charity for those belonging to other denominations, it nevertheless seemed to me that in my own creed was the largest measure of perfection,—that it alone held full measure of salvation.

Now it appears to me that each denomination has had its own place in the plan of redemption, and that nearly, if not all, have been needed for the ultimate salvation of the race.

While all denominations have held many beliefs in common, each has had its own distinctive feature and has considered this peculiar feature as pre-eminently necessary to salvation, holding it aloft, in spite of opposition and persecution, protecting it against every effort of ridicule and destruction, until it could not be lost; and so its advocates have blessed the world with their loyalty to their highest understanding of good.

Thus, the Episcopalian has believed in the church and fought for it, as his sense of all-inclusive good; the Catholic has caught a glimpse of God's motherhood and protected that; the Unitarian has held aloft the thought of God's Fatherhood; the Baptist has proclaimed the necessity of immersion; the Methodist, the message of sanctification and justification; the Quaker, the thought of God as Spirit; the Universalist, the thought of a God of Love, who would eventually save all; the Presbyterian and Congregationalist have taught Jesus Christ and him crucified; and there are of course others.

When I contemplate the struggles, and trials, and persecutions that each sect has had to encounter, my heart is full of gratitude and love to every brave warrior who has so endeavored to be loyal to and protect his highest sense of good; and I see that through this faithfulness, in caring for such part of the divided garment of righteousness as each has been able to discern, has it been possible that the whole, undivided garment, without seam, or rent, in all its spiritual sense of beauty and perfection, could be given to us.

Surely the teachings of Christian Science as found in "Science and Health with Key to the Scriptures," proclaim an entire gospel with each and every one of the essentials of Christianity held in prominence.

So live to-day that, when to-morrow comes,
Thou shalt not cloud the sun with vain regret;
But let thy hand and heart commit those deeds
That love for man and faith in God beget.

OSGOOD ELLIOTT.

Testimonies.

Found a Demonstrable Religion.

It is now over three years since I began to investigate Christian Science, and what have I found? I have found that even a limited understanding of Christian Science, if rightly applied, can help us under all circumstances.

I have found in Christ, Truth, a physician who is always with me, a friend who never forsakes me, a guide who is ever before me to point out and illumine the rugged pathway, and I have found a true religion. I never seemed to care much about religion before, it seemed so vague and uncertain. Different churches had different views, and there seemed no way to prove which was right. I never asked many questions, but those I did ask were not answered to my satisfaction. I know that Christian Science is right, because I have proved and am proving it day by day, by demonstrating the power of God, Good, over all beliefs in evil. I find it is a religion to be lived every day, and in proportion as we live it, do we derive benefits therefrom.

I desire to relate two cases of healing by Christian Science in our family. The first was a case of spinal meningitis in our little girl, then a baby of about eleven months. My mother and myself were very young in Science then, but we did all we could from 7 A.M. until 11 P.M. My husband, who did not believe in Christian Science then, wanted a doctor, so we called in a lady physician who occupied part of the same house. She did what she could, and her verdict was that the child could not live till morning. Meanwhile I had called in a professional nurse, a friend of ours, who although not a Scientist was quiet and calm. I told my husband I wanted a Christian Scientist, and he went for a practitioner who then lived five miles from here. I think it was about 6 A.M. when she gave the child an absent treatment, as she was unable to come at that time, and the little one fell into a peaceful sleep and improved steadily from that time. The nurse, of course, saw the change and thought it wonderful. The doctor kept her thoughts to herself. My husband accepted Science, for he saw the power of Truth, and we all with grateful hearts thanked God. When I opened my Bible after the worst was over, my eyes rested on the 124th Psalm, and I realized the truth of that Psalm as never before.

The other was a case of catarrh. I had always been subject to it before coming into Science, and it was thought to be hereditary. At times the discharge was so bad that I could not speak, and I frequently had severe headaches. When we came south we hoped the climate would help me, but it seemed to do but little good. We had good physicians north, and one of the best in this city, but still the disease stayed with me. Through reading Science and Health, and attending the Sunday and Wednesday evening meetings, after a few months the trouble was gone. It disappeared so gradually that I did not know when it left. I had no treatment for it. Truly I have found the pearl of great price.—ETHEL L. REED, Jacksonville, Fla.

A Proof of God's Protecting Power.

A ray of Truth and Love so bright shone into our home in June, 1900, that ever since I have felt I must write and tell of it.

One warm day toward evening my three year old boy was being undressed for bed. Suddenly, without any warning, he ran toward the open window, and pushing against the screen, it fell out with the child on top of it to the lawn below from the second story window. At the time I was in the adjoining room, and my daughter ran through

the hall exclaiming at the top of her voice that Arthur had fallen out of the window. In a second the house was in a commotion. With no thought of fear, I instantly declared "He is God's child, and no harm can come to one of God's children." All the way going down stairs I endeavored to realize Truth's presence and power. When I reached the child he had been carried into the house, and was crying in a frightened way, but not as if in pain.

As I took him in my arms I said, "He is all right," although many fears were being expressed aloud about broken bones and internal injuries. The child said he wanted to go to bed, and a few minutes after being put in bed, he was sleeping peacefully, in the usual way, and did not wake until morning.

Early the next morning he ran into my room as bright and happy a child as you ever saw, without even a scratch or bruise on his body.

When friends heard of it they said it was wonderful that the boy had escaped uninjured, but that it was of course the screen that had broken the fall and saved the child's life.

It was not the screen that saved, but God's protecting care, the Power that is ever near; and if as God's children we will only trust and be obedient to Him "He shall give His angels charge over thee, to keep thee in all thy ways."

AMY R. READ, Lowell, Mass.

Desire for Tobacco Overcome.

Through reading and receiving much benefit from the many testimonies published in *Journal* and *Sentinel*, I am frequently reminded of my own failure to relate some of the benefits I have received through Christian Science.

I have been investigating this all-important subject for some time. It is about thirteen years since I first knew there was such a thing as Christian Science, and about eighteen months since I determined to give it a fair trial. I first started in by applying what knowledge I had gained to treating myself for the tobacco habit of seventeen years standing. I am thankful to say that in one month I was entirely free from the disgusting habit of chewing tobacco.

I have been cured of what mortal belief calls a bad and hopeless case of drunkenness, said to be hereditary. I was under treatment for this trouble about thirty days, after which it yielded and all desire for intoxicating drinks disappeared. This demonstration was made finally and completely in Houston, Tex., about nine years since. It was in the midst of temptation that I was lifted out of this habit.

My line of work on railway was such that I was compelled to move much from place to place and I was brought constantly in contact with a class of associates who were much given to drink. It had for a long time seemed impossible for me ever to gain deliverance from the thralldom of this error. It is with many thanks to Christian Science that I give this testimony to my deliverance from, to me, the worst enemy.—M. HALLIDAY, Galveston, Tex.

Grateful for Light and Peace.

I have long felt it my duty to tell at least a part of what Christian Science has done for me. Five years ago it found me a hopeless physical wreck, in bondage to all the ills that mortal mind is heir to. I had known of Christian Science for two years, but like many another, having ears, I heard not, and it was only through intense suffering which medicine could not alleviate, that I was brought at last to the Truth, and it has indeed made me free. One by one the bonds that held me were broken and I awoke to the fact that I was stronger than I had ever been before in my life. We have had three children born in Science. When the first was born I was only in bed about

twelve hours. I took a buggy ride when the baby was two days old and never felt any ill effects from so doing, although friends and relatives predicted that I would, sooner or later. When the next one was born I never missed a meal from the table. I ate supper with the family, the child was born at two o'clock in the morning, and I arose at seven, dressed myself and ate breakfast with the family, and never went back to bed except for my regular night's sleep.

I arose when my last baby was three hours old and walked into the next room, and held the baby while my bed was prepared for the night.

One of our little ones, a girl not yet four years of age, has had several beautiful demonstrations, is a regular attendant at the Sunday School, and always learns the Subject and Golden Text so she can repeat it from memory.

While I am very grateful for my physical healing, I am more grateful for the light and peace that has come into my life.—MRS. CARRIE E. PETERMAN, Lead City, S. D.

A Business Man's Testimony.

It is now almost two years since Christian Science was first brought to my notice as a curative agent. I embraced the opportunity of investigating its merits with little if any hope of getting relief. I had been the victim of an ailment for five years, despite all the efforts put forth by the best medical skill in our city, including a most perfect system of gradual starvation called "diet."

Had I thought for a single moment that in the operation of being healed I should, in any way, imperil the blind belief I had in my religion, I should undoubtedly have died a martyr to my own bigotry, but the healing of sickness revealed the light. I have the most kindly feelings for the old faith, and believe fully in the sincerity of the majority of its followers, but when Truth through Christian Science reveals what God, Life, and Truth really are, there is only one thing to be done; the doing of which means happiness and contentment and an uplifting indescribable.

I will not go into the details of any of the many demonstrations that have proved to me and my family the absoluteness of the power of Christian Science; suffice it to say that in my business affairs, in my home, and everywhere, it has never been found wanting. I have gone only a few steps of the way of this beautiful Science, but as I have taken each one it has brought to me such courage, such happiness, such a conviction of the Truth, that although I look ahead and see many steps yet to be taken, I am so confident of the added pleasure each one means that I look forward to the journeying with the greatest and deepest sense of perfect contentment.—R. J. McL., Chicago, Ill.

Christian Science brought Health and Happiness.

Christian Science brings all that is good. I thought I would not tell of the good I have received until I more fully understood it, but the more I read "Science and Health with Key to the Scriptures," the more I felt that I should let others hear of my healing.

I missed the coupling when coupling cars, and was caught between the cars. The large bone in my shoulder was broken. The doctor came, put a bandage on, and said it would be eight weeks before I could use my arm.

The next day a friend of mine who is a Christian Scientist came to see me, and that night in some way the bandage worked loose. My friend came to see me again the next day. The doctor came on the third day after I was hurt. He found the bandage off the broken bone, and to his surprise, the bone had knit together as firm as it ever was. In less than a month I was back braking on the cars again. That is what Christian Science did for me. May God help those who do not know of the Truth to find

it speedily. My wife, who is now well and happy, was a sufferer from asthma for twelve years. We tried everything, but to no purpose. She had given up in despair. Life was nothing to her, death would have been preferred at times. To-day she is well and does all her own housework. We cannot find words with which to tell how grateful we are for Christian Science. It has brought us health and happiness, which we never expected to have. I hope that others, who are as unfortunate as we once were, may be as fortunate as we now are in learning the Truth.

T. B. YEAGER, Elizabethtown, Ky.

Sorrow Turned into Joy.

I did not come into Christian Science through physical healing, but through a great sorrow. My only daughter had passed on and I felt utterly alone. For three years I wandered through a wilderness of despairing thoughts when a dear sister in Science said, "Come to church with me, perhaps you will feel better." I went to a Friday evening meeting, I was deeply impressed, I took part in the service as far as I could. Oh, what a restful feeling came over me the moment I entered the hall! I attended the following Sunday service and joined a class in Sunday School. All this gave me great comfort. Some weeks after this I had a severe attack of biliousness, which my dear teacher put suddenly to rout. Soon after that I awoke one morning to find my left arm paralyzed. The pain was intense and had been for two or three days previous. I again went to my teacher as soon as possible. She treated me about noon of that day and the next evening my arm was as well as ever except a slight weakness. The next morning I went to church feeling very happy in knowing that my arm was healed through Science. Since then I have been able to overcome many ills for myself as well as others, and I rejoice and my heart is made glad in this blessed Truth.—A. L. S., Boston, Mass.

The *Journal* and *Sentinel* bring so much that is helpful to our home that I feel it a duty to give a little in return for all the good received.

God's word in Christian Science is the power in our home. Our little girls have been healed of so-called contagious disease, have also been protected many times from contagion. My husband has been greatly helped in business and I have been healed and brought through different forms of error and disease. Christian Science was the one and only physician at the birth of our youngest girl now three years old. I am most grateful for the uncovering of evil thoughts and the ability to destroy them through the understanding gained from "Science and Health with Key to the Scriptures." Obedience to the Truth which Mrs. Eddy has so unselfishly striven to give to a sin-sick world, is the one way we can be grateful to her.

MRS. W. M. JEFFERY, Pittsburg, Pa.

Before coming into Christian Science an attack of headache, fever, and sore throat would appear about four times a year, and I would be kept from school for nearly a week. But since I have gained a little understanding of man's relation to God, these troubles have almost entirely disappeared.

Last Sunday the old trouble came up only to be put down by the Truth, and in the evening I went to church free and happy in the consciousness of divine Love, which heals all sickness and sin. I try to keep constantly in mind the thought in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, p. 392: "Rise in the strength of Spirit, to resist all that is unlike God."

J. F. S., St. Louis, Mo.

Religious Items.

We republish from the *Examiner* (New York) the following from the pen of F. W. Robertson:—

WISDOM.

Sunday.

Unworldliness is this—to hold things from God in the perpetual conviction that they will not last; to have the world, and not let the world have us; to be the world's masters, and not the world's slaves.

Monday.

It is perilous to separate thinking rightly from acting rightly. He is already half false who speculates on truth and does not do it.

Tuesday.

In all matters of eternal truth, the soul is before the intellect; the things of God are spiritually discerned. You know the truth by being true; you recognize God by being like him.

Wednesday.

Simpler manners; purer lives; more self-denial; more earnest sympathy with the classes that lie below us—nothing short of that can lay the foundations of the Christianity which is to be hereafter, deep and broad.

Thursday.

We are too much haunted by ourselves; we project the central shadow of ourselves on everything around us.

Friday.

Rights are grand things, divine things, in this world of God; but the way in which we expound those rights, alas! seems to me the very incarnation of selfishness.

Saturday.

It is not in understanding a set of doctrines . . . that rest and peace are to be found, but in taking up, in all lowliness and meekness, the yoke of the Lord Jesus Christ.

In an editorial on "The Armor of Virtue," the (Unitarian) *Christian Register* says: "Temptations as commonly described are of two kinds, the desires and the objects of desire. But in fact there is only one kind of temptation. No object can tempt unless some desire goes out after it. Suppose a dozen persons were on trial, and before them were passed in review the many objects or opportunities or suggestions of what are called temptations,—strong drink, opium, ill-gotten gain, the feast of the glutton, and all the seductions of the senses. As they pass, there will be some in the line unconscious of them all. They will not tempt, because no unlawful desire goes out toward them. Some may be armed with virtue at all points but one. Some external solicitation matches some defect of body or mind; and, possibly to the surprise of the person tempted, a truant thought will escape the control of the conscience. To some it may be that all these objects will be the occasion of temptation, because the mind is full of lawless desires, and the soul obeys the rule of virtue only on compulsion. Now in the training of the young the only safe way is so to educate the mind that the external suggestion, however powerfully made, will not be a temptation, will not draw forth an active desire."

The *Universalist Leader* says: "There is large service for the Church that supplies the peculiar needs of this age, and it will surprise many to know that those needs are spiritual. It is a commercial age and in that sense materialistic, but the thoughtful judgment reaches higher levels. Great corporations are coming to have new standards of judgment of their employees; they are looking to character as well as to ability; they are demanding character. The Church is the school of Christian character. When men recognize that in their fitting for success they are to be trained not only in the public schools, professional and technical schools, but there is something else required which can be obtained only in the Christian Church, they will go there for it. Just as soon as man discovers that there is something in the Church which he needs and wants, you can no more keep him out than you can keep him out of the Klondike gold

fields when he wants gold and knows that it is there. The Church that shows the best product of Christian character will find itself popular."

The following extract from a sermon by the Rev. Hugh Black of Edinburgh is from "The Editor's Sanctum" of *The Congregationalist*: "It is pagan teaching, common though it be, that sin is inexpiable and must hang on you to the end and shroud your life with its blackness. Do not fear that this Christian doctrine of the forgiveness of sin will make sin easy, it is the only thing that can make sin impossible—the light that drives out the darkness, the love of God that fills the heart and leaves no room for evil, not even evil memory. God offers to man a reconciliation so complete, a communion so close, that nothing, neither things past, nor things present, nor things to come, can separate the believer from the love of God in Christ Jesus his Lord. Thou shalt forget, thou shalt forget, is part of his blessed promise."

A writer in the (Baptist) *Examiner* of New York, thus refers to one of the illustrations in Bunyan's "Pilgrim's Progress": "The Interpreter, he tells us, takes Christiana and her company apart, and 'has them into a room where was a man that could look no way but downwards, with a muck-rake in his hand; there stood also one over his head with a celestial crown in his hand, and proffered him that crown for his muck-rake; but the man did neither look up nor regard, but raked to himself the straws, the small sticks, and the dust of the floor.'" The writer then continues: "Is not this a graphic picture of the material scientist whose absorption in the things of the 'infra-human world' is so intense that he has no thought for the infinitely nobler things of the spirit?"

When good William Tyndale translated the Bible the powers that were set themselves against him and resolved to burn all the copies of the book they could get hold of. Tyndale defied them. He was wise in his day and generation. Half the first edition was on his hands; nobody would buy the books. Then the Bishop of London sent his emissary to Tyndale to purchase all he had, and the good man sold them gladly. They were burned in Cheapside—all but one copy, which is still in the British Museum—and the bonfire of Bibles made the people anxious to read the Scriptures. It was the first huge advertisement of the Bible, and the profits of Tyndale's sale enabled him to print a second edition, which was eagerly bought up.—*The Standard*.

The Congregationalist recognizes the serious evil of a disordered disposition in the following paragraph: "If accused of cruelty in daily life we should probably resent it indignantly, yet every time a person inflicts an evil mood upon his household or upon his fellow-workers he is treating them cruelly. Most of us are guilty, at times, and we never stop to think that our innocent victims are utterly defenceless. Consider how quickly all members of the family suffer when one brings his depression to the breakfast-table; how easily good spirits are quenched by the person's moroseness; how readily an atmosphere of nervousness, of ill-nature, of physical pain makes itself felt when there is no effort at self-control! Even a sulky maid in the kitchen can bring discomfort to a whole household."

The (Baptist) *Standard* says: "One of our Baptist papers publishes the advertisement of a person who offers 'Speeches, essays, toasts, addresses, reports, special letters, circulars for busy people prepared confidentially at reasonable rates.' There is a large difference between the preparation by professional writers of business circulars and the buying of speeches, essays, and addresses to be passed off as original. The advertiser might as well have included sermons in his list. It is strange to see in a Christian journal an advertisement of an enterprise which an enlightened conscience

must pronounce dishonest in some of its phases."

Elbert Hubbard, in an article recently appearing in the *Independent*, entitled "Evolution, Socialism, Trusts, etc.," thus quotes from Renan:—

"Renan has said that truth is always rejected when it comes to a man for the first time, its evolution being as follows:—

"First, we say it is rank heresy, and contrary to the Bible.

"Secondly, we say the matter really amounts to nothing one way or the other.

"Thirdly, we declare that we always believed it."

"Try it for a day, I beseech you, to preserve yourself in an easy and cheerful frame of mind. Compare the day in which you have rooted out the weed of dissatisfaction with that on which you have allowed it to grow up, and you will find your heart open to every good motive, your life strengthened, and your breast armed with a panoply against every trick of fate; truly you will wonder at your own improvement."

RICHTER.

A little faith of our own is better than much that has no vital affiliation with our life. One doctrine found to be the very word of God to our souls does more to bring peace to our hearts and mould character than a score of doctrines thinly believed in, because our fathers found them good.

REV. ROBERT MACDONALD.

LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Theory vs. Realization. Is Christian Science an Opinion?

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.
THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS.

A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS.

An illustrated poem,
Single book, prepaid \$3.00

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

Attorney General Knox and Solicitor General Richards are of the opinion that the Secretary of the Treasury has no power to refund the duties on imports from Porto Rico which had been collected between the date of the ratification of the treaty of peace and the enactment of the Foraker law. The Supreme Court recently decided that Porto Rico was domestic territory, and that import duties were illegal, but it is probable that the importers will have to go to Congress and wait until that body makes an appropriation before they can recover the duties paid.

Twenty-eight million, four hundred and eleven thousand, six hundred and ninety-eight people in the United States live in cities and towns of over four thousand inhabitants. This is 37.3 per cent, a net gain of almost five per cent since 1890. There are now 1,158 places of over four thousand, as against 889 in 1890.

A change has been made in the age limits of persons taking examinations for positions as postal clerks and letter carriers. Persons between the ages of twenty-one and forty-five may now take the examination in either branch. Heretofore the position of clerk was open to persons over eighteen and that of carrier to persons between twenty-one and forty.

The Bureau of Forestry was established in July. Hitherto the work in this line has been done by a division, but now a bureau has been created with three divisions under it. The personnel of the forestry division numbered eleven three years ago; to-day it numbers one hundred and twenty-five. The appropriation has increased from \$28,520 to \$185,440.

The Navy Department has purchased from Spain the big floating steel dry dock at Havana for \$185,000. The dock was built in England in 1887 at a cost of \$545,000. It is four hundred and fifty feet long and one hundred and sixty feet wide and has a lifting capacity of ten thousand tons.

Secretary Hay has received assurances that every government in the Western Hemisphere has accepted in good faith the cordial invitation of President Diaz of Mexico to take part in the Pan-American Congress to be held in the City of Mexico next October.

It has been suggested that Admiral Dewey should be given command of a large squadron of the best of our new ships, to be present at the coronation of Edward VII.

E. H. Conger, United States minister to China, sailed for Peking July 17 on the steamer Nippon Maru.

Foreign.

The civil list, as the appropriation for the maintenance of the king and his court is called, was voted upon by Parliament last week. The whole amount appropriated was \$3,230,000, which is an increase of \$335,000 over the amount paid in Queen Victoria's time. Of the amount appropriated King Edward VII. receives \$2,350,000, the queen \$250,000 and the sons and daughters \$190,000.

It is said that no man in England is more punctual and regular in his attendance upon divine worship than King Edward. When in London he attends service at St. James's chapel, a very small and simple church, than which there is, perhaps, none more so in all London. When at Windsor he attends St. George's chapel, and when at Sandringham, St. Mary's.

Lord Wolseley, the former commander of the British Army, declared in a debate on the Army Reorganization bill in the House of Lords recently, that the United States Army was the finest of its size in the world, and that its superiority was due to various causes, among them being the higher wages paid to officers and men.

A monument to commemorate the landing of Commodore Perry at Kurihama, Japan, July 14, 1853, was unveiled on the 14th inst. by Real Admiral Rogers, commanding the United States visiting squadron. Viscount Katsura, the Japanese premier, delivered the memorial address. Speeches were made by Americans and Japanese.

An International Exposition of Modern Decorative Art will be held in Turin from April to November, 1902. The exposition will be under the patronage of His Majesty the King of Italy. The promoters have extended a most cordial invitation to the artists and manufacturers of this country.

At a cost of \$3,750,000 it is proposed to improve navigation in such a way as to allow Pacific liners having a draught of twenty-eight feet to anchor at Shanghai instead of twenty miles below as they are now compelled to do.

Information is received from Peking that an important scheme to create a sinking fund for the Chinese indemnity has been accepted by all the Powers. The plan provides for the complete redemption of the bonds by 1934.

After having discussed the project for fifteen years the Russian Government has finally sanctioned the laying of an oil pipe from Baku to Batoum, on the Black Sea, a distance of 561 miles.

Lord Pauncefoot believes that when he returns to the United States in October he will bring a Nicaragua treaty that will be satisfactory to both the Senate and the British cabinet.

It is said that the first stamps to be issued by the British Government, bearing the imprint of King Edward VII. will be a complete set for use in the Transvaal.

The final evacuation of Peking by the allies will take place August 14, the anniversary of the relief of the legations.

Industrial and Commercial.

The total imports of the United States for the year ending June 30, amounted to \$822,756,633 and the exports \$1,487,656,544, an excess of exports over imports of \$664,899,911. The imports are \$27,184,651 below those of last year, and the exports \$93,173,462 above. The commerce of Hawaii and Porto Rico is no longer included in the foreign commerce. Had they been included the total exports would have exceeded \$1,500,000,000.

The twelfth session of the Trans-Mississippi Commercial Congress was held at Cripple Creek, Col., July 16-20. The object

of the congress is to encourage growth in thorough development of each State and Territory represented, and to work in harmony for such national legislation as will help to attain the desired end. Nearly 6000 delegates were in attendance.

In the course of a few months the Lackawanna Railroad will be managed by telephone instead of by telegraph. The telephone system has been successfully tried on various branches of the road in New York and Pennsylvania, and if it continues to give satisfaction it will probably be tried on the main line between New York and Buffalo.

The steamer Northwestern of the Northwestern Transportation Company made the round trip from Chicago to Hamburg in eighty-four days. She is the first of three steamers sent out from Chicago for European ports to complete the round trip, and the voyage showed a good profit.

During the nine months of the fiscal year 1901 the exports from New Orleans were \$122,234,669, securing for that city a clear and undisputed title to the rank of second in the list of American export cities.

The managers of eighty-eight mills in Georgia have voluntarily signed an agreement not to employ children under ten years of age after September 1, and not to employ children under twelve at night.

General.

Mr. James Ford Rhodes, the eminent American historian, who lives in Boston, has been informed of the high esteem in which his historical work is held by European critics and scholars. Three years ago the Marquis de Chasseloupe-Loubat presented to the Berlin Academy of Science a triennial prize of three thousand marks, seven hundred and fifty dollars, to be awarded for the best modern work on American history. This prize, which has just been awarded for the first time, was voted to Mr. Rhodes' "History of the United States from the Compromise of 1850."

The Chicago Record-Herald says that the American colleges have never experienced such a shower of benefactions as during the month of June. It then gives a list of twenty-five colleges which have received gifts ranging from \$12,500 to \$5,000,000. The total amount received by these colleges was \$12,817,082.

In a case which grew out of a fight between the Bell Telephone Company and the Citizens' Telephone Company, the Supreme Court of South Carolina has decided that a telephone company cannot deny its instruments to an applicant because he uses the lines of a rival company.

Independent Cuba will begin business with a bonded indebtedness of \$122,400. These bonds were issued by authority of the revolutionary government during the war with Spain, and the new constitution of Cuba pledges the government to the payment of the same.

A native of France by the name of Maiche claims to have solved the problem of telephoning to great distances by submarine cables. He recently succeeded in transmitting a telephonic message with perfect distinctness through a cable four hundred miles long.

The fifth international convention of the Epworth League assembled at San Francisco, Cal., July 18. It was estimated that thirty thousand strangers were in attendance.

Miss Helen M. Gould has given eight thousand dollars for the establishment at Mt. Holyoke College of a scholarship in the name of her mother, Helen Day Gould.

A copy of the first edition of Shakespeare, printed in 1623, was sold at auction in London recently for \$8,600.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

The World's Salt Wonders.

Mine that has been Worked for Six Centuries.

SALT is one of the essentials of life, and the beneficial effects of its various uses are being better appreciated every year. The annual salt product of the United States is about twelve million barrels of two hundred and eighty pounds each. Such signal success has been achieved by manufacturers in the efforts to improve the quality of the product that importations of refined salt have almost ceased to be a factor in the industry. The principal salt producing states are California, Illinois, Kansas, Louisiana, Michigan, Nevada, New York, Ohio, Pennsylvania, Texas, Utah, and West Virginia. The entire salt product of Louisiana is rock salt, from the Petite Anse mine. Nearly all the product of California is obtained from sea water by solar evaporation.

Perhaps the world's most interesting salt mine is that of Wieliczka, near Cracow, in Galicia. It has been celebrated for centuries, and has been worked for the last six hundred years. This wonderful mine is excavated in a ridge of hills at the northern extremity of the chain which joins the Carpathian Mountains. When the stranger reaches the mine, there bursts upon his view a little world the beauty of which is scarcely to be imagined. He beholds a spacious plain, containing a kind of subterranean city, with houses, carriages, and roads, all scooped out of one vast rock of salt, as bright and glittering as crystal, while the blaze of lights continually burning for the general use is reflected from the dazzling columns that support the lofty arched vaults of the mine, which are beautifully tinged with all the colors of the rainbow, and sparkle with the lustre of precious stones, affording a more splendid and fairylike aspect than anything above ground can possibly exhibit. In various parts of this spacious plain stand the huts of the miners and their families, some single, and others in clusters, like villages. They have very little communication with the world above them, and hundreds of persons are born and pass the whole of their lives here. Through the midst of this plain lies a road which is always filled with carriages laden with masses of salt from the farthest part of the mine. The drivers are generally singing, and the salt looks like a load of gems. A great number of horses are kept in the mine, and, when once let down, never see daylight again.

Such is the marvelous salt mine of Wieliczka, which is more renowned on account of its magnitude, its age, and the weird and almost supernatural aspect it presents to the visitor than any other. The subterranean palaces, with their magnificent appurtenances, their fantastic occupants, and other dreams of the imaginative, are not more strange or astonishing to the fascinated reader of romance than this extraordinary, glistening, cavernous, mineral city, with its numerous lamps, its crystallized walls, its roads, and the plaintive songs of the drivers as they drive their horses through its sunless thoroughfares, presents to the eyes of the surprised traveler.

The most extensive rock salt deposit in the world, perhaps, is that which is found on the continent of Europe, extending for five hundred miles along the Carpathian Mountains, stretching out laterally for one hundred miles, and having a thickness in some places of twelve hundred feet. To this deposit belong the mines of Upper Austria and Hungary, of the Tyrol, Salzburg, and Styria, Transylvania, Wallachia, and Galicia. In neighboring Poland, the Wieliczka salt mine is one of the largest known. It has been worked since the year 1251, and has forty to fifty miles of galleries, yet it is supposed that the resources of this mine have been scarcely touched, so extensive are its conjectured dimensions. In England a large bed of rock salt lies beneath the valley of Cheshire, from Malpas to Congleton. The mine at Norwich has been worked from 1670. About a dozen large mines there are in full work, and yet the resources of the deposits seem to be boundless. At Cordova, in Spain, a mountain of salt five hundred feet in height, the depth of foundation of which is unknown, overlooks the town and river of that name.

Rock salt is found at the earth's surface, and at various elevations above and below it. It is found at the sea level, and above and below the level of the sea. The Wieliczka mines are eight hundred and sixty feet below the level of the soil and three hundred feet below the level of the sea. The rock salt at Hallein, near Salzburg, is thirty-three hundred feet above the sea level, and that at Arbonne in Savoy is four thousand feet higher, being perched in the region of perpetual snow, at an elevation of seventy-two hundred feet above the sea.

In Abyssinia there are extensive and inexhaustible beds of salt, which is used in quite a different way from what it is in other countries, for little bars of it are circulated in place of small coin. In other parts of the African continent there are large mountains of rock salt, and those of Tunis and Algiers are especially notable.

Salt is also to be found in Asia in large mountains, in marshes, and in lakes. In the north of Persia there is a large salt desert, and near Ispahan there are quantities of rock salt. The island of Ormuz, in the Persian gulf, consists almost entirely of fossil salt; it is, indeed, so very plentiful that the atmosphere is completely charged with it, so that the dwellings of the inhabitants are encrusted with a tolerably thick layer, giving them a peculiar glistening appearance. This phenomenon is owing to the small particles of salt continually floating in the air and rising from the ground much in the same way as dew is deposited on the top of the garden wall or on a lawn after a hot summer's day.

Rock salt is mined in much the same way that coal is. In some places, as at Cordova, in Spain, it is quarried in the open. At Cordova it has been quarried down the perpendicular faces of the salt cliffs. At Nevada it is got at in the same way. In other places it is quarried in pits. When the salt seams are covered by other strata, a shaft, plain or in flights of steps, leads down to the salt; from this galleries are excavated through the purest part of the

seam. In some French and German mines water is used for cutting out the sides of the galleries, and the centres are afterward blasted away and removed in blocks. The more common way of mining is with the pick, chisel, hammer, crowbar, gunpowder, etc. The first galleries are run along the upper edge of the pure salt. The galleries are broad, and from about seven to fifteen feet high, with arched roofs, supported on either side by broad pillars of salt, or better still, by walls of salt. They are formed in steps, which are blasted out from above downward. As the galleries or tunnels extend, tramways are laid down, and light wagons, drawn by horses, bring the salt to the foot of the shaft or to the open air, where, as at Ischl, the galleries pierce the side of the mountain.

The Wieliczka salt mines are reached by means of several shafts, some for pumping up water, some for the exit of salt, others for workmen, horses, fodder, etc. Many of these shafts are in the form of spiral staircases. There are five stories in the mine, tunneling through the salt, and each story is separated from the next by an interval of about one hundred feet. Where the descending shaft passes through clay or loose soil, walls of rock salt are built into the sides of the shaft to support them. Blocks of salt are superimposed in the usual manner and afterward water is poured over the wall thus formed. The water dissolves some of the salt, which fills the crevices and interspaces, and, as the water evaporates, this salt forms a cement which binds the blocks into a solid mass. At Ischl, the salt mines, which are tunneled in horizontal galleries from the face of the mountains, are entered by means of a rutsch at the inner extremity of the tunnel. This rutsch is a slide, cut on the slippery salt at an angle of forty degrees, and leading down into the mine. The miners sit on logs of polished fir and descend the rutsch with breathless speed. There are steps along the wall of the slide and a projecting rope for support by means of which the ascent is made, but the steps are too slippery to walk down on with safety. These mines are worked by solution with water, which is afterward boiled, as the salt is rather inferior. At Kirghis, in South Russia, rock salt is quarried in the sides of pits; the seams are cut vertically into blocks, which are then hammered at their free extremities by means of a rude timber battering ram, hung from a triangular wooden support, which causes each block to separate from its floor, through cleavage. In the Transylvanian mines the salt is cut with chisel and hammer into long blocks about a foot in diameter, which are detached from their beds by blows of heavy hammers on their upper surfaces. Each block is then broken into smaller ones, called bolts, for the market. The workmen are very accurate in measuring the weights, as the weight of rock salt is pretty constant.

Great Salt Lake, Utah, is in many respects one of the most wonderful bodies of water in the world. It is six times as salt as the ocean, and though four good-sized rivers are constantly pouring their waters into it, it never loses any proportion of its saltiness, and its level is never raised an inch. No one has yet discovered why all this fresh water does not reduce the salt, or what becomes of the fresh water, since it does not raise the lake level.

It was, at one time, about as large as Lake Huron, and perhaps one thousand feet in depth; now it is about one hundred miles in length, with an average width of about twenty-seven miles, and its greatest depth is sixty feet. But what a store-house of wealth it is! Its area is twenty-seven hundred square miles, or 75,271,680,000 square feet. Allowing it an average depth of twenty feet, its contents are 1,505,433,600,000 cubic feet.

Chemical analysis has shown that one sixth of this is common salt and sulphate of soda, say 250,905,600,000 cubic feet. Of this combined product one eighth is sulphate of soda and seven eighths common salt. A cubic foot of sulphate of soda weighs fifty pounds, and a cubic foot of common salt weighs eighty pounds; a simple calculation shows, therefore, that the lake contains 784,080,000 tons of sulphate of soda and 8,789,169,000 tons of salt. Allowing ten tons to a carload, that makes 78,408,000 carloads of the soda and 878,016,960 carloads of salt.

These figures are astonishing, to say the least, but the lake has other features that challenge attention. For example, there are mountainous islands all over it, varying in height from three thousand to five thousand feet. Antelope Island, the largest, is about sixteen miles in length and five miles in width, with a height of four thousand feet. The scenery on the island is exquisitely beautiful. Luxuriant grasses flourish everywhere, and streams of pure water run down the sides of its mountains and its canyons. Its beach is of white sand, and slopes in just the way to make it an ideal bathing resort. Thus it is possible to have a delightful sea bath one thousand miles from the ocean and 4,250 feet above the ocean level.—*Boston Herald*.

Two Famous Trees.

The city of Cambridge celebrated the Fourth of July in 1900 by exercises which have an interest for the whole country, for they commemorated the one hundred and twenty-fifth anniversary of Washington's assumption of command over the Continental army.

The central figure of the ceremonies was the "Washington Elm," a noble tree now slowly dying, it is feared, of old age and improper treatment, but under which, a century and a quarter ago, the great Virginian began his mighty task.

So says the legend. Its authenticity, to be sure, has been questioned. There are those who say no evidence of its authenticity can be produced. And yet what matter? There stands the tree, and there it stood in 1775, a contemporary of Washington, at least; and round it, on the eve of last Fourth of July, the people gathered to hear again the tale of the fight for freedom and to renew their patriotism.

Who can read the story of the "Charter Oak" without a stirring of the blood? The English master sending out his stewards to prepare a site for his mansion; the delegation of Indians waiting upon the choppers and begging them to spare that oak, "which for generations had been a friend and guide to their ancestors;" Wadsworth snatching the charter from the tyrannous Andros and hiding it in the hollow trunk; the fall of the old tree a century and a quarter later, at an age estimated to be from eight hundred to a thousand years; and finally the armory band playing a dirge beside the worn-out body of their old friend, and at night the toiling of all the bells in Hartford for an hour.

Happy is the city which has such a landmark, and fortunate are the people whose union with the past is established by such a bond! No monument reared by human hands, but a living thing, bridging the chasm of the years with a body which grows, as ours do, through youth and maturity and old age, to death.

The storm of protest which arises when a noble tree is destroyed is a tribute to the latent poetry in human nature.

Youth's Companion.

Half the people in the world think they could do better and be happier elsewhere, than where they happen to be placed. They see only the thorns, the drudgery, and the disagreeable things in their own vocation, and only the flowers and the pleasant experiences in the vocations of others.—*Success*.

Selected Articles.

Earl of Dunmore writes his View of Christian Science.

THE EARL OF DUNMORE, who is now in this country, has written some of his views on Christian Science. His Lordship may be called prominent among the leaders of the new medico-religious movement on the other side of the ocean. He is not a man to be regarded lightly, if his achievements and if popular opinion of him count for anything. He is highly educated and accomplished, and is noted for his brilliancy and versatility.

The Earl is a Highland nobleman, and one of the few of his class who can speak Gaelic. His ordinary name is Charles Adolphus Murray, and he is the seventh of his line. He is in his sixtieth year. He has traveled in Central Asia and other unfrequented parts of the globe, and has written interestingly of what he has seen. Then he has much note as a deer stalker, as a pianist, violinist, composer, and orchestral leader, as a homœopathic physician, and as a brave life-saver at sea, one of his exploits in this respect having been the admiration of all England.

The Earl is more than six feet tall, is straight, bronzed, and clear-eyed, and has no suggestion about him of the crank or faddist, or follower of weird "isms." He has come to America to pay his respects to the Rev. Mary Baker G. Eddy, founder of Christian Science, and to take an examination that will allow him to become an authorized teacher of the faith. He is accompanied by his two daughters and several English and Scotch friends of the aristocracy. The travelers are flitting between New York, Boston, and other big cities. Here are the views of the Earl on Christian Science, penned by himself:—

There never has been a period within the history of mankind when religious thought has been so sedulously employed as at the present time, when many deep-thinking men and women are earnestly striving to solve some of those religious problems that have for so many generations baffled human intelligence.

We live in an age of progress, when new theories are being constantly evolved and fresh conclusions deduced, in an age when the spiritual activity of the human race is making itself earnestly felt in the anxious research into the real Truth of Being and its many accompanying propositions.

With Christianity in the abstract we have all been familiar since the days of our childhood, but with Christianity as a demonstrable science, and as it has been defined by Christian Science teaching, many are not familiar.

The truth about any doctrine is always more or less of an interesting subject to reflect upon, but the truth concerning this great scientific proposition which is now engrossing so much public attention cannot fail to be of interest to the public generally, and perhaps to some of those who may read these lines.

Free investigation into the working of Christian Science as into the working of any other religious organization is the recognized right of every man and woman in this country, where freedom of thought obtains, for no one can be expected to accept any doctrine before it has been duly explained to him in such a comprehensive manner as to reach his higher intelligence.

GROWTH OF THE MOVEMENT.

It is but a short five-and-thirty years since the revelation of Christian Science came to Mary Baker Eddy, a gentle, pious, unassuming Christian woman, who (to quote the words of an eminent exponent of Christian Science), "after a life and experience that fitted her in the highest

degree for so grand a ministry, stood out far in advance of the common frontage of human mentality and announced the discovery or revelation of that Science of Life which she afterward named Christian Science."

During the course of the thirty-five years since the discovery of the Science of Metaphysical Healing from sin and from sickness, countless benefits have accrued to the human race: sinners have been reclaimed, habitual drunkards have turned from intoxicants and have regained not only their health but their self-respect, the sick have been healed of every conceivable disease, lunatics have regained their sanity, and one law after another that constituted the illusory bondage of mortal mind has been broken in the name of the Son of God.

Christian Science can count to-day among its followers in both hemispheres professional men and women of the highest class, scholarly ecclesiastics, students of both sexes with brilliant university records, officers of high scientific attainments in both services, statesmen, judges, lawyers, philosophers, and doctors.

Such has been the rapidity of the growth of this science that, notwithstanding the comparatively short time that has elapsed since its foundation, its adherents number considerably over one million persons, and there have been organized in America, Canada, Australia, England, France, and Germany nearly five hundred Christian Science Churches and over one hundred training institutes. Some thousands of persons are doing noble work among the sick, while as for those latter who have benefited by the practice of this science, it was authoritatively stated at the World's Congress of Religions, as long ago as 1894, that more than one million cases of disease had been healed by Christian Science up to that date, and that many of these cases had been previously pronounced incurable by the doctors.

NOT A FAITH CURE.

So much for the growth and progress of this Science, which its milder opponents term "The New Religion," "The New Faith Cure," little knowing that so far from its being a new religion it is in reality the oldest Christian religion in the world, inasmuch as it is a clear and intelligible apprehension of the religion of Christ, the rules of which were laid down nearly two thousand years ago by the Master himself.

Christian Science has no connection in any way with what is called the "Faith Cure," because it is not through blind faith in a personal God that the curative work is accomplished, but through the understanding and realization of two of the main axioms of Christian Science—namely, first, that there is but one Mind (God), and that Mind governs all; secondly, that man being God's spiritual idea, is the reflection of his Divine Father (God).

On reference to the Christian Science text-book written by Mary Baker G. Eddy, wherein are laid down its religious tenets, you will find that Christian Scientists, as adherents of Truth, take the Scriptures for their guide to eternal life. They not only believe in the Bible, but find that, through the understanding of Christian Science, all Biblical mysteries are solved, and all seeming contradictions are reconciled.

They "acknowledge and adore one Supreme God." They "acknowledge His Son, and the Holy Ghost." And they conclude the summing up of their religious tenets in the following impressive sentence: "We solemnly promise to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus, to love one another, and to be meek, merciful, just, and pure." Are these the words of pagans, unbelievers, and miscreants who reject Christianity?

To the question found in the same text-book, "Does Christian Science, or Metaphysical Healing, include medication, hygiene, mesmerism, or mediumship?" the answer

is an emphatic denial, Mrs. Eddy saying that "every conscientious teacher of the Science of Mind-healing, knows that hypnotism is error, and he must recognize this in order to defend himself from its influence. . . . It is the action of one mortal mind taking control of another, without the other's knowledge or consent, and is practised from mistaken or wicked motives" (Science and Health, p. 448).

Christian Science, therefore, has no connection whatever with either spiritualism, mesmerism, or hypnotism; very much the reverse, seeing that it absolutely refuses to recognize the power of the human mind or of the human will as having any status at all in God's kingdom, but claims, *per contra*, that there is no other Mind but the One Mind (God), and no other will but the One Will (God).

NO PERSONAL GOD.

Christian Science recognizes the Almighty as being a God of Infinite Love and not a personal God. It has come to us after all these hundreds of years to revive the teaching of Christ through spiritual understanding, not to teach any new doctrine, but rather to show us how to unlearn all the false theories and traditions on which we had pinned our faith.

Jesus said, "Except ye be converted and become as little children, ye shall not enter into the kingdom of heaven."

It is impossible for us to cling to our old beliefs and try to augment them with new theories; we cannot hold to the old idea of a personal God and expect to add to this belief the true understanding of the Almighty. Therefore our willingness to drop all false beliefs must be taken as an earnest of our desire to possess the true understanding of divine Truth and to be taught anew of God.

This is what Christian Science teaches us, and it is through its doctrine that God is being at last understood to be a God of infinite love and compassion instead of an avenging judge. And as this conception of the Almighty becomes more fully realized, so will the beauty of Truth, Life, and Love become more fully recognized by the world.

It is to sick, suffering, and diseased humanity that Christian Science comes like an Angel of Light, bearing in one hand the gospel of Health and Truth, and in the other a message of peace and love to man from God.

It reveals to the world the fact that the healing of sickness as well as of sin is another natural concomitant of true Christianity. I use the word another, purposely, because there is a very prevalent idea among a large portion of the community that Christian Science is simply a newly discovered healing process for physical ailments, and has little or no moral side to it, and it is that erroneous idea which raises so much antagonism; whereas all Christian Scientists know very well that the healing of physical ailments is but a comparatively small part of the great Christian Science whole.

Although the proof is the fact of the healing, yet the healing itself, to quote Mrs. Eddy, is but "the bugle call to thought and action in the higher range of infinite goodness."

Mrs. Eddy also says, "In order to cure his patient, the metaphysician should first cast moral evils out of himself, that he may thus attain the spiritual freedom which will enable him to cast physical evils out of his patient; but heal, he cannot, while his own spiritual barrenness debars him from giving drink to the thirsty" (Science and Health, p. 365).

A man, therefore, has to study well the moral side of Christian Science and to go through a course of self-purification before he can attain that "spiritual freedom" which will enable him to cope with the sufferings of his fellow-creatures.

When Jesus commanded his disciples to preach the Gospel, he in almost every case, added the injunction to heal

the sick, and Christian Science has not the power, any more than any other church has, to separate one part of the gospel of Christ from the other, because the healing of the sick is, and always was, part of the gospel of Christ.

THOUGHT DOMINATES THE WORLD.

Thought is one of the chief factors in the every-day transactions of the world. Thought dominates the concerns of mortal man and rules the destinies of empires. Thought, governed by fear, which we may call fearsome thought, is as much the immediate producer of sickness and disease as is sinful thought the primary instigator of sin and crime. Fearsome thought, as well as sinful thought, is thought directed into a wrong channel; but Christian Science shows how divine Mind can direct thought aright and heal both sickness and sin.

Let us say, for the sake of argument, that man's normal state is one of harmony and concord, and then let us take as an example the case of an individual surrounded by sin and temptation and manifesting every conceivable kind of evil; then, if we know that evil is nothing more than an outcome of erroneous thought, what can be the only possible course for us to pursue in order to deliver that individual from this evil condition?

Is it not obvious that there can be but one remedy possible, and that is change the thought in order that error, which kills, may be supplemented by Truth, that gives life.

Change the thought into the right channel, and Truth must triumph.—*The New York World*.

Too Hasty Criticism.

Editor of The Herald.—My attention has been called to certain questions propounded in *The Herald* by "An Observer." He has seen the deep interest which Christian Scientists manifest in the text-book of their denomination, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. He asks if this deep interest which he is pleased to call "superstitious reverence," is not fetish worship. I reply, No. He confesses that he does not comprehend Science and Health. He is therefore in no position to pass judgment upon those who do understand it, and whose understanding of this remarkable book brings them help for the problems of life. I can sympathize with one who does not grasp the meaning of Science and Health at the first reading, for I have had a similar experience, but a careful observer would note that the difficulty of understanding a scientific work at the first glance, is no objection to the book. It indicates that subjects are treated with which the readers are not fully familiar. In reading any scientific work of a philosophic nature, the first essential to understanding it fully, is to occupy the view point of the writer. This necessarily requires some investigation and some study, and no one is in a position to pass judgment on a new treatment of a profound subject until he does comprehend it.

For very plain and simple reasons, this remarkable work merits the high regard of those who understand it. Those who read this book find that their study of it makes it easier to do right and harder to do wrong. It helps to make them well and to keep them well. From my own experience I can testify that it makes God nearer, Christ Jesus dearer, and the Bible more precious to me. What the compass is to the mariner, that Science and Health is to the believer. It takes him safely over the ocean of trouble and discord into the haven of peace. The mariner values and carefully guards his compass because of what it does for him, and the intelligent reader of Science and Health has the same regard, for the same reason, for his text-book. He who had never sailed the seas might flippantly declare the mariner's regard for his compass to be fetish worship:

but the mistaken judgment of the careless observer will not cause the careful seaman to abandon the instrument which is to him so great a help.

This observer of things which he confesses he does not understand, declares concerning Science and Health, "I am not possessed of a sufficient degree of intelligence to comprehend its profundity." His logic seems to be that, because he does not understand this book, no one else can. This scientific treatise has passed through two hundred and fifteen editions of a thousand copies each, and is prized by many of the learned in this and foreign lands. Our friend's reasoning places the hundreds of thousands of thoughtful readers of this book on one side of the scale of literary judgment, and on the other side is his own hastily formed opinion. He finds that his single opinion outweighs that of the calm judgment of the thousands. I will grant that our unknown friend has more intelligence than his logic indicates; but I submit, there may be "more things in heaven and earth than are dreamt of in his philosophy."

Our anonymous critic shows himself a reckless, as well as a blind, observer when he asks, "By what authority does Mrs. Eddy undertake to revise the Lord's Prayer?" Mrs. Eddy has done no such thing. In company with a multitude of reverent Bible commentators, she has commented on this most beautiful of all prayers, but she has not revised or changed one sentence of our Master's precious prayer. In Science and Health, page 322, is to be found this prayer just as it occurs in the King James' version of the Sacred Scriptures. The spiritual interpretation which is there given of this prayer is prized because it helps to a better understanding of the Master's words; but to say that Mrs. Eddy has revised the Lord's Prayer is to state what is not true. She has not revised it. She has helped many to a clearer understanding of the words as they fell from the lips of the Great Master.

Our "Observer" says, "We would be extremely pleased to receive information as to what portion of Divine lore contains any reference to a 'Mother God.'" Is it possible that this reviewer of religion has never heard of the motherhood as well as the fatherhood of the Heavenly parent? This thought of the motherhood of God is not absent from the Scriptures, but until recent years it has been forgotten or ignored by scholastic theology. In the first chapter of Genesis, at the birth of man, do we not find a mother as well as a father present? It is not the Father alone who says, "Let me make man in my image," but rather it is the Father-Mother God which declares, "Let us make man in our image, after our likeness" (Genesis, 1:26). Moreover it is said in the following verse: "So God created man in his own image, in the image of God created he him; male and female created he them." According to this portion of "divine lore," the man of God's creating included male and female, and this feminine as well as masculine element, is said to be the image of God. Hence the warrant from divine lore for referring to God as both father and mother.

Our "Observer" concludes with the words of an old hymn, "The old time religion is good enough for me." This is the argument which we may suppose Pharaoh used to Moses. It is in substance what the Pharisees said to Christ, and the self-satisfied so contended with Martin Luther and John Wesley; but this argument did not keep the children of Israel in bondage in Egypt nor silence Christ. The truly religious man in all ages has said with St. Paul, first "prove all things," then "hold fast that which is good." The genuine religious reformer has a profound love for the "old time religion," but he is brave enough, and wise enough, to awaken those "at ease in Zion" and lead the way from one stage to the next of religious progress.

To the student of that remarkable text-book, Science and Health, his religion is a very sacred and precious part

of his life. By means of it he has come into more loving relations with his heavenly Father and into a more tender and gentle sympathy with his fellow-men. He is learning to look out upon life as a little child, to find the Kingdom of God near at hand, and to think of the Heavenly Parent not only as a wise Father, but as a tender and loving Mother.

IRVING C. TOMLINSON.

In *The Herald*, Portsmouth, N. H.

In the Concord, N. H., *Patriot* of July 16, "H. C." says in "Notes by the Way."

Coming to Pleasant View everything about it looks more pleasant and inviting, if that were possible, in the morning hours. The large rye field belonging to Mrs. Eddy's farm, and which extends from Pleasant Street to the Concord fair grounds, is dotted over with stacks of rye.

On the same date among the news items of this enterprising journal we read:—

What used to be an unsightly swamp in the rear of the grounds at Pleasant View, the home of the Rev. Mary Baker G. Eddy, was transformed this spring into a beautiful field of rye covering twenty acres. The work of harvesting the crop has been in progress for the past three days, and has been in charge of an expert from the Kansas wheat fields. In the work an Adriance Buckeye self-binding harvester has been used and the operation has been of great interest to dwellers in that locality and to passers-by.

Notices.

The Concord Church.

The Concord Church during the summer months holds its services at 10.30 A.M. Sunday and 7.30 P.M. Wednesday.

To Members Admitted June, 1901.

Will those who sent in applications for membership with the Mother Church for the admission last June, and who have not yet received notice of their admission please send their names and addresses to the Clerk, William B. Johnson, 30 Norway Street, Boston.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Sept. '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for October, November, and December.

New Application Blank.

A new form of application blank for membership with the Mother Church has been prepared, which can be had by applying to the clerk, 30 Norway Street, Boston, Mass. It is desired that hereafter the new form shall be used.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Clergyman's Views on Christian Science.

THE Rev. W. R. Huntington, D.D., contributes an article under the above heading, to the *New York Journal* of July 14, 1901. This article is partly in commendation and partly in criticism of Christian Science. Mr. Huntington stands for that strange duality which enters so largely into all theological thought and discussion, and therefore it is quite consistent that he should look with double vision upon Christian Science, seeing in it both good and bad, truth and error, logic and illogic.

THE COMMENDATION.

The good he sees may be fairly thus epitomized:—

Its most conspicuous feature is idealism.

It teaches a better doctrine and a better mode of living than certain pronouncements that have been coming thick and fast from the camp of the materialists during the last forty years.

Without doubt Christian Science has, in very many instances, been known to transform men and women morally and spiritually.

That practically applied Christian Science is a new evangel which brings with it a serene quietness of mind, a spiritual repose, a rest from fret and worry not found elsewhere.

That those to whom it is a fresh revelation feel sudden and great joy in the discovery.

That it is right they should so feel.

THE CRITICISM.

Mr. Huntington's criticisms may fairly be summed up as follows:—

He finds fault with the soil of Christian Science as a nursery of character, because it is a soil of thin, aqueous abstraction, from which the fertilizer known as personality is wholly absent.

Christian Scientists set up a ghostly image, fashioned of the thin abstractions of the mind, and would have this taken for the living God.

That Christian Science defines God as a principle instead of a person.

That it is a mistake to argue that because God is love, love must be God.

That the Christian Scientist, being in perpetual doubt as to whether his fellow-man is real, and being forbidden to conceive of Almighty God as other than a principle, must perforce find himself finally driven back, for the only sure object of love, upon himself.

All Christian Scientists will appreciate Mr. Huntington's commendatory expressions because they have not so far transcended all personal considerations that they are lost to the good opinions of others.

In view of the strange misapprehension relative to Christian Science and its methods, entertained by so many of the clergy, Christian Scientists are pleased that members of that profession are able to see therein things to be commended.

We will briefly notice the criticisms of Mr. Huntington: First, as to his conception that "it is a soil of thin, aqueous abstraction from which the fertilizer known as personality is wholly absent."

We take it that this refers to the personality of God. If, indeed, the personality of God were absent from Christian Science teaching, we should go further than Mr. Huntington and say that its soil would be not only thin and aqueous, but that it would be wholly without soil. The only sense in which the fertilizer of personality is removed from Christian Science soil is this: that God is not a human personality but a Divine Personality. We had hoped the more intelligent class of clergymen would long since have so far investigated Christian Science that they would cease repeating the fiction that it teaches "a principle" instead of a personality. It does not so teach. It teaches that God is Divine Principle. Not an abstract principle from the human standpoint of principle, but Principle in the sense of allness—creative allness, governing allness, past allness, present allness, future allness; this allness being qualified only in this, that out of his allness, God creates or reflects all that really exists, including man and the universe. If Mr. Huntington and his fellow clergymen will read and reflect upon the definition of God as found in the glossary of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, page 578, which is as follows: "God. The great I AM; the all-knowing, all-seeing, all-acting, all-wise, all-loving, and eternal; Principle; Mind; Soul; Spirit; Life; Truth; Love; Substance; Intelligence," they will find what is really meant by the use of the word Principle, as defining God. No one can intelligently read this definition and then truthfully say that the Christian Science God is an abstract principle rather than a person, because the best and grandest conception of true personality is therein comprehended; a personality which so far transcends the human or anthropomorphic personality of God, that he who preaches of the omniscience, omnipotence, and omnipresence of Deity, should refuse to accept the limited human sense of God as against the unlimited divine idea conveyed by the term Divine Principle.

The soil of God, as absolute Divine Principle, is so rich and luxuriant in all its practical outworkings, as compared with the thin and barren soil of mere human personality, that the two soils are not worthy to be mentioned in the same connection. The chief difference is that the understanding of one leads to the overcoming of sin, sickness, and death, while belief in the other tends to perpetuate sin, sickness, and death. The difference is great—infinite.

A God of love—Love as Divine Principle—is not "a ghostly image," for this understanding of Him brings joy, peace, health, wholeness—holiness.

Note the duality of our friend's logic. The Christian Science God is "a ghostly image," he says in one place, while in other places he has admitted, as we have above shown, the good results of Christian Science teaching in bringing out better and more spiritual, healthful, and happy lives. Now if this God indeed is "a ghostly image," we have our friend's admission that a ghostly image is a very valuable thing. Whatever will produce even the results admitted by Mr. Huntington is far from being an abstract principle or ghostly image. It is the ghostly image of God as mere human personality that has deceived the ages and held humanity in bondage. A sober, serious, and thorough study of the Christian Science text-book will convince our friends of the truth of this statement.

In explication of Mr. Huntington's criticism of the Christian Science conception of God, he says: "I cannot worship a principle, I cannot pray to a definition, I cannot love an idea." Of course he cannot. Christian Science asks him to do nothing of this kind. We think we have abundantly shown this by what we have above said and quoted. If

the Christian Science God were the God Mr. Huntington depicts, all Christian Scientists would quickly unite with him in condemnation of such a God.

Mr. Huntington again says, "It is a mistake to argue that because God is love, love must be God, just as it would be a mistake to argue that because God is light, light must be God." What does our friend do with St. John's declarations that God is love and God is light? These declarations are not confined to St. John. All through the Scriptures, both in letter and spirit, run the same declarations. In declaring God to be love and light, therefore, Christian Science adopts the Scriptures instead of the dictum of the clergy.

Mr. Huntington again asks, "If we are so afraid of anthropomorphism that we dare not let such words as 'loving-kindness,' 'tender mercy,' 'purpose and will' escape our lips in connection with Deity, we may as well give over the believing of 'fanies of fruitless prayer,' and to the 'wintry skies roll no more Psalms.'"

If Mr. Huntington would understandingly peruse even a little of Christian Science literature he would see the utter injustice, as well as the folly, of this assertion. No literature on earth teaches more of loving-kindness, tender mercy, Divine purpose, and Divine will than Christian Science literature. No people upon earth believe more in loving-kindness and tender mercy than the Christian Scientists. We say this not by way of boasting, but by way of strict fact. The very essence of Christian Science teaching is that God is Love. The necessary outflow of Love is loving-kindness and tender mercy.

Such radical misapprehensions of everything that pertains to Christian Science on the part of thinking people and those occupying the position of public teachers, are as unaccountable as they are inexcusable.

Mr. Huntington's closing deduction is even more wide of the mark than those which we have noticed; namely, "The Christian Scientist, being in perpetual doubt as to whether his fellow-man is real, and being forbidden to conceive of Almighty God as other than a principle, must perforce find himself finally driven back, for the only sure object of love, upon himself."

One whose conceptions of Christian Science are so woefully awry, has no more right to undertake to criticise it, than the man who cannot read has a right to criticise Shakespeare. We speak plainly, but we think the occasion demands plainness of speech. The Christian Scientist sees in his fellow-man the real man, instead of the false man, and knows his fellow-man, in his reality, to be the image and likeness of the eternal God.

If our friend will read and study just this single statement of "Science and Health with Key to the Scriptures," pp. 472-3, until he understands it, he will never again, either publicly or privately, we feel sure, repeat his false charge.

"Jesus beheld the perfect man, who appeared to him, where sinning mortal man appears to us; in this perfect man the Saviour saw God's own image and likeness, and this healed the sick. Thus Jesus taught that the Kingdom of God is universal, and man unfallen, pure, and holy. Man is not a material habitation for spirit; he is himself spiritual. Soul, being divine, is reflected in nothing imperfect, or unlike the infinite Soul."

The Religious Journal.

THE *Universalist Leader* has a correct conception of the office of a religious journal.

A religious journal is not merely a vehicle for platitude and exhortation of the pleading sort. It is a chronicler of Truth and a conveyer of helpful, hopeful, and healing facts. It has something vital to give. It has food for the soul and aid for the body. It is a messenger with a message out from the eternal verities.

The *Leader* thus ably outlines its views of what a religious journal is:—

A religious journal for most of the denominations may suitably take the style and fill the place of *The Christian World* or *The British Weekly*; for the distinctive denominational mission of these sects has been fulfilled. They have not much that is now unique and characteristic to tell or to do. It is different with sects like the Swedenborgians, the Unitarians, the Universalists, the Christian Scientists, and some others. They have not only their share of the common work of a Christian Church to do, but they have a special message to proclaim, a distinctive work to do. If their idea is large and constructive, like the idea of the kingdom of heaven in the teaching of Jesus for example, religious journalism with them should have two well-defined ends and uses: 1. To keep their distinctive message before their public. 2. To apply the radical and salutary principle of their religion to the life of society and the events of the world around them. That opens to them a great and interesting field. The journalist who should enter into it and fill it in some respectable measure, would not be an idler or a supernumerary. He would have an audience, he would have influence, and his journal would not lag at the tail of the literary fleet. The perfunctory piety, the professional platitudes, the decorous and harmless assaults on unidentified wickedness, do not count. Interesting reading is full of purpose and point.

Dedication at Beatrice, Neb.

In the account of the dedication of the church at Beatrice, Nebraska, published in the *July Journal*, there was an omission which we gladly take occasion to supply herewith. The following from the *Beatrice Daily Express* contains the matter which was inadvertently dropped when making corrections.

A most charming and impressive soprano solo was sung by Miss Helen Nathalie Barstow of Chicago, "With Verdure Clad," from Elijah. Miss Barstow has a beautiful and finely cultivated voice.

The services of the morning were duplicated in the evening, with an additional soprano solo by Miss Barstow, "Father hear us," from Millard, that was most charmingly rendered.

Among the Churches.

Dedication of Third Church of Chicago.

From the *Record-Herald* of Chicago we republish the following account of the dedication of the Third Church of Christ, Scientist, of Chicago. In the August *Journal* will appear a full account of the dedicatory services, which will contain in full the addresses of Rev. Jesse L. Fonda and Mr. Edward A. Kimball, together with a description of the church edifice.

Following is the account from the *Record-Herald*:—

Thousands of Christian Scientists participated in the exercises yesterday by which Third Church of Christ, Scientist, of Chicago was dedicated. The new structure, built by the contributions of local members and friends, fronts on Washington Boulevard, and occupies the south-east corner at Leavitt Street. Through its large entrance ways more persons went yesterday than could find seats or standing room, though four distinct services were held during the morning, afternoon, and evening.

The opening exercises were held at nine o'clock, and even at that early hour the auditorium was filled. At eleven o'clock, when the second exercises began, the galleries were packed and many turned away to hope for seats in the afternoon. And, coming then, others went away and re-

turned for the evening service at 7.45. With a seating capacity of fifteen hundred the spaces of the aisles and entrances taken up, there were more than seven thousand in the four audiences combined.

At each of the services the following message from Mrs. Eddy was read:—

Pleasant View, Concord, N. H., July 10, 1901.

Third Church of Christ, Scientist, of Chicago.

Beloved Brethren:—May this church find God all instead of part, and reflect His goodness and power. Behold, how good and how pleasant it is for brethren to dwell together in unity!

MARY BAKER G. EDDY.

The exercises were conducted in turn by the Readers of First, Second, Third, and Fourth Churches. In the early morning service the Readers were John H. Cameron and Mrs. Ruth B. Ewing; at eleven o'clock, Bicknell Young and Mrs. Emma Bush; at three o'clock, Rev. Mr. Fonda and Mrs. Elizabeth Webster; and in the evening, Charles M. Flint and Mrs. Harriet R. White.

In each of the exercises the address of welcome was delivered by Rev. Jesse L. Fonda and the address of dedication by Edward A. Kimball. The order of services included the organ voluntary, by Calvin F. Lampert; hymn by the congregation; Scripture reading and prayer; solos, and the Scientific Statement of Being and Correlative Scripture.

Progress in St. Louis.

Christian Scientists have been making such progress in St. Louis in the last few years that their little church at 2726 Pine Street is unable to accommodate their congregations. In order that there may be seating room for all who wish to attend, a large church will be built on Lindell Boulevard, between Boyle and Newstead Avenues. Some time ago the church general committee purchased the lot on which the edifice is to be built for seventeen thousand dollars. It has a 152-foot front and is 213 feet in depth. The plans for the building are now in the hands of Architects Mauran, Russell, & Garden. The general style is to be Grecian, but that is all that has been definitely decided as yet. The breaking of the ground is to be commenced soon after the plans are completed and accepted by the executive committee, consisting of A. P. DeCamp, chairman; William E. Morgan, John M. Harrison, James A. Logwood, and Louis Bendit. It is intended to make this church one of the finest in the city, with a seating capacity of fifteen hundred. The cost is estimated at one hundred thousand dollars, but it is possible that it will run beyond this before the building is completed. Work will be begun soon after the hot weather, and if nothing interferes the church will be ready for dedication in a little over a year.

The Christian Science Church in this city has had a remarkable growth since the completion of the church on Pine Street. When it was built, six years ago, there were less than a hundred members, and only a small congregation. There seemed at that time to be plenty of room for several years to come. The interest manifested and the constantly increasing congregation and membership, however, finally made it necessary to think of a larger church building.

Last year the general committee voted to buy a lot for a new place of worship. When the purpose was announced, the subscriptions began to come in large and small amounts, and the seventeen thousand dollars for the lot was soon raised. The Christian Science people never solicit funds for any purpose. If money is needed or wanted for anything it is announced, and the members are left free to contribute what they think is their proper share. They deem it a privilege to contribute whatever is necessary to meet the demands. Whether a man contributes a large or small amount is not known by anybody, except the treasurer, which position is held at present by William E. Mor-

gan. It is no hard matter, Mr. Morgan says, to get whatever is necessary. Those that are financially well fixed subscribe from one thousand to five thousand dollars, and even larger amounts, and the poorer ones as their means will allow.

Another good point about Christian Scientists is that they never go in debt. If some project is contemplated and the funds are not in sight, the matter is dropped until a more opportune time. At present, though the full amount has not been subscribed for the new church, the committee knows that it will have the money when wanted, and that everything will be paid for at the time the church is completed.

The old church, which is still comparatively new, is to be sold as soon as the new one is ready to be occupied. It was built six years ago at a cost of thirty-five thousand dollars. At that time there were less than one hundred members in the congregation. At Sunday and Wednesday night services now the building is always filled. The present membership is nearly four hundred, and the average attendance on each Sunday is about six hundred. No proselyting has been done, and all the converts have been made through regular services, through the literature, or through solicited talks with some of the members. The membership includes some of the most prominent and wealthy men and women of the city.—*St. Louis Daily Globe-Democrat.*

Third Church at Milwaukee, Wis.

For the past two or three years the members of the Second Church of Christ, Scientist, living in the northern part of the city, have felt the need of a place of worship in that locality. The distance to the Athenæum, their present place of worship, being beyond walking distance, recourse to the street cars became necessary, involving a loss of time or an expense which prevented many people from attending. Accordingly, a month ago a meeting was held on the north side to see how many persons living in that vicinity would attend. This meeting was so large that the North Side Kindergarten Hall was secured and it was found that over two hundred persons would co-operate in supporting the work if permanently established. Last evening (March 25), all the members of the church being present at the Athenæum, the object of the new move was stated and approved. Twenty-one letters of dismissal were granted and expressions of good-will from many members of the church occupied the remainder of the evening. A new church will be immediately formed by those who were granted letters last evening, and the third church of this denomination organized.

Twenty-five dollars was contributed for the purchase of a Bible and "Science and Health with Key to the Scriptures," the Christian Science text-book, to be used by this society.

For the present the services will be held at the North Side Kindergarten Hall, corner of Seventh and Sherman Streets, and there will be services on Sunday mornings and Wednesday evenings.—*Evening Wisconsin.*

The people of Missouri are clamoring for the governor to appoint a day to pray for rain. Only a few weeks ago, the Missouri legislature passed a law barring Christian Science healers from practising in the state. The Christian Scientists claim to cure by means of prayer. Why this change in sentiment in Missouri on the prayer question?

Atchison Globe.

I am glad to think

I am not bound to make the world go right,

But only to discover and to do,

With cheerful heart, the work that God appoints.

Selected.

The Lectures.

At St. Joseph, Mo.

On Sunday afternoon, June 30, a large and attentive audience filled Tootle Theatre, in spite of the intense heat, and listened closely to a lecture by Judge William G. Ewing for an hour and a half, given under the auspices of First Church of Christ, Scientist. The speaker was introduced by the First Reader, Charles M. Howe, C.S.D., who spoke as follows:—

Friends:—It may seem a matter of wonderment to some, that so large and intelligent an audience should gather here this afternoon, under such trying circumstances to listen to a lecture on Christian Science, yet it only shows the great and increasing interest that is being manifested all over our land in this all-important subject, which concerns, more than all others, the welfare of mankind.

Some three years ago the Mother Church in Boston, The First Church of Christ, Scientist, established a Board of Lectureship for the purpose of correcting the misconceptions so prevalent in regard to Christian Science.

Christian Scientists are happy because their faith rests upon an understood Principle capable of proof in healing the sick and casting out error, as the understanding of the principle of numbers or the principle of music will destroy error and discord. Likewise, the Science of Life or the Science of Being will eliminate the errors of mortal thought,—sin, sickness, and death.

I have the pleasure of introducing to you the distinguished and able speaker, Judge William G. Ewing of Chicago, who will address you upon the subject of "Christian Science as the Physician, Saviour, and Redeemer," and I bespeak for him your careful and earnest attention.

Correspondence.

At Sioux Falls, So. Dak.

The lecture by Judge William G. Ewing of Chicago, ex-judge of the Superior Court of Chicago, Ill., and member of the Board of Lectureship of the Mother Church of Christian Science in Boston, Mass., given in the new Opera House last Sunday afternoon (July 7), on the subject of Christian Science, was well attended by an appreciative audience. It was considered by those who heard it the finest lecture ever given in Sioux Falls. Several of our lawyers and judges were present and said it was the most logical and concise statement of the evidence on the subject that could be given. His language was of the finest and most eloquent, showing him to be a man of truth and eloquence, well understanding the subject he was handling. At the close all seemed reluctant to go. Those present will long remember the judge, who is a man of high reputation, well known in this country and abroad. Those who failed to hear the lecture little realize how much they missed. The speaker was introduced by an old friend, Mr. C. O. Bailey.—*Sioux Falls Daily Press.*

Mr. Bailey's remarks were in substance as follows:—

Upon no subject which has attracted the public attention during the past few years has there been a greater divergence of opinion than upon the subject of Christian Science. While by some it has been regarded as a passing fad of the hour, by others it has been deemed to be founded on divine inspiration and truth. We have to-day in Sioux Falls a gentleman who is able to speak with authority upon Christian Science. Whatever may be our individual opinions, his remarks cannot fail to be both interesting and instructive. It affords me, therefore, great pleasure to introduce to you Judge William G. Ewing of Chicago.

Correspondence.

From our Contributors.

Hidden but not Destroyed.

BY CYRENE EMERY.

HUNDREDS of years ago, in the very dawning of the fourteenth century, a great painter, Giotto the Glorious, took up his brushes one day and painted a portrait on the wall of one of the rooms of the Bargello in Florence. For many months that fair Italian city had been plunged in civil war, and the hearts of her true children had been heavy within them as every day they heard the clash of swords in the streets. But now, in 1302, peace was once more established, the volatile Florentines had forgotten their feud and chattered like friendly sparrows in the Old Market, while the dark streets and *viale* once more echoed the songs of the flower-girls calling their sweet wares. It was in commemoration of this happy peace that Giotto painted his picture on the walls of the Bargello,—a group of the leading minds of the hour, among the rest, Dante,—painted it as only Giotto could paint, in glowing splashes of color that time, with all its vaunted power, can scarcely dim.

Years passed. The peace was broken once and again. Giotto and Dante and the singing flower-girls no longer walked by the Arno. The room in the Bargello little by little changed its uses, and gradually filled with rubbish. The walls grew dingy with dirt and dust until only dimly could any eye discern the faces in Giotto's picture—scarcely even dimly unless memory guided the glance. Then came a day when somebody whitewashed the wall, and after that the years did their worst. Dante's pictured face was lost to every eye on earth. Five long centuries and more kept the secret, until in 1851 or thereabouts a certain student of art found, in legend or history, a hint that somewhere in Florence was hidden a masterpiece, precious alike for the artist's sake and for the dark, stern face that it portrayed. He studied and he searched,—found first the building, then the room, then the wall. Careful hands went to work, delicately, daintily, and now Giotto's picture is revealed once more, almost as fresh and bright as in those far-away days when it was painted.

And the story of Giotto's picture points, like all things else, to Truth!

"In the beginning," a noble picture was conceived by the Master-Mind—even the idea of a creation that should mirror and express all that was in that Mind. For Mind to conceive was to create. Man, made in the image and likeness of God, expressed the perfection of God a perfection in which was no evil, no blemish or defect, neither indeed could be. In all that fair universe, there was no power—since God, Good, was the All-Power—that could hurt, or destroy, or make afraid. In all the universe was no evil presence, since all that was, was God, Good, and His manifestation. And God's perfect law, which is harmony, brooded over and governed flower, and beast, and man.

But presently a mist seemed to rise,—a mist of misunderstanding, of ignorance and fear,—and it grew and thickened until to mortal thought this perfect creation of God became dim, as a star shines but faintly through some wandering cloud. In the mist mankind began to fancy that phantoms moved, creatures not of God's creation, evil shapes which the pure, good Mind that made all could never have conceived,—sick, tired, discouraged men and women, little children writhing in the agonies of inherited tortures, sinful creatures shrinking from even that dim light, a horrible medley! Little by little, as the misunderstanding grew, the perfect creation was quite hidden from sight, and mortal eyes saw only the phantasmagoria that came and went and came again,—

the ghostly people of the realm of Dream.

What wonder that earth became a place of tears and groans, or that men turned to the most mysterious vision of all, and decked it in soft, sombre robes, and named it "our friend, Death, who somehow will set us free"!

And yet, not all men, for here and there some seer still dimly discerned the Truth of creation. Here and there pure eyes pierced the mist and caught the glow of a great Light. But just what the Light should reveal, or how to come nearer, they knew not, until at last, in the fulness of time, came a Guide to them. Straightway he led to where God's work lay hidden. Revealing "in thought and deed" the Father, he interpreted men to themselves. Before his feet the mist melted, at his voice the darkness grew light, and those who cared to see beheld again God's world and His child made in His image and likeness.

Those who cared to see! They are only a little band, all told, and after a while the Master went his way. Some of those who had followed him and caught a glimpse of the hidden glory, made a record of his words and deeds, so that in all the ages those who would might find the way too. Many men, good and true, longing for the Light, read and pondered and started on their quest, hoping, yearning, despairing, for in the darkness they had misread the words of the Way-shower, and how could they find the Way?

Then one day it was learned in Christian Science, which was discovered and founded by Mary Baker G. Eddy, that the mist rose no higher than men's thoughts and that it could no more change and make imperfect God's perfect creation than the whitewash on the walls of the Bargello in Florence could change the picture that it hid; that fear and ignorance and misunderstanding can only, at the most, hide for a little time what can never be destroyed, even the harmony and perfection and glory of God's work.

Satisfaction.

BY M. BETTIE BELL.

It is not in the material senses, but in love and wisdom that we find spiritual satisfaction. We can say with David, "As for me, I will behold thy face in righteousness; I shall be satisfied, when I awake, with thy likeness." To be satisfied we must be regenerated, sanctified, purified. The satisfaction of Spirit overcomes dissatisfaction and self-satisfaction. We cannot know the glory which awaits us until the spiritual senses unfold the light of Life. The gates of hell cannot prevail against the satisfaction of Soul.

We must not begin by thinking our case, our cross, our work, our difficulties, harder than those of our brethren; especially we must not feel that others' advantages have been better than ours. If we begin our journey with such thoughts as these, the mountain of our hope will seem very far away, and the climbing toilsome. We should remember it is mortal mind that makes laws for itself, and self-laws can never interfere with our entrance into the realm of reality. Self-laws can never bind, blind, or divorce us from Spirit. The laws of Spirit are supreme and all-satisfying.

Selfishness is the root of self-satisfaction, dissatisfaction, self-ease, and self-laws. Through these errors mortals have become self-mesmerized and are in slavery to an unreal master. There is no satisfaction outside of a knowledge of God.

Satisfaction can come to us only through the true teaching, healing, and preaching of Christian Science. Healing comes through the law of Love; teaching through the spirit of Christ; and preaching through the power of the Word scientifically understood. These three are one, and they renew and save mortals from the consciousness of material law.

Fetters flee when Life is understood; bondage goes when

Truth has made us free; slavery is abolished when Love has cast it out. Life, Truth, and Love are the Principle, the Healer, Teacher, and Preacher,—the Comforter, the *All-in-All*.

Through a divine process the dead in human belief must be raised from slavery, fetters, bondage, and prison, into the liberty of the sons and daughters of God; then will satisfaction unfurl her banner and Truth will make us free.

"Give us this day our daily bread." If we have a little peace one day; a little joy another; a little strength, power, wisdom, light, grace, and purity, other days,—we are having "this day our daily bread," and growing towards a state of satisfaction.

Longing to be better will make us strive to be so; striving to be so strengthens our ability until the better side of life is found to be the *only* side, and we are transformed and renewed by the spirit of Love. Strength, power, grace, and peace will unfold the realities of Truth in our consciousness until dissatisfaction is swallowed up in satisfaction.

Pressing onward and upward, the dews of love, faith, and trust will refresh us with such spiritual light and beauty as will attract others to desire the better life. We cannot be happy unless we are making others happy. Doing for ourselves and families alone and leaving the other part of God's family to suffer for want of our spiritual tenderness and light is a hindrance to growth. There is no self-happiness, self-health, nor self-comfort. Unselfishness is the realm of health, happiness, comfort, and light.

Unselfishness is the pearl of great price, and we must win and wear it. All the spiritual affections act through unselfishness, and spiritual affections clothe us with the seamless garment of satisfaction.

The desire for dress, society, food, drugs, travel, novels, fame, business, or some other fancy, pursues a person like a phantom and makes him think he is not ready to yield up his false desires for a higher idea. Human affections promise fulfilment of hopes, but, like moths, they eat the strength out of hope and the promise out of desire, until vigor is wasted and that which was hoped for and desired is like a faded flower. Ungratified hopes and desires drive us, like tired children, to the feet of divine Love. We must awaken from the deep sleep of vanity and delusion, and turn to the Lord our God, with all our might, soul, and strength, and pray without ceasing until we find in Spirit the true hope and desire gratified and satisfied.

Meekness never seeks for the high places, and humility is content with loving God and man. Sometimes the most brilliant light in the temple of Truth is a tiny jet in some far-off corner, doing its work with uncomplaining satisfaction.

Let us arm ourselves against all confusion and disorder, and fight the good fight of faith, knowing that selfishness and dissatisfaction can no longer pursue us, knowing that we can think no thoughts but heavenly thoughts, know no words but heavenly words, and be no longer children of darkness, but children of light,—no longer children of dissatisfaction, but children of *satisfaction*.

Despair.

BY W. J. MURRAY.

ONE of the greatest obstacles to spiritual progress, and one that is perhaps more subtle than most others, is the temptation to think we can never overcome ourselves, in other words, self-condemnation. When, after deciding to follow the example of the Nazarene, and for days, perhaps weeks, secretly rejoicing in our freedom from sickly and sinful thoughts, we are suddenly, as it were, besieged by a host of them, we are apt to become discouraged or mesmerized into the belief that it is use-

less to try to overcome them. In this mental attitude, it is difficult to accomplish anything. St. Augustine says, "Beware of despairing about yourselves." Mrs. Eddy says, "Instead of blind and calm submission to the incipient or advanced stages of disease, rise in rebellion against them" (Science and Health, p. 390). Thousands can testify to the wisdom of these sayings, for by putting them into practice they have been able to overcome the suggestions of the carnal mind. They have learned through Science that this so-called mind is "a liar and the father of it," and "its witness is not true," therefore they refuse to accept its testimony.

Like other men, the Christian Scientist has his temptations, but, equipped as he is with courage and strength born of spiritual understanding, he no longer yields himself servant to obey, but goes to work with the aid of Divine Love to master the situation. True, his faith is often sorely tested, but he knows if he presses on to the top of the mount, like Abraham of old, it will be accounted unto him for righteousness. Like the children of Israel he has a desert to cross before he can enter into the Land of Promise. As he follows our Leader to-day in the direction which she has laid down in Science and Health, the Red Sea of doubt and fear is separated, enabling him to cross over into a country of hope, expectation, and fruitage. He is fed on the manna of spiritual comfort from day to day, and when in his thirst after righteousness he turns to his Bible, that which has hitherto been a barren rock is now smitten with the rod of Divine Science, and the waters of life gush forth plentifully.

Some Observations.

BY J. E. FELLERS.

IN my first investigation of Christian Science, and before I accepted its teachings, a few observations impressed me very favorably, and I submit them in the hope that they may commend the Truth to others.

1. The small number who wear spectacles.
2. The large number of men in attendance at the church services.
3. The cheerfulness among the Scientists.
4. The impressiveness of the silent prayer.
5. The large attendance at mid-week meetings.
6. The unusual attention paid to Scripture reading.
7. The congregational singing.
8. Christian Science, not gossip, was the topic in the corridors.
9. A storm is seldom so severe as to prevent a Scientist from attending church.
10. Jesus gave his disciples power to heal the sick and sinful, and I could not find where he ever revoked that power.
11. I observed that the general feeling of unrest and doubt so universally manifest had no place among Christian Scientists.
12. One man, when asked where all the people came from who attended Christian Science meetings, replied "Out of their graves." I did not then know what he meant.
13. An orthodox friend who professed ripe scholarship, made a casual investigation of Christian Science and dismissed it with the remark that it was a silly humbug. Although I had not accepted Christian Science, I could not help recalling the story of the young man who studied law with his uncle for two days, returned to his home, and said, "Mother, the law is not what it is represented to be. I am sorry I learned it."

In every part and corner of our life, to lose one's self is to be gainer, to forget one's self is to be happy.

ROBERT LOUIS STEVENSON.

Testimonies.

The Lord will Provide.

The *Journal* and *Sentinel* have been worth so much to me that I feel I never can be thankful enough for them, and have always felt that I should tell what Science has done for me.

In the first place it snatched my dear mother from the grave and made her a well, strong woman after the physicians had said she would never see a well day again.

I knew that she had found more than I had, although I belonged to an evangelical church and thought it was very much to me; but I was sick nearly all the time, and our poverty seemed a mountain. When I came into Science I was alone and self-dependent with four little children, one a baby. I had only one or two treatments then, and as I seemed to have so little to pay for them, I thought I would work it out myself. As soon as one thing was overcome, however, something else would seem to come to the surface, and finally error screamed so that I sent for a practitioner and told her of my straightened circumstances, and she helped me to realize God's allness and our relation to Him.

The next week my husband sent me twenty dollars, which seemed a large amount to me, and so I had five dollars to pay for the week's treatment. Error said to me, "Where will you get clothing for the children if you pay the five dollars for treatment?" But I did not listen to error, and in two or three weeks I was notified that there was an express package in the office for me, which I found to contain two suits of the nicest flannel underwear for each of the children, and stockings, etc. After that my husband sent me from thirty to forty dollars per month until the next spring. I then took my little ones and went to him against the advice of nearly all my friends and some of my relatives. The thought was that unhappiness would again come to us, but I have been with him nearly three years, and I can only rejoice for what Science has done. He is now a kind, thoughtful husband and father, and has been twice advanced to a more responsible position. He gets a good salary now, and we have been able to pay up all old debts and he has paid for my class instruction under one of our Leader's loyal students, for which I am so thankful that words cannot express it. More than this, we have laid away one tenth for tithe money ever since we came into Science, and now have a nice little sum in the box.

MRS. JANETTE DICKSON, Incline, Ia.

What Christian Science has done for Us.

I hail the coming of the *Journal* and *Sentinel*, as the coming of dear friends, not only for the glad tidings they bear from the various fields, but for the words of comfort and strength they bring. I have long felt it my duty to give testimony to what this blessed Truth has done for me and my family.

It cured me of hereditary consumption, heart trouble, and dyspepsia, after a long and thorough trial of material remedies had failed to bring relief. Also the fear and dread of cancer, which made its appearance on my face, just as it had on my mother's, who passed away, was healed by holding the thought that God never made a cancer, and that He made all that was made, and it was good, therefore I had no fear of cancer.

It cured my daughter of severe attacks of throat trouble, and a cough that appeared when she was six weeks old. She suffered from it every winter. Many sleepless nights were passed in seeking material relief, and in the fear and dread of its terminating in consumption, as it was predicted that it would before she reached the age of eighteen. But thanks be to God, through the Truth as taught in Science

and Health, she has reached that age and is the picture of health.

I should like to speak of another demonstration. After entering the high school, she began to complain of her eyes, which had always seemed weak, till finally she cried in despair, that she would have to quit school, or get glasses. "No, Mary," I said; "let us look to the One and only Source for help. Keep in mind the perfect sight." She assented, the trouble lessened, and after two weeks no mention was made of it. Her work in the high school was completed in May. She studied by lamp-light as well as by day, practised her music, and employed some of her time on fine needlework, without a complaint, but cheerful and happy instead. Oh, the gratitude that fills my heart, when I think of the beautiful and wonderful workings of Truth!

One thing do I desire and that will I seek after, to know more of this beautiful teaching. I have never had class instruction, but look forward to a day when I can.

N. H., Bryan, O.

God Hears and Answers Prayer.

Four years ago last August I first heard anything good of Christian Science. It was through the healing of my husband. He went to Chicago to be treated, and his healer advised him to buy "Science and Health with Key to the Scriptures." When he brought it home, we went to studying, and through the study of that book and one treatment from my husband, I have been healed of heart-trouble, dropsy, nervous prostration, chapped hands, corns, and the worst of all, the fear of death, which tormented me day and night.

I had all my life tried to do right, not because I loved God, but because I was afraid to do wrong. Now, since I have learned that God is my loving Father, I do as nearly right as I can, because I love God and man, and I have learned that perfect love casteth out fear.

We have had many beautiful demonstrations in our own family, and have been able to help others. A man who had had a running sore for over ten years, and had tried everything in the line of medicine, was healed in one week's treatment. One old man suffering with asthma, who was given up to die by two doctors, was healed in one week. He walked four miles after the sixth treatment. A case of chronic constipation of fifteen years' standing, where everything had failed, was healed. One man who had been troubled with hives for seven months, and had tried everything in material remedies, was healed. A lady who had tried without relief many remedies and doctors, was healed of cancer under Christian Science treatment. I could tell of many more.

Now I know that God hears and answers our prayers, while in the past I thought He did. My husband and I had the privilege of class instruction from one of Mrs. Eddy's loyal students. We now have an organized church here. My heart overflows with gratitude and love to the Discoverer and Founder of Christian Science, Mary Baker Eddy, and to all who have helped me to walk in the path, that leads to harmony.

ANTONIE M. CURRAN, Marion, Ind.

How I came to Christian Science.

Christian Science was brought to me by a friend who knew of my condition. She kindly asked me to try it, but I, not knowing anything about this Truth, laughed at her and asked if she thought that I could be healed through Christian Science, since all the best physicians had failed. She said, "There is nothing impossible with God." This statement brought a little light to me, because all the doctors told me that they could do no more for me.

Sometimes I was for weeks in bed. I had had two operations performed. My husband insisted upon my trying Christian Science; he said it could do me no harm.

I concluded to go to the Wednesday evening meeting, and when I heard all the beautiful demonstrations I thought if it helps them it can help me. The next day I went to the reading room, where I received the first treatment. I walked home, which is a mile and a half from the room. This I had not been able to do for the last five years.

I have also been healed of stomach trouble and sick headache, which I had had for the last twenty-eight years.

Sometimes I have a little battle to fight, but I always come out victorious. I am able to do all my own work, whereas in the past I had to depend on hired help.

Truth has also healed my husband of eczema, for which the doctors could do nothing. Our son was healed of rupture, eczema, and many other diseases.

To mention all the beautiful demonstrations we have had would be impossible, but we are thankful for the blessings we have received from Christian Science and to the one who worked so patiently with me in the hour of darkness.

I am a subscriber for the *Journal* and *Sentinel*, which are very helpful to me.—MRS. SOPHIE ERNST, Akron, O.

When I say "Loch Lomond, Scotland, is beautiful," I do not only mean the actual "Loch," but the surroundings—the environments, go to make up this beauty,—the trees, the rocks, the moss, the heather, the everything round about.—and the oftener we visit Loch Lomond, the more of the individual beauties come under our notice. A thing that escaped us on our first visit will, on our next, perhaps, come out very plainly, and so we grow to love the place more and more because of these "treasures of beauty" that we have found.

So it is with God, when I say, "God is Good, God is Love." I do not mean just this bald fact, I must not stop there, I must not draw a circle round about my conception of God. I must not forget that Creator and creation, Mind and its thought, divine Principle and its idea cannot be separated, they go to make up this locality of Beauty.

I think this is exactly what St. John means in his epistle, "for he that loveth not his brother whom he hath seen, how can he love God whom he hath not seen?" So every time we think of God, let us try to get a broader, truer, fuller insight into the environments of God, for these environments have no limit, they go opening up under our gaze, more and more good, more and more beauty; and the time will some day come when we shall forever dwell in this beautiful locality.

MRS. EVA MACNAIR, Edinburgh, Scot.

Christian Science was brought to my notice by the instantaneous healing of my sister. Fifteen months ago Christian Science found me with many diseases. Tuberculosis, so pronounced by a specialist, constipation, and weak eyes, were my worst troubles. From all of these I am now free. I have cured through my slight understanding of Christian Science, headaches, toothaches, the grip, and poison oak.

I find that animals respond quickly to Truth. In a few treatments given to horses, I have seen the distemper knot, and fistula disappear, and there has been no return.

I am grateful for the physical healing, but best of all I firmly believe I am standing upon the rock, Christ-Truth. I am grateful to the practitioner who gave me treatment and upon my request sent me "Science and Health with Key to the Scriptures." After a careful study of this textbook on Christian Science for four months, my ailments have disappeared.—GEORGE FOX, Pilot View, Ky.

Religious Items.

Booker T. Washington, principal of the Tuskegee Institute, delivered an address at the Summer School of Theology at Harvard on the subject: "The Religious Aspect of the Negro Problem in the South." Among other things he said:—

"I am probably safe in saying that every black man brought as a slave into America was a heathen; that is, that he had no knowledge of Christianity. At the end of the slavery period there probably was not one who did not have some idea of what Christianity means. I do not mean by this to defend slavery. It was a curse to all concerned; greater, perhaps, to the Southern white man than to the Negro himself. But perhaps we do not give enough credit to the Southern white people for the religious work which they carried on during the slavery period, and the results which they accomplished.

"This work, however, emphasized the abstract side of religion rather than its concrete applications. All were agreed, as all are agreed now, that the Negro's soul ought to be treated properly so far as the next world was concerned, but the sentiment was not so strong as regards his body in this world. This was only one evidence of a disposition not wholly lacking in some pulpits of the present day, to dwell upon the things of the next world rather than the things of this one; a tendency to divorce religion from the practical things of life. And the greatest problem which we have to contend with among the Southern Negroes to-day is to make the professions of their religion correspond to their practice in every-day life."

The speaker also described the Bible training of the Tuskegee Institute, which is combined with regular industrial training and aims to give those wishing to enter the ministry the proper qualifications. At present the colored churches are unable to support a pastor unless he does something to help himself, so that a knowledge of farming or some other occupation is exceedingly necessary. Another factor which is helping to work out the problem is the work of the white Southern churches, many of which are making earnest efforts to do work of a nature similar to that of Tuskegee.

An exchange says that 'English Wesleyans are setting about revising their hymnal, and, as an aid to the editors, the Methodist Times has polled the Wesleyan constituency, after a fashion, by a prize competition in which about four hundred and fifty persons participated by voting for their favorite hymn. Editorial comment on the contest states that 'the rage for hymns of the Moody and Sankey type has evaporated,' judging by the plebiscite returns. The ten hymns gaining the most votes were, first, 'All hail the power of Jesus' name,' and then followed in the order named: 'Jesus, lover of my soul,' 'Oh, for a thousand tongues to sing,' 'Rock of Ages, cleft for me,' 'Holy, holy, holy, Lord God Almighty,' 'Abide with me, fast falls the eventide,' 'Nearer, my God, to thee,' 'Sun of my soul, thou Saviour dear,' 'Come, ye that love the Lord,' and 'When I survey the wondrous cross.' The task of analyzing the returns has not been an easy one, as the editors of the Times confess, but it has had its humors, and thus its compensations. For instance, most of the women competitors included 'Bid me of men beware,' but balanced their lack of faith in men by including 'Two are better far than one,' and 'The voice that breathed o'er Eden.'"

The Presbyterian Journal is about as wide-awake and up-to-date a church paper as any denomination can boast. Some of its editorial comment has a freshness and snap that speaks well for the future of the Church that supports it. In a long editorial on "Infant Damnation," it says its say in such a way that he who runs may read and not mistake the meaning. The editor proposes to do away with infant damnation, which he says "is worse than heresy; it is blasphemy, and to retain its suggestion in the Confession is a slander upon God," and he would do away

with it without any jugglery with words. He says: "It is an easy thing to tell the truth, but quibbling demands genius." He does not want any sophistries, and concludes: "Let those who believe that the Bible teaches or that God is capable of consigning children to the flames of everlasting torture go where they belong. We do not know where this may be, but any old 'multifarious and heterogeneous' place will do."—*The Universalist Leader*.

Referring to non-attendance of men at Church, *The Christian Advocate* editorially says: "When one considers the obligations of Church membership it is not strange that many men hesitate, and even positively refuse to bind themselves by them. Membership in the Church of God stands for honesty in business, purity in private life, charity for one's neighbors, consecration to noble endeavor, and a desire to honor God and exalt His Son by a constant determination to reproduce the life of the Saviour in one's own life. If a man has no sympathy with a holy life and no hungering after personal righteousness, he is not likely to be found in church, either as a member or a worshiper. The presence of the church edifice is an affront to him, and to meet a minister or to hear one preach is extremely distasteful, simply because his conscience may be agitated unpleasantly, and he greatly prefers a quiescent conscience. To such a man the Church is a fraudulent institution, the minister an impostor, and Church members are deluded or dishonest persons who are to be held as not above suspicion."

From an editorial in *The Christian Advocate* (New York) we quote: "Much of the vital preciousness of religion arises from the personal relationship existing between the heavenly Father and His earthly children. It is this that gives zest to life, and courage and hope. It is this that makes it possible for men and women to endure with patience conditions of life that otherwise would make human existence undesirable and stale, and that enables them to achieve the most marvelous things in every field of human activity where the good of mankind and the glory of God are concerned. Take from the burdened hearts of men this profound and satisfying confidence in the overruling interest of the divine Father in the individual affairs of His children, and a condition of spiritual desolation will result."

The Congregationalist says: "We all like to be courteous and kindly to our friends, some of us put on a special varnish of obsequious good manners with those whom we feel to be above us, and others take special pains to be kindly toward those whom in our hearts we call inferiors. But—next, perhaps, to the familiarity of the home circle—the real test of gentleness is found in the casual greetings of every day with those whom we have never seen before and may never see again. The gentle man or woman is not obliged to be thinking always of his own dignity, for that is not a veneer or a polish, but an inherent quality."

The Rev. George H. Dole, in an article in the *New-Church Messenger*, says: "We understand by the Holy City descending from God out of heaven a new state of mankind upon earth, spiritually intelligent and holy in living, wherein the Lord draws close and gives happiness to them on earth like the blessedness of the kingdom above. We understand the descent of the Holy City to mean that the spirit of society in heaven will descend and clothe itself with society on earth, so making the earth the similitude of heaven; for we are not taught in vain to pray, 'Thy kingdom come. Thy will be done in earth as it is in heaven.'"

President W. W. Harper, in a recent address at Chicago on "The Religion of the Future," said: "It will be simple. It must be reasonable. It must stand the test of investigation. It must make no false and pretentious claims. It must be a religion of toleration. It must be characterized by

idealism, or the artistic soul cannot endure it. It must be ethical. It must also be a religion capable of furnishing comfort in time of trouble, for this is what art and science cannot do, and this, after all, is the greatest demand of the human soul. The religion of Jesus answers all these tests."

Coleridge said: "He who begins by loving Christianity better than truth, very soon proceeds to love his own Church or sect better than Christianity, and ends in loving himself better than all."

When it becomes known that Christianity and Truth are one there is no further difficulty. Truth may be entirely apart from creed, but never from Christ or Christianity.

The Universalist Leader editorially says: "The heart of the matter is the human heart; make that right and things will be made right, and never till then. There are those who say the heart can never be made right until conditions are improved, but it is yet to be shown that righteousness is more the fruit of prosperity than of poverty."

This is the fulness and perfection of knowing God, so to know him that he himself becomes our delight; so to know him that praise is sweetest, and fullest, and freshest, and gladdest when we sing of him. He who has learned this blessed secret carries the golden key of heaven—nay, he hath fetched heaven down to earth, and need not envy the angels now.—MARK GUY PEARSE.

RULES TO BE OBSERVED.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and Church notices should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or vice versa.

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

We especially request our contributors to write plainly, and only on one side of the paper.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS.

A book of 471 pages, contain- ing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.	
Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4 1/2 x 6 1/2 inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.	
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.	

CHRIST AND CHRISTIAN.

An illustrated poem, Single book, prepaid	\$3.00
Twelve or more books to one address, each, prepaid . .	2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science: its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Price by mail, \$1.00; \$5.00 half dozen; \$0.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science: containing Dedictory Sermon delivered at the Mother Church, and Scintillations from the press on that occasion: 132 pages. Price by mail, \$1.00; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL: 86 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers: 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science: 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston: 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston: 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum: One Dollar for six months: Single Copies, Twenty Cents: Foreign Subscriptions, \$2.50 per annum: \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents: Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents: Fifty copies or more to one address, postage paid, each, 10 1/2 cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A: for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1: six copies to one address, \$6: twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$13: per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$16: per half dozen, \$7.50. Full Morocco, \$1.50 each. Levant, \$3.00 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50: Six copies, \$7.00: Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

The new battleship Maine was launched at Philadelphia July 27. The State of Maine was officially represented by Governor Hill and his staff. To Miss Mary Preble Anderson of Portland, Me., was given the honor of christening the ship. The construction of the Maine was authorized by Congress May 4, 1898. The keel was laid April 22, 1899, and she is now 58 per cent finished. The contract price of hull and machinery is \$2,899,000. Her length on the load water line, 388 feet; extreme breadth, 72 feet 2½ inches. At a mean depth of 23½ feet the displacement is 12,230 tons. She will mount the most powerful battery ever placed on a battleship in this country, if not in the world. Her complement is 35 officers and 511 men.

A movement has been started in Washington, D.C., which, it is hoped, will finally result in changing the date of the inauguration of the President of the United States. The commissioners of the District of Columbia have been requested by the inaugural committee to appoint a committee, national in character, to give the matter careful consideration and take such steps as may be necessary to bring the question before Congress in such a manner as will result in making the desired change.

Rear Admiral Schley has asked Secretary Long to appoint a court of inquiry to determine the facts in regard to his course in the Santiago campaign. The request has been granted and the court will meet at the Navy Department, in open session, September 12. Admiral Dewey will act as president of the court. The other members will be Rear Admirals Lewis A. Kimberly and Andrew E. K. Benham. Commander John E. Pillsbury will act as judge advocate.

The registration of persons seeking homes in the Kiowa-Comanche reservation was closed at six o'clock Saturday afternoon, July 27. The drawing began at nine o'clock the following Monday morning and was in charge of three men appointed by the Washington land office. The total number of registrations was 16,000, while the number of claims was only thirteen thousand.

A proclamation establishing free trade between the United States and Porto Rico, and declaring the organization of a civil government for the island, was issued by President McKinley July 25.

Lieutenant Borah, who was sent to Siberia to purchase a fleet for use in Alaska, has purchased five hundred deer at \$6.50 each. He hopes to reach Port Clarence with them by the last of August.

The new tariff law for the Philippines

provides for an especially low duty upon all distinctively American products.

On the 22d inst. the Chinese indemnity question was settled on a basis which was approved by this country. The final agreement reached by the envoys of the Powers and the representatives of the Chinese Government provides for the payment of 450,000,000 taels in bonds, to be distributed ratably among the Powers, bearing interest at four per cent for forty years. China will pay 23,000,000 taels a year, 18,000,000 for interest and 5,000,000 for sinking fund.

A bill was introduced in the House of Lords on July 26, by Lord Salisbury, authorizing King Edward to assume by proclamation within six months of the adoption of the bill, such title as he may think fitly recognizes his dominion beyond the seas. The title will probably be: Edward VII., by the Grace of God, of the United Kingdom of Great Britain and Ireland, of British Dominions beyond the Sea, King; Defender of the Faith, and Emperor of India."

Baron Iwasaki has purchased the library of the late Professor Max Muller and will present it to the University of Tokio. The library is composed of thirteen thousand volumes.

The Pope recently entertained eight guests at luncheon in the Vatican. Although he has occupied the chair of St. Peter for twenty-three years, he has never before entertained any one at his table.

Elaborate preparations are being made for the reception of Count von Waldersee from China on August 10.

China has informed Russia that Manchuria must be restored.

According to the annual report of Charles E. Saylor, special agent of the United States Department of Agriculture, Minnesota is the leading Northwestern State in the beet sugar industry. Last year nineteen hundred acres of beets were harvested. These produced an average of ten tons per acre. All the beets grown in this section, including the Dakotas and Iowa and western Wisconsin, were marketed at the factory of the Minnesota Sugar Company at St. Louis Park, a suburb of Minneapolis.

According to the report of the Interstate Commerce Commission there are fifty-two railroads in the hands of receivers. Sixteen went into receiverships during the year ending June 30, 1901, and thirty-five were taken out of receivers' hands.

The different locomotive works in the United States are now building one hundred and sixty new locomotives for the New York Central. This is the largest number of locomotives ever ordered by any railroad company in one year.

During the first six months of 1901 the value of Cuban exports amounted to \$34,100,000, and the imports amounted to \$42,707,144, a balance of \$8,607,144 in favor of Cuba.

General.

The Submarine Signal Company has obtained a special permit from the United States Government to erect a cable house on Egg Rock. The company proposes to establish a system of submarine signalling, which vessels entering Boston harbor determine their exact location when within ten miles of the shore.

The system is the invention of Arthur Mundy of Boston, electrician, and was perfected by Professor Elisha Gray of the phone fame. The first public test was made off Nahant and Winthrop, December 1900. The system is one of signalling over the sea without wires. Bells are submerged ten or twelve miles apart, and operate electrically from the shore. Power is furnished by a small dynamo driven by a gasoline engine, located in the cable house, the current being transmitted to the bells by cables.

The bells are suspended from buoys and can be heard a distance of twelve or more miles. To hear the signals the vessels are fitted with receivers, or sound collectors, attached to their sides.

If the system is extended the bells of each ring a different number, and their positions will be charted, so that navigators can pick out their position on the chart to within a ship's length.

According to an article in the May number of the *Forum* by Mr. E. I. Antrim, there are in the United States to-day eight thousand public libraries containing nearly fifty million books, as against six hundred libraries and two million books fifty years ago. There are now library commissions in several states, traveling libraries in forty-two states, and three library schools with courses of study ranging from one to three years for which more than five hundred students have graduated. There are now in the United States libraries that contain more books than did all the libraries of the country fifty years ago.

A call has been issued for a national convention of negro bankers at Buffalo for September 26 to 28. This will be the first meeting of the kind ever held in this country. There are seven banks in the country owned and occupied by negroes. The first Colored Bank North is the name of a bank which will begin business this month in Philadelphia.

When Oklahoma was organized as a territory there were about twenty-five million acres of land within the boundaries established. Over seven million acres were reserved from settlement for Indians and other purposes. In ten years twelve million acres have been filed on by seventy thousand homesteaders.

The earliest instance of the use of arbitration in labor disputes was in England, 1808. The order was practically created by the English Court of Appeals in a 1842 decision. About the first labor arbitration case in the United States was in Massachusetts in 1888.

The jury of awards for fine arts at the Pan-American Exposition says that the exhibit of fine arts at the Exposition is the most complete and representative collection of American art ever got together.

Shamrock II., challenger for the America cup, left Gourock, Scotland, on Sunday morning, July 27. She was accompanied by the steam yacht Erin.

Charles Cecil Fennell, a Canadian, recently made the trip around the world sixty days, thirteen hours and thirty minutes.

Captain Howard Blythe sailed for Gloucester, Mass., to live in a new five-story sleep. The passage occupied thirty-eight days.

The twenty-fourth annual convention of the American Bar Association will be held in Denver August 21-23.

"What I Say Unto You, I Say Unto All, WATCH." Jesus.

New Revision of Bible Finished by Commission.

AFTER nearly six years of painstaking labor a committee of Bible scholars, consisting of five bishops and five priests of the Protestant Episcopal Church, has completed what is practically a new revision of the Holy Scriptures. This committee is known as the Joint Commission on Marginal Readings in the Bible, and was appointed at the General Convention of the Protestant Episcopal Church in 1895, with instructions to report to the General Convention of 1898. It did so, but limited its recommendations to the books of the New Testament. A resolution to continue the commission was adopted by the House of Bishops and the House of Deputies in the Convention of 1898, in order that it might prepare a more complete report for the consideration of the Convention of 1901, which meets in San Francisco in October.

The commission consists of Bishops Dudley of Kentucky, chairman; Gailor of Tennessee; Hall of Vermont; Niles of New Hampshire; Whitehead of Pittsburg, and the Rev. Messrs. Carey, Binney, Body, Packard, and Waterman. The commission has completed its report, and yesterday sent copies of it—a printed pamphlet of upward of three hundred pages—to the bishops of the country and to the clerical and lay delegates to the House of Deputies.

What the commission has accomplished, its purposes, etc., are thus described in its formal report:—

"The commission of bishops and presbyters appointed by the General Convention of 1895, and reappointed in 1898, to consider and report 'what, if any, marginal readings for the English version of the Old and New Testaments the General Convention may authorize for the instruction of our people,' respectfully reports that it has performed the duty assigned it, and offers herewith such marginal readings as in its judgment it would be well for the General Convention to authorize for permissive use in the public reading of the Scriptures, that the people may have larger and more accurate knowledge of the Word of God.

"The commission believes that this work, which it has done by order of the Church in convention assembled, was worth the doing. It knows that it has been done most carefully, and at the expense of much time and much labor on the part of the Commissioners."

In a footnote it is explained that five sessions of the commission have been held with sixty-five days of common work in considering suggestions prepared beforehand. The suggestions of the members to whom different books of Holy Scripture were assigned were circulated in advance among the members of the commission.

Continuing, the report says:—

"The element of Scriptural instruction forms a large, almost the whole of the variable, part of our daily offices. The object of the commission has been to give an intelligible meaning to every part of the Bible. This, it is believed, will be clear on a careful examination of the proposed

marginal readings. Even in quite minor corrections the element of instruction has been the primary thought.

"It is hoped that this work may aid in encouraging regular private study of God's Word, as well as in promoting edification in the public services. The Church will have a Bible which, on the one hand, retains the version around which the loving regard of the people so largely centres, and which, at the same time, contains all such alterations in the rendering of the text as are necessary for its intelligent use.

"There is a class of passages in Scripture which, owing to changes in taste and feeling, need some paraphrase to give the meaning of the passage without suggesting to the modern reader associations of a distasteful or distracting character."

The report then instances the Greek expression "bowels of mercies" (Philippians, 2 : 1) as serving as an illustration of such expressions as are referred to.

It then goes on:—

"With regard to textual questions, in the books of the Old Testament a certain number of renderings have been introduced, for the most part having the support of ancient versions, in cases where a different reading appeared to give needed help for the understanding of an otherwise obscure passage. These are distinguished from merely alternative renderings of the present text by the word 'or' preceding them.

"In regard to various readings in the Greek Testament the commission has been careful to avoid committing the Church to the acceptance of any particular view of disputed matters of textual criticism.

"The commission has not thought it necessary to mark in any way passages like that relative to the woman taken in adultery (St. John, 8 : 1-11), or of the last verses of St. Mark's Gospel (16 : 9-20), where the genuineness and canonical character of the passages are quite independent of the questions which have been raised as to the exact place in the Gospel narrative of the first passage, or as to the precise literary history of the second.

"With regard to only three passages in the New Testament has the commission felt called upon to make any critical note. In these instances the commission has simply stated the fact, now universally recognized, that the passages in question are not found in some of the earliest manuscripts. These passages are the verse explaining the healing virtue of the pool at Bethesda (St. John, 5 : 4), the Ethiopian eunuch's profession of faith before his baptism (Acts, 8 : 37), and the doxology at the end of the Lord's Prayer (St. Matthew, 6 : 13).

"St. John, 5 : 7, 8, is given in the commission's margin without the clause as to the three heavenly witnesses, which clause is absent from all but the latest Greek manuscripts, and is generally recognized to be no part of the original text.

"As in the Old Testament, renderings based on various

readings of the Greek have been introduced where the authority for the reading, together with its intrinsic importance, seemed to require it. The merely alternative character of any such reading has been noted, as in the Old Testament, by a preceding 'or.' The great mass of variant readings has been passed by as immaterial to the general purpose of our work.

"In some cases it is impossible to decide with anything like general consent which is the better of two interpretations, both of which are supported by considerable authority. In such passages it is clearly of importance that the Church should have both possible interpretations of the inspired writer's words before it, one in the text and the other in the margin.

"It should be remembered that the principle of marginal readings was distinctly sanctioned by the version of 1611 (as by earlier English versions), in which a considerable number of alternative translations were deliberately placed in the margin, and not a few translations based on variations from the received Greek text.

"The revision and enlargement of these marginal readings, with the aid of the fuller opportunities granted in our day, has certain advantages (already referred to) over the adoption of an entirely new version (as that of 1881), not only in preserving the familiar words and phrases hallowed by long association, but also in that it does not commit the Church prematurely to a decision on critical or linguistic questions, which must for their satisfactory solution require longer time and wider research.

"It has been the object of the commission to sift out of the very large number of alterations made in the familiar English text by the Revised Edition those which are really important to make clear the sense of Holy Scripture. In many cases renderings preferable to those in its text are found in the margin of the Revised Version. Of these, and of the renderings preferred by the American revision company, the commission has made use with a view to the best presentation of the English Bible to the people of our time and country. The American revisers often suggest words and phrases better adapted to our needs than those of the English translators of 1611 or 1881.

"With regard to their purpose, the present Commissioners would re-echo the declaration of the translators of 1611:—

"'We never thought that we should need to make a new translation nor yet to make of a bad one a good one, . . . but to make a good one better, or out of many good ones one principal good one, not justly to be excepted against. That hath been our endeavor, that our work.'

"The work done by the commission, it may be said, has the approval of all its members so long as they have been able to serve upon it, and the report and recommendations now offered are signed on behalf of all the present members of the commission. They are all agreed in cordially recommending the suggestions here made for the approval of the General Convention as alternatives which should be thus authoritatively placed before the Church 'for the instruction of our people,' and as having all of them a rightful claim to such a position. There must, of course, be different estimates of the importance of particular suggestions on the part of individual Commissioners, as on the part of the readers for whose discretionary use they are provided.

"It will be seen that the recommendations on the New Testament presented in the General Convention of 1898 have been considerably modified, chiefly in the way of diminishing the number of alternative renderings. This

was done in deference to what seemed to be the general opinion of the Church. We have also, as requested, marked those suggestions for which the commission is more directly responsible, as not being derived either from the margin of the King James version (1611), from the text or margin of the Revised Version (1881), or from the readings and renderings preferred by the American Committee 'printed as an appendix to the Revised Version.' It has been found impossible, without an immense amount of additional labor, to mark throughout the exact authority on which these suggestions of the commission rest or the sources from which they are in all cases derived.

"The commission has received an offer from the King's printers in England to print, at their own cost, two editions of the Bible containing the proposed marginal readings (if these shall be adopted), one edition for use at the lectern and a smaller one for private use, if they shall be authorized to do this.

"In conclusion, the commission would call attention to the fact that by the authorization of such marginal readings as are proposed no one will be obliged to use them if he shall prefer the words of the existing version, while to refuse such authority is to wound the conscience of many who are persuaded of the inaccuracy in certain places of the King James version, inasmuch as they are in such places compelled to read to their people what is generally felt to be an inaccurate rendering of the words of the inspired writers.

"The commission therefore respectfully recommends the adoption of the following resolution by each house of the General Convention:—

"Resolved, That the marginal readings for the English version of the Old and New Testaments reported to this house by the joint commission appointed in 1895 and re-appointed in 1898 to make such report be published under the direction of said commission, and are hereby authorized for use by the ministers of this Church in the public service of the Church."

Then follow the revisions of the commission, which cover every book in the Old and New Testaments. The volume closes with certain specimen books of the Old and New Testaments with the alternative renderings proposed printed as they might be printed if the General Convention should authorize the recommendations of the commission. These complete books were printed through the generosity of a layman.

The following passages are noted in the new revision of the Scriptures by the Joint Commission on Marginal Readings in the Bible of the Protestant Episcopal Church as not being found in the earliest manuscripts.

"For an angel went down at a certain season into the pool and troubled the water. Whosoever then first after the troubling of the water stepped in was made whole of whatsoever disease he had" (John, 5 : 4).

"And Philip said, If thou believest with all thy heart, thou mayest. And he answered and said, I believe that Jesus Christ is the Son of God" (Acts, 8 : 37).

"For thine is the kingdom, the power and the glory forever. Amen" (Matthew, 6 : 13).

New York Herald.

Three Great Cathedrals.

THE three great capitals of the world are building monster cathedrals, and all three edifices are now well on the road toward completion. For each one it is claimed that it will be "the finest in the world."

London's new cathedral is to be at Westminster. For some years now it has been in course of erection, and the

scaffolding still surrounds portions of the mighty edifice. The cathedral is some three hundred and fifty feet long and about one hundred and sixty feet wide—in other words, as long as Chester cathedral and rather wider than Canterbury. The style of architecture is early Christian Byzantine, similar to that in which St. Sophia at Constantinople is built.

Although the shell of the building will first be completed, it will be some time before the finishing touches to the edifice are made. The interior of the cathedral when complete will deserve the adjective "magnificent." The walls of the nave will pictorially illustrate the history of the Roman Catholic Church in Britain from the earliest times down to the end of the nineteenth century.

The first site for the cathedral was purchased in 1868 by the late Cardinal Manning for £36,500, but after a time the site was exchanged for that on which the present structure stands, although another £20,000 had to be raised in addition. Together, when the foundation stone was laid in 1895, over £75,000 had been promised in subscriptions, but that figure was by no means sufficient.

It is estimated that the new cathedral at Paris—the Church of the Sacred Heart, to give the edifice its full title—by the time it is finished will have cost over a million pounds. It has been so long in building that it has been possible to raise this huge sum gradually, though a large proportion of it was given when the idea of its erection was first mooted. When France was defeated by Germany, there were many who averred that it was due to the sins of the nation, and it was suggested that a monster cathedral should be put up as a token to succeeding generations that the French nation repented of its sins. When the project was first mentioned, it made a stir in the world, but there are thousands of people living to-day who do not know that the new cathedral of Paris is in reality a gorgeous penance.

The cathedral at Paris is a trifle larger than that at Westminster, and the indications are that it will be more beautiful. But Paris has a start of twenty years, and by that time London may outstrip its rival. Many churches in this country have been built on the brick system. Children and adults are asked to pay three half-pence or two-pence for a brick each week, and by that means large sums have been raised. The same plan has been adopted in Paris for raising the funds for the Church of the Sacred Heart, only, of course, stones were necessary instead of bricks. Big subscribers have their names or their initials on the stone which they have subscribed for.

Uncle Sam is also building a cathedral at New York. The Episcopal Cathedral of St. John the Divine is not quite so complete as that of Paris, but it is quite as advanced as that at Westminster. The Americans believe it will be the finest in the world, as is only natural.

Eight mammoth monolithic pillars, the largest stones ever quarried, are to surround three sides of the altar in the cathedral. The stones have been taken from the quarry at Vinalhaven. Each stone is fifty-four feet six inches long, with an average diameter of six feet and a weight of more than one hundred tons. The total cost of the eight when finally in position will be over two hundred thousand dollars.

Only one structure in the world contains single stones surpassing or even remotely approaching these in size and cost. It is the Cathedral of St. Isaac at St. Petersburg, the facade of which is supported by monoliths of sixty feet in length and seven feet in diameter.

Some of the monuments and the windows in New York's edifice are to be very fine indeed. It will resemble in many respects the cathedrals of our own land while those at Paris and Westminster will be as different from them as it is possible to make them. The funds for the cathedral are also coming in well, for Americans are big givers.

London Telegraph.

A Fine Stamp Collection.

THE exhibit made by the Postoffice Department at the Pan-American Exposition abounds with interest for all classes of visitors to the big show. The display is much more complete than any the department has ever before made, not excepting that at the World's Fair at Chicago. In this exhibit is a collection of all the postage stamps ever issued by the government. This collection is valued at \$5,000, and it is the first time the government has made other than a partial exhibit of original stamps. There is also a very complete collection of confederate state stamps.

The most attractive part of the display is a collection of oil and water color landscapes through which the mail trains of the United States government pass, as well as marine views seen from the great ocean mail carrying steamships. This includes some of the finest scenery in the world.

The United States director of the post in Cuba and the directors in Porto Rico and Hawaii were desired to make a thorough collection of old stamps and the machinery for carrying the mails in these islands. The result is such a collection as was never before seen at any exposition on this or any other continent.

The equipment division of the Postoffice Department is represented by models of uniformed mail carriers of the United States and other countries, fully equipped with the insignia of the service of their respective governments. A model of the United States auxiliary cruiser, *Yale*, formerly the trans-Atlantic mail steamer *City of Paris*, and recently bought by this government, a model of the Mississippi mail steamer *St. Louis*; a model of the Florida River mail steamboat *Ocklawaha*; a model of the steamship *Southerner*, the first steam vessel to carry the mail across the ocean; a model of a United States postoffice car, completely furnished, one sixth the size of the regulation 60-foot car; two models of the ordinary mail cars; three models of German mail coaches and carts; an old western mail and passenger coach, in use for many years in carrying the mail between Helena and Bozeman in Montana, in which such distinguished passengers as Presidents Garfield and Arthur and General Sherman have traveled; a figure of an Indian mail carrier with toboggan, drawn by three dogs hitched tandem, typical of the service as it now exists in the snow-clad regions of the northern border states; a mounted mail rider; a large collection of United States and foreign mail bags and pouches; a collection of postmarking stamps and mail locks in use in this and other countries.

In the collection prepared to represent the dead letter division are articles which have been sent through the mails and forwarded to the dead letter office because illegibly addressed or prohibited by postal laws. In it are included explosive bombs, deadly weapons, tarantulas and rattlesnakes sent alive, and poisonous liquids and compounds. Other articles are letters written on collars, cuffs, and boards; children's toys, Indian scalps, skulls, stuffed birds, jewelry, etc.—*Selected.*

Why?

If the wren can cling
To a spray a-swing
In the mad May wind, and sing and sing
As if she'd burst for joy;

Why cannot I
Contented lie
In His quiet arms, beneath His sky,
Unmoved by Life's annoy?

Among the Churches.

Report of the Work at Exira, Iowa.

The Christian Scientists of Exira, Ia., have recently moved from a private residence to a nice large room in the Guernsey Building. The following sketch of the work was read at the first Sunday service in their new quarters.

The seed of Truth was first sown here some fifteen years ago, by the healing through Christian Science treatment of one of our local leaders, after having been given up to die by the doctors. After this positive proof that Christian Science is the Truth taught and practised by Jesus Christ, our present leaders took it up and lived it, and demonstrated it for themselves and others, until a number were sufficiently interested to organize an association (January 9, 1895) known as the Christian Science Dispensary Association of Exira.

Under this association regular meetings were held every Sunday morning and Wednesday evening for more than two years. For these meetings rooms were gratuitously furnished by Mr. and Mrs. J. G. Gates. Later a reading room was established and kept open to the public Tuesday and Friday afternoons.

May 15, 1897, First Church of Christ, Scientist, of Exira, Ia., was organized with ten charter members. Under this organization regular church services have been held. Since this organization four additional members have been received into the church.

Christian Science literature has been furnished the hotel, depot, poor farm, county jail, and Audubon and Exira libraries.

February 2, 1900, the Dispensary Association disorganized, donating all their books, property, and money, to the church for a reading room. The church immediately established a reading room, which has been kept open as usual, a member being appointed each week to take charge of the same.

In the spring of 1898 Mr. and Mrs. J. G. Gates presented the church with a deed to the corner lot just west of their residence for a church site. Soon after a building fund was started, which has increased very encouragingly, and consists entirely of free-will offerings.

In June, 1899, we secured the services of Edward A. Kimball of Chicago, an official lecturer of the Mother Church in Boston. Mr. Kimball delivered a lecture on Christian Science, in the K. P. Hall to a good audience, considering the inclement weather.

Up to the present time (with the exception of about six months while under the Dispensary Association), the meetings have been held at the residence of Mr. and Mrs. J. G. Gates. Our pleasant room, which is to be known as Christian Science Hall, has been nicely furnished by free-will offering, and we are, and always shall be, glad to welcome all to our services and reading room.

MRS. ELLA HENSLEY, *Clerk.*

The Work at Colfax, Wash.

I was not led to Christian Science for the physical healing so much as for comfort for the loss of a loved relative for which I had found no consolation. Through this blessed study I did find comfort, and many other dark places are becoming clear. I have had many proofs in my home of the power of Truth over the claims of error. One was the case of our little five-year-old girl, who had what the doctor pronounced tonsilitis. When her father returned with material remedies, which he deemed necessary, the child was up and well, through Christian Science treatment.

"Thou hast caused men to ride over our heads; we went

through fire and through water: but thou broughtest us out into a wealthy place," has been my experience. The unfolding of spiritual ideas is the inestimable wealth that these experiences bring to us when seeking the true light.

It is now ten years since the first of our little band of students began studying; to these two faithful, loyal women we owe much. They have earnestly, patiently toiled on through almost every form of discouragement, and now are beginning to receive their reward.

Last November we organized with six members, and purchased a building site. The following communion Sunday ten others united with the church. The last communion day four more were added. We now have our reading room open, and the literature on sale, and have contracted for, and work has begun on our church building. Truly, "If God be for us, who can be against us?"

Words cannot express my heartfelt gratitude to our beloved Leader for her untiring labors for the world. To me the thought of woman as last to leave the cross, first at the tomb of the risen Saviour, and first to proclaim to the world the power of Truth over all error, is one of great beauty.

Though not many in numbers here in Colfax, workers have gone from us across the seas, both east and west, and yet another earnest, loyal student is working in the British possessions on the north, while many others have gone to intermediate points.

I cannot close without an expression of thanks for our ever helpful literature, for it is through these and our Leader's writings that I am enabled to say

Blessed Bible, word of God,
Leading where the Master trod,
Freeing us from the false sense,
To Heaven-born peace, thou guid'st us hence.

MRS. FANNIE MCBRIDE STINSON, Colfax, Wash.

Reading Room at Stockton, Cal.

A year ago last spring, when the by-law as to the establishment of reading rooms was passed, had we, with our membership of twenty-two, none of whom are rich in this world's goods, listened to mortal mind, we should have thought we could not afford to furnish rooms and pay rent therefor. But knowing that Truth supplies all our needs, and realizing that the progress of the cause, so dear to us all, depends upon implicit obedience to the by-laws, we went to work. We engaged rooms centrally located and furnished them neatly and substantially. Our leader, whose offices adjoin the reading room, has ably superintended the work, wisely answering the questions of many inquirers.

Some who have made use of the books in these rooms during their spare hours have overcome the desire for strong drink, which had held them in bondage for years, and to-day rejoice in the consciousness that Love is all power.

We have always had funds sufficient to meet the requirements. We did not at once have the means to carry the books, our first sale being made July 9, 1900. Since then one hundred copies of Science and Health have been sold. The total receipts from all sales have been \$533.05.

MARGARET G. MEEHAN, *Secretary.*

Communion Service at Watertown, So. Dak.

Yesterday (June 9) communion services were held at First Church of Christ, Scientist, here. Ten were admitted to membership. Among the ten admitted was Rev. A. D. C. Mr. C. was the first Methodist minister in this city, and was the builder of the first Methodist Episcopal Church here. "Who is so great a God as our God!" Our society is growing both in numbers and demonstration of Christian Science. My heart is overflowing with love and gratitude for our Leader who has given us Christian Science.

JOHN D. CARLE, Watertown, S. D.

Christian Science in Business.

THOUSANDS of earnest, sincere, intelligent men and women are believers in Christian Science; other thousands, equally earnest, sincere, and intelligent, believe it is a fad, delusion, or craze. It is not our purpose to enter into a discussion of this question—one of those topics where one “convinced against his will is of the same opinion still”—but to refer to a statement made at a big meeting of believers in Boston last week—a meeting at which Christian Science sped “blithely into the fields of business.” At this meeting Mr. Shields of Warsaw, Ind., brought Christian Science into the field of competitive endeavor. He was modest enough to ascribe none of his success to personal good management. He had applied the Science to his clothing store. “Perhaps you don’t know what that means,” said the speaker. All Mr. Shields’ clerks had been instructed to call cotton, cotton, and wool, wool, and the clothing business has boomed ever since. His former advertising methods he characterized as “band wagon fashion.” These had been abandoned when he became converted to Christian Science, and now Mr. Shields pointed to the fact that he was advertising twenty-three firms besides his own, and negotiating with forty others.

That’s the kind of Christian Science we can all believe in. If that Science, which is simply the science of telling the truth at all times and under all conditions, obtained, there would be no need of laws to prevent false and misleading representation in the sale of goods, no necessity for attempting to enact laws to kill off the fake advertising methods now in vogue. Unfortunately, all do not practise this system—do not subscribe to this doctrine of absolute honesty; they prefer to prepare and publish announcements that are not Scientific and certainly are not Christian. May the tribe of those who “call cotton, cotton, and wool, wool,” increase until it shall fill the whole business world. It would make unnecessary pure food laws—it would hasten the coming of the trade millennium.

New England Grocer.

Christian Science Testimony.

CERTAINLY Christian Science is a good thing—for Christian Scientists. At the great testimonial meeting at Tremont Temple last night (Wednesday, June 26), many testified to what might well be termed miraculous cures of which they themselves were living testimony.

Many will no doubt refuse to accept this evidence from these people, and many Christians will prove to be doubting Thomases; indeed, they will very likely prove the most sceptical, as they have already shown themselves to be the most violently opposed to Christian Science.

Yet the Christian accepts the miracles recorded in the New Testament, indeed, much of the Christian’s faith is founded on this sort of testimony of the Divine authority. The Christian church has preserved evidences of many miracles since the time of Jesus, and millions of Christians believe in those records of supernatural power.

When, however, the Christian Scientist, by the simple application of the power vouchsafed to those who have perfect faith, that power by which mountains may be moved, heals the sick through divine means alone, we find many people arrayed against it.

The power of the Spirit; the supremacy of Mind; the importance of spiritual development; the mortification of the flesh, all these things are part of the Christian creed, and yet when we find them carried to extremes by the Christian Scientists, we find Christians who denounce the doctrines as false and iniquitous.

Why not accept the testimony of these good people as true, then? They are neither knaves nor imbeciles. To refuse this testimony is to suggest that there may have been many doubters when the miracles cherished by the Christian church were performed. Christians should be slow to condemn and repudiate such evidences of the power of Spirit.—*Lawrence Telegram.*

Notices.

Our Leader’s Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, is now ready for distribution. Leatherette covers, deckled edges; 50 pages. Price, 50 cents; per dozen, \$4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Photographic Views.

An artistic series of photographs has been produced of Pleasant View, Concord, N. H., the home of Rev. Mary Baker G. Eddy.

There are various views of the house and grounds, including one photograph made at the request of Mrs. Eddy.

Also several showing a large number of visitors on the grounds at the time of Mrs. Eddy’s appearance on the balcony of her residence on June 25, 1901.

Those interested may address the photographer, Mr. W. G. C. Kimball, Concord, N. H., who will gladly mail a list of the series to any address.

The Concord Church.

The Concord Church during the summer months holds its services at 10.30 A.M. Sunday and 7.30 P.M. Wednesday.

To Members Admitted June, 1901.

Will those who sent in applications for membership with the Mother Church for the admission last June, and who have not yet received notice of their admission please send their names and addresses to the Clerk, William B. Johnson, 30 Norway Street, Boston.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Sept. ’01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for October, November, and December.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Paper in the North American Review.

THE *North American Review* for August, 1901, contains a ten page article from the pen of Mr. W. D. McCrackan, member of the Christian Science Publishing Committee for New York, entitled, "The Simple Logic of Christian Science."

Mr. McCrackan ably and clearly meets and refutes the leading points made against Christian Science by Dr. J. M. Buckley in a paper written by him published in the *North American Review* for July. Many of the current misapprehensions relating to Christian Science are also corrected by Mr. McCrackan.

Inasmuch as this magazine is one of the able and standard monthly periodicals of the world, and, as we believe, this is the first paper representing the Christian Science side ever appearing in its columns, it will be read with unusual interest by many thousands of people outside, as well as inside, the Christian Science ranks.

All adherents and friends of the Christian Science movement will appreciate the significance of the fact that the *North American Review* has extended a friendly hand to the extent of giving so much space to a paper in advocacy of its tenets.

Hypercriticism.

A WRITER in *The Baptist Watchman* says, "There is a certain class of minds which would repudiate the New Testament revelation if it should turn out that the mustard-seed is not actually the least of all seeds."

There is a whole world of truth—human truth—in this statement. It well illustrates the hypercritical habit of not a few minds, especially those minds that have a large confidence in their own culture and intellectuality.

We have heard of persons, and know of others, upon whom able and helpful sermons have been utterly lost because the preacher mispronounced a single word. We know of other persons who have gone home from church disgusted and disgruntled because the minister did not pronounce some of his words after the latest fashion prescribed by some authorities, although there was respectable and even standard authority for the offensive pronunciation. Yet the hypercritic lost all that was good in the sermon because of his own hypercriticism.

This pedantic class of minds would sacrifice substance for form. It would rule out of its circle all who do not come up to its prescribed standard. It would ostracize the worthiest and most Christian spirit if that spirit fell short of the critic's literary attainments, was unfamiliar with its favorite authors, or failed of its conventional pronunciation.

Nay, more, this hypercritical spirit, carried its full length, would, if it could, rule out of the Kingdom of Heaven all who fell short of its standard, however pure and worthy their lives in the moral sense. This spirit would, if it could, have an intellectual heaven, a literary heaven, a heaven of culture peculiarly its own and after its own

conventionalities; and it would have this heaven universal and eternal.

This is precisely the spirit indicated by the writer in the *Watchman*. It would reject revelation because of a grammatical error, a literary slip, or a slight inaccuracy of statement. It would debar itself from the good because of its own peccadillo.

We know of persons—not Christian Scientists—who have gone away from a Christian Science testimony meeting in disgust because one of the testifiers did not give his testimony in strictly grammatical language; yet the person testifying told of wonderful healing, of the great spiritual help received, and gave, on the whole, one of the most touching and convincing experiences of the entire meeting. This was lost to the hypercritical hearer, even rejected by him, because of his own folly.

This spirit should become aware that it is but advertising its own littleness, its own lack of true culture.

We are led, in this connection, to wonder if all who are now disciples of Christian Science have overcome this mortal quality. From all we see and hear, we are forced to answer in the negative.

The spirit of hypercriticism and of supercilious pedantry is by no means as inconspicuous in our ranks as it should be. Doubtless it is being overcome in proportion as the awakening comes. May these words do their part in hastening the awakening, and aid in leading on to a more just criticism, a truer intellectuality, a broader charity, and a larger culture.

We wish, in conclusion, to say, that while we are always glad to hear heart and soul experiences clothed in good forms of expression, it is nevertheless true that some of the testimonies which have sunk most deeply into our consciousness came from those whom the hypercritics would rule out of their heaven for lack of conventional education. Notwithstanding the partial lack of approved form in this class of testimonies, the spirit of love was manifested in such rich abundance that the dear hearts who reflected it were worthy to associate with the best of earth.

Therefore, dear friends, let no one refrain from speaking the truth, and of Truth, because of any supposed educational lack. Let the heart speak, and the head will not suffer.

And, too, let Christian Scientists guard more and more carefully their pre-Scientific tendency to gauge things from the coldly intellectual, rather than the warmly spiritual, standpoint.

Christian Science Services in the White Mountains.

FROM the sprightly little paper called *Among the Clouds*, published at Mt. Washington, N. H., we publish the following account of services held and to be held in the beautiful little Christian Science Chapel near the White Mountain House in New Hampshire:—

The subject of the Lesson-Sermon at last Sunday morning's service of the First Church of Christ, Scientist, near the White Mountain House, was "Truth," the golden text being from Psalm 145 : 18, "The Lord is nigh unto all them that call upon him, to all that call upon him in truth." There are no personal preachers in Christian Science churches, the Lesson-Sermon consisting of correlated selections read from the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, elucidating the subject and developing its spiritual meaning in accordance with the teaching of Christian Science. These lessons are prepared by a Bible Lesson Committee connected with the Mother Church of the denomination, The First Church of Christ, Scientist, in Boston, and they are used by every Christian Science

Church in the world. The subjects are designated by Rev. Mary Baker G. Eddy of Concord, N. H., the Discoverer and Founder of Christian Science and Leader of the denomination.

The service Sunday was simple, interesting, and impressive. The church building, the only one of any denomination in this immediate vicinity, is very pretty and was much admired by the visitors. It was erected in 1898 by subscriptions of Christian Scientists who visited the mountains.

Those who took part in the services were: Mrs. Emile Rounsevel, First Reader; Mrs. Martha Jackman, Lisbon, N. H., Second Reader; Mrs. L. O. Burckett, Brooklyn, N. Y., soloist; Miss Hattie Robbins, Boston, Mass., accompanist.

Services will be held regularly in this church during the season, at 10.45 A.M. Sundays, and to-morrow (Wednesday) evening at eight o'clock a testimonial and experience meeting will be held, to which services all are cordially invited.

Rev. John Snyder and Christian Science.

UNDER the above heading the *Christian Register* of July 18, 1901, publishes a reply by Mr. Alfred Farlow to a criticism on Christian Science by Rev. John Snyder.

The *Christian Register* makes the following editorial comment in connection with Mr. Farlow's article:—

Mr. Alfred Farlow we understand to be the accredited literary representative of Christian Science and Mrs. Eddy. Having printed a lengthy criticism by Rev. John Snyder and a more moderate one by Mrs. Woolley, we allow Mr. Farlow this week the right, which he claims, to make reply. No one supposes that these three articles will contain all that might be said on all sides of the questions raised, but they contain quite enough to satisfy the editorial sense of due proportion in the presentation of thought on this subject. We do not, therefore, regard the subject as now open for discussion in the *Register*, but rather closed by Mr. Farlow's rejoinder. Private experience is instructive; and from it we learn that question and answer, argument and rejoinder, assertion and denial on this subject, may go on endlessly, with little convincing power on either side. The truth seems to us to be that this is a clear case of natural selection. Christian Science claims its own, and selects them out of any community as promptly and as surely as the magnet separates the iron filings from sand. Those who are elected to Christian Science take to its literature with alacrity, while the non-elected are repelled by it.

Mr. Farlow's reply is as follows:—

In your issue of June 20 you published a criticism on Christian Science by Rev. John Snyder. If our clergymen would enter into a consideration of the deep spiritual meaning of this Science, and make investigation of its actual effects upon the sick and sinful, and refrain from writing and speaking of it while having only a superficial knowledge of it and never having healed a patient to prove even to themselves that they understand it, I am sure that the criticisms which they offer so liberally would be withheld. In many years' experience as a Christian Scientist, I have never yet seen or heard an adverse criticism of this faith which contained a correct statement of it.

That one who utterly misunderstands this Science should believe and repeat the aged falsehood that Mrs. Eddy borrowed her ideas from Mr. Quimby is not strange. If Mr. Snyder had a definite understanding of this Science, he would recognize at once that there is nothing in harmony between that which is represented as the teaching of Mr. Quimby and that of Mrs. Eddy. Indeed, there is nothing outside the Bible in ancient or modern philosophy

which is in any degree akin to Christian Science. If Mrs. Eddy borrowed her ideas from other authors, what did she do with them, since they do not appear anywhere in her writings? Mr. Snyder asserts that Christian Science is pantheism, and yet no theory taught is so far from it. Pantheism teaches that the sum-total of the universe, or creation, constitutes God; while Science teaches that the creation is the product, the manifestation, or expression of God, inseparable from Him and yet not identical with Him, one with God in the sense in which Jesus used that term in the text, "That they may be one, even as we are one."

Man is, indeed, the likeness of the one infinite God; but he is not in any sense a part of God. We agree that "it is as strange to account for the illusion of disease as to account for the disease itself," and upon this basis Science declares the absolute Allness of God and the nonentity of disease. If God be to us infinitely great, disease and sin must become to us infinitesimal; and yet these seeming evils must be recognized in all their claims to insidiousness and fatality, and be dealt with accordingly, until the time of their danger is passed. A lie has all the appearance of truth and all the effect of reality, if believed; and it takes its place as a lie and returns to its native nothingness only as it is found out and is no longer allowed to have power or influence. The mere fact that discord, error, sin, and disease can be overcome by divine power alone is convincing that, whatever these may be in the sight of mortals, they weigh nothing in the sight of God. We do not claim that darkness is an entity. It is not something, but the want of something,—the want of light. So discord should be understood as the lack of harmony, evil the absence of good, sickness the want of health. And health is the consciousness of the divine power and presence which overrules and destroys the human consciousness of the reality and power of disease, while the body responds accordingly. Christian Scientists do not, as our critic assumes, "imagine a multitude of inferior deities with power to create evil," but are consistent with their text that God is the only creator, and that He did not create evil; hence evil never was created, and never began to be, never became a reality. The statement that there is no matter is no more a contradiction of sense testimony than that of our Master who declared, "It is the spirit that quickeneth, the flesh profiteth nothing."

But this abstract statement needs the explanations which are given in the body of the Christian Science text-book, in order to be understood. Science does not teach that the creation is unreal, but that our imperfect human concept of it is false. In our present unspiritual condition we have more or less an erroneous concept of all things. This perception will improve as we grow spiritually, until finally we shall awake in His likeness. Then shall we see as God sees,—heaven and earth in all their beauty, perfection, and spirituality,—and the material sense of heaven and earth will have passed away. Mr. Snyder declares: "For the consistent Christian Scientist all the laws of the universe are cancelled." I might say that to the consistent Christian all material laws are cancelled, since it is un-Christian to give power to aught except God, Spirit; and yet what Christian man or woman in his practice is consistent with the exalted demand of Christianity? And I venture the assertion that, in their theory, Christian Scientists are no further in advance of their practice than are Christians of other denominations. A child is not expected to do the work of a man. The imperfect man cannot accomplish that which is possible only to the perfect. I deny without hesitancy that Mrs. Eddy or any other Christian Scientist offered to let a man sever a jugular vein, in order to prove ability to heal the wound in his presence. An act of this kind would be an indulgence of the claim of physical power. It would be incurring unnecessary risk and labor, and would be a complete departure from the

practice of this Science. Christian Scientists are not boasting of what they are able to do through the power of God. They claim no more for themselves than they claim for others. It is the teaching of this faith that all mankind should be safe and secure under divine protection. We have enough troubles which come uninvited, and no need of going after them. Besides, "God is not mocked: for whatsoever a man soweth, that shall he also reap." If it was wrong for our Master to cast himself down in order to prove to the devil his power over material conditions, it would certainly be wrong for his disciples to do this. Our critic declares it is idle to talk of becoming like God; and yet we are told that man was made in the image and likeness of God, and that he should attain this primitive estate. David said, "I shall be satisfied, when I awake, with thy likeness."

Mr. Snyder refers to the old Egyptian theory, calling our attention to the outcome of said theory,—a lapse into pantheism, and, finally, the lack of distinction between right and wrong,—and then insinuates that such will be the outcome of Christian Science. His comparison is no comparison, since Christian Science has for its basis the infinite ~~God from which emanates all truth and righteousness,~~ that which leads to infinite progress. He might as well have said, because a false premise leads to a bad conclusion, a good premise will do the same. In answer to the question, "Who shall say that certain instincts are godlike and certain others are not?" I would say, This will be determined largely from experience. One's peculiar sense of right must be the standard by which he measures that which is presented to him; and if, perchance, he errs in his judgment, experience will thus be convincing that he is wrong, and that which we have failed to learn through Science will be found out through experience. Mr. Snyder declared, "A Scientist lawyer said to me, 'One good thing this belief will do: it will destroy the idea of sin.'" Even though this statement may be correct, it is too abstract to convey any idea of the Christian Science method of destroying evil. While Christian Scientists may differ from others in their understanding of the nature of evil, yet they know and teach that the sinner is making wickedness real by his indulgence of it; and he will never be rid of it, nor of its just penalty, until he ceases sinning.

Our critic is wrong in his assumption that Christian Science teaches contempt for the body according to the teachings of Oriental philosophy. The teaching of this school is that the body should be governed and controlled by divine will according to the teachings of the Master: Take no thought for the body, what ye shall eat or what ye shall drink, or wherewithal ye shall be clothed; but "seek ye first the kingdom of God, and his righteousness, and all these things shall be added unto you." It is not the body that is wrong, but the erroneous conception and abuse thereof; and this must cease. It is not strange that Pundita Ramabai, with narrower opportunities for enlightenment than the people of our own country, should misunderstand Christian Science, and think it identical with Hindu teachings, since many of the clergymen of our land, with broader opportunities, have likewise mistaken this Science. The logical outcome of this faith is exactly the opposite of that which is described as the outcome of Hinduism.

Mr. Snyder insinuates that no one can be cured through Christian Science without money, and refers to the Christian Science text-book as held at a "price which must nearly equal ten times the cost of its production." It is very strange to me that any clergyman should venture to make such reckless statements. I have never heard of an applicant who has been turned away from a Christian Scientist because he did not have money to pay the regular fee. Neither have I ever known an instance where one who desired to read the Christian Science text-book did not

have that privilege. A very large portion of the time of Christian Scientists is given to gratuitous service, and no one has ever been turned away. I know of institutions among Christian Scientists which have been made expressly to reach the poor. I have known many instances where the poverty-stricken have been lifted out of their poverty as well as from beds of sickness into health through the help of Christian Scientists. We will admit that the Christian Science text-book is sold at a fair profit, but it is not higher priced than other text-books. There are copies of this book to be found in almost every city in the country where public libraries afford an opportunity of reading to those who are not able to buy the book. That the Christian Science periodicals are protected by a copyright does not, in any degree, vitiate the truth of Christian Science. Is it a matter to be complained of that the Founder of this Science is wise, exact, and careful in her business habits? Why should she not take precaution against any adulteration or interference with the cause which she has instituted? If the patrons of this movement are satisfied with its business management, a third party could be nothing more nor less than a meddler. Our critic asks, "Do Christian Scientists ever heal a disease which involves the change or waste of tissue?" Then he declares, "The answer may be safely in the negative." Be it as it may, multitudes of people have been healed who had been pronounced incurable because of "a change or waste of tissue." They acted, felt, and looked just like sick people, and were so pronounced by the medical schools; and they are well to-day under Christian Science.

Next our critic rectes the stock speculation that Christian Science heals by reason of the influence of human will over the body. Without commenting upon the stability and real efficacy of such results, we will admit that some people have been apparently cured because of their faith in various peculiarities and because of the supposed power of the human mind; but that there are many counterfeits does not affect the fact that there is one original, genuine method of curing without medicine, and we assert that Christian Science is the very opposite of the cruder forms of mental operation which depend entirely upon suggestion. This Science recognizes no other power besides the divine Mind, and every mental argument of the Christian Scientist is based upon his understanding that God is the only power. Such arguments must of necessity be good, and can only have good effects. To do evil necessitates a departure from Christian Science and a substitution of the human mind for the divine. The operations of Jesus must have been mental or spiritual, for they were not material; and yet he could not have been a hypnotist, for he said, "Not my will, but thine, be done," "It is not I, but the Father who doeth the works." So Christian Science does not heal by the exercise of human will, but by silencing human will with the divine. It is not claimed that patients are healed by mere perusal of Mrs. Eddy's book, but by the thought gained therefrom; and there are plenty of people to testify that they have been cured in this manner.

One might judge that our critic has no faith in God and does not believe in the possibility of results through prayer. His horrible fear that "Christian Science is throwing aside an accumulation of important knowledge" should be allayed with the understanding that Christian Scientists are not left comfortless. While they have departed from opinions outgrown, they have a better understanding in their place, even the "Spirit of Truth which shall guide into all truth." Our critic asks that Christian Science and its cures be carefully scrutinized by men whose competency is generally recognized. Jesus said, "We thank thee, O Father, Lord of heaven and earth, that thou hast hid these things from the wise and prudent and hast revealed them unto babes." Paul said, "Not many mighty

men after the flesh are called," also, "For God hath chosen the foolish things to confound the wise." One who is deeply engrossed in material knowledge may be for that very reason less capable of discerning spiritual truth, not because of his want of intelligence, but because he is not willing to set aside the testimony of the senses and accept that understanding which comes from God, and thereby "compare spiritual things with spiritual." Nothing pertaining to earth is of lasting benefit. The knowledge of the ages serves the purpose of stepping-stones leading up to the present; but, if wise, we will leave behind the things that are behind, and "run with patience the race that is set before us." Step by step the world had wended its way up to that point where there was one individual whose experience had been of such a character as to prepare her to perceive a correct knowledge of the nature and essence of the Creator and creation. We have no quarrel with our past imperfections. Nevertheless, it would be foolish to hold to time-honored beliefs simply as keepsakes, and thereby stunt our growth along the more modern scientific and spiritual lines.

As we look back upon the time when our ancestors reaped the fields with the sickle, we have no censure to offer, because they reaped as best they knew. Since we have the self-binder, shall we say, "Is it not too bad to throw away the accumulation of reap-hooks and resort to this modern machine?" No doubt many of the broad-minded ones who have passed away would have been the first to indorse Christian Science if they had remained until its discovery. I desire to state in unmistakable terms that it was not claimed by a leader of the New York city church, nor by any other Christian Scientist, that the inscription cut on a piece of marble had been removed by faith or prayer. Since this falsehood has been so often refuted in the press, we see no excuse for its reiteration on the part of this venturesome critic. True, an experience was related showing that, in spite of their ignorant attempt to do wrong, they were, after all, constrained to do right. It was not claimed that the lettering was changed on the corner-stone, but that it was rightly inscribed in the first place.

Some of the incredulous in the time of Jesus asked for a sign, notwithstanding multitudes of people had been healed as a proof of his messiahship. So, in these days, critics demand that investigation shall be made along the lines common to their peculiar notions as a proof of the efficacy of Christian Science, while there are hundreds of thousands of people, a very large per cent of whom have been pronounced incurable by eminent physicians, ready to testify to having been healed by this Science. To such critics we can only say, "There shall no sign be given them."

Whatever may be said of the spirituality or non-spirituality of Christian Science, one thing is certain, people of this faith do not repeat falsehoods about other denominations or their creeds. Mr. Snyder's effort to belittle the emphasis upon healing in the New Testament receives a strong rebuke in the fact that in not less than five hundred places in the New Testament references are made to healing the sick, and our Master laid special stress upon healing as well as preaching. He said: "These signs shall follow them that believe; In my name shall they cast out devils," etc.; "He that believeth, the works I do shall he do also;" "Preach the gospel, heal the sick." Christian Scientists do not lay special stress upon the physical healing. They respect the truth implied in the Master's words: "Go, and sin no more."

From a Unitarian Clergyman.

THE following letter from a Unitarian clergyman acknowledging the practical worth of Christian Science, was written in response to the above article.

Groveland, Mass., July 19, 1901.

Mr. Alfred Farlow, Boston.

My Dear Sir:—I am a Unitarian minister who reads the *Christian Register*, every week.

I wish to thank you with my whole heart for your rejoinder in this week's issue, to the Rev. John Snyder.

If I am a judge of fairness and ability in the defence of Christian Science, I owe to you to try to say in public, that you have made a well-nigh annihilating reply to Mr. Snyder's too superficial strictures.

We Unitarians are apt to boastfully claim to be the most enlightened and advanced of all Christian believers. We proclaim our understanding of the nature, and of the truth of the teachings and of the person of Jesus of Nazareth.

Christian Scientists experimentally know the meaning of all the contents of the New Testament accounts of the healing of Jesus; and their thought of the Allness of God in human health and righteousness seems to me to be unspeakably wise and blessed.

Let those in whom is the demonstration of the spirit of the life of God in the soul of man, receive appreciation only, at the hands of Unitarians. Some of us need the baptism from above sadly.

Most sincerely yours,

WILLIAM H. SAVARY.

Letter of Dismission.

THE FIRST BAPTIST CHURCH OF OWEGO, NEW YORK.

REV. R. A. VOSE, *Pastor*.

To First Church of Christ, Scientist, of Binghamton, N. Y. GREETING.

Dear Brethren:—This certifies that Clara B. Wheeler is a member in good standing with us, and at her own request is hereby granted this

LETTER OF DISMISSION,

for the purpose of uniting with you.

We commend our sister to your Christian and Church fellowship, praying that her union with you may prove a mutual blessing.

By order of the Church.

CHARLES HUMPHREY, *Church Clerk*.

Owego, N. Y., May 9, 1901.

A Word of Thanks.

Anamosa Prison, Ia.

Mr. John E. Playter.

Sir:—Please excuse the liberty I take in writing to you without express permission. I only want to thank you for the pleasure which I receive from your kindness, to one of my "brothers in distress."

The Sentinels which you send Mr. N., he sends to me, and I in turn pass them on. By this method the *Sentinel* is read by a majority of the inmates, and with pleasure. These little acts of kindness are to the prisoner what the oasis in the desert is to the weary pilgrim,—a refreshment, a new hope, courage. It is a reminder that fraternal love is not a stranger in our land.

Thanking you again for your kindness, I am,

Very truly yours,

A. E. R.

"Doubt of any sort cannot be removed except by Action." On which ground, too, let him who gropes painfully in darkness or uncertain light, and prays vehemently that the dawn may ripen into day, lay this other precept well to heart, which was to me of invaluable service: "Do the Duty which lies nearest thee," which thou knowest to be a Duty! Thy second Duty will already have become clearer.

THOMAS CARLYLE.

From Our Contributors.

Gratitude.

BY L. E. LITZSINGER.

WHEN the heart once enshrouded in darkness and gloom,
Has been filled with the sunshine of God,
Were it possible then to conceal the bright rays
As they scatter their radiance abroad?

Could the rose and the lily their fragrance withhold?
Can the stars hide their light as they shine?—
Ah, the cup that is full, even full to the brim,
Must o'erflow with the nectar divine.

Now the heart-bells of love are made vocal with praise,
And are chiming sweet gratitude's strain:
Sorrow's death-knell is rung, and the Earth sings with joy
As it echoes the gladsome refrain.

Can Christianity Heal?

NOTICE having come to First Church of Christ, Scientist, London, of an address on Christian Science, under the heading "Can Christianity heal?" about to be delivered by a clergyman of the Church of England, a few Christian Scientists went to hear what the reverend gentleman had to say.

As one of the party, who had the privilege and pleasure of hearing his very beautiful address, I have been requested to forward to you, with a view to publication in either the *Sentinel* or *Journal*, the following brief summary of what we heard, which has been compiled from notes taken at the time. It must not be taken as a verbatim report of the address, but merely as an honest endeavor to convey to others the pleasure we received by giving them the substance of what was said, and the impression, which we all carried away, of the speaker's words and their meaning.

The speaker has been kind enough to examine this summary of his address and accord his permission to us to send it to you for publication.—D. D. BAYNES.

The speaker commenced his address by quoting Exodus, 15 : 26: "I am the Lord that healeth thee," and said in connection therewith that he ventured to think that Christian Scientists would not object if it were said that they based their faith in God's power and willingness to heal, on that and similar passages in the Bible. His further remarks in the same connection gave us the impression that he considered Christian Scientists were right to do so, and that what the Church of England needed to do was to approach Christian Science and Christian Scientists in a sympathetic manner, and guard against assuming too critical an attitude towards it or its adherents.

He advocated that the Church of England should seek for and find out what of good she could gain from Christian Science and touch only with loving hand whatever she did not find in harmony with the Spirit of Christ's church. He then went on to say that Christian Science had undoubtedly come into being because there was and is a great need of some, if not all, of its ideas. He alluded to the causes which had set Mrs. Eddy to work as the Founder of Christian Science, and went on to say that the need for Christian Science was due to this: "that we are face to face, hide it as we may, with the failure of life and the failure of religion."

He uttered some true and impressive remarks on the failure of life as evidenced in the constant failure of sense of energy, mental and physical, and seemed inclined to favor an examination of Christian Science for the good to be got from its ideas on life.

This summary does not attempt to give all the words

uttered by the speaker in support of his statement that religion fails. They were words of burning truth depicting eloquently, boldly, and sorrowfully, the reasons, which most of us have felt at some time, why the so-called orthodox religions are failing to give men and women that which satisfies. Some of his words were in substance to this effect: If there is one thing which should do men good in body, soul, and spirit it is religion. Men and women cannot and will not go on under a delusion. They must rebel against mere form and empty nothingnesses. Deep in the hearts of men there is a longing to be great and good, and if the religion offered to them does not satisfy this longing we must expect an upheaval such as Christian Science and be glad of it.

He considered that the Truth in Christian Science was two-fold: First, Its healing; Second: Its conception of God, life, and religion. As regards the healing, the speaker was evidently of opinion that it might and should be, and that the church only follows with lame and faltering steps and asks why cannot we cast them (the devils of sickness) out?

He urged that the reason of the church's failure is its lack of faith. He noted that the power of healing continued for some time after our Lord's ascension, but that it was early lost, and now the church suffered from a natural scepticism born of its sense of weakness and failure to continue with signs following. He charged the present low view of life and lack of true appreciation of the allness of God with being the cause of much of the physical and mental disorders of the present time. "There are many suffering to-day from not being unselfish children of God," was one expression he used, and he showed the sincerity of his desire that Christian Science should be greeted in a fair spirit by saying what was in substance: "If Christian Scientists can call attention to this, let them, and only those will deride whose low view of life has reduced them to incapability of grasping at higher thoughts."

In referring to the Christian Scientist's understanding of God as All-in-all, he dwelt with much earnestness on the fact of how the world is oppressed with the burden of a terrible fear which a correct appreciation of God should dispel, and quoted 2 Timothy, 1 : 7: "For God hath not given us the spirit of fear." In impassioned and moving words the speaker poured out his desire and evident belief that, to quote his own words, "the dark shadows of sin, disease, and death may be dispersed and to have this worked is worth all sacrifice."

In words breathing the sympathy of our Master he urged his hearers to refuse to look upon Christian Scientists as outside the gates of the church, but to draw them in and not show a spirit of desire to separate. He concluded by stating in emphatic language that though not bound to follow the Christian Scientist's errors, the Christian churches are bound to climb the same heights, that we are reminded by Christian Science that Immortality is *now* and *here*, and that the Peace of God is for believers *to-day*.

Success.

BY A. E. VAN OSTRAND.

LET us consider the question, What is success? Is it merely the gratification of these material senses? Is it the accumulation of worldly goods? Is it dominion over mankind through any of the various phases of social, civil, political, or professional life? Ask those who have met with success in a material way, and, without doubt, the vast majority will tell you that it did not give them the happiness they so much desired, and in the main the results were far from satisfying.

Jesus when he rebuked his followers, in the parable of the

man who laid up treasures for himself, but was not rich toward God, said, "Thou fool, this night thy soul shall be required of thee: then whose shall those things be, which thou hast provided?" but he defined real success, when he declared, "The prince of this world cometh, and hath nothing in me;" meaning by this, that his overcoming of self was complete, and there was nothing left in his consciousness that responded to the temptation of the world, the flesh, and evil. Can anything be called success, in its truest sense, which is not substantial and permanent? St. John said to the Laodiceans, "Because thou sayest, I am rich, and increased with goods, and have need of nothing, and knowest not that thou art wretched, and miserable, and poor, and blind, and naked." Jeremiah declared that "he that getteth riches, and not by right, shall leave them in the midst of his days, and at his end shall be a fool," and the Master asked, "What shall it profit a man, if he shall gain the whole world, and lose his own soul?" showing us that in his opinion so-called success, if not gained through spiritual understanding, was profitable for nothing. In following the teachings of Christian Science, we learn that all error, in each individual consciousness, must be overcome, before we can have dominion over sense and self, realize that perfect freedom of the children of God, and awake in his image and likeness. We must strive to purify our thought of all that beclouds the spiritual sense, obstructs the light, and hinders the perfect reflection of divine Mind.

We are learning each day that as a man "thinketh in his heart, so is he;" that thoughts are things and have power to benefit or injure us and others, in proportion to their purity or impurity, truth or falsity.

St. Paul beseeches the Corinthians to bring "into captivity every thought to the obedience of Christ." Isaiah said, "Let the wicked forsake his way, and the unrighteous man his thoughts."

But the question naturally arises, What do we gain by applying the teachings of Jesus in a practical way? and if we listened to the voice of error it would seem to say that we are scoffed at, maligned, and finally defeated. But this is not so, as all can testify who have had an opportunity to understand and apply the Truth as explained in Science and Health, and we are proving daily that "whatsoever a man soweth, that shall he also reap." If he sows selfishness, dishonesty, and sensuality, these are the marks of the beast, and he will reap evil, disease, and death; but if his thoughts and acts are pure, honest, and unselfish, these are reflections of divine Mind, and must result in happiness, health, and harmony. This is the eternal law of God which is just and true, and does not need re-adjusting to meet each individual case, but is ever-operative,—a perpetual, living, loving, law, which rewards every man according to his works, and can never be rendered null and void, or made of none effect.

Overcoming Personality.

BY HERBERT S. FULLER.

MARY BAKER G. EDDY endeavors in all her writings to turn the gaze of those who seek the light of Christian Science, from personality to Principle. In word and example she gently, but firmly and safely, leads us from the contemplation of "the seen" to an understanding of spiritual things, thereby presenting to our view "the things which are unseen" to the mortal sense of sight, but which appear to the spiritual sight to be blazoned so that all can see.

In pursuance of this, she takes us along the path of Truth until we are able to discern for ourselves the real from the unreal, and cease in a measure to have respect "for the persons of men."

Students of her writings know full well that if they would attain in the Science of Being the heights which she stands

ready to scale with them, they must destroy the false sense of personality.

The world insists that we, Christian Scientists, worship the personality of our Leader. This is a false statement. It has no power and cannot lead one from the true thought. We know that our Leader is constantly pointing from self to Principle, and we fully understand that the claim that we do worship her is false. Love her we do and shall, for what she has done and is doing for the world at large, but this is not of the hero worship kind, and deals not with her personality, but what is reflected by her.

Mrs. Eddy teaches us that there really is but one personality, that is God, and that personality is reflected not transmitted. She tells us plainly also that faith in human personality will not heal, and most of us know this to be true from having proven it. In all ways she leads us from the thought of personality.

Difficult as the problem may seem at times, we have got to divorce ourselves from reliance on personality and look to God—Good—only. We know that God does not have respect for person.

As I read the closing chapters of Revelation that tell of the wonderful spiritual vision that came to St. John, the disciple whom Jesus loved, I am compelled to think that the good apostle had this problem to wrestle with.

In the twenty-first chapter, after John had seen the new heaven and the new earth, and the Holy city, New Jerusalem, he tells us that there came unto him one of the seven angels, who took him away in the spirit to a great and high mountain. He is shown the beauties of the great city, the holy Jerusalem, descending out of heaven from God, and also the river of the water of life and the tree of life.

In the light of this great experience which he had just passed through we find in the eighth and ninth verses of the twenty-second chapter these words:—

"And I, John, saw these things and heard them. And when I had heard and seen them, I fell down to worship before the feet of the angel which showed me these things.

"Then saith he unto me, See thou do it not: for I am thy fellow-servant, and of thy brethren the prophets, and of them which keep the sayings of this book: *worship God.*"

Do not these words indicate that John then and there wrestled with the problem of personality?

A Tribute to our Leader.

The graduating exercises of St. Helen's Hall of Portland, Ore., took place June 13, 1901, in the presence of a large audience. On the platform were the venerable Bishop of the Diocese, several clergymen of the Episcopal Church, the president of the State University, Dr. Franz Strong, and many scholarly men and women of Oregon.

One of the brightest young ladies of the class read an interesting essay on "Famous Women of America." Among those mentioned in a brief account were Harriet Beecher Stowe, Margaret Fuller, Mary Lyons, Frances Willard, Elizabeth Cady Stanton, closing with a tribute to Mary Baker Eddy, the Leader of Christian Science. Neither this young lady nor her parents are in any way connected with Christian Science, but the recognition comes from the standpoint of a well-informed student on the topics and movements of the day.—MRS. A. B. C.

God works in all things; all obey
His first propulsion from the night;
Wake thou and watch!—the world is gray
With morning light!

WHITTIER.

Testimonies.

Bad Habits Outgrown.

Early experiences in our work in coming into Christian Science are helpful. Looking back at the conditions of belief and fear that we have come out of, gives occasion for thankfulness to the Giver of all good gifts.

After seeing the practical healing of physical disease by Christian Science, and the happy, contented lives of the Christian Scientists, I started to study "Science and Health with Key to the Scriptures" with a desire for a better life. Starting as earnestly and honestly as I knew how, I began to put into practice its teachings, and after a short time I began to look over my past life and to examine myself to see if any results had been attained. I was amazed to see what conditions I had come out of; one illustration will explain my meaning. Having been subject to the tobacco habit for over twenty years, being an inveterate smoker of strong cigars, I wondered exceedingly where the desire for a smoke had gone to. I learned later that it was only a mortal belief of appetite that had held me in bondage. This was over six years ago, and from my first start in reading the text-book, Science and Health, I never have had the slightest desire to indulge in a smoke or take a chew of tobacco.

I realized that my prayers had been answered, for old things had passed away and new things had appeared that were more of a reality than my old beliefs. This new birth in the Truth has continued, and the old conditions of thought—envy, jealousy, malice, hate, revenge, selfishness, and all the characteristics that control mortals and lead them to indulge in wrong doing—are passing away.

When first coming into Christian Science my desire was to benefit myself. I soon learned that to be a Christian Scientist one had to live and put into practice the Sermon on the Mount, and the ten commandments. The command to love our neighbor as ourself had always been a mystery to me, but through the understanding of Christian Science it has been made plain.

This revelation of Truth came as light to my consciousness, there was no emotional ecstasy but a clear, calm, and joyful contentment that gave me courage to work to overcome the old self and to strive to know the new man made in the image and likeness of God. This Truth will come to all that have the honest desire to know God aright.

With the study of Science and Health in connection with the Bible came the illumination of the Scriptures. I then understood that the teachings of the prophets, of Jesus, and of the apostles were based on the understanding of God, and man as made in His image and likeness. While grateful for the many blessings of physical healing and being able to help others, I feel far more grateful for the moral and spiritual healing that has come to me, making a new life and a new world.

GEORGE F. GUILLE, Chicago, Ill.

Deafness Healed.

Ever since I was a mere child, my hearing in both ears has been greatly impaired, brought about by excessive earache. For years I was attended by a number of the best doctors in our state, but to no avail. Not until the doctors had given my case up and said my ear-drums were broken and I never would be able to hear again, did my people consent to my being treated by a Christian Scientist.

At the time my father and mother had heard but little of Christian Science, and, naturally, they had very little use for it.

After two weeks, my hearing was restored and I was able to hear as plainly and distinctly as any one. Of course, there were those who said that it was because I had been stuffed full of medicine and was now letting it alone and

permitting nature to take its course, that I would have got well any way, and that Christian Science had nothing to do with it. It looked reasonable enough to us that such might be the case.

This was about thirteen years ago. After that we moved to California, and about eight years ago I got wet and took a very severe cold, and it settled in my ears again. This time we decided to let nature take its course, and I would be all right soon. The longer I waited for nature to do the work, the worse I got, so finally my mother called upon a healer and asked her to treat me. Inside of a week my hearing was greatly benefited, and within a month, I was as well as ever.

It is wonderful. Both of these times I was so deaf that I could not hear a watch tick when placed close against my ear, but now I can hear a clock tick in the next room. I am positive that Christian Science cured me.

CHARLES R. MILLER, Corona, Cal.

Patience Rewarded.

A few years ago I was afflicted with a large fibroid tumor and was under medical treatment for several months without being benefited. An operation was not deemed safe. The treatment being very severe, I finally gave it up and turned to Christian Science.

The case was an obstinate one and seemed to require long and continuous effort. Sometimes I seemed to be worse but there must have been progress all the way, for I was perfectly healed. When I look back I am glad the healing did not come at once, as I can see that every step I have been compelled to take was really just what I needed to bring to me an understanding of God as Love. As this view of the Divine grew in my thought I felt that I could not dishonor God by giving up that which had given me my first clear and true sense of Him as a perfect Saviour. These words of Jesus presented themselves to me as a gentle reminder, "No man, having put his hand to the plow, and looking back, is fit for the Kingdom of God."

Science and Health was my daily and hourly companion, and words can never express the gratitude I feel toward its author, who has shown us the way to health and a better life.—CAROLINE F. JAMES, Kingston, N. Y.

Rejoicing in Freedom.

Born in 1841, I served in the Confederate Army, and for thirty-three years have prospected and mined in Montana. I was salivated when less than three years of age, and did not weigh fifty pounds when twelve years old. About this time, I had my back injured and was afflicted with piles, biliousness, and chronic constipation.

In 1879 rheumatism was added, and for a time I used crutches. I developed asthma a short time after—as an addition to catarrh, which attacked me first in 1871. In 1885 my eyes began to fail, and I commenced using spectacles. From my earliest recollection I have been dosed, or dosed myself, with all the remedies within my reach for these various complaints. I am free from disease, and am writing this communication without glasses. I have lost all sense of the dead weariness that formerly made life a burden after each day's work was done. I am awaking to "the sense of Life that knows no death," and to "that joy which finds one's own in another's good" (Miscellaneous Writings by Mary Baker G. Eddy, pp. 194, 128).

HARPIN DAVIES, Bald Butte, Mont.

In the testimony "Desire for Tobacco Overcome," which was published on page 737 of the *Sentinel* for July 18, the third sentence in the third paragraph should read, "This demonstration was made finally and completely in Houston, Tex., about one year since." It will be observed that the writer states he had turned to Christian Science for help about eighteen months previous.

Religious Items.

Cunningham Geikie, D.D., LL.D., in an article in the July number of *The Homiletic Review*, thus writes of the Christendom of the fourth century: "The Christendom of the fourth century was wonderfully changed from that of the apostolic age. Human nature, always the same, had already, while Paul and his fellow missionaries were still alive, shown the white buds of future thorns shooting up amid the tender spires of the good seed over the heathen world. At Antioch, in Jerusalem, Corinth, Galatia, and, indeed, over the whole missionary field, the furious pride and bigotry of the Jew and the insatiable disputatiousness of the Greek fostered controversy and induced confusion. In the later epistles, moreover, new divisions and fresh corruptions are foreshadowed, so that from the first Christ seemed, in his own words, to have sent, not peace, but a sword among men. Inside the fold no less than without. The fourth century found its special battleground in the attempts to define the mysterious relations of God the Father and our Lord; Arius on the one hand and Athanasius on the other heading the opposing parties. In A.D. 325 the Council of Nice had formulated the creed which still survives, but that venerable document only gave a war-cry to one side; the other defining it to suit their own opinions. From the one great controversy many others sprang up, till heresies—that is, parties—became countless, each, as the Emperor Julian truly said, hating each other more than any savage tribe hated its bitterest enemy."

Under the head of "The Curse and Comfort of Creeds," *The Congregationalist and Christian World* says: "May a Christian examine the foundations of his belief? This question is being earnestly discussed in great church assemblies. On one side it is urged that these foundations were laid by godly men ages ago, and laid forever. On the other hand, it is asserted that Christian life cannot survive unless it expresses vital and satisfying belief. In the General Assembly of the Church of Scotland a few weeks ago the subject of greatest interest was the Confession of Faith and the power of the Church to modify it. The question as stated by Principal Story was, 'Is the Church of Scotland fettered and tied hand and foot mentally to the very forms and expressions of the seventeenth century?' After three hours of able and sometimes heated discussion, the Assembly practically declared in the affirmative—that the Church has no power to modify, abridge, or extend any article of the Confession, though with an addendum expressing its confidence that office bearers in the Church 'will so exercise its jurisdiction as not to oppose the consciences of any who, while owning the sum and substance of the doctrine of the Reformed Churches, are not certain as to some less important determinations also contained in it.'"

The following from *The Examiner* will find a hearty response in the minds of thousands of people: "It is high time that some one in authority should come to the rescue of those unfortunates who are compelled to give testimony in courts of law. The treatment of them by lawyers is often cruel in the extreme. Questions are asked which are expressly designed to place them in a false position and thus discredit their evidence, and they are not suffered to make any explanation. The distress thus caused to a sensitive mind often amounts to actual torture—torture more poignant than rack or thumbscrew. In a recent case in one of our New York courts the judge said: 'A party, when he becomes a witness, is entitled, even on cross-examination to be protected. Witnesses have some rights which courts are bound to respect. Attacks of the kind set out in this record cannot be made upon one's private life under the guise of cross-examination.' It would be well if all judges would take this position, and refuse to permit the continuance of the practice of putting witnesses to the torture."

The following from the editorial columns of *The Universalist Leader* is worthy of serious consideration upon the subject of temperance: "There is no more gratifying sign for those whose minds and hearts are keen in the service of the cause of temperance,—and that should mean every Christian of every degree,—than the attitude of the employers of men in large numbers. A practical admission of that for which the temperance prophets have contended for years, is made when the great corporation gives notice that no one who uses intoxicating liquor shall enter its employment; that corporation endorses the temperance platform in a voice its own men, at least, are obliged to hear and respect. We may find all the fault we will because some of the employers themselves continue to make personal use of the thing, but it will be remarkable if the argument of policy and good dollars does not some time appeal to the men most interested. If the use of liquor does not pay with the employee and his little responsibility, how much less must it pay with the employer with his larger responsibility."

Says *The Watchman*: "The Christian public hardly needed the elaborate statement put forth by the China Missionary Conference, approved by nine-tenths of the Protestant missionaries in the Empire. Its purpose is to show that missionaries were not chiefly responsible for the Boxer uprising, and that they have not manifested an un-Christian spirit in suggesting the punishment of those who were guilty of the massacre of foreigners and native Christians. As to the first item, no intelligent person believes that the missionaries had any close relation to the Boxer uprising, which was anti-foreign rather than anti-Christian. As to the second matter there is equally little doubt that the prevailing missionary sentiment has been thoroughly Christian, though some missionaries have not risen to the Christian level. The message, however, that was sent out from the Shanghai meeting last September, we said at the time was a mistake, traceable to overwrought feeling, and nothing has taken place since that to change our opinion."

The Rev. Samuel G. Ayres, in a sermon published in *The Universalist Leader*, says: "It is but seldom that a great soul is understood. It is doubtful if in all history we find one religious leader whose message was gladly accepted. In the realm of science this same fact is true. The world is largely made up of conservatives. There has always been a small school ready to accept new truth, but radicalism has been with the minority. Zoroaster, Confucius, Buddha, Mohammed, and Jesus in religion; Socrates, Seneca, Plato in philosophy; Copernicus, Spinoza, Roger Bacon in science; Savonarola, Luther, Murray, Garrison in reform.—these noble souls who have striven so earnestly for some principle which would ennoble and enlighten the world, have had small following. In their own age they were unpopular with the vast majority; to-day we are glad to be known as their followers."

"I believe that God has ordained a way for man's salvation, that way is Christ. He stands with one hand raised to heaven, one reaching down to man. Man must take that hand to be saved. I believe that every soul will ultimately do so. I don't believe that any soul ever was, now is, or ever will be condemned to endless hell," said a prominent citizen of Clarinda. "Come down and help us win the victory," said the Universalist minister. "O, I have been a member of the Presbyterian Church for twenty years and am now."

Universalist Evangel, Clarinda, Iowa.

All interpretations of the Scripture, I remark again, which make toward hardness, cruelty, and severity are false—false! No mosaic of texts can be allowed to stand against the stream of Bible testimony. God governs by His goodness, and where that fails He restrains as far as possible by fear, but fear of consequences of evil is the alternate and the lowest reason. Goodness is the

primitive principle for the purpose of lifting men out of their lower state, and bringing them up into communion with Him.

REV. HENRY WARD BEECHER.

The Right Rev. Leighton Coleman, D.D., LL.D., in an article in *The Church Standard*, says: "There are many devout rich people leading simple lives who discountenance any invidious distinctions between really respectable people. It is to those that the Church must chiefly, if not exclusively, appeal for the exertion of their influence towards delivering this country from the debasing thralldom which accompanies this enforced and, as I believe, growing separation between fellow-members of the Commonwealth of Israel."

Christ does not force his way into the heart. He comes where he is welcomed only; but his coming to-day, as of old, means opened eyes, falling scales, clear vision, his glory revealed, an awakened soul. Then let our prayer be unceasing for his coming, for the larger knowledge, for the richer experience, for the vision of his glory which is given only to those with open eyes.

The Standard.

Says *The Christian Register*: "Whatever may be the outcome of missionary work in heathen lands, it is certain that the names of many missionaries, men and women, will be held in grateful remembrance by all who admire the hero and reverence the saint."

LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Theory vs. Realization. Is Christian Science an Opinion?

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS.

A book of 471 pages, contain- ing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions. Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75

Orders for Miscellaneous Writings in lots of twelve or more to one
address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which
include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS.

An illustrated poem,
Single book, prepaid \$3.00

Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION.

A biographical
sketch of the author. The way she was led to the discovery of
Christian Science; its growth and fundamental idea; 120 pages,
cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half
dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the
history and to the readers of Christian Science; containing
Dedicatory Sermon delivered at the Mother Church, and scin-
tillations from the press on that occasion; 132 pages. Price
by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating
and enforcing practical Christian Science, thus affording inval-
uable directions for all true Scientists. The following are
some of the topics treated: SEED-TIME AND HARVEST, DEEP
THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUF-
FERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80
pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50
half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00
each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable
book, containing a brief and concise statement of Divine Science,
alias Christian Science, in the form of questions and answers.
It is a very succinct statement of Christian Science; 35 pages.
Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00
per dozen, prepaid.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeri-
tus' Message delivered at the Communion Season in the
Mother Church in Boston, June, 1898. A clear and strong
refutation of the charge that Christian Scientists are Pantheists.
Leatherette covers; 21 pages. Price by mail, 26 cents; per
dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message
of the Rev. Mary Baker G. Eddy to the Mother Church on
Communion Sunday, June, 1900. Leatherette covers, deckle-
edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in
Christian Science; 56 pages. Pebbled cloth covers. Price by
mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17
pages. Paper covers. Price by mail, 21 cents; \$2.00 per
dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14
pages. Paper covers. Price by mail, 21 cents; \$2.00 per
dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music
by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per
dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIP-
TURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder
of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in
Boston, Mass.

The Journal is published on the first of each month, and con-
tains interesting reports of cases of Spiritual and Physical healing
as well as instructive discussions of the Principle and the Practice
of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United
States, Canada, or Mexico. Two Dollars per annum; One Dollar
for six months; Single Copies, Twenty Cents; Foreign Subscrip-
tions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday
Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one
address, one year, each, 50 cents. Foreign Subscriptions, one copy,
one year, 60 cents. Postage prepaid to any part of the United
States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies
or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by
REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHN-
SON. Price, 50 cents per copy; \$5.00 per dozen. Words used
by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY
BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For
soprano or tenor, C sharp to A; for lower voices, B flat to F.
Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother
Church, also list of members. Price, one copy, \$1; six copies
to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, pre-
paid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half
Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half
dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History
of the Building of the Mother Church, The First Church of
Christ, Scientist, in Boston, Mass. 103 pages. Illustrated.
One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL
NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of
the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 72 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF
CHRISTIAN SCIENCE. 63 pp.

95 Falmouth Street, Boston, Mass. U.S.A.

SEPTIMUS J. HANNA, C.S.D. CAMILLA HANNA, C.S.D.
Editor. Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

Lone Wolf and other Indians made application to the United States Court in Oklahoma for an injunction restraining the Government from opening the Kiowa-Comanche lands for settlement. They urged that the act under which they were divested of their lands was unconstitutional. It was also urged that two million dollars, the price paid for the land was insufficient, and that at least five million dollars should have been paid. The application was denied by Judge Erwin July 29, and the opening of the lands was not in the least interfered with.

The total receipts of the United States during the fiscal year ending June 30, amounted to \$587,685,337.53 and the expenditures were \$509,967,353.15, leaving a surplus of \$77,717,984.38. The receipts were the largest in the history of the government, and the expenses larger than any fiscal year except those of the Civil War and the war with Spain.

Secretary Long issued the following general order July 29:—

All persons in the naval service are strictly enjoined to refrain from any public statement concerning the subject matter of the court of inquiry requested by Rear Admiral W. S. Schley.

(Signed) John D. Long, Secretary.

The new mint at Philadelphia is the largest and costliest money making institution in the world. Together with its machinery it has cost the Government about two million dollars.

It is estimated that the cost of the naval court of inquiry asked for by Admiral Schley will be from twenty-five to forty thousand dollars.

Among the thirty admitted to West Point July 29, was Calvin P. Titus, the young American soldier who first scaled the wall at Peking.

August 1 the United States Treasury had \$504,354,297 in gold, the largest amount of gold ever held by any nation in the world.

Foreign.

In compliance with the demands formulated last December by the allied ministers, the Chinese government has issued a decree establishing a Board to deal with foreign affairs. The new Board consists of five members and is to succeed the old Tsung-li-Yamen. The edict declares that foreign affairs will hereafter be the most important business of the government. The ministers of the Powers are satisfied with the tone and substance of the edict.

Parliament has been asked to grant \$32,500,000 in aid of the Transvaal and Orange River colonies in South Africa. Fifteen million dollars of this amount will be considered an advance to the colonies to be repaid out of the first loans issued by them.

Dr. Sauring Berson, a member of the Meteorological Institute of Germany, recently made a balloon ascent in which he reached a height of 33,500 feet. The lowest temperature recorded was forty degrees below zero, Fahrenheit.

Miss Katherine D. Elwas, niece of the governor of Bermuda, is seeking to find a market in the United States for the handiwork of the idle and penniless Boer prisoners confined on the island.

A revolutionary force from Colombia has invaded Venezuela. Martial law has been declared by the president of the country and an army of ten thousand men will be raised to meet the invaders.

The House of Commons has authorized the expenditure of ten million dollars on the Pacific cable, Great Britain's share under the agreement with the colonies.

King Edward has asked Parliament to grant Lord Roberts five hundred thousand dollars in consideration of the eminent services rendered in South Africa.

Since the beginning of the war in South Africa thirty-three thousand Boers have either been taken in arms or have surrendered.

The cost of the Boer war during the month of July was \$6,250,000 weekly.

Industrial and Commercial.

Vessels built in the United States and officially numbered by the Bureau of Navigation during the fiscal year ending June 30, 1901, number 1,173 of 401,285 gross tons, compared with 1,058 of 305,677 gross tons for the previous fiscal year. Unrigged barges, canal boats, etc., will add 88,331 tons to this total. Such construction the previous year aggregated 76,186 tons. The whole tonnage built has been exceeded only twice in our history in 1854 and in 1855, when the maximum, 583,450 tons was attained.

The Common Pleas Court of Cleveland removed the injunction secured by the Big Consolidated Railway restraining the City Board of Equalization from increasing its valuation, and the Board met at once and raised the valuation from \$1,145,150 to \$8,556,759.

The *Engineering and Mining Journal* estimates that the value of the metal and mineral output of the United States in 1900 was \$1,365,608,583, which exceeds that of 1899 by \$147,000,000.

Plans for a central railroad station at Chicago, estimated to cost forty million dollars, will be presented at a meeting of railroad officials August 15. Eighteen of the twenty-two roads entering Chicago have approved of the scheme.

The American Window Glass Company of Pittsburg, Pa., now controls the manufacture of glass in the United States, having purchased the United Glass Company of Syracuse.

The American Federation of Labor has started to raise a fund of half a million dollars to be used for the purpose of employing counsel in fights with wealthy corporations.

The Southern Pacific Company will use oil instead of coal for motive power on the Texas and California lines.

It is estimated that this year's wheat crop will amount to 725,000,000 bushels.

General.

Everyn Baldwin, an American explorer, at the head of what is said to be the best equipped expedition that ever started out to discover the North Pole, left Tromsø, Norway, the latter part of July. Three vessels well provisioned, a large company of scientists, and everything experience could suggest in the way of equipment, made up the expedition. There are forty-two men in the party and they are prepared to stay five years.

The old Baldwin locomotive, 1899, which drew Abraham Lincoln's funeral train a part of the way West, has just been put out of service after nearly forty years. In recent years it has been used in yard service on the Pennsylvania division of the New York Central. In its prime 1899 was regarded as a perfect type of passenger locomotive.

The twenty-fifth anniversary of Colorado's statehood was observed at Colorado Springs, August 2. The principal address was delivered by Vice-President Roosevelt. His subject was "The Growth of the West during the last Quarter of a Century." Ten thousand people heard the address.

A telegraph station will be established at Tatoosh Island at the entrance of Puget Sound for the purpose of reporting incoming ships. Experiments will be made with wireless telegraphy, and if this does not prove successful a cable will be laid.

The Nebraska Grain Association estimates that at the very lowest one hundred and fifty million bushels of corn will be raised in the State this year. The crop has not been affected by the drouth nearly as much as was feared.

In a case testing the validity of Chicago's anti-billboard ordinances, a physician testified that certain classes of billboards are injurious to the health of people because of the suggestions of disease and suffering.

The Mt. Vernon Chapter of the Daughters of the American Revolution are raising money to preserve the Pollock Church which was designed by George Washington and in which he worshipped.

The special meeting of the American Forestry Association will be held in Denver, Col., August 27-29, in affiliation with the American Association for the Advancement of Science.

Thirteen thousand acres of timber land in the pine belt of Alabama recently sold for eighty thousand dollars. The purchaser was a capitalist and timber man of Chicago.

August 2 was "American day" at the Winnipeg exposition. It was estimated that fifteen thousand visitors from North Dakota and Minnesota were in attendance.

The board of directors of the Pan-American Exposition have decided that the entire midway at the Exposition must be closed on Sundays.

The magnificent linguistic library of the late Prince Louis-Lucien Bonaparte has been purchased for the Newbury Library of Chicago.

July 24, the city of Detroit celebrated the two hundredth anniversary of her founding by Sieur Antoine de La Motte Cadillac.

M. Jules Verne, who has passed his seventy-third birthday, is said to be engaged upon his ninety-ninth novel.

The attendance at the Pan-American Exposition during the three months ending July 21, was 2,724,908.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" - *Jesus.*

Linotypes and their Work.

A Most Wonderful Invention and Piece of Mechanism.

YEARS of continuous experiment and the expenditure of a million dollars were required for the invention of the Mergenthaler Linotype. The linotype is pronounced by the *London Engineering* to be "the most remarkable machine of this century." Its invention and introduction are effecting a revolution in the business of printing newspapers and books which is scarcely second in importance to the wonders wrought by electricity.

The linotype marks the first and only successful departure from the long-established forms of type composition. The last great improvement was the production of a machine in which the linotypes were produced instantly and ready for use on the press by the mere fingering of keys like those of a typewriter, the keys serving to assemble temporarily in line metal matrices bearing individual letters, against which the slugs or linotypes were cast in type metal.

This machine, known to-day in every part of the world as the linotype, is now extensively made in factories in the United States, England, and Canada, giving employment to many hundreds of men. The machine is used on more than five hundred of the leading dailies of the world. Over five thousand machines are constantly in use throughout the world, and by numerous book and job printers.

Operated by a single person, the machine produces and assembles linotypes ready for the press or stereotyping table, at the rate of from 3,600 to 7,500 ems per hour.

The linotype produces finished matter of the highest quality. It permits the face or style of type to be changed at will. It permits the operator to read and correct his matter as he proceeds, thus avoiding the usual errors in correction. Any person of intelligence can, in a few days, become a good operator, and in a few weeks an expert.

The first machines were introduced in the printing office in 1886 and are still in successful daily use. It was decided, however, to follow the development and improvement of the invention as far as possible. The action of the machines was carefully watched for months, the requirements of the printing office studied, and the advice of skilled printers sought in all directions. In the light of the information thus gained the machine was modified, improved, increased in capacity, and made adjustable or convertible to every demand. New shops were built, new tools and machinery devised, and the manufacture inaugurated on the "interchangeable" system, which has given American watches their great reputation. The result is the present standard linotype, a machine marvelous in speed, in the quality of its product, and in the perfection and action of its parts. The principal factory is located on Ryerson Street, Brooklyn, N. Y., and the offices of the company are located in the Tribune Building, New York City.

The linotype is not a typesetting machine in the ordinary sense of the word. On the contrary, it is a machine

which, being operated by finger keys like a typewriter, creates or produces type matter ready for use on the press or stereotyping table.

The machine marks a wide departure from the ordinary method of using single line letter type. It produces and assembles side by side metal bars or slugs, each the length and width of a line of type, and having on the upper edge characters to print an entire line. These bars, having the appearance of solid lines of type and answering the same purpose, are called "linotypes." When assembled side by side, they constitute a "form" composed of ordinary type, and adapted to be used in the same manner. After being used, the linotypes are returned to the melting pot to be recast into other lines, thus doing away with distribution.

The production of the linotypes is effected as follows:—

The machine contains as its leading members a large number of small brass matrices. The cut of one of these matrices looks like a letter Y.

These matrices consist each of a flat plate, having in its vertical edge a female letter or matrix, and in the upper end a series of teeth. There are a number of matrices for each letter or character represented on the keyboard.

The machine is organized to select matrices bearing the required characters, and set them up in a line side by side, with intervening spaces, in the order in which they are to appear in print, and thereafter to present the line to mold so that the linotypes or slugs may be cast against and into the entire line of matrices at one operation.

There is an inclined stationary magazine or holder, containing channels in which the assorted matrices are stored. The matrices tend to slide downward out of the magazine by reason of their gravity, but they are held in check by escapements, one at the mouth of each channel. From these escapements, rods are extended downwards to a series of finger-keys. There is a special key for each character or letter. The keys are depressed by the operator in the order in which the corresponding characters are to appear in the print.

Each time a key is actuated it permits a single matrix, bearing the corresponding character, to fall out of the mouth of the magazine and downward through the channels to an inclined traveling belt, by which the matrices are carried downward one after another, and delivered into a slotted assembling block in which they are set up or composed side by side in a line or row. A stationary box contains a series of spaces, and a delivery device connected with finger bar by which the spaces are discharged and permitted to fall into the line at their proper places. Thus it is that, by operating the keys, the required matrices and spaces are delivered one after another and assembled in line in the block, until it contains all the characters necessary to complete one line of print. After the line of matrices is thus composed it is transferred to the face of a vertical mold wheel through which a slot or mold proper

extends from the front to the rear face. The entire row of characters in the matrix line is presented directly opposite the face of the mold or slot, so that when the mold is filled with metal to produce a slug or linotype, the metal will flow into the matrices, which produce their respective characters in relief on the edge of the casting.

Behind the mold wheel there is arranged a pot in which type metal is maintained in molten condition by a flame from a gas burner thereunder. The pot has a delivery mouth or channel adapted to fit against and close the rear face of the mold. Within the pot there is mounted a mechanically operated pump-plunger. After the line of matrices is presented and locked against and across the face of the mold, the mouth of the pot is closed against the rear side of the mold, and the plunger then operated to force the molten metal from the mouth of the pot into the mold, in which it solidifies, completing the slug or linotype.

After the linotype is thus produced the mold wheel makes a partial revolution, turning the mold slot from the horizontal position in which it stood during the casting operation to the vertical position. While the mold stands in this position, a horizontal blade advances from the rear and pushes the linotype forward out of the mold and between trimming knives into a galley on the front of the machine. A vibrating arm advances the linotypes one after the other along the galley, into which they are thus assembled side by side in column form, ready for immediate use.

After the assembled matrices have answered their purpose in front of the mold it is necessary to distribute and return them to the magazine, from which they are again in due time discharged in different order for use in succeeding lines.

The distribution of the matrices to their proper channels is effected by mechanism of extreme simplicity, as follows:

Each matrix has the teeth arranged in a peculiar order or number, according to the letter which it bears. In other words, a matrix bearing any given letter differs, as to the number or arrangement of its teeth, from a matrix bearing any other letter, and these teeth are relied upon as the means of effecting distribution. A rigid metal bar is fixed in position above the open upper ends of the magazine channels, and is formed at its lower edge with longitudinal teeth or ribs, adapted to engage the teeth of the matrices and hold the latter in suspension. The ribs of the distributor bar vary in number and arrangement over the mouth of each channel of the magazine. The matrices to be distributed are simply pushed horizontally along the bar at one end so as to hang suspended therefrom, and then moved slowly along it over the mouths of the channels. Each matrix will remain in engagement with and be suspended from the teeth of the bar until it arrives over its proper channel, where the arrangement of teeth permits the matrix to discharge so that it falls directly into the channel. The movement of the matrices is effected by means of longitudinal screws which lie below the distributor bar in position to engage the edges of the matrices and slide them along the bar.—*The Topeka Daily Herald*.

Accuracy, doing things to a finish, is one of the most important lessons that can be taught a child, because there is a moral quality at stake. The whole character is often undermined by the unfortunate habit of inaccuracy. Men whose ability would have made them peers in their communities have become nonentities, and their careers mediocre or total failures, simply because they were allowed in childhood to form the habit of half doing things, and of making half or exaggerated statements.—*August Success*.

Voice of the Press.

A Plea for Justice.

NEITHER the *Herald* nor any of its attaches belong to the cult known as Christian Scientists, and there is no impelling personal motive to defend that peculiar sect in these columns; but this newspaper believes in fair play, and that one "ism" is just as much entitled to it in the consideration of its claims as another.

It is the history of human nature that any proposition of a religious type is unceremoniously branded as an "ism," a fake, a fad, a fraud, or a delusion, by those who entertain views of a different character. When, in the course of time, the alleged "fad," whatever it may be, has succeeded in weathering the storm and securing a foothold, it turns about with equal ferocity and unfairness to attack some other suggestion that may be new to its knowledge of things.

Thus it is seen that some of the religious sects of to-day, rich in material wealth it may be and influential as to numbers, forget the struggle against misrepresentation and abuse that characterized their earlier days, and seem to think that their status in the world can be maintained only by directing their own batteries against any new candidate for public investigation that may appeal to the people for a hearing.

Time was when those religious organizations that are to-day misrepresenting the Christian Scientists were themselves the victims of unjust aspersions; and the illogic of ill-bred advocates of the doctrine of sweet charity and love, so generously given to the world by the Saviour of mankind, was hurled at them with all the fiery intolerance which bigotry could inspire.

Now, when Christian Science comes along, with many things in its potpourri of principles that the world cannot see its way clear to endorse, but which avowedly stands for an upright and moral life, and for the inculcation of lofty ideals of thought,—whether practical and matter-of-fact or not,—it encounters all the polished savagery which the pulpit may direct against it.

The writer did not have the pleasure of hearing Judge Ewing, but having a knowledge of the claims set forth by the sect he represents, he has perused with some interest excerpts from an alleged rejoinder from the pulpit of the Rev. George Stull of Billings.

In one of his flights of reason and flows of soul, the chaplain said, "Christianity makes the way so simple that a wayfaring man, though a fool, need not err, while Christian Science talks of the gnosis of the air and the harmatia of the homo, the yogo of the dama and the karma of the maya." In using a jumble of Sanskrit words in the foregoing, without reference to their application or meaning, and which have no place in Christian Science, the learned divine apparently sought to make cheap ridicule from the sacred desk take the place of argument.

Whether a clergyman, or any one else, sees fit to attack a religious movement, or philosophy, or school of thought, that is endorsed and supported by men of mature minds and unimpeachable personal character, it is the bounden duty of the assailant to correctly state the hypothesis that he would undermine and destroy.

The concluding statements in the foregoing excerpt are a burlesque, and, if so intended, are unworthy a minister of the gospel; on the other hand, if honestly set forth, they betray an ignorance of the principles of Christian Science that should have called a halt on any attempt to "answer" them. It is unfortunately true that the cause of Christianity, which has done so much for the benefit of mankind, is injured and impaired by the readiness of so many of its advocates and teachers to discredit other moral agencies through an ignorant or malicious distortion of the theories set forth.

The fact that one agency in the interests of a higher and nobler manhood sees fit to misrepresent another, teaches the world to discount the statements of the Christian minister when proclaiming his own doctrines to mankind.

The *Herald* will plead—not for the endorsement of Christian Science, not for a belief in the unbelievable in any direction to which the human mind may turn—but for a broader and deeper charity, a wider and fuller conception of life and its purposes, that will unite all men in the approval of all things that contribute to the upbuilding of human character and the growth of the God-given soul, regardless of the petty differences of expression through which the underlying truths of the universe manifest themselves upon the pathway of the race.

Helena (Mont.) Evening Herald.

An Age of Mental Depression.

It is generally admitted that the disease of mental depression is a very common one at the present time, especially with what are usually called the educated classes.

No doubt in all ages there have been many people who suffered from depression from various causes more or less personal to themselves, but the wide extent of the disease in modern times seems to suggest that there must be some general cause or causes of the phenomena. Mr. Albert Chevalier's well-known song, "Wot's the good of anyfin? Vy, nuffin!" expresses a really not uncommon state of mind, and its popularity is probably due to its striking a sympathetic chord in the breasts of the hearers.

The moral and intellectual confusion is naturally most keenly felt by the finest minds. People who live by rule of thumb, or by accepting the conventional ideas of their neighbors, and who never think things out for themselves, are hardly aware of the extent of the collapse of the traditional creed. It is only the intellectual people who are troubled.

Without going into theological questions, few competent authorities will be disposed to deny that a great deal of Christian theology, which was once firmly believed in and made the basis of Christian ethics, is now no longer tenable. The dropping of a few theological articles would perhaps matter little, if we could be sure where we would stop, and if it could be shown that the overthrow of the theological structure of Christianity would not affect its moral authority. That, however, is just what cannot be shown. The ethical authority of a religion can hardly survive the theology which constitutes to so great an extent the religion itself—which is, at any rate, the skeleton or framework upon which the religion is built. The Christian religion cannot afford to be brought down to the level of that of Confucius, which is simply a collection of moral apothegms, without any ultimate authority beyond their inherent merits.

The authority of Christian ethics must necessarily stand or fall with the truth of Christian theology. The most logical minds cannot help seeing this and appreciating the consequent chaos in ethics.

The present age bears a considerable resemblance to the declining days of Paganism, when the philosophers were undermining the old religion with their criticism and the new religion was struggling into life. While Christianity is not perhaps being destroyed as Paganism was destroyed, it is undoubtedly going through a very critical evolutionary phase, and it seems inevitable that it will issue from the ordeal a very different kind of religion from what it was, say, a century ago.

Such ages of transition are frequently periods of melancholy. Men's minds are unsettled, and there is a general spirit of uneasiness abroad. When the Roman Empire was under the government of the Antonines, although the period was one of great material prosperity (just like our own Victorian epoch in that respect), it was yet tinged with a kind of intellectual sadness.—*Westminster Review.*

Selected Articles.

Eternal Life.

"I AM come, therefore, that they might have life, and that they might have it more abundantly." These words spake Jesus, the meekest, wisest, and best man who ever walked the earth. He spoke from an understanding point of view, for he knew what life is and how it came. He knew that Life is God; that living is the consciousness of existence, and that man lived because he reflected this Life Principle. Because he understood the science of creation, cause and effect, he knew that life is never in that which it creates, but that God is the Life of man. Because man had believed otherwise, he came, and by coming and teaching the Truth he corrected the error.

He said in one place, "He that hath the Son, hath life; he that hath not the Son, hath not life." In other words, until we learn and demonstrate our sonship with God we do not realize what life is, for no man lives in matter. As we understand and utilize the divine energies, as we rise above the consciousness of material existence, we are learning what life eternal is,—a conscious understanding of God and man,—and then we truly live.

Jesus said he came that we might have a fuller, larger, clearer sense of life than previous teachings ever revealed. His was a religion of life, not of death, and one of the greatest mistakes is that it is his death that saves us. He taught no such thing. To the weeping Mary's belief in a literal resurrection he said, "I am the resurrection and the life; understand this Life Principle which I teach, and thus rise above the dismal beliefs of sin, sickness, and death, which hold you in the sepulchre of mortal mind." We are saved, not because Jesus died for us, but because he worked out for us the problem of being. He gave his life indeed, but it was simply to prove the nothingness of every form of error, even "the last enemy to be destroyed;" and he proved it by overcoming death.

There never lived a more practical man. Every statement he made was based upon a scientific fact, and as the laws of God are understood their accuracy will be proved. He said, "Heaven and earth [your material conception of it] shall pass away, but my words shall not pass away," and they never will, for they are spirit and life. His most transcendental statements are being understood and demonstrated by those seeking a scientific Christianity. The mists of materialism, the dogmatism of creeds, and the inherent sin in his consciousness, have all hindered man in his search after God. He has been asleep in the dream of the senses, believing in a personal God and corporeal, fallen man. His eyes have been holden so that he could not behold his divine birthright, dominion over material sense. But the day is at hand when a more reasonable, practical Christianity is preached and proven. God's hand is not shortened that He cannot save, and He must and will be found an ever-present help in time of trouble. When the Science of Being is more generally understood, man will see that discord, selfishness, poverty, sickness, and death are caused by sin and ignorance, and instead of resorting to matter for aid, he will seek to understand and utilize the divine Mind, God, and will find that the Sun of righteousness does arise with healing in his wings.

The signs of the times are significant. A feeling of unrest, of disquietude, is a harbinger of a great spiritual awakening which, ere it ends, will redeem the world. "The wages of sin is death." Sin is death, for Life is God. Only as we lift thought above sin, above the sense of limitations which comprise this state of mortal consciousness called material life, do we really live. The spiritual fact is the only fact. God is our Life, and God is all. He is Love, divine Mind, the only intelligence, power, and might

of the universe. The powers that be are ordained of Good, and there are no other powers.

Another great mistake is, that life, the understanding of Life, is gained only by first passing through the gateway of death. That man must first die in order to live. That which Paul rightly called the "last enemy," in this way is taught to be our best friend. Jesus did not so teach, nor his disciples. At no place in the Scriptures is death taught to be anything but an evil. I refer, of course, to a rational interpretation, and this will be found to be a spiritual and not a literal one. As the spiritual sense of the Scriptures dawns upon human thought, it will be found to be a logical, practical exposition of the Science of Being, of what God and man is—the impotency of error, and final triumph of Good. "Now is the accepted time, now is the day of salvation," says Paul, and he meant that here and now is the place and time to solve the problem of being, lay hold of the Infinite, acquaint yourself with God, and be at peace. This is the primary school of existence, and if we have not learned our lesson as Enoch, Elijah, and Jesus evidently learned it, we must go on and do so in a future state of consciousness. Death is an incident, not an ultimate in the problem of human life, and not a necessary incident at that.

When we understand really the statement of the apostle, "To be carnally minded is death, but to be spiritually minded is life and peace," we shall cease looking to death as a deliverer, but will bravely and honestly strive to assimilate more and more of the divine nature, until we awake in His image and likeness. We shall seek and find spiritual things, and realize that they alone can aid us, for they come of God, Good. The kingdom of God is found in the consciousness of the spiritually minded, for heaven is harmony, and harmony can be attained only as discord is destroyed, and all discord arises from materialism. There is but one Life, even God, and this Life is eternal, and cannot be lost. We may seem to be clouded as to the facts of being at times by error, sin, but will regain our heritage. The hundred and forty and four thousand, significant of the full number of God's children, although they may wander far from Spirit in the mists of sense, will, through much tribulation, wash their sin-stained garments white in the tears of repentance and be saved. Good is eternal, evil temporal. Here or hereafter we must learn our lesson. We ourselves must decide.

The Doctrine of Christian Science.

To the Editor of *The Philadelphia Times*.

In the report in your issue of June 18, of the Methodist Episcopal preachers' meeting in Camden, held the day before, you say that the Rev. F. A. DeMaris denounced Christian Science, and said, "How can a doctrine be Christian that denies the fundamental principles of the church? It teaches that prayer is vain. It teaches the pre-existence of the soul. Christian Science is certainly a misnomer. It is a wolf in sheep's clothing. It is masquerading with a mildewed theosophy on the one hand and a metaphysical cure on the other. I believe it to be one of the abominations of the present age. Insidiously it is worming its way into the thought of the age, and I believe that the time has come when the clergy should speak out with no uncertain sound."

The thought arises how much better it would have been if our reverend critic had devoted the most of his time to communion with his reverend brethren on the beauties of Methodism and a little of it to some of those of Christian Science, its rising, rapidly growing, sister denomination of Christians, and wishing it Godspeed, instead of denouncing what he either does not understand, or perverts. It is difficult to believe that a Christian minister, a follower of

the meek and lowly Jesus, really made such disparaging statements in respect to a denomination of Christians, not one of whom, I am safe in saying, had ever laid a straw in his way. Christian Science is pre-eminently Christian, for it is in accord with every command of Jesus, including his final command: "Go ye into all the world, and preach the gospel to every creature. . . . And these signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover" Mark, 16 : 15, 17, 18).

"In order to pray aright, we must enter into the closet and shut the door. We must close the lips and silence the material senses. In the quiet sanctuary of earnest longings, we must deny sin and plead God's allness. We must resolve to take up the cross, and go forth with honest hearts, to work and watch for Wisdom, Truth, and Love. We must 'pray without ceasing.' Such prayer is answered, inasmuch as we put our desires into practice. The Master's injunction is, that we pray in secret, and let our lives attest our sincerity" (*Science and Health with Key to the Scriptures* by Mary Baker G. Eddy, p. 320).

The words Soul and God in Christian Science are synonymous. Soul therefore has always existed. Christian Science is demonstrable truth, and not a misnomer. In proof of this, Christian Science has healed over a million cases of sin and disease. The statements, "It is a wolf in sheep's clothing," etc., are untrue, and nothing in Christian Science, or in the lives of Christian Scientists justifies them. "I believe it to be one of the abominations of the present age," by no means proves the reverend gentleman's belief to be true. "I believe that the time has come when the clergy should speak out with no uncertain sound." And so do I. They will speak out and their speech will have the true ring, and not a false ring, for they occupy God's pulpits, and are God's clergy, and they will therefore speak the truth, for God is truth, or cease to be ministers. The people are as never before hungering for the truth and nothing else will satisfy them. "Yea, a man may say, Thou hast faith, and I have works: show me thy faith without thy works, and I will show thee my faith by my works."

JOHN WHITE.
In *The Philadelphia Times*.

Dean Farrar on Christian Science.

To the Editor of the *Transcript*.

The utterances of Dean Farrar in Saturday's *Transcript* are the swellings of the tide of progress, and are welcome words to all who believe more in Christianity than sectarianism. The bigoted love of old error is, however, painfully strong still, and there are quiet preparations being made for bitter war by churches and the medical profession against the Christian Scientist. The homœopaths are now arming, forgetful of the days when their measure of truth was ignored and they persecuted. Perhaps the sectarian world is seeking to find some object on which to exercise the gathering wrath born of its own consciousness that something within the folds is wrong which is breeding consequences. Does the decay in church membership and the consequently weakened treasury so often bewailed by the modern congregation, seek to find its cause in the new and rapidly growing sect? Do the doctors feel the pinch? What if it calls itself "Christian" and is not according to evangelical views, is it Christian to attack it? What if the science is only in name and not in fact, is that a reason for an era of persecution? Do people die from so-called neglect of "proper remedies"? Surely the morgue and hospital are witnesses that there are deaths from civilized neglect, as the emaciated bodies of the starved, cry out against the humanity, the Christian (?) humanity that could have saved them, and did not. Are doctors infallible, or shall we thank God for the blessing of being killed scien-

tifically, while we wonder at the changes of scientific view in the professional kaleidoscope.

Somebody's ox must be gored, seeing that there is such a bellow from the herd of sects. If the Christian Scientists teach humbug, then let men ask, is the church guiltless, are the denominational creeds satisfactory? Is even the Apostles' Creed so genuine and enlightening as to be just the thing for the soul of the intelligent preacher to pin faith to? Will the Athanasian creed be found attractive? Surely the old Westminster Confession or the close communion Baptist bigotry leaves something to be desired; and maybe Wesley's sermons and discipline would not go down many spiritual throats to-day without a deal of pushing. What are the Christian Scientists doing? do you answer, Not believing outside the church what the church demands? well, he or she is very blind not to see that inside the churches there are thousands upon thousands who do not believe what the churches hold, but then they subscribe, and keep on, and that makes a difference. The faiths need reconstruction.

If the believing ill, makes the Christian Scientist do well, is it not better than to claim to be orthodox, yet do *nil*. What have the Christian Scientists done? I will tell you (and mark you, I don't belong to them nor believe with them), they have gotten a hold upon lackadaisical would-be invalid women and removed the curse from their husbands and homes, awakened their minds to a sense of responsibility to their fellows, sent them out to minister to human needs, made them too busy to think of their own imaginary ill, sent them to study their Bible as they never did before, awakened in them a desire for knowledge, and developed unknown activity. They have brought happiness and light into dark and gloomy homes, made despairing impoverished husbands and fathers, whose pockets were a Klondike for the physician, happy in the consciousness that all their earnings would not be swallowed up in doctors' bills and the home overshadowed by the angel of death, they have built places of worship where the distracted have found peace, and the idle employment. If they cannot pronounce other people's shibboleths, shall we stop their well doing? No, not if we could, for we cannot. Christ would say while they do well, as the broad-minded Gamaliel said of old, let them alone; "If it be of God ye cannot overthrow it, if of men it will come to naught." What if it be one of the divine spades to dig up the hard beaten sectarian soil that has so long been unproductive? It no doubt is an offence against law when the life and interests of others are jeopardized by exposure to infectious or contagious diseases; but since when has the "regular" practice of medicine become such a certain science that it shall be the only one paid to experiment? If an adult desires any special line of treatment or none, shall he not have liberty to exercise his choice? It is all right to have a case reported so that a legally appointed medical officer may diagnose the disease and if infectious compel isolation, but the method of treatment is for the patient and friends to determine. No treatment for any disease is specific, and as it is a fact that fifty per cent of the treatment is mental suggestion, then if the other fifty is divided up between the pathies who give medicine, it will be seen that those who do not, have quite as much success as those who do. No class of professional men know better than the clergy and physicians how splendidly humbugged we all are.

CHURCHMAN.

Count Tolstoi and Christian Science.

To the Editor of *The World*.

A recent issue of your paper contained the cabled report of an interview with Count Leo Tolstoi in Paris, in which he was quoted as speaking disparagingly of Christian Science. Feeling quite sure that the remarks attributed to him must be the result of some mistake, since the great

reformer is known to be in sympathy with all movements tending toward a purer Christianity, I wrote to him directly at Yasnaya Poliana, Toul, Russia, inclosing the newspaper clipping. I have just received a communication signed by his daughter, in which she assures me that the article is founded upon an error; that her father never felt anything but respect for Christian Science. But for his illness, she continued, he would have written me personally.

I think there is every reason why Count Tolstoi's real sentiments should not be misstated at this time, and therefore thank you for this correction. W. D. McCrackan.

In *The New York World*.

From the Belfast Weekly News.

According to a Laffan telegram, a remarkable spectacle was to be seen on 25th of June at Concord, N. H., on the occasion of the annual pilgrimage of Christian Scientists to the home of Mrs. Eddy, the foundress of their church. More than three thousand pilgrims from every quarter of the globe visited Concord, many coming from Great Britain and Australia. The pilgrims returned to Boston in the evening, to all appearances entirely satisfied. Mrs. Eddy looked well and strong, and spoke with a clear, loud voice, disproving the reports that have been current as to her health having broken down.

Notices.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, is now ready for distribution. Leatherette covers, deckled edges; 50 pages. Price, 50 cents; per dozen, \$4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

To Members Admitted June, 1901.

Will those who sent in applications for membership with the Mother Church for the admission last June, and who have not yet received notice of their admission, please send their names and addresses to the Clerk, William B. Johnson, 30 Norway Street, Boston.

Services at Roxbury, Mass.

The regular church services of the Roxbury Christian Science Church will continue without vacation this year.

Services at Cambridge, Mass.

During the month of August the regular Sunday services of First Church of Christ, Scientist, Cambridge, Mass., will be held at 10.45 A.M. as usual. The Wednesday evening meetings will be discontinued.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Sept. '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for October, November, and December.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Correction and Explanation.

Dear Editor:—Will you kindly give place to the following explanation. Immediately after the Christmas holidays a letter, which I had previously written to Mrs. Eddy, was published in the *Sentinel* and *Journal*. In it I thanked her for sending to us a copy of Prof. Theodore F. Seward's book, "Bible Sunshine." I have recently learned that this mention of the book was regarded among some Christian Scientists as an endorsement of it. This is not correct. The author kindly sent this copy to Mrs. Eddy, and as she has but little time to give to anything apart from her increasing work, she sent it to us, and I was merely thanking her for her courtesy.

I have since been told that "many Christian Science healers are putting it into the hands of patients who think they cannot fully understand "Science and Health with Key to the Scriptures." This statement, together with the information of the misdirected thought occasioned by a mere mention of the book in a letter which was not intended for publication, leads me to ask the privilege of making this correction. Had I suspected such an erroneous impression had been made upon any one, it should have been righted long ago.

The truth of the matter is, that after reading Professor Seward's book, we greatly regretted that one who had been so awakened to the Truth of Christian Science, and had expressed such gratitude for that awakening, should feel that he could give to the world a book that would be better to put into the hands of any one than the one that had led him, and thousands beside, out of the wilderness of superstition. We felt that a personal desire was blinding him to the greater good that he could do, were he promulgating instead the pure doctrine of Christian Science as it has been given to the world from the inspired pen of our Leader, the Rev. Mary Baker G. Eddy; and any attempt to elucidate the text-book of Christian Science, must be unfavorably received by those who know the import and value of that book. The loyal Christian Scientist knows that neither he nor his patient should read or study the books of any other author than those of our beloved Leader, in order to learn the Science of the Christ Truth which she is teaching and demonstrating to this age. We are learning what Jesus meant, when he said to his disciple, "Follow me;" and while we respect all individual effort to uplift humanity, we know that if we would protect the interest of our Cause we must directly follow the one who is leading this Cause. We must enter the sheepfold by the *door* and not seek to climb up some other way.

ANNA B. WHITE-BAKER.

Concord, N. H., August 2, 1901.

The June Class.

THE Normal class of the Board of Education began its session June 20, and continued for two weeks. The class was larger in numbers than that of one year ago and was unusually representative in character, embracing, as it did, students from various parts of the globe. The following places were represented:—

Little Rock, Ark.; Pekin, China; Denver, Col.; Washington, D. C.; Wilmington, Del.; London and Manchester, Eng.; Paris, France; Macon, Ga.; Lewiston, Idaho; Chicago, Bloomington, Decatur, and Galesburg, Ill.; Charles City and Burlington, Ia.; Wichita, Kan.; Louisville and Winchester, Ky.; Winnipeg, Man.; Baltimore, Md.; Boston, Mass.; Battle Creek, Mich.; Duluth and Minneapolis, Minn.; St. Joseph and Kansas City, Mo.; Helena, Mont.; Norfolk, Neb.; Brooklyn, Buffalo, and New York City, N. Y.; Fargo, N. D.; Manchester, N. H.; Cleveland, Dayton, and Marion, O.; Berlin, Hamilton, and London, Ont.; Pittsburg and Philadelphia, Penn.; Edinburgh and Alyth, Scotland; Burlington, Vt.; Milwaukee, Racine, and West Superior, Wis.; and Seattle, Wash.

By the common consent of all who were present at this class, the teaching was comprehensive and thorough, yet so practical and replete with plain illustrations as to bring it within the easy grasp of all the students. It embraced the double character of teaching and examination; an important part of the work of the teacher being an inquiry into the fitness of the students or candidates for the exalted office of teaching the sacred subject of Christian Science. This double office seems to have been ably performed by the teacher.

In connection with this important event in the history of Christian Science teaching, we again desire to remind all interested that the present system of teaching was established by the Leader of our movement, the Rev. Mary Baker G. Eddy, and is therefore entitled to the respect and fealty due to her acts. She selected for the work of teaching one of her old and tried students, whose wide experience in teaching, healing, and otherwise demonstrating the principles of Christian Science, have pre-eminently fitted him for the efficient discharge of this important duty. All who have the real interest of the Cause at heart will therefore gladly recognize the usefulness and practicability of this educational system, and all that goes with it.

Those authorized to teach, if they were truly receptive to their teaching, will go forth armed and equipped with the requisite power and ability to instruct others as they have been instructed.

The office of teaching Christian Science is a high and sacred one. It is a trust that should not be lightly undertaken. It is a trust that should be exercised only in the supremest effort to benefit mankind. It is a trust that should be free from every element of selfishness or cupidity. The power conferred should be consecrated only to the service of God and humanity. Any less exalted motive is a departure from the spirit of all true Christian Science teaching and is debasing and demoralizing in proportion. The highest standard must be adopted at the inception of the work and consistently maintained. The teaching of Christian Science includes infinitely more than physical healing. This is important and should be conscientiously practised, but as true healing includes true morality, and true morality is embraced in the highest spirituality, the latter is the real goal. Only as thought is led Spiritward is it attaining its true estate. The Christ standard is the Christian Science standard, for Christ is its best exemplar. The Christian Science teacher who departs from this standard is not a true teacher, and the student who fails carefully and systematically to study the life, character, and teaching of Jesus, and sincerely endeavor to follow the same, is not a true student of Christian Science.

These general observations should suffice to impress upon the minds of those upon whom this high authority has been bestowed a deep sense of the significance of their trust.

Upon the subject of teaching we cannot do better than to here quote briefly, from our text-book, "Science and Health with Key to the Scriptures," whose author, Mary Baker G. Eddy, penned her weighty words out of her own experience as a Christian Science teacher:—

"Teach your student that he must know himself, before he can know others and minister to human needs. Honesty is spiritual power. Dishonesty is human weakness, which forfeits divine help. You uncover sin, not in order to injure, but in order to bless the corporeal man; and a right motive has its reward. Hidden sin is spiritual wickedness in high places. The masquerader in this Science thanks God there is no evil, yet serves evil in the name of Good.

"Teach your students the omnipotence of Truth, which illustrates the impotence of error. The understanding, in a degree, of the divine all-power, destroys fear, and plants the feet in the true path,—the path which leads to the house built without hands, 'eternal in the Heavens.' Human hate has no legitimate mandate and no kingdom. Love is enthroned. That evil or matter has neither intelligence nor power, is the doctrine of absolute Christian Science; and this is the great Truth which strips all disguise from error.

"He who understands in any degree the Principle of Mind-healing, points out to his student error as well as Truth, the wrong as well as the right practice. Love for God and man is the true incentive to both healing and teaching. It inspires, illumines, designates, and leads the way. Right motives give pinions to thought, and strength and freedom to speech and action. Love is priestess at the altar of Truth. Wait patiently for Spirit to move upon the waters of mortal mind, and form the divine concept. Patience must 'have her perfect work'" (Science and Health, pp. 450, 451).

The class before adjourning sent a message of love and appreciation to Mrs. Eddy, and also appropriately expressed to their teacher, Edward A. Kimball, C.S.D., their high sense of gratitude for the great privilege afforded them.

The Ledger Album of Celebrities.

THAT ably conducted and high-toned monthly publication *The Ledger Monthly* of New York for August, 1901, publishes what it calls "The Ledger Album of Celebrities." The album consists of portraits of President and Mrs. McKinley; Mark Twain, the American humorist; Michael J. Pupin, the father of ocean telephoning; Mary Johnston, the American novelist; Mrs. Mary Baker G. Eddy, the Founder of Christian Science; J. Pierpont Morgan, banker; Charles M. Schwab, President of U. S. Steel Company; James J. Hill, the great railroad builder; Edward VII., King of England; Alexandra, Queen of England; Sir Thomas Lipton, yachtsman and merchant; Gen. Christian De Wet, commander of the Boers; Count Tolstoi, Russian author; Signor Marconi, the inventor of wireless telegraphy; Edmond Rostand, the French dramatic poet; Ignace Paderewski, pianist and composer, and Andrew Carnegie, philanthropist, these portraits being arranged on opposite pages, the Americans appearing on the first and the foreigners on the second page. We have given them in their order.

The portraits are admirable reproductions, evidently from approved photographs.

This number also contains an article entitled, "The Founder of Christian Science," which is as follows:—

"It was in 1866 that Mrs. Mary Baker G. Eddy discovered the system of religious healing known as Christian Science. In the year following she won her first disciple and began the work of spreading her new ideas. The movement received its first real impetus in 1875, when Mrs. Eddy published her book called *Science and Health*. A year later she founded and became president of the first Christian Science Association, in 1879 founding the first Christian Science Church, and in 1881 opening in Boston the first school for the promulgation of her teachings, which she

called the Massachusetts Metaphysical College, where she personally taught over four thousand students. The first magazine devoted to the subject was established in 1883.

"These are the mile-stones in the progress of one of the most remarkable religious movements of modern times, a movement that in the past decade gained more new members than all the orthodox sects combined. The present number of followers of Mrs. Eddy's teachings is over a million, and over two hundred thousand copies of her book, *Science and Health*, have been sold.

"Mrs. Eddy is greatly beloved by her students and followers, and there are now over twenty thousand members of The First Church in Boston."

Accompanying this article is a neat little sketch of Pleasant View, Mrs. Eddy's home. Christian Scientists are not vain, or at least they sincerely strive against vanity, because all their teachings are to that effect, but nevertheless all Scientists and friends of Science will be gratified that *The Ledger Monthly* has extended to Mrs. Eddy and Christian Science so favorable a presentation to the world.

From Leslie's Weekly.

Leslie's Weekly of August 3, 1901, contains a well-executed photographic picture of the house and grounds of Mrs. Eddy, taken the day of the recent visit of Scientists to Pleasant View, which picture is accompanied by the following article:—

A CHRISTIAN SCIENCE PILGRIMAGE.

How little the batteries of criticism which have directed their fire with unusual vigor on the Christian Scientists and their form of belief during the past year have done to shake the faith of the members of that sect in their venerable Founder and Leader, Mary Baker Eddy, may be judged by the interest and enthusiasm shown on the occasion of a recent visit of a host of Christian Scientists to the home of Mrs. Eddy, at Pleasant View, Concord, N. H. The annual Communion of The First Church of Christ, Scientist, in Boston, held in June, called together upwards of eight thousand communicants from all parts of the world, and an opportunity was improved to make a pilgrimage to the Founder of the sect. The visitors, of whom there were two thousand five hundred, were conveyed to Concord by three special trains, and were well repaid by not only seeing Mrs. Eddy, but were still more favored by hearing her address the vast throng. Our photograph was taken immediately after Mrs. Eddy had left the house for her accustomed afternoon drive.

An Impostor.

WE have twice or thrice in the past, called attention to the impositions practised upon Christian Scientists by a man claiming to be one of our number who gave different names at different times and places. Evidently this person is still pursuing his former methods, as the following letters indicate.

La Crosse, July 20, 1901.

Ezra M. Buswell.

Dear Sir and Brother:—About three weeks ago a man came to me claiming to be a student of yours, and asked me to loan him five dollars, until he should reach home, about one hundred miles. His story was very ingenious and plausible. He claimed to have been healed by you sixteen years ago, and afterward took class instruction of you, his wife also. His name he gave as George E. Adams, and his wife's name as Susan F. Adams.

He was club-footed, and I was told two days ago that he was exposed in the *Journal or Sentinel* two or three

years ago. I do not remember it if I saw it. But do you not think it would be well to mention him again? There have been many added to the ranks since then who are ignorant of his existence, and they may be duped as I was. I can hardly realize from things he said, and knew, that he is not a Scientist. I really feel ashamed to have been so deceived, and would be glad to prevent others from having a similar experience.

Yours in Truth and Love,
MRS. ELMA I. LOWRY.

Beatrice, Neb., July 22, 1901.

Dear Brother:—The enclosed letter, is the second, of the kind I have had the last week. I have no student of that name. It is strange that this man should go on so many years, and not be detected by some one.

Yours in Truth,
EZRA M. BUSWELL.

Among the Churches.

Work of the Sunday School at Binghamton, N. Y.

For the encouragement of other Sunday Schools which are trying to demonstrate that God supplies all our needs, I write this article.

One year ago I was appointed secretary of the Sunday School of First Church of Christ, Scientist, Binghamton, N. Y., and during that time it has increased from six pupils to eleven, and from two classes to four.

The Sunday School made the final payment of eight dollars on the church organ, and furnished the reading room with one dollar's worth of pamphlets, supplements, and reprints for free distribution.

Recently (since the agitation of the medical bill in this state), six dollars and seventy-five cents have been spent in literature, as follows: "Legal Aspects," "Medical Bills," and "Scriptural References." They were mailed, each accompanied by a "Christian Science History," to the lawyers, physicians, and ministers respectively of this city. The postage, amounting to about three dollars and a half, was also paid by the Sunday School. A second supply of supplement and reprints with two subscriptions to the *Sentinel* costing three dollars and a half has been furnished to our Literature Committee, who are placing them in one of the railroad stations as required.

Also the *Sentinel* has been placed in the Y. M. C. A., R. R. Y. M. C. A., and State Hospital. A stamp for our literature was bought. The total expenditures for the year have been \$27.45.

The advanced classes are working out the headings to the sections and all the classes give demonstrations each Sunday. The entire school has learned and carefully reviewed the Commandments, and Beatitudes.

ETHEL SINGLETON, *Secretary*.

Reading Room at Indianapolis, Ind.

Our reading room was opened April 1, 1900. At the close of the year we had sold over five hundred dollars worth of literature including sixty copies of Science and Health, about half being the pocket edition. We had two thousand visitors during the year, many of whom called for healing, others for information and to read.

The work is growing in our city. I feel we have made good progress during the past year, and as we are willing to give up self and work for God, we shall realize the harvest. Patience and obedience to divine Principle will meet every need.

My gratitude goes out to our Leader for the benefits

the world is receiving to-day through her teaching and guidance. Wonderful wisdom was manifest in instituting the reading rooms for the public; for they are a blessing to suffering humanity, if only as a place to tarry and receive a cup of cold water in his name. The seed sown in this way throughout the land will bring fruit in abundance.

I feel grateful for the privilege of being placed where I can be a benefit to hungering humanity, my daily prayer is that I may reflect this Life-Principle to others, and thereby obey the injunction of our master, "And as ye go, preach, saying, The kingdom of heaven is at hand. heal the sick, cleanse the lepers, raise the dead, cast out devils: freely ye have received, freely give."

MRS. MARY C. WEBBER.

Services at Kennebunk, Me.

A Christian Science meeting was held Sunday afternoon (May 5) in G. A. R. Hall. Considering the fact that no public announcement had been made of the meeting, there was a very encouraging attendance. The services were conducted by Mrs. Foye of Portland and Miss Carrie Remich of this town. The services were interesting and instructive, and received the closest attention by those present. These meetings will be continued every Sunday afternoon at three o'clock in the future. Many of our people, irrespective of creed, are beginning to take an interest in the teachings of Christian Science, and therefore there is no doubt but what these services in the future will be well attended.—*Local News*.

Science and Health in Prison Library.

St. Paul, Minn., July 10, 1901.

Mr. Henry Wolfer, Warden, State Prison, Stillwater, Minn.

Dear Sir:—May I ask if the library of the institution of which you have charge, contains a copy of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, the Founder and Discoverer of Christian Science?

This book is to be found in the prisons of a number of the states, and in some of the prisons the Christian Scientists hold Sunday services the same as other denominations.

Reading this book alone, which is an exposition of the Scientific application of the religion Jesus taught and practised, has healed the physically sick and reformed the sinner. In the latter case by showing him that there is no abiding satisfaction or pleasure in sin, but only as we believe in and practise the good, do we find any lasting benefit or profit.

If the book referred to is not in the library, I shall be glad to present the library with a copy of it, and know it will greatly benefit all who read it.

Yours very truly,
HOWARD C. VAN METER.

Stillwater, Minn., July 12, 1901.

Mr. Howard C. Van Meter, St. Paul, Minn.

Dear Sir:—Replying to your favored inquiry of the 10th, wish to say that we have not a copy of the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, the Founder and Discoverer of Christian Science. I have no doubt that this book is very interesting and may do some good. If you care to send the book for the prison library, it will be accepted with thanks.

Very truly yours,

HENRY WOLFER,
Warden Minnesota State Prison.

The Lectures.

At Hurley, So. Dak.

Judge William G. Ewing lectured on Christian Science, in the Opera House, Monday evening, July 8. Nearly every seat was occupied. The lecture seemed to meet the need of the hour, answering the various questions which the people are asking in these days.

The lecturer was introduced by Mr. George R. Lanning who spoke in substance as follows:—

Ladies and Gentlemen:—It is fair to presume that from the foundation of the world up to the present time, it has been next to impossible to find a human being that was fully satisfied. If you will take your Bible and turn to the book of Psalms you will find there that David said, "I shall be satisfied, when I awake, with thy likeness." And from that day to this, I will venture to say, there has not lived a man, except Jesus Christ, who could honestly say he was *satisfied*—one who was not looking for something better than he already had.

Ask those whom you meet if they are fully satisfied with their church relations, with the theology of their church, and they will tell you no. They will tell you that there is something lacking—an aching void that is not filled. They will tell you that there is a something, they know not what, which they would like to reach out and take hold of and appropriate to their own use, but that it is beyond their reach, and they cannot get it, hence they are not satisfied. And I venture the assertion that you, my friends, are not exceptions to the general rule. Your very presence here indicates that *you* are not satisfied, that you are looking for something better.

Those of us here to-night, who have felt the beneficial effects of Christian Science, are confident that Christian Science does fill that aching void, does supply that which we have been longing for all these years, and that if we continue to watch and pray for increased understanding, and *live* what we understand, we shall finally awake with His likeness, and *be satisfied*.

I feel that I am safe in saying that there has scarcely, if ever, been a question presented to humanity for their consideration and solution, about which there is such a diversity of opinion, as that of Christian Science. Should I ask each one of you (those outside of Science) for your concept of Christian Science, I do not believe any two of you would agree. And further than that, not one of you could give me a correct answer as to what Christian Science is. If this is true, I ask, is it strange that so many people think they are opposed to Christian Science?

Now, in order that these erroneous impressions might be corrected, the Mother Church has provided a Board of Lectureship, composed of members of the church, whose duty it is to present this subject to the people in such a manner that they may understand what Christian Science is,—to answer the questions which the people are to-day asking themselves about this matter. We are fortunate to-night in having with us a gentleman who has given this subject years of thoughtful study and consideration; a gentleman who was snatched from the very jaws of death by Christian Science, hence he speaks from experience. I now have the honor and pleasure to introduce to you, Hon. William G. Ewing of Chicago, who will now address you upon the subject of Christian Science.

Correspondence.

At Helena, Mont.

Sunday afternoon (July 21), an audience that filled the seating capacity of the first floor of the Auditorium listened for an hour and a half to a lecture on the subject of Christian Science by Hon. William G. Ewing of Chicago. Judge Ewing was formerly a leading lawyer of the Chi-

cago bar, and in his time held many offices of trust with honor to himself and his constituents.

He declared near the close of his address that he owed every breath of life breathed by him for the last fifteen years to Christian Science, and being a man of high intellectual attainments and scholarly qualifications, Mr. Ewing was therefore prepared to speak of the beliefs of Christian Scientists as one having authority.

Dr. W. G. Eggleston introduced the speaker, saying,—

It may seem strange that one who is not a Christian Scientist should be here to introduce a most distinguished exponent of that faith. For two reasons it gives me pleasure to be here in this capacity. First, because I have for ten years known, and for a longer time have known of, the gentleman who is to speak to you. In addition to that, I believe that when an earnest and sincere man comes with a message we should give him a patient and respectful hearing. We have nothing to fear from one who honestly believes he comes with a message of truth. Every advance that the human race has ever made has been made by listening to the earnest, sincere men who brought the truth to them. And every retrogression that the human race has made has been because men refused to listen to such men.

The gentleman who is to address you is a distinguished son of Illinois. In that state he has held high offices, and never except with credit and honor to himself and the offices. Widely known, by those who know him he is respected and loved. I take pleasure in introducing to you the Honorable W. G. Ewing of Chicago.

Helena Daily Independent.

At Anaconda, Mont.

The doctrine of Christian Science, which has of late been attracting world-wide attention, and has thousands of followers, while it is the especial target for denunciation by preachers and doctors, was ably expounded at the Grand Opera House last night (Monday, July 22), by Judge William G. Ewing of Chicago, one of its most noted and most respected exponents.

The house was well filled with a fine audience, notwithstanding the heat of the evening and the discomforts attending. Judge Ewing was introduced by Attorney James M. Hinkle, who said he was not a Christian Scientist himself, but believed in extending the same right to others that he claimed for himself—to do as he pleased and to worship God according to the dictates of his own conscience. "We who believe in one thing and think we are right and condemn all who differ from us are very narrow-minded," he said. "What we want, and what humanity needs, is broad-minded, considerate men and women. No two men act alike, think alike, or look alike, and for that reason every man should be tolerant toward every other, and concede to each one the right to worship God as his conscience dictates. The fact that I do not belong to the society is no reason why I should condemn Christian Science."

Mr. Hinkle then paid a splendid tribute to Judge Ewing as a man of recognized ability, conscientious in his beliefs, earnest in his endeavors to induce mankind to live better lives and reap the rewards that await men. Reference was made to Judge Ewing's career as a lawyer and judge of the Superior Court of Chicago, and to his "decisions while in that position, which will stand as monuments to his honesty and integrity."

The Anaconda Standard.

True peace is the fruit of *spirituality*: therefore, it is an inflow from the ocean-fulness of God. The world cannot give it: a man cannot give it to himself, nor win it by mere resolution. In right conditions, *it comes*, like heavenly-mindedness, of which it is a part.—CHARLES G. AMES.

From our Contributors.

A Thread in the Garment of Righteousness.

BY G. M. S.

OUR Leader has said, "Divine Love, as unconscious as incapable of error, pursues the evil that hideth itself, strips off its disguises, and—behold the result: evil, uncovered, is self-destroyed" (Miscellaneous Writings, p. 209).

Again and again, I have found this to be true. "I die daily" in demonstrating it and "count it all joy," for I know that the uncovering of any sense of inharmony in my thought or life is a call to a war of extermination of error,—a call never to be unheeded, or even tardily answered, for as the moments flee, other claims force themselves upon the attention ere the echo of the first has died away. The promptness and exactness of Science is astonishing and grand, and all our perceptions must be educated up to a degree which passes the understanding of mortal mind.

I have been amazed to find what an accumulation of erroneous beliefs there are hidden deep down in the subconscious thought, like so many magic lantern slides, each with its separate picture, which Truth uncovers and brings to the light in due time. The supply seems to be inexhaustible, but there must some day be an end of them if each one which is brought before our gaze is demolished and good put in its place. I am most grateful for every conviction and repentance.

The latest belief which has thus been shown to me was the "step-mother" thought. Many years ago, while an invalid, I suffered secret, indescribable torment from the fear that in case of my demise, my young children would of necessity pass to the care of a step-mother. To my thought, this word step-mother presented an aggregation of selfishness and cruelty unmitigated by any redeeming qualities. My indignation and antagonism against it finally reached such a point as seemingly to overpower the slender hold I had upon life. Thought fainted under the terrible burden, and while friends came from distant points weeping and expecting to find me upon a bier, mortal mind woke somewhat from its swoon and fought blindly with the apparition which was trying to take its mortal place. At this juncture my husband made a piteous appeal to me to try to live for the sake of my family. The darkened thought was arrested; the new one took its place, and the step-mother was never allowed an opportunity to materialize.

When mortal thought had thus, presumably, vanquished its enemy and it could not longer contemplate such a horror, the belief was pressed away out of sight. It was not, however, yet relegated to oblivion. Years afterwards, when I was a grandmother and had found Truth, it was searched out from "the innermost parts" to receive the porter's challenge in accordance with Law.

"Without a knowledge of his sins, and repentance so severe that it destroys them, no person is or can be a Christian Scientist" (Miscellaneous Writings, p. 107). Its approach was stealthy and unsuspected, for it appeared in the guise of solicitude for the welfare of a grandchild who was under my care. I tried to overcome fear, but did not succeed, because I had not light enough to see what the enemy was that I had formulated; but at length out of the mist came the old thought materialized. I was face to face with the dreaded situation—my little one would go to—what? Only for an instant did the query confront me; for divine Love showed me the utter falsity of the old belief, by bringing it in opposition to the fact of God's omnipresence, and unity with "his image and likeness."

Truth held the lamp of Life high, and in a single flash I saw that what I had dreaded was a claim of hate, a plague

spot, a mental leprosy. I saw that all these years it had been an unsuspected source of distress to me, and that I had regularly contributed my quota of bitterness to the congregated thought against those who undertake to care for other people's children, and thereby increased the difficulty of their work. I saw also the wrong that I might now do to the child by casting upon her thought shadows of jealousy, distrust, and sorrow.

This would be a blight, more or less, to three persons beside myself, and beginning with a group of four, project an ever-widening circle of inharmony. I remembered the injunction, "Let no clouds of sin gather and fall in mists and showers, from thine own mental atmosphere. Hold thy gaze to the light" (Miscellaneous Writings, p. 355).

Divine Love enabled me to reply, "I will." It was easily done, for I saw what a ghost belief had been conjuring up. The result was immediate relief and an increased sense of peace and rest.

Following this came a kindliness and compassion for the new mother, and a desire to help her with the confidence and affection of the child, and to be a means of encouragement and help to one who had not found Science. Thus a basis for real friendship and helpfulness was established, for which I am profoundly grateful.

I know that my demonstration was not only for myself but for the little one whose welfare is thereby secured.

Mahmout, the Persian: an Allegory.

BY JOHN S. CRELLIN.

MAHMOUT, the Persian, builded him a house, long after "the Adam-dream; long after the morning stars sang together, and all the sons of God shouted for joy." And Mahmout was glad, for all he saw was good. The sun smiled in kindly approval upon all within, and touched each door and window, each picture on the wall, with a tender kiss, and for very joy Mahmout sang all day long. And when evening came he waved his hand in grateful acknowledgment to the setting sun and the sun grew conscious of him and was glad.

A brook, like melted crystal, talked to the grasses and flowers on its brink as it tumbled its way onward to the distant hills. Great trees, laden with fruit, nodded in the breeze and whispered, "How beautiful!" and the brook answered back again, "How beautiful!"

But one morning, as the sun rose from behind a great bank of clouds, tipping their peaks with torches of golden fire, he saw, to his astonishment, that a cloud had settled upon the face of his friend, the builder of the house. And he called to him, "Mahmout, what ails thee?"

"My house, my house!" cried Mahmout. "You have lighted it up beautifully, within and without, till every wandering bird sings about it, and all travelers gaze upon it in admiration. But alas! that which troubles me cannot be seen by bird or man—one of my rooms is dark."

"Is what?" asked the sun.

"Is dark," answered Mahmout.

"Alack!" said the sun, "these mortals ever speak to me in riddles. Come, tell me, what is dark?"

"Darkness is the absence of light, O Sun!"

The sun flashed a burst of splendor through the realms of ether to a distant star as he wondered, "How strange!"

"How strange!" cried the brook, as it reflected back to the sun its open wonder.

"How strange!" sang the birds; and the tired traveler caught the words as he knelt at the happy brook to drink, lifted his head, and marveled, "How strange!"

"Absence of light!" gasped the sun, "absence of light! I never heard of that. One of his rooms is dark! Show me thy room, Mahmout!"

"Come down, O Sun, and look!" cried Mahmout; and

the great Light-bearer, filled with wonder, came swiftly down. "Behold! here is the room, an upper one, the only one that's dark!" grumbled Mahmout as he flung open the door.

The sun stepped in and peered about in every crack and crevice, from floor to ceiling, but he could not guess. "Where is the dark, O man?"

Mahmout, almost blinded by the sun's astonishment, gazed in bewilderment: *there was no dark.*

"Where is the dark, O man?"

Mahmout hung his head in shame. "Alas, I cannot tell! The room *was* dark before *you* entered in."

"What is this wall you've builded against my rays?" now cried the angry sun.

"The wall of self," answered the trembling wretch. "The birds annoyed me with their songs, the brook with its ceaseless babble, and my fellow-mortal with his never-ending cries for help."

"Remove it!" thundered the sun as he mounted back to heaven; "let's hear no more of *self*."

"I wonder what is self?" murmured the brook as it fed the thirsty grasses along its brink. "I wonder what is self?" whispered the trees as their ripe fruits pattered to the ground that all who would might eat and rest beneath their shade. "Self, self," sang the birds, "who ever heard of self?"

Then Mahmout, the builder of the wall, began to take it down. For you must know, that to his poor sense, after the sun was gone, the room again was dark. O, how hard it was to break loose the first great stone. But, as it fell, Mahmout could hear the singing of the angels. And as the first faint rays of the sun came gladly in, Mahmout could see the under side of the stone glaring up at him from the floor, and on it was written, "malice."

Then came "envy," "jealousy," "hatred," "revenge," and all their awful kind, as Mahmout, with bleeding fingers, tore eagerly at the wall. At last, "Self-love," *the great corner and foundation*, fell inward with a crash and all the room was light.

"I'll throw them out!" cried Mahmout as he turned to execute his threat. But lo, the loving Sun had already melted them to air. Then sang the birds, the trees, the brook, and even Mahmout too,—a song was wafted to them by the angels: "Unto him that overcometh will I give a crown of life."

Mahmout and the house were one. The Sun was Love, that still is calling to each mortal man: "Mahmout! Mahmout! O tear away thy wall."

Prison Work.

BY NETTIE SHELDON.

THE result of the work of putting Science and Health into the jails and prisons has recently been brought to my notice in a very gratifying way.

A man awaiting trial in a jail where Science and Health had been placed became deeply impressed with its teaching, and after having been sentenced to three years' imprisonment in Fort Madison Prison, Iowa, wrote me asking for Christian Science literature. Our church sent him a copy of Science and Health. The *Sentinel* has also been forwarded to him. The acknowledgment of benefit received is ample reward for any effort of ours to scatter the good seed of Truth. The following is a copy of the man's last letter.

Miss S.:—I received your most welcome letter of the 21st, and was very grateful for the encouraging words contained therein.

In addition to your message I also received the *Sentinels*, and it would be very difficult indeed for me to attempt

to describe how highly I appreciate the instructive feature of that good paper. However, I will remark that its influence has been most beneficial. As I read the abundant testimonials contained in the *Sentinel*, I should be very grateful if I could add a humble statement to its pages as a slight token of gratitude for the remarkable benefit it has conferred upon myself.

Since my introduction to Christian Science it has extended to me an entirely new life by completely destroying a false appetite that was rapidly carrying me to self-destruction. Through the inspiration of "Science and Health with Key to the Scriptures," I have been liberated from all those impulses which so characterized my past life, and which have placed me in my present surroundings, —prison walls. Now, however, as I am entering a new life, my aim will be to prove myself worthy of the benefit Christian Science has so graciously bestowed upon me. In my present environs Science and Health is indeed my true friend and only companion, and as I advance in the spiritual understanding of its teaching, it brings a corresponding amount of peace for which I am overwhelmed with gratitude.

Yours most respectfully,
F. S.

Living.

BY L. L. D.

As Christian Scientists, it is our constant effort to learn how to *begin to live*, for we discover that to our sense we have never truly *lived* until we begin to know God and our relation to Him; and *this* life, the Bible tells us, is eternal.

Only that is *life* to us in which we find all freedom from the things which pain and trouble us, and find instead those things which minister to our highest good.

Love manifested in every detail of our daily experiences, is life, and we then learn the truth of what our Leader says in one of her poems, "Love alone is Life."

Does the heart cry out with one long wail of bitterness and sorrow for the things it has lost or failed to gain? Then we have not yet found the Life which is God, or the Love which is Life.

Wretched discord of any sort, is not *life*, and no material help of any kind whatever, can ever give us lasting freedom from it. Divine Love alone can resolve the clashing dissonances of the life material into the heavenly harmony of the Life which is God. When God's own music is heard in every phase of our lives, then life will be a satisfying reality and worth living.

I sat one day, by a discontented, discouraged, unhappy woman. I longed to help her, and finally I said, "Let me give you a Christian Science treatment." She replied, "Well, help me, if you can." So I sat for a few minutes silently declaring that there was no reality in discord, that God's child could not suffer and be unhappy, because God was the only Power and He never made anything but love and peace.

In a few minutes she left her sewing and began moving about the house and singing as if the sun had suddenly broken through the heavy clouds, and now every trembling leaf quivered with joy, and every raindrop glistened with light and beauty. The burden was gone. The power of Good over the evil was again demonstrated.

As religion has deepened its hold and broadened its sway, every part of life quickened by its touch has become more real, more sacred, more joyful, more satisfying. Religion is not a department of human life. Religion is a spirit pervading all departments of human life.

MARY EMILY CASE.

Testimonies.

A Grain of Understanding.

We are taught in "Science and Health with Key to the Scriptures" that even a grain of the understanding of Truth helps immensely, and I personally found this so, even when I first heard of Christian Science.

Some dear friends with whom we had been staying in the country, and who had come into Science, had explained the new thought to my inquiring and unsatisfied mind, and given me a glimpse of Reality. I had seen also their proofs of faith by their works, and the dawning of this day filled me with high hopes and a restless longing that I might get more light.

When I left them to pay another visit, I had an early and unexpected opportunity of proving that I had my "grain" of understanding. One afternoon, my daughter and I went for a drive in a low phaeton. We had no groom with us, so I took the reins. We were driving in Richmond Park, and just before descending a little incline a man some fifty yards ahead of us fell off his bicycle and startled our pony so much that she plunged forward, and in a moment had the bit between her teeth and was off full gallop down the incline. As I afterwards found, they had forgotten to put any breeching on in harnessing her, and the carriage coming on to her hocks only terrified her the more and maddened her gallop.

It was a dreadful moment, for she dashed on off the road amongst the trees, many of which we just shaved, and though my daughter and I both pulled with all our strength at her mouth, we could not even guide her. Then it came across me like a flash that no accident could happen where God's presence was realized, and I said to my daughter, "It's all right, dear; God is here," and I think she answered, "Yes;" but our career seemed hopeless, for the pony was tearing along among the trees, when just in front of us we saw a post and rails guarding a drop into a lower field, and, to mortal sense, going at that headlong speed, it seemed as if there were nothing for it but to go right into it. My daughter said, "Mother, I'm going to throw myself out;" and I did not try to stop her. She let go her rein and jumped out, falling violently on her shoulder, and to my amazement the pony swerved sharp round—seemingly a physical impossibility in that mad gallop—two or three yards from the railings into a stiff paling to our right, throwing me out and bringing herself and phaeton up dead short. People began coming up very slowly towards us from various points, afraid, they said afterwards, that we were both killed; but we were neither of us hurt, nor was the pony, and only slight damage was done to the carriage. We both knew and felt that the God we understood so differently was not in the accident; that He *cared* for us, and though, as I say, the understanding was in its earliest dawn at that time, it proved the beginning of Wisdom. A little tear in the sleeve of my daughter's blouse was the only sign of her fall, and I had not even as much as that to show. Hourly and daily must we watch and pray for this understanding to increase that the arm of the Lord be fully revealed to us.

One word of gratitude must end my little letter,—of gratitude and love to her who has done what she has done for humanity, and who works ever ceaselessly and lovingly for us all.—K. SUART, London, Eng.

Glasses not Needed.

Previous to 1899 my eyes had been troubling me for several years, and for nearly two years had been in quite a bad condition. They pained me a great deal if I used them at night or read very much. I went to an oculist who was considered very good, and he told me I

would have to put on glasses and wear them the rest of my life for any special work. The trouble was far-sightedness. I put the glasses on and wore them about four months. They were a great deal of annoyance to me, and I did not like the idea of always having to wear them, but supposed it was necessary. After wearing them for four months, I became interested in Christian Science. I had attended several of the services. I thought I was very much opposed to it, that I simply went with a friend who wanted to attend but did not like to go alone. Finally I made up my mind I would go because I wanted to understand something more of Science, and after making that decision, I went home and laid my glasses off and said that I was not going to wear them any more. I have never put them on since, except a day or two afterward, when I had some very close work to do and the day was dark. I have had scarcely any trouble with my eyes; just at first I felt a little of the old sensation. Now I can use my eyes for hours and do anything I please. I am very thankful that I was enabled to put the glasses away.

T., Cleveland, O.

Healed after Material Means had Failed.

It is now a year ago, since I first heard of Christian Science. I was then suffering from kidney disease and rheumatism of three and one half years' standing. During that time I was under the care of four doctors, without getting any help. I have used all kinds of patent medicines, electricity, and took for two months daily treatments in a hydropathic institute; but I seemed to grow worse right along. Then I found Christian Science, a year ago. Thanks to God for that hour. I went to a Scientist and was healed in nine treatments, although most of my troubles were destroyed at one visit.

Shortly after my healing, some of my old friends said: "You just wait till the winter comes and see how you can stand it." The winter did come, and I was out on the street every day, in storm and cold, driving a wholesale delivery wagon, and was all the time healthy and strong. And how could it be otherwise, when we, through the study of Science and Health, learn to know that God, or Good, is ever-present. I am very thankful for the physical healing and for the spiritual uplifting, for which I give all the glory to God and Christian Science.

JOSEPH AMANN, Milwaukee, Wis.

Christian Science overcomes Fear and Anxiety.

For many years I had suffered with severe rheumatism in my arm. I had tried every material remedy but only temporary relief came and I was much discouraged as the pain always returned. It was therefore with great joy that I learned the good news that through Christian Science I could be healed. It was brought to my notice by a friend, and as soon as it was explained to me I began the study of Science and Health. The pain left me and my physical troubles ceased.

This was seven years ago, and since then I have been able to rise above many seeming difficulties and to help others. In my own home I find Christian Science a constant help in overcoming fear and anxiety. It is with the greatest gratitude that I realize what a blessing Mrs. Eddy has conferred upon humanity by founding a Science that points out the Truth, that makes us free, and enables us to be of real help to others and to love our neighbors as ourselves.—H. M. C., London, Eng.

Behind the cloud the starlight lurks,
Through showers the sunbeams fall;
For God, who loveth all his works,
Has left his Hope with all!

WHITTIER.

Religious Items.

In an editorial in *The Independent* we find the following comment on Count Tolstoy's excommunication from the Orthodox Church of Russia: "We are not surprised that Tolstoy has been excommunicated. Such a Church as the Russian Church could not but excommunicate him and he knows it. That Church believes in the efficacy of multitudinous rites and ceremonies and sacraments which he believes to be nothing other than silly magic. That Church cannot well retain a man who calls its sacraments an imposture. It must be understood by the reader that it is the Russian Church which Tolstoy has in mind, not the Christianity which we are familiar with. It is his disgust with the pretensions and corruptions and persecutions of that Church that has carried him to some extremes which he would not have had occasion to emphasize if he had lived under a freer and purer Church. He takes the position of what we would call an Arian, a worshiper of God, a disciple of Jesus Christ as a teacher of morals and religion and a revealer of God, but not as himself divine. He makes Christ's literal teachings his law, with all their non-resistance and voluntary poverty, and he carries them out to the extreme of the wrong of paying taxes, which Christ himself paid to Caesar."

"We are not sorry that Tolstoy has so few disciples but we are positively glad that he puts such a ferment into the world's thinking. He sets us all to examining the bases of our beliefs and traditions. He asks us, What is truth? He makes us think what religion really is, and how much is essential to it; and what are the rights of the State, and whether war can be justified, or police control of public morality, or whether Anarchism is to be the last fruitage of Christianity."

From an editorial in the *American Baptist Flag* we quote this: "If conscience was an infallible guide it would guide all men to do the same thing. Many men who claim to be guided by conscience do things which are opposite and contradictory. The Hindoo mother who casts her child into the great river Ganges claims to be, and no doubt is, guided by conscience, while the cultured mother looks on in horror, her conscience revolting at the deed. This proves that conscience is but a creature of education. That which is a great sin to one is an act of devotion to the other. But Paul settled this matter beyond controversy when he said that he persecuted the church, casting into prison every one that called on the name of Jesus, but while he did all these great sins, he declared that he did it all in good conscience; he verily thought that he was doing God service. Oh, no, Paul; you did it ignorantly in unbelief, but that did not make it right; hence conscience is not a safe guide. God's law was given to define sin. Paul said: 'By the law is the knowledge of sin.' God's law, then, and not conscience, is the standard by which we are to be measured. Men who get behind conscience to screen themselves have a more flimsy covering than Adam when he endeavored to hide himself by a covering of fig-leaves."

The following may not come strictly under the head of the religious; nevertheless it is published in *The Literary Digest* under the heading, "Religious Notes:"

The late Joseph Cook was celebrated for his positiveness, which those who did not admire him termed "cocksureness." The *Boston Pilot* relates several stories in illustration of this. It says: "When he went over to Scotland to demonstrate by practical experiment the dangerous effects of alcohol on the human brain, he beat up the white of an egg with spirits until the mass coagulated, but it did not convince his audience as he had expected. On the contrary, it only evoked from Professor Blackie the quiet remark: 'That seems to prove that whiskey must be good for softening of the brain.' But the cruellest sarcasm said of him was when Bill Nye wrote demurely: 'I under-

stand that my friend, the Rev. Joseph Cook, has completed a thoughtful essay entitled 'A Bird's-Eye View of the Kingdom of Heaven.' Joseph was capable of looking patronizingly down on even that Dominion—or so his critics said."

Says Alexander Maclaren, D.D., in *The Christian Advocate*: "'Blessed are they that have not seen, and yet have believed.' I need not do more than just in a sentence remind you that we shall very poorly understand either this saying or this gospel, or the greater part of the New Testament, if we do not make it very clear to our minds that 'believing' is not credence only, but trust. The object of the Christian's faith is not a proposition; it is not a dogma nor a truth, but a person. And the act of faith is not an acceptance of a certain thing, a resurrection or anything else, as true, but it is a reaching out of the whole nature to Him and a resting upon Him. Christian faith, being more than intellectual belief, does involve the activity of the will. Credence is the starting-point, but it is no more. There may be belief in the truth of the Gospel and not a spark of faith in the Christ revealed by the Gospel."

It happens to many a man and woman that in the absorbing demands of business or professional life, of home duties or the claims of society, there is a gradual failure of moral purpose or religious conviction; and, while the life grows in one direction, it as surely degenerates in another. We can cultivate any part of our natures we will, just as the gardener or horticulturist, by selecting certain qualities, gradually develops a new kind of potato or corn, a new variety of strawberry or apple. We can make ourselves new kinds of men and women by giving attention to business or pleasure, books or music, athletics or religion. Spiritual things are not of interest to us where we do not cultivate them, just as business becomes dull if we do not give attention to it and try to make it interesting.

The Christian Register.

The Rev. Walter B. Vassar, in *The Examiner* thus speaks of the misuse of the Bible:—

"It is a wonderful book that will bear so much maltreatment from its friends and stabbings at its heart from its enemies. And yet, since we know that God's truth cannot die, whether revealed on the printed page or in the lives of 'living epistles,' we need not so much marvel at our enduring Bible."

"The misuse of the Book, while it cannot damage its real character, can greatly hinder its mission and curtail its usefulness. And herein we find the most serious objection to the ill-advised use which not a few preachers, Bible class teachers, Bible readers, and evangelists often make of it."

The Congregationalist and Christian World thus speaks of worship and rest: "The special promises of Christ's presence is to social worship. It matters little where the two or three are gathered together, if they are gathered in his name. But aimless loitering or even quiet hours under green boughs or on wave-beaten sands must be classed as rest, not worship. The spirit of worship may enter into them and they may become transformed under the influence of some reverent soul, but they can never take the place of purposed communion and deliberate social expectation of the presence of Christ. Not even meditation, important as it is, can long do this, for the religion of Christ in worship, as in ministry, is social in its purposes and belongs among men."

"I believe in the verity of John's vision, when he saw all in heaven and earth and in the sea reconciled to God and heard a voice from this redeemed multitude which he could only compare to 'the voice of the many waters' blending in praise to the Omnipotent One."

"Let us not limit the almighty arm of Jehovah, but rather believe and say with the apostle, 'Eye hath not seen, nor ear heard,

neither have entered into the heart of man, the things which God hath prepared for them that love him.'"

The Universalist Leader.

Society is an organism. "No man liveth to himself." One human being cannot receive an injury, or be kept from his rights, without injury to all. Hence the Golden Rule is beginning to be adopted as a simple law of self-preservation. It is found that by making the Golden Rule the Rule of Gold our social fabric can be raised to a far higher type of civilization than it has yet attained. The Golden Rule will lead to the Golden Age.

THEODORE F. SEWARD.

In *The Golden Rule*, "Brotherhood."

In a sermon by the Rev. George C. Starkey in *The New Church Life* we find the following: "To love itself, no other attributes are competent than those which are of pure love, thus of mercy toward the universal human race, which is, that it wills to save all and make them happy to eternity, and to transfer into them all things of its own: thus from pure mercy to draw all who are willing to follow, to heaven, that is, to itself, with the strong force of love."

Like Froude, Edward Everett Hale, has defined "Right as the sacrifice of self to good," and "Wrong as the sacrifice of good to self."—GEORGE PERRY MORRIS, in *Review of Reviews*.

RULES TO BE OBSERVED.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quarterlies, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards, and Church notices, should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or *vice versa*.

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

We especially request our contributors to write plainly, and only on one side of the paper.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS.

A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$3.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.	
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.	

CHRIST AND CHRISTMAS.

An illustrated poem,

Single book, prepaid \$3.00

Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$3.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription :

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription :

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale :

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 72 pp.

SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE. 63 pp.

MR. KIMBALL'S LECTURE. 33 pp.

HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.05.
Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

There are upwards of forty rear admirals on the navy retired list of the United States. The oldest is Thomas O. Selfridge, who is now nearly ninety-five, and is said to be the oldest retired naval officer in the world. His son, Thomas O., Jr., is over sixty-five years of age, while there is a younger brother over fifty who is a commander in the navy.

The San Juan Council has appropriated six thousand dollars yearly for the support of a public library. The idea is to combine a public library for San Juan and also have a distributing library for other portions of the island of Porto Rico. The authorities expect to receive from Mr. Carnegie a sufficient amount to build the library.

The second largest claim yet filed with the Spanish Claims Commission has been presented by Francis Seigle, an American citizen resident in Cuba. His claim amounts to \$872,427. He says that in 1896 his plantation was worth one million dollars, but owing to depredations of Spanish troops he is reduced to absolute want.

The city administration of Manila was turned over to Civil Governor Taft and the newly appointed officials, August 7. The control of the city will be in the hands of these commissioners, similar to the government of the District of Columbia. Colonel Herrera, a Filipino, is president.

Six hundred and sixty-five national banking institutions with an aggregated capital of \$34,267,000, have been organized since the passage of the new banking law, March 14, 1900. Of these banks 457 were organized with a capital of less than fifty thousand dollars.

A movement is on foot to organize the veterans of the Philippine war into a compact fraternity on the same general lines as the Grand Army of the Republic.

Rear Admiral Henry L. Howison has been selected to fill the vacancy on the Schley Court of Inquiry, caused by the inability of Rear Admiral Kimberly to serve.

From a statement prepared by the internal revenue bureau, the total receipts from the war revenue act from July 13, 1898, to May 31, 1901, amounted to \$310,053,363.

The gunboat Machias has been ordered to Colon to look after American interests there during the trouble between Venezuela and Colombia.

Foreign.

A memorial to Queen Victoria will be erected in front of Buckingham Palace. The whole memorial will be sixty feet high, con-

sisting of a platform approached by five flights of steps and surmounted by a statue of the Queen, flanked by symbolic groups representing Truth, Justice and Maternity, the Army and the Navy, etc. Colonnades, gardens, and gateways have been planned. When completed it is believed the approach to Buckingham Palace will be one of the finest entrances to any royal residence in Europe.

The German Antarctic expedition, under the leadership of Professor Ehrlich von Drygalski of Berlin, noted for his study of Arctic glaciers, sailed from Kiel, Germany, August 11. The expedition is financially backed by the German Government though conducted by civilians.

In accordance with instructions received from the imperial government, Lord Kitchener issued a proclamation on August 7, in which he allowed the Boer leaders until September 15 to surrender. If this is not done they will be permanently banished from South Africa.

The signing of the final protocol of agreement between the Powers and China has been delayed owing to objections raised by Great Britain against the international commission for the revision of the tariff.

Andrew Carnegie has offered to give one hundred and fifty thousand dollars to Montreal, Can., to build a public library if the city will provide fifteen thousand dollars a year for maintenance.

The International Association of Botanists completed its work at Geneva, August 8. Among the Americans present was Professor William Gilson Farlow of Harvard University.

The Dowager Empress Frederick of Germany passed away at Cronberg, August 5. She was the eldest child of the late Queen Victoria.

Thirteen American claims now before the South African Compensation Commission aggregate more than two hundred thousand dollars.

Count von Waldersee, field marshal of the allied forces in China, arrived at Hamburg August 8. He received a most cordial welcome.

Andrew Carnegie has been invited to become lord rector of Aberdeen University, Scotland, in succession to Professor Stuart.

Industrial and Commercial.

There are 905 companies operating electric, cable, and horse railways in the United States. The total mileage of single track is given at 20,442 miles, and the total number of cars is 62,918. The aggregate of capital stock for 1900 is \$1,066,196,460, an increase over the previous year of \$75,183,698. The bonded debt of all roads for 1900 was \$866,818,673, an increase over the previous year of \$83,855,202.

The Arbuckle Brothers, coffee merchants of New York, will in the future bring coffee from Brazil on their own vessels. They claim that their rivals, the Sugar Trust, had a decided advantage over them in the coffee warfare because of the rebate they received from the Brazil steamship pool, hence decided to employ their own ships.

There are about seventy-five thousand oil wells in the United States, exclusive of those in the Beaumont district, with an approximate daily production of one hundred and sixty thousand barrels. A dozen wells in the new Beaumont district are producing more than all the other wells in the country combined.

According to a recent report of the State Department at Washington, D. C., the United States is Japan's best customer. Japan's total exports in 1900 aggregated \$101,806,137. Of this amount \$26,178,065 came to

the United States, while the United States exported to Japan \$31,265,075 worth of goods.

A test of American and English locomotives has just been made by English experts at Kingston, Jam. Over a difficult line and under the same conditions the old American engine beat the new English engine, which cost twice as much, by more than seven minutes.

The exports of raw cotton during the fiscal year of 1901 averaged a million dollars a day. The quantity was not so great as in some other years, but the total value was higher than ever before.

General.

A wealthy Russian land owner died not long ago, and after the funeral his heirs looked vainly for the will, but without success. A few days later a young man, seeing a graphophone on the table in the library, put into it a record which he supposed was that of a popular Russian song. To his amazement and terror, instead of a song he heard the dead man's voice recite the words of the missing will. Lawyers were summoned, and they lost no time in examining the record containing the will. It was found to be flawless, and the question whether a will left on a graphophone cylinder is valid is now before the Supreme Court at St. Petersburg.

A concerted effort on the part of missionaries in Porto Rico is being made to send bright children to the United States to attend our schools for a time. It is believed that these young Porto Ricans will exert a most helpful influence upon friends and relatives when they return home.

A new system of wireless telegraphy has been invented by three students at Chicago. The claims for the new invention are that it is quicker, can send messages to greater distances, and that the problem of operating several instruments in the same locality is practically solved.

The first station of Nikola Tesla's wireless telegraph system will be built at Wardencliff, L. I. This station will be the main one of the system, and it is stated that Mr. Tesla expects to be able to communicate with all countries of the world from that point.

The highest price for New York real estate was paid recently when a parcel of land at Broadway and Thirty-fourth Street was sold for \$350 a square foot. It contained 1,100 square feet and brought \$375,000. The dimensions are 31x45 feet.

St. Peter's Cathedral at Rome is the costliest religious edifice in the world. About seventy million dollars were spent in its construction. The foundation was laid in 1450 and it was not finished until 1880. It was dedicated in 1826.

In the United States the savings deposits of 1870 were \$549,874,358, distributed among 1,630,846 depositors. This amount was multiplied by more than four in 1900, when \$2,384,770,849 was distributed among 5,875,054 depositors.

An Egyptian boat, said to be four thousand years old, has been donated to the Carnegie Institute of Pittsburgh. The boat was recently dug up from the bed of the Nile and is two thousand cubic feet in size.

The new constitution of Alabama provides that women who pay taxes on five hundred dollars worth of real estate may vote at all bond elections.

The twenty-eighth triennial conclave of Knights Templars will be held the last week in August in Louisville, Ky.

The fifty-fifth annual session of the American Missionary Association will be held at Oak Park, Ill., October 22.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Some Lessons Taught by the Pan-American.

BY MRS. J. EDGAR HUGHSON.

ALL culminating results tell their story of efforts, mental and physical, spiritual and material. To the student who aims at the realization of some ambition there comes a glow of satisfaction, be the endeavor without or within his special field of research, when such a result is secured as wins applause; and glorious indeed are the rewards to the affections and minds of the projectors of any plan and purpose put forth for the elevation and enlightenment of humanity when the results are declared, by all concerned, builders and observers, as surpassing previous efforts.

Then may the world unite in one acclamation of praise for the spirit that is never satisfied with past achievements, but strives for a higher realization of the ideal and a nearer attainment of the perfect pattern.

All higher realizations are the result of higher ideals, and be the language stone or cement, wood or paper, sunlight or electricity, the story related is uplifting as the thought expressed through these forms is elevated and idealized, inspirational in motive.

At the Pan-American Exposition, there comes an impression of the dominating of the ideal as there opens to view the splendor of first one scene then another, arranged for the enjoyment and inspiration of the visitor, and the language is universal, for it speaks, not in arbitrary words, but in Thought structures.

In mediæval times the capture of a royal personage in battle was heralded to the populace by a triumphal entrance of the victorious general to the capital city, followed by the chained captive.

A fine description is given in the historical romance, "Zenobia," of the triumphal entrance of Aurelian into Rome with Zenobia chained by a golden chain to his chariot, he having torn her from her beautiful city of Palmyra to celebrate his own triumph and victory.

To-day, freedom and liberty of thought have made a triumphal entrance into the twentieth century with mediæval paganism and barbarism chained into subjection, which is grandly typified by the entrance to the temporary city constructed as a memorial and a future incentive to the progress of Pan-America.

Passing along Lincoln Parkway, by the Art Gallery in process of erection for permanent use, catching a glimpse through the trees of New York State Building,—a permanent structure to be occupied by the Historical Society,—over a bridge, through a row of columns, there rise in noble grandeur, the four pylons on the Triumphal Bridge, not to celebrate individual achievement, but to commemorate the virtues upon which our nation was founded, and which, in the future, must support all organizations that survive the strenuous efforts of error to tear down the bulwarks of character and strength, and supplant them with unbridled liberty or narrow bigotry.

These massive pylons, two on each side of the bridge, rise high to affirm the realities of brotherhood, liberty, civic virtue, and benevolence. They are united by chains of huge decorative mediæval shields and flags, which

seem to the visitor to show how, through ages darkened by ignorance, this age has reached a period in its development where the new commandment, "Love one another," has become the foundation of true government, and the spirit of the new century just entered upon.

This spirit has already heralded the dawn of desire for the best wherever it originates to be tested, weighed in the balance, but not found wanting, but to bear the test of practical universality in mutual esteem, mutual toleration, mutual liberties, mutual purity and honor, and mutual helpfulness. Having imbibed the spirit which prompted these monumental structures, the visitor, as he stands between them, looks first to the right, then to the left. He rejoices! He has entered the new city through the gateway that leads to the right understanding, and now drinks in the beauties before him from the view-point of the artists who designed them. He observes the true values, notes the perspective, the important points of arrangement, buildings, esplanade, courts, and fountains, and sees that the point of climax is the electric tower, a structure four hundred and ten feet high, from which pours a large volume of water into a wide basin at its foot. Here beautifully designed sprays spurt, play, and bubble water, as though full of joyous glee and a desire to rival each previous effort at sparkling and reflecting sunlight to celebrate this great and memorable creation of this beautiful Pan-American city.

The court of fountains, which indents the broad esplanade is a magnificent conception of the useful and ideal combined in mythological and artistic designs for beautiful effects and the practical utility of supplying moisture and coolness to the air.

Entering thus from the south, with the electric tower about two thirds the distance of the grounds from the pylons, an intelligent idea is obtained, which enables visitors to economize time in passing from one building to another. About half way between the bridge and the tower, unique, helmet-shaped band-stands shelter the musicians, where, surrounded by innumerable seats, the crowds sit and listen at stated hours to the music as it floats on the breeze across the esplanade, a feast to ear and eye sufficient for a lifetime, with the view this affords of fountains and buildings, turret and tower; while, like a Thisban thread, wind the water-ways or canals through the grounds, adding their artistic reflections of bridges, borders of statuary, vases, and all that their clear depths mirror.

Now and then in quiet enjoyment, floats by a company of tourists in an electric launch or a gondola, while on land whole families,—father, mother, and little ones,—pass by, forming a regular cavalcade in rolling chairs, or the Jinrikshas drawn by Japanese in their picturesque costumes. Truly, Pan-America, with its adaptation of the Spanish Renaissance in its colonnades, loggia, and architecture, is a cosmopolitan city without including the types on the Midway, which, to have the privilege of visiting, is indeed a valuable opportunity that should not be lost to any one, far or near, and particularly to a continent of people limited to their own shores, by many obstacles on land and water, which must be overcome before being permitted to see

even an infinitesimal part of what this segregation of ideas represents.

The illumination of the Pan-American Exposition grounds exceeds any conception hitherto attempted by man to secure light for a city. The legends that transferred the Grecian gods and goddesses to the heavens upon their performance of any deeds of heroism seem here to have been reversed, and the spirit of investigation which seeks to illumine the understanding upon every theme of study has brought the constellations down to earth in seeming fancy, and placed the myriads upon myriads of brilliant stars upon pedestals, colonnades, buildings, fountains, and towers to illuminate not alone the eye of the Exposition, but to furnish the illumined thought to all the world that there is yet to be learned that which will exceed this illumination as far as this exceeds the illuminating power of a candle's light—beyond what human mind can now conceive. For now the dome of the sky grows darker and darker as, after this city's thread of light, which softly and gently steals on from one spot to another like a fiery thread at the edge of evening, deepens to the golden light, out-rivaling the stars that twinkle in the distant heavens.

Is it any marvel that, upon the first sight one cannot refrain from the thought of the "great city" whose "light was like unto a stone most precious, even like a jasper stone, clear as crystal"?

The educational results of this Exposition cannot now be estimated any more than could those of the Centennial in 1876 or those of the World's Fair in 1893. And, as the Centennial was the foundation from which developed that widespread interest in the fine arts and liberal, in all their comprehensiveness, and many of the progressive ideas in mechanical invention, which have characterized this country since that time, so the creation of the White City has with its court of honor, its golden statue to liberty, which, by their purity, symbolized, the court of honor that should be embraced in the heart of every nation and every individual, with each as unalloyed love of liberty as was that statue of pure gold; its vast architectural designs in building and sculpture; its fine art and decorative effects, so has that Exposition of ideas spread until the back coming wave brought new force to, not one America, but all America; and the ray of light from that white city has, like the wisdom of the intellect, been separated, reflected, and refracted in its solar spectrum of crystal time, to produce the rainbow city, where, from her lofty pedestal on the domed cupola of the most beautiful and highest tower ever erected for illumination, stands a goddess of Light proclaiming her double mission to the world—demonstrating not alone a fleeting city's light, but the illumination of a world; and it stands, together with the tower and all its illumined space, above and below, an artistic and historical expression of thought illumined by inspiration.

Scientific Temperance.

THE agitation for total abstinence and stringent restriction of the liquor traffic has ceased to be the special work of "temperance fanatics." Men of Science (who spell the word with a large S) are giving attention to it; and the evils of alcoholism and the means of dealing with them have a conspicuous place in the discussions and transactions of learned societies and among the subjects of articles in scientific journals. The French government is puzzled over the prevalence and growth of the malady. The German government has made the means of repressing the drinking habit a matter of serious consideration for a long time. In fact, the nations abroad are at last beginning to go through an experience like that we have endured; only there the matter is taken up by statesmen and philosophers whose minds are admitted to be broad, instead of

by such as are called "cranks" here. Strong liquors do not alone come in for reprehension. The mischief of wine and beer drinking is recognized as being quite as important under the prevailing drinking habits, and is receiving even more attention than that of the consumption of spirits. We have observed this trend for several years in our journalistic reading of foreign scientific papers, in articles which we have not now at hand, and have contrasted the interest shown in them with the apathy which, till Sheriff Pearson and Mrs. Nation arose, seemed to be coming over our own land. A few recent articles that have come under notice will help show what is going on, and how.

In a recent discussion in the New York Academy of Medicine, by medical men pure and simple, the topics of "Beer Drinking and Kidney Disease," the effects of alcohol on the nerve centres, the care and treatment of inebriates, alcohol and tuberculosis, and ignorance as a cause of alcoholism were dwelt upon. All the doctors seemed to agree that alcohol was bad and only bad, and it had been a mistake ever to regard it otherwise, and all paid very little attention to the supposed distinction as to degrees of badness between the light drinks and the strong ones. Dr. M. Allen Starr expressed the opinion that the most potent influence to be relied upon as a preventive and remedy for alcoholism was the religious one.

Mrs. M. G. Stuckenburg has recently published a pamphlet containing numerous quotations from Germans in various callings—government officers, university professors, physicians, authors, pastors, and bishops—testifying to the evil effects in private and public life of German indulgence in drink; and some of them are particularly strong against beer.

The Archbishop of Canterbury has remarked upon a great progress made in English public opinion in favor of the temperance movement. A special government commission has brought in a report upon the liquor traffic in which, the archbishop says, the things proposed by those most opposed to any progress in the temperance direction must be taken as marking a very considerable advance. Some of the measures suggested in this report are before Parliament for enactment.

The London Lancet of February 9, 1901, while acknowledging that English medical men have been faultily backward in recognizing and exposing the evils of alcoholic indulgence, mentions the names of several eminent doctors who have done their duty in the matter. Of a showing by Dr. William Carter of Liverpool, that the number of cases of admissions for injuries resulting from drunkenness has been greatly reduced at a single institution since the curtailment of the hours of sale, it says that "one such fact as this should dispose of most of the nonsense that we hear to the effect that legislation has done all it can to mitigate the preventable disease of alcoholism." A conviction of the terrible mischief that is done to the country by alcoholic indulgence is shared, it is certain, "by the medical profession of the kingdom, whose position for using words of caution and remonstrance is unique, and who have opportunities for studying the alcoholic question at first hand which are denied to temperance lecturers."

Dr. Victor Horsley, an eminent original investigator in physiology, delivering the Lees and Raper Memorial lecture in St. James's Hall, London, last year, spoke on the effects of small doses of alcohol on the brain, exclusively from the scientific point of view. The test of the "reaction time," or the small fraction of a second which is consumed by the nervous system during which it receives an impression and exerts some movement in response to it, had been applied, he said, by Kraepelin, whose investigations of the subject had been most thorough. Kraepelin had found that this response seemed quickened at first, but that a slowing followed immediately and lasted as long as the

alcohol was in active operation in the body; so that the whole response was much more tardy, and a response in which an association of ideas was involved was never quickened by alcohol. In a case where an arithmetical process seemed to be done more rapidly under the influence of alcohol, analysis showed that the work was wrong; and wine proved itself to be verily "a mocker." The apparent initial quickening effect is not accounted for, but is supposed to be due to a loss of control, as in an engine from which the governor is removed. Voluntary movements are described as being an intermittent succession of impulses. When alcohol is taken the normal summation of impulses is interfered with, and the movement becomes a tremor. In dynamometer experiments an apparent acceleration of work is followed by a depressent effect. The experiments of Aschaffenberg and the experiences of travelers and military expeditions give results in harmony with these. Other experiments point to injuries to the cerebellum as the source of the unsteadiness of the walk of drunken men. Degenerative structural changes in the nerve centres are also described in Dr. Horsley's paper as resulting from the use of alcohol. The conclusion seemed overwhelming to the lecturer that even in very small quantities—that is, in dietetic amounts—alcohol has a most injurious effect on voluntary muscular work, and he finally declared his opinion, "from the scientific point of view," that the contention that small quantities of alcohol, such as people take at meals, have no deleterious effect, could not be maintained. Considering the mass of evidence that has been accumulated on the subject by numerous authors, it followed that from a scientific point of view total abstinence must be our course if we are to follow the plain teaching of truth and common sense.

An International Congress against alcoholism met at Vienna April 9-14. Its transactions, when published in full, will probably furnish more information of value on the subject.—*The Christian Advocate*.

A Novel Steam Engine.

A UNIQUE idea has been worked out by a Des Moines, Iowa, inventor, whereby the boiler of a steam engine is practically avoided. The general principle of the engine is this: That while in the ordinary engine but a small quantity of steam is being used at any one time, yet a great quantity of fuel is necessary in order to keep a large volume of water continually boiling to provide the necessary steam. In the present instance there is no boiler proper, there being substituted therefor a small quantity of water in the lower end of what might be called the steam chest proper, though here called a boiler.

Operating in this boiler is a long, hollow piston, lacking about one thirty-second of an inch of fitting to the sides of the boiler, thus leaving room for a steam cushion all the way around it, and also making it possible for the condensed steam to run down the sides. A rod connected with this piston passes up through the centre of another piston, which operates in a vacuum cylinder above the boiler and is geared direct to the fly wheel.

The upper piston above referred to fits absolutely air-tight in the vacuum cylinder, and is geared to the shaft in the usual crank manner. As the steam piston is forced up, it forces the upper piston up, leaving a vacuum, which draws it back again, thus giving, in addition to the steam power of from forty-five to sixty pounds pressure, the additional fifteen pounds pressure of the atmosphere in the vacuum.

One of the greatest advantages claimed is that, in view of the fact that two pistons are connected direct to the machinery, and there being a great difference in the length of their stroke, it dispenses entirely with the "dead centre"

principle of all other engines, and one of the pistons begins doing business before the other one ceases.

Surrounding the vacuum cylinder is a jacket containing water, which prevents the heat from the friction of the air-tight piston from expanding the metal and wasting any power. It also operates to keep the upper end of the boiler cool, and assists in the condensation of the steam, which trickles down to the lower end of the boiler where it immediately becomes steam again and is used over and over.

There is absolutely no exhaust or escape to the engine. A one sixteenth of a horsepower model, which has been running for some time, requires less than three teaspoonfuls of water, and as the water is in an air-tight chamber, it will last an indefinite length of time, and all the heat that is necessary for this engine is a small alcohol lamp.

There will soon be in operation a five-horsepower engine, standing about four feet high, which will operate with three pints of water and require for fuel but one gasoline generator, such as is on an ordinary gasoline stove. The engine weighs only about one third as much as other types of existing engines, and it is claimed can be constructed and operated much more cheaply. It is at present known as the Kessler-Ellyson hydro-pneumatic engine.

The Railway and Engineering Review.

Oldest Bible in America.

THE oldest Bible in the United States was shown at the state house recently by the owner, Rev. John Herr of Lima, Ill. It is a fine example of mediæval printing, and the original binding is yet almost intact. It is bound in beechwood, and covered with Russia leather, stamped with curious patterns and marked by the depredations of worms. There are only three copies of this edition in existence. The original edition was only fifty copies.

The old volume has a bloody history. The monks who struck it off with clumsy wooden type paid the price of death at the stake for their temerity, and of the twenty-six people who studied it in secret, but ten lived more than five years, while many of the Bibles were burned by the public hangman.

But few of the edition were preserved, hidden away in old chests and secret places, and one of them was this Bible. It was finally purchased by John Herr of Zurich, and in his family it has remained for twelve generations.

The volume bears the date 1553, and was printed at Zurich, Switzerland, by two apostate Carthusian monks, Andrew Gessner, and Rudolph Wessenbach. Its language is a Swiss dialect of German. At the time of printing, Switzerland was under the domination of the Pope. Only Latin was permitted to be used in religious books, and even Latin Bibles were not to be read by any but churchmen. Death was the penalty for laymen who read the Bible, and so the volumes were printed in the closest secrecy.

When it was known that the edition of the Bible had been printed, spies were brought from Italy, and after a long search, the two monks were found. Short shrift was given them, and on Good Friday, in the year of 1556, they were burned in the public square of Zurich, in the presence of a vast multitude. The little circle of Lutheran Protestants who read the Bibles were hounded down remorselessly. Sixteen of them were put to death with the most horrible torture, and but ten were pardoned.

The old Bible possesses a great interest to students, apart from its history, as it contains the twelve books of the Vulgate translation which are missing from the King James version, the one in familiar use in America and England. These books,—Baal, Maccabees, Hester, Baruch, Tobie, Jesus Sirach, Esdre, and others,—are placed between the book of Kings and that of Job. The Bible contains a picture of the last judgment, and wood engravings with hand painting.—*Denver Republican*.

Selected Articles.

The Christian Science View of Sin.

To the Editors of *The Outlook*.

I desire to review some points in an article on Christian Science which appeared in *The Outlook* of July 6.

This essay seems to have been kindly intended, but true to the thought expressed in its first sentence, "It is difficult for any one, not a votary of Christian Science, to understand what it is," it manifests only a superficial view of this Science. This is indeed a Science, and should have been so treated by our worthy editor; then would he have waited until he had become a practical Christian Scientist, and had healed successfully through its teaching, to prove, even to himself, that he understood it, before attempting its explanation to others.

Complaint is made that Mrs. Eddy does not give a clear definition of God, yet hundreds of thousands of people have been able to destroy troubles for themselves and others through the clear understanding of God which they have gained from Mrs. Eddy's book, "Science and Health with Key to the Scriptures." It is too bad that our critic did not give his own definition of the personality of God. I have read a number of criticisms in this same strain within the past few weeks wherein the authors have complained of the Christian Science definition of God, and yet have failed to give their own. Those who are dissatisfied with Christian Science should give us a better way of producing the same results.

Our critic seems to understand Mrs. Eddy's definition of evil as a nonentity; that it bears the same relation to God which darkness bears to light; but in his criticism thereof does not continue to reason consistently therewith. He fails to apply the same remedy to evil which he would apply to darkness, and therefore fails utterly to define the Christian Scientists' method of destroying evil. He admits that darkness is nothing more than the want of light; that it is a nonentity. Does he attempt to be rid of darkness by simply saying that it is nothing? He recognizes that the only way to be rid of darkness is to bring in the light. Now, consistent with his own proposition and his own interpretation of Christian Science, he should recognize that evil can only be overcome with good. This is the method which our great Master advocated, and just what Christian Scientists practise. When God has the ascendancy in human consciousness and in the life of the individual, evil of necessity, finds no place. If God be to us infinitely great, evil must become to us infinitesimal. Herein is the superiority of the Christian Science method of overcoming evil—the sinner is given strength and courage to master evil because of his understanding of the omnipotence of good and the consequent impotency of evil. No class of people know better than Christian Scientists that evil must be grappled with and mastered, and that the sinner will never be rid of his wickedness nor its just penalties until he ceases sinning. To say that sin is an illusion and continue sinning is not consistent, for the evil-doer is making it real by his indulgence. Christian Science does not incorporate sin under the name of good and allow it place and power, but draws the line emphatically between right and wrong, and declares that wrong must cease and right must prevail to the utmost.

The Christian Scientist does believe there is an enormous amount of sin in the world, and why? Because he has not through spiritual growth unbelieved this.

When Paul said, "So fight I not as one who beateth the air," he meant that his fighting was done intelligently, not by striking out in an indefinite, ineffectual manner. This same Paul referred to evil as the power of darkness. Darkness has no power except to hide the truth and is always destroyed when the light appears.

I like the definition of sin which our critic quotes from the Westminster Catechism: "Any violation of, or want of conformity to the law of God." In the light of this definition all mistakes as well as wilful wrongs should be included under the name, sin. John said, "All unrighteousness is sin." All unright-wis-ness (all unright-wise-ness) is sin. All wisdom or knowledge which is not right is sin, and all conduct which is allowed or indulged by reason of this wrong or false knowledge is sin. It is error, or unright-wis-ness, to believe that sin, which is not of God, is an entity. Hence the truth of Mrs. Eddy's statement, "To believe sin is real is itself sin." Indeed, this is the original sin, and the proof that we believe it to be real is our indulgence in it. When we are ready to admit that there is nothing in it, having lost all pleasure therein, we are ready to let go of it and cease sinning. No harm can come to the sinner nor any perpetuity of his sin from the knowledge of its unreality. It is because he believes there is something in it that he uses it. It is said that Jesus did not teach the unreality of sin. Will our critic kindly explain what Jesus meant when he said of the devil, "He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it"? It is the vocation of a liar to express lies, and a liar in the strict sense of that word produces nothing else but lies. A lie is utterly devoid of truth, hence altogether untrue and unreal—a mere negation. Here we have the plain declaration that the devil's "own," or offspring, sin and disease, are lies.

We are taught that all evil is the work of the devil; in other words, the work of deception. Believing and acting that which is false constitute the sum total of sin, and this definition is in perfect accord with the one which we have quoted from John, "All unrighteousness is sin."

The Christian Scientist does not wink at sin, does not simply ignore it, but, filled with the understanding of the omnipotence of God and the utter powerlessness of sin, he grapples with it and crushes it out of existence. If all Christians knew and practised what Christian Science teaches concerning sin, the world would rapidly be regenerated and evil would be speedily annihilated. If evil is as real as good, will our critic explain how the power of God destroys evil in the human heart? Is it not true that the wrongs which are mountains to their victims weigh nothing in the sight of God? And is this not why the divine power so easily annihilates sin.

ALFRED FARLOW.

Office of the Publication Committee of The First Church of Christ, Scientist, Boston, Mass.

[We print this letter, selecting it from many received on the same subject, because its authorship makes it really an authoritative statement of the position of Christian Scientists on the point involved.]

THE EDITORS of *The Outlook*.]

No Hate Vibrations.

To the Editor of *The Truth Seeker*.

Christian Scientists are surprised that you should attribute to them such propensities as you mention in your issue of June 15. Christian Science denounces in scathing terms the belief in "witchcraft" of every sort. No one has applied such explicit terms to all forms of evil suggestions as the Discoverer and Founder of Christian Science:—

"The march of mind and honest investigation will bring the hour when the people will chain, with fetters of some sort, the growing occultism of this period" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy).

Christian Science takes the same view of so-called witch-

craft as did St. Paul in his epistle to the Galatians, 5 : 20, where it is reckoned among "the works of the flesh."

Such a term as "hate vibrations" is unknown to Christian Scientists, and must have been borrowed by the writer from some of the occult (so-called) sciences, for it has no place in Christian, or Divine, Science, which defines God as Love and as Omnipotence. The serious and misleading implications that Christian Scientists are capable of using such a power must be ascribed to a complete misconstruction of the teachings of Christian Science. The healing of sin and sickness, through the spiritual regeneration of man, is the aim and object of Christian Science.

Yours truly,

W. D. McCrackan.

In *The Truth Seeker*.

To Prevent Wrecks.

A LOSS of 7,642 human lives is the record of the twenty-three great shipwrecks of the nineteenth century, and this is but a small fraction of the total mortality through accident at sea. The heirs of Anthony Pollock, who went down with the ill-fated Bourgoigne, have recently offered a prize of \$19,000 "for the best appliance for the saving of life in case of maritime disaster." The award is about to be made, and according to Henry Harrison Lewis, who writes on the subject in *The World's Work*, it is possible that we may shortly bid good-by to all fear of such great ocean calamities as are even now too frequent. Mr. Lewis describes some of the devices offered: Those designed to prevent collisions are most numerous, and depend on wireless telegraphy, the detection of delicate sounds, and on heat and cold. It is practicable to record the approach of a vessel by the heat that it transmits, a feat that does not seem so wonderful when we remember that Ganot recorded in his "Physics" his invention of a thermopile that was sensitive to the heat of a candle held a quarter of a mile away.

Mr. Herman Herberts of Newark, has constructed a thermopile that will detect differences of temperature as slight as one one-millionth of a degree centigrade. One thermopile will be used on each side of a vessel, and wires will extend from it to the bridge of the vessel, where they connect with a galvanometer. One bell will ring on the approach of a heated object, as another steamer; another bell will ring on the approach of a colder object, like an iceberg.

Thomas A. Edison has a plan in which he disregards electricity and depends on the capacity of water for transmitting sound. In the keel he would have constructed a diaphragm operated by compressed air. An electric battery or a dynamo could operate this diaphragm so as to produce an explosive note which would travel miles through the water and be received on the diaphragms of other vessels. A code of signals could be used and long messages exchanged.—*Literary Digest*.

Singing away Pain.

A party of tourists were driving along the country road leading to Killarney, that fine old town among the Irish lakes. As they came within sight of a cottage standing back from the road, with a lovely garden of flowers in front, there reached them the sound of singing.

The voice was full of sweetness, rich and strong, now and then rising into such lofty strains it seemed like an angel's song, then dropping to the mellow softness of a mother soothing her babe to sleep.

The little company was entranced. What genius in obscurity was here? Some one, surely, born to win fame and fortune when brought forward and trained by suitable teachers.

"If I could ever hope to sing like that!" exclaimed the young man who was driving, himself a student of music; and then, stopping his horses, he said: "Let us find who he is; perhaps I might be of help;" but here he paused as a young girl came out of the garden gate toward them. She had a basket on her arm, as if going to market. As she was passing, dropping a slight courtesy as she did so, he asked, "Will you please tell me who is singing so sweetly in the cottage?"

"Yes, indeed," said the girl, turning a bright face toward them. "It is only my Uncle Tim, sir; he's after having a bad turn with his leg, and so he's just singing the pain away the while."

For an instant the company was speechless; then the young man asked, "Is he young? Can he ever get over the trouble? Tell these ladies about it, please."

"O, he is getting a bit old now," was the answer. "No, the doctors say he'll never be the better of it in this world, but"—and her voice dropped into tender pathos—"he's that heavenly good, it would come nigh to making you cry sometimes to see him, with the tears running down his cheeks with the pain, and then it is that he sings the loudest."

With a "Thank you, dear," from the ladies, they drove slowly on.

"And there shall be no more pain, and all tears shall be wiped away," said Aunt Myra, softly.—*Christian Life*.

Notices.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, is now ready for distribution. Leatherette covers, deckled edges; 50 pages. Price, 50 cents; per dozen, \$4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

To Members Admitted June, 1901.

Will those who sent in applications for membership with the Mother Church for the admission last June, and who have not yet received notice of their admission, please send their names and addresses to the Clerk, William B. Johnson, 30 Norway Street, Boston.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Sept. '01, 't means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for October, November, and December.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Applications for Teaching.

APPLICATIONS for appearance before the Board of Education for next year, will not be received until notice thereof appears in our periodicals.

THE CHRISTIAN SCIENCE BOARD OF EDUCATION.

Peace that Passeth Understanding.

THE Saviour's mission was to bring peace and rest to the struggling heart. Doubtless no sweeter words ever fell on mortal ears than these, "Come unto me, all ye that labor and are heavy laden, and I will give you rest;" and yet, paradoxical as it may seem, these words were uttered by the one who declared that he came not to send peace on earth, but a sword. When the Master's life and teachings are understood these seemingly opposite statements are found to agree. He came not to bring peace to the mortal, sinning sense of existence. To this sense, the teachings of Truth, exemplified in a pure and holy life, bring not peace and rest; they come as a sword, quick and powerful, piercing even to the dividing asunder of the true and the false. The mortal who has seemingly found joy and satisfaction in that which is from beneath, must be brought face to face with the fact that the things of this world do not, cannot, afford any lasting satisfaction, before he is willing to find rest in Truth and enjoy the solace of that peace which passeth all human understanding.

There are those in this age, as well as in the days of Jesus, who are weary of the world, its disappointments and numberless woes, who would gladly find peace and rest. To them the words of the Master are spoken as directly as though they stood on the hillside of Galilee and heard the words as they fell from his lips. It is difficult to grasp this momentous fact; and because we fail to realize God's power and willingness to help His children, we often carry heavy burdens when it is our privilege to lay them down and find rest and peace in the understanding that the present as well as the future is in God's hands, and that He doeth all things well.

Jesus told his disciples that they would receive another Comforter, even the Spirit of Truth, which should abide with them forever. This promise was fulfilled, and how the Master's followers were enabled to continue the grand work of preaching the Gospel, healing the sick, and even raising the dead, is an established fact in history. In the hour of persecution they were not left comfortless; God's grace was sufficient for them, and they were not tempted above that they were able. In the darkest hour of persecution they remembered the Master's words, "Be of good cheer; I have overcome the world," the path grew light about them and they pressed on strong in the faith that overcomes the world.

The Comforter which Jesus promised was not for his immediate disciples only, but for all those who should believe on him through their word. This Comforter came into the world and has not departed from it. Here and now it is possible to find the promised peace and rest. Thousands upon thousands, who failed to find joy and satisfaction in the world of material sense, are daily testi-

fying that Christian Science has been the Comforter leading them into all Truth. It has enabled them better to understand Jesus' words and works. Christian Science has revealed the underlying Principle of those words and works, and has shown how it is possible for the believer in all ages to prove his faith by his deeds. It demonstrates that it is man's blessed privilege, to-day, to know God as an ever-present help. It is not because God has ceased to help that mortals have fallen, leaning upon their own strength, but because they have failed to trust Him implicitly who said, "I will never leave thee nor forsake thee."

The genuine practical worth of Christian Science lies in the fact that it declares God aright. It causes one to feel that the God of his fathers is indeed his God. God has not changed. His power and love are still infinite and His will is manifest in perfect and eternal harmony. This conception of God brings Him near in the day of prosperity and the day of adversity as well. At all times the thought of God's love and presence lifts one above the discords of earth. Thus it is that the weary and heavy laden find peace and rest when the world of mortal thought is saying there is no peace and no place where rest can be found.

The world marvels at these proofs of God's love and power, and seeks to account for them in a material way. But because the world worships a god of matter it cannot understand God who is Spirit, nor comprehend the things wherewith He hath blessed those who love and serve Him. But the one who has within himself the proofs of God's goodness, knows in whom he has believed, and that his faith is not in vain. Even though he is opposed, misjudged, and persecuted by the world he does not lose faith in his God, for "shall not the Judge of all the earth do right?" He recalls the Scripture, "Vengeance is mine; I will repay, saith the Lord," and is at peace with all men. Greater than anything else, greater than all else is his God, and he says with the Psalmist, "The Lord is on my side; I will not fear: what can man do unto me?"

Because he regards his mortal sense of existence as but the probationary school of experience wherein he is working out the facts of spiritual being, he says, in the words of the apostle, "Nay, in all these things we are more than conquerors through him that loved us. For I am persuaded, that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate us from the love of God, which is in Christ Jesus our Lord."

When faith lifts man above the earth where he can see that spiritual existence is the only reality of Being, he gains "the peace of God which passeth all understanding," and having that peace he rests in the assurance that the future, with whatever it may have in store for him, cannot change the fact that he is a child of God and has a place in God's universe which no one else can fill.

Public Debate Demanded.

THE editor of the *Helena Evening Herald* of July 29, 1901, very forcibly and ably descants upon the spirit manifested by certain of the local clergy who have recently been declaiming against Christian Science in Helena. The editorial is in the nature of an invitation to public debate between the clerical assailants of Christian Science and some representative of the latter, and is entitled, "Public Debate Demanded."

While we cannot say that we are in sympathy with the editor of the *Herald's* view of publicly discussing Christian Science, we greatly admire his robust candor and fairness in treating the situation.

Here is, in part, what he says:—

"Those who believe in fair play most earnestly hope that some arrangements may be made whereby a joint debate may take place between some Christian Scientist of note and some Montana preacher who thinks he is big enough to hold him down.

"Those of us who are neither Christian Scientists on the one hand, nor church members on the other, have felt a growing interest in the jug-handled controversy that has been going on since the departure of Judge Ewing.

"Many in this city would like to hear the merits and demerits of Christian Science debated, inasmuch as some of the good brethren of other denominations will persist in hammering away against that peculiar faith.

"It appears that Judge Ewing, in his lecture in this city, did not assail any other faith and refrained from personal criticisms of religious teachers of the various denominations in opposition to his own.

"This fact inspired a respect for the doctrines he enunciated, even among those who cannot be induced to accept them, and was in marked contrast to the treatment accorded Christian Science since his departure by some of the professed followers of the lowly Nazarene.

"The rare opportunity of challenging Judge Ewing to joint debate seems to have been entirely overlooked until his professional engagements had taken him beyond the jurisdiction of the Montana pulpit. But after the judge was under headway to other points a number of pulpit orators flew to the attack with great energy and viciousness, if not with ability and good judgment.

"The spirit manifested by some of the local clergy is in such marked contrast to that shown by Judge Ewing, when measured by accepted Christian standards, as to excite a great deal of comment throughout our city and state—so much so, in fact, as to create a universal desire to hear the issues involved debated on their merits.

"Those who heard Judge Ewing's address are positive that he did not, even by implication, traduce the name of a woman, while those who have listened to the pulpit rejoinders unite in saying that, without exception, personal imputations against the character of prominent ladies were freely thrown out, in one form or another, much to the disgust of a fair-minded public.

"It is quite likely that Judge Ewing, who is reputed to be a gentleman of the highest type, might refuse to meet any man in joint debate who will so far forget himself as to cast reflections upon the personal character of respectable women, even though he arrogates to himself the title of a 'reverend.' Almost any gentleman would feel that way about it, no matter what profession of faith the preacher might assume to represent or how large his following.

"Even the general statement that Mrs. Eddy is working for money comes with poor grace from a minister who would throw up his job in twenty minutes if it were not for the salary he receives, notwithstanding the Scriptural injunction to spread the Gospel without money and without price, and to give his other coat to the poor.

"The chances are that Mrs. Eddy does not receive any larger compensation than many a three-hundred-dollar-a-year preacher, when measured by the size of their respective congregations and the influence they relatively exert.

"If it is to be a question of the pocket-book, why not attack the big clerical guns of New York City and elsewhere, whose incomes reach away up into the thousands, while little children are starving to death in the slums?

"The writer believes that the divine gifts of God should be freely distributed, in proportion to the growth of the individual and his capacity to utilize them, that truth should be imparted to all who can use it in the process of moral evolution; but if it is wrong for Mrs. Eddy to accept compensation for her teachings, it is likewise wrong for those who criticise her methods to do the same, even though they receive less through inability to secure more.

"But aside from all the details of selfishness, from which

no religious organization seems wholly free, it would be interesting to know the truth concerning the claims of the Christian Scientists, now under fire in this community, and a joint debate in the Auditorium, the proceeds to go into the charity fund for the coming hard winter, would be welcomed by our citizens as a fitting finale for the pulpit Punch and Judy show that is now going on.

"Let both sides give a reason for the faith that is within them from the same rostrum,—and may the best man win!"

Christian Science Literature.

WE publish herewith an extract from the August, 1901, number of the *Tidings*, published by the Woman's Baptist Home Mission, headquarters at 2411 Indiana Ave., Chicago, Ill., which will be found to be self-explanatory:—

"In May, and again in July, subscribers in one of our large cities have complained that Christian Science literature has come to them folded in *Tidings*. In the first case, there were three leaflets, and in the latter a folder advertising Mrs. Eddy's book and other matter. However and wherever these tracts get into our paper, it is after it leaves our headquarters, and we will be grateful to any one who will help us discover the guilty party. The offence is contemptible and criminal, and it is no credit to Christian Scientists that they should seek to promulgate their doctrines by such sneaking and dishonest methods. We warn the perpetrator that we shall spare no pains to discover the culprit, and we admonish him or her that the offence is one subject to no light penalty. We also ask that all subscribers who have found such literature tucked into their papers, will let us know. As yet, as far as we have information, there has been trouble only in one city."

In explanation of this article we also publish the following letter from Mr. Archibald McLellan of Chicago, a member of the Publication Committee:—

Chicago, August 6, 1901.

Miss Mary Burdette, 2411 Indiana Ave., Chicago.

Dear Madam:—My attention has been called to the August number of the *Tidings*, in which a statement is made to the effect that subscribers to *Tidings* in one of the large cities, received certain Christian Science literature folded in your paper, and there seems to be a disposition to charge the insertion to Christian Scientists as a body.

I do not understand how any person outside of the Postoffice Department could have access to your paper after it left the place of publication, and I am certain that no Christian Scientist is tampering with the mails. Certainly no organization or person acting officially for Christian Science, have had anything to do with the occurrence with which you justly find fault.

I will be much pleased if you will give me the facts in reference to the matter, so that an investigation can be made. I presume that you are the proper person to address in this matter; but fearing that I may be mistaken I take the liberty of sending a copy of this letter to Mrs. J. N. Crouse, 2231 Prairie Avenue.

Sincerely yours,

ARCHIBALD McLELLAN.

In reference to the above matter we simply have to say that nothing whatever relating to it had come to the knowledge of the editor of our publications, or any one connected with the same at headquarters. We deprecate, as much as the editor of *Tidings* possibly can, the methods which are described in the above article, and if any Christian Scientist has been guilty of the act charged, we hereby emphatically request that it be not repeated.

While uniting with the editor of *Tidings* in denouncing the action referred to, we cannot refrain from expressing regret that the editor, before publishing so harsh and apparently un-Christian a denunciation, did not make inquiry

either at headquarters, or of some responsible representative of the movement, for the purpose of ascertaining the real situation. It strikes us this would have been a more Christianly method to pursue.

Among the Churches.

New Quarters at Rockland, Me.

The *Rockland Opinion* in its issue of July 12, published the following account of the opening of new quarters by the Christian Scientists in that city:—

An event of importance and interest occurred last Sunday morning, when the Christian Scientists of Rockland, comprising First Church of Christ, Scientist, opened their new headquarters. These consist of two rooms on the second floor of the Kimball Block on Main Street, near Lime-rock,—an auditorium, seating about ninety persons, and an adjoining room in the rear which is to be used as a public reading room during the week, but which can be thrown into the hall on Sundays by opening the folding doors across the full width of the room.

The woodwork of the rooms is cypress, finished with green filler; the floor, varnished yellow pine; the walls are tinted a pale sea green, and the ornamental steel ceiling cream and green, making a very pleasing and harmonious effect. On two of the walls are inscriptions in Old English gilt lettering, very artistically done. One is the Scriptural quotation from St. John, "God is Love," the other, a quotation from Mary Baker G. Eddy, "Divine Love always has met, and always will meet, every human need."

At the street end of the hall are three windows, in front of which is a platform with two oak reading desks and two handsome mahogany chairs. A square piano is used for the accompaniments and is placed near the platform. The seats are cane seated oak chairs, arranged in rows with a centre aisle.

In the reading room is a centre table and easy chairs. There are two windows, which make the room very bright. On the table are copies of all the standard Christian Science publications, including the weekly and monthly periodicals. Some one is in attendance from 10 A.M. to 4 P.M. to welcome visitors and give any information that may be desired.

Services are to be held in the hall Sunday mornings at eleven o'clock, and a testimony and experience meeting Wednesday evenings at half past seven, to which all are cordially invited.

The exercises on Sunday consisted of singing by the congregation; reading from the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy; silent and audible prayer; a short address by Miss Sara Louise Lyon, the First Reader, and the benediction. There was also a musical programme, consisting of two violin solos, by Mr. W. F. Pierce of Vinalhaven; an alto solo with violin obligato, by Miss Alice Gurney Lane and Mr. W. F. Pierce, both of Vinalhaven, and two vocal quartets by Miss Alice Roberts and Prof. T. M. Roberts of Utica, N. Y., in addition to Miss Lane and Mr. Pierce. These numbers were interspersed during the religious services, and were rendered with marked artistic taste and ability. There was a large attendance, every available seat being occupied. Many of the visitors were from neighboring towns, Camden, Thomaston, Warren, and Vinalhaven, and also a number from Utica, N. Y.; Boston, Mass.; Baltimore, Md., and Peoria, Ill. After the services, there were exchanges of greetings and congratulations, all the visitors and members being rejoiced over the acquisition of such beautiful quarters.

It was learned that most of those present had been healed of some serious disease through Christian Science, and had become interested by subsequent study.

The following appeared in the *Opinion*, July 19.

The opening of the new hall of First Church of Christ, Scientist, in this city, last week, was an event that is of interest as marking the growth of a comparatively new school of religious thought in this community. Much has been said of the new cult, but there are many people—and we have been among the number—who have had but very slight acquaintance with the doctrines it holds and the extent to which they are subscribed. Hoping to gain some information of value to ourselves and readers, we asked one of the visitors on the occasion of the opening of the hall, a gentleman of intelligence and high standing, to give us a brief outline of the tenets held by the Scientists and a history of the local society. He says:—

"Christian Science is not a mere method of healing sickness, but is a religious teaching based on the Science, underlying Christianity, which was discovered by Rev. Mary Baker Eddy. It is founded on the scientific interpretation of the Bible. The healing is an outcome of the religion and includes mainly the healing of sin, but also of physical ills. It requires no faith in order to be healed by some one who understands the Science—only a willingness. Many persons have been cured of organic and chronic diseases through the reading of the text-book, 'Science and Health with Key to the Scriptures.'

"Christian Science was first introduced in Rockland when Miss Sara Louise Lyon went to Vinalhaven from Utica, N. Y., in February, 1894, and came here once or twice a week. She settled here in May, 1896, and began holding meetings in her parlor, with three or four others; but regular weekly meetings were not held until the following September. The parlors were soon crowded, and a public place needed; so, in August, 1897, Grand Army Hall was rented for the Sunday services.

"In December, 1889, a society was formed and a hall of their own secured in the Ulmer Block, a public reading room being also then established. In December, 1900, the society was incorporated as First Church of Christ, Scientist, of Rockland, Me., and a state charter secured.

"Christian Science was also introduced at Camden and Vinalhaven by Miss Lyon, and both of these towns now have chartered churches. There are also Christian Scientists at Thomaston, Warren, and Rockport.

"In all there are about fifty members at present in these three churches and an average attendance of almost one hundred, which indicates that there are four or five hundred persons who have been healed or who are interested in Christian Science in and about this neighborhood."

Mixed Figures.

Nothing diverts attention from the subject more quickly than an incongruous mixture of figures in a speech. Not long since we heard a minister of the Gospel, of large fame, so mingle figures in the midst of his sermon as to practically create a new animal, of which neither the science of zoology nor the prophet Ezekiel in his imaginative excursions into that field knows anything. We respect him too much to point the moral with his name. But a Western editor says, "We once heard Mrs. — eulogize Mrs. Stanton, Harriet Beecher Stowe, and Susan B. Anthony as follows: 'These are the women who laid themselves down in the dust, as it were, to form a bridge over which you and I might go dry-shod.'"

The use of different figures in a protracted discourse is proper enough, but one should never lose sight of the natural relations of things used as figures.

The Christian Advocate.

Christian Science Healing.

THE CHRISTIAN SCIENCE CHURCH is one of works. Wherever found it stands as a living monument to the power of the Gospel to heal the sick and reform the sinner to-day. Week after week and month after month this work goes on, as witnessed by testimonies given at First Church of Christ, Scientist, Dayton, O. Among those recently given were the following.

A traveling man from Kansas City spoke of the wonderful growth of Christian Science in that city; he stated that he traveled over a large section of the country and was often in the smaller towns where there were but few Scientists. It is a source of great encouragement to him, he said, to see the zeal and earnestness manifested by the small societies. He then told of the healing of his wife. She had been under the care of eighteen physicians and had two operations performed, and only as a last resort did she try Christian Science. In sixty days from the time she took her first treatment she was well. That was seven years ago. There is something more, he said, than the physical healing; it is the spiritual illumination of the Scriptures that Christian Science gives.

The housekeeper at one of our large hotels said that she meets a great many persons interested in Christian Science. She related the following incident. The night previous an elderly man and wife arrived at the hotel. They came to see their son, who was an actor in the drama to be played that evening at the Victoria. He had been absent from home for seventeen years. She was somewhat interested in Christian Science, but at first did not think that she could come, yet she very much desired to see her boy. After arriving at the hotel, she became very sick, but would not permit her husband to go for a physician, endeavoring to follow out her highest thought of right according to her knowledge of the Science. After some conversation with her, the housekeeper found that she was interested in Christian Science, and the lady was much delighted to find that she had found a friend in Christian Science just at a time when she so much needed assistance, and through the help given, the suffering was soon overcome.

A lady spoke of the value of living Christian Science, as told to her by a neighbor engaged in business. When the Christian Scientist first moved next to her, the lady, owner and manager of the business, decided she would not have anything to do with the Science; rather was it spoken of as something to be shunned. The Scientist was pleasant, but said nothing about the Science to her. In due time she noticed that the Scientist had something that she did not possess, and gradually began to make some inquiry. Her questions were answered, but no attempt was made to talk very much on the subject. Later she asked for help and this was given, and great benefit was received in relief from suffering. But there is still a better part. Before she knew of Christian Science she could and would in various ways tell what some people term "business lies," but now the little Science she had gleaned has changed her course to an honest standard. Her joy for what she knows is very great.

A gentleman stated that some few years ago Christian Science was introduced in a family, the mother of the home receiving great benefit. She had a neighbor who had been in poor health for some time. She loaned "Science and Health with Key to the Scriptures" to her, and through its perusal she was healed and her family have been greatly benefited. This lady in turn had a neighbor who was in poor health and through Christian Science she found health and peace. She had been a searcher for a better understanding of the Truth for a number of years, and never was satisfied until the truth of Christian Science dawned upon her. Not only has she been helped by Christian

Science, but her husband and children also have felt its beneficial influence. A Christian Science tract fell into the hands of a gentleman who had been a great sufferer, and by reading it he was directed to the Truth that healed him. His friends endeavored to discourage him, but he clung tenaciously to the fact that it was Christian Science that healed him.

A young lady testified that for some time she had been greatly troubled with her eyes. She informed a friend who was interested in Christian Science that she had no faith in Christian Science, but would be willing to be helped by it if it were possible for her to be helped. Treatment was given, but she did not experience the benefit anticipated. She felt that she must gain the understanding for herself, and then with the help of her friend she was relieved and healed. Now her sight is much better than it had been for years. Not only has she been benefited, but other members of the family also.

A lady testified: "A friend living in another city, having been engaged in school work for some years, began to think that the arduous duties of her position were ruining her health. She was not only in poor health but was not satisfied with her religion, though her father was a minister. She asked for help in Christian Science. I received a letter from her the past week, in which she says that she is well, that she has been healed physically, morally, and spiritually."

A gentleman told of a case of healing of an old colored woman who had been a slave and never knew how to read. One day she asked him if her eyes could be healed by Christian Science, and she was assured that they could be. In three treatments the difficulty was overcome. She declared that she learned more in one talk with the Scientists than she ever knew before. She is now learning to read Science and Health.

A case of eczema was spoken of. A young man called to see one of our Scientists and took treatment. In due time he acknowledged some benefits. A few months passed and nothing more was heard from him until a few days ago, when the speaker saw his mother and she informed him that his healing had been very remarkable. He had inherited this disease and had always been troubled with it. Now he is almost free from it and greatly benefited in other ways. He is able to work every day.

A gentleman stated that the most important part of the work in Christian Science is the moral reformation. He then spoke of being called to treat a man. In a few weeks all pain was overcome, and he was able to be on his feet all day, working without suffering any inconvenience. He wrote: "I have lost the desire for alcoholic drinks, and rejoice that this cursed habit has been destroyed." When asking me for treatment he did not mention drinking. This proves that the moral reformation and physical healing are one in Christian Science.

A lady gave her experience: "I have much to be thankful for. I was a great sufferer for a number of years with asthma. I was under the care of some of the most eminent physicians in Detroit. I was making arrangements to go to California about the time Christian Science was brought to my attention, but decided to give the latter a trial first. I did so and was restored to health."

A gentleman told of the healing through Christian Science of two little boys of ivy poisoning, covering the hands and a portion of the body. On one of the little boys it broke out on his face, his eyes almost swelling shut so that he could not tell his playmates across the street. This has been met in a beautiful manner with the Truth.

A Scientist spoke of some cases of healing that came under his observation in a town in Indiana. A lady wrote him for treatment a few weeks ago. She was a physical wreck, and had contemplated going to Michigan for her health, but finally concluded to give Science a few weeks'

trial before doing so. She wrote me a few days ago, stating that she was in perfect health.

Another case was that of the healing of a man of cancer of the stomach which occurred seven years ago. He was given up to die. He was reduced in weight from two hundred and twenty pounds to ninety-eight pounds, and in one week's treatment was able to be up and out on the street, eating whatever he desired. He was soon able to be at his work, that of wagon maker, and has remained in good health since. This gentleman continued, "In twelve years of practice, I have seen almost all forms of disease healed in Christian Science. To me there is nothing else but this Truth, all else is hypothetical."

The humane teaching of Christian Science in behalf of animals was spoken of. A lady had a pet dog. Several dogs in the neighborhood had been poisoned. One day her mistress came to her very much excited, stating that the pet dog was dying. To all appearances the story seemed true. She immediately commenced to apply her knowledge of Christian Science, and in a short time the dog was running about as frisky as ever.—*Dayton (O.) Herald.*

Arnold Arboretum.

THE work of the Arnold Arboretum is of sufficient national importance to justify its friends in appealing to all Americans who care for trees, forests, and gardens, in whatever part of the United States they may reside, in behalf of a larger endowment for that institution.

It is a department of Harvard University and one of the largest scientific gardens in the world, comprising about two hundred and twenty acres. It is a museum of living trees in which, according to the terms of the James Arnold endowment, every tree and shrub able to support the climate of Massachusetts must be cultivated; and it is a scientific station where by study, experiment, and publication, the knowledge of trees is increased.

By a contract with the city of Boston, running for a thousand years and securing to the Arboretum a condition of permanence and stability which is believed to be unique, the city has built and agrees to maintain roads and walks, provide police protection, and assumes the liability of taxes. The scientific control is reserved to the University.

The Arboretum has become recognized everywhere as one of the most important scientific stations of its kind in the world. It has already introduced into the gardens of this country and of Europe many new trees and shrubs. Every park in the country now feels its influence; and it is visited by landscape gardeners, students of forestry and horticulture, and other lovers of trees from all parts of the United States. The amount of useful scientific work which can be directly traced to the Arboretum is considerable; but much remains to be done in other parts of the world which the Arboretum better than any other establishment can now accomplish, and which may well be expected to result in great benefit to America.

Believing that its growth and care are a matter of concern to every one interested in the welfare and educational progress of the United States, and to all who love trees and gardens, the committee now makes known the needs of the Arboretum and appeals to the public in all parts of the United States for aid for its care and development, feeling sure that every dollar contributed will in due time be returned a hundred-fold in the increase of the general prosperity of the country.

Money now given to the Arboretum will be added to the Endowment Fund in the hands of the President and Fellows of Harvard College. The addition of at least \$300,000 to the present endowment is absolutely needed to carry on in the most economical manner the Arboretum and its work.

The Christian Register.

From Our Contributors.

A Cottage Portrait.

BY CLARENCE A. BUSKIRK.

WITHIN my humble hall there hangs against the wall
A fairer flower than summer garlands show,—
A beautiful old face whose gentleness and grace
Beam forth like winter flowers beside the snow.

How calm the light which lies within those dear old eyes,
How noble the sweet patience of that brow;
Those furrows which the years wore deep with many tears,
Ah, how serene beneath life's sunset now!

As on that face I gaze, my fancy seeks the days,
Long vanished, which her laughing girlhood knew;
I see the well-sweep move she oft has told me of,
And forest paths her bare feet rambled through.

And then my fancy strays to those romantic days
When maidenhood built castles in the air,
And saw in bright day-dreams idyllic vales and streams
Where dwelt no sordid souls and all was fair.

Is all that now remains of years of joys and pains
But pictured in that face upon the wall?
Do all our lives then bloom so nigh the fatal tomb,
In its dumb darkness to extinguish all?

Is earth a prison-cell where only convicts dwell,
To a sure doom thence to be led away?
Nay, Life is not a breath chilled by the touch of death,
And Love and Truth are not the serfs of clay.

Our Father-Mother God is not some Jove whose nod
Is wrathful,—a fierce giant-man above;
God's children are we all, and, whatso'er befall,
Elysian is our fate, for God is Love.

Constant and faithful friend, within these lines I send
My greeting to thee, whereso'er thou art;
For, like a thornless rose, thy lovely memory grows
And blossoms at the gateway to my heart.

Dreams and Realities.

BY CAROLINE E. MILLER.

WHEN I was a small child, I suffered terribly from horrible dreams; so much so that I actually dreaded going to bed at night.

This miserable state of mind continued for several years, but gradually my sufferings were alleviated to a considerable extent, because, although my dreams were still replete with terror, I had a vague underlying consciousness that they were but dreams and not realities. In proportion as the dream horror grew in intensity did my struggles to rouse myself increase, until, just as a climax was about to be reached, I would wake to the blessed realization that I was safe and sound in my own bed, and surrounded by those I loved.

Naturally as the knowledge grew upon me that I had the power to banish these false claims by simply rousing myself to wakefulness, the dread of bad dreams vanished from my mind, and thereafter my sleep was peaceful and undisturbed.

Not long ago, I suddenly awoke to the realization that I was living over again this same childish experience in my waking dream of mortal existence. Before I realized the Truth as revealed to me by reading Mrs. Eddy's wonderful book, the dream of mortal existence was to me

an intensely vivid reality, a reality sometimes fraught with as much suffering as the dreams of my early childhood. And then when I first became conscious that this life which I had been enduring was only a dream, and that all I had to do to banish it from my mind forever with all its miserable uncertainty and unhappiness, was to wake to the blessed reality of a life in Christ—perfect and eternal—what a glorious sense of freedom it gave me! And every day life grows more beautiful and more perfect. So long as we trust to the guidance of divine Love, we can never go astray or make a mistake.

Only a short time ago, a friend who is becoming interested in Christian Science said to me, "Well, I must confess I never saw such a happy, calm, self-possessed lot of people in my life, as the Christian Scientists. They act like veritable kings, and seem to possess something which makes them superior to every ill." Is not that a beautiful tribute to the children of God? Yet how divinely natural it is that they should be always happy and serene and proud of their inheritance. "Behold what manner of love the Father hath bestowed upon us, that we should be called the sons of God." And to every son of God the Bible is full of beautiful promises: "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee." "Because thou hast made the Lord . . . thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling," and so on, an infinite number.

When I think of the many ways in which mortal mind has held me in bondage all these years, and realize that every day my sense of freedom grows more comprehensive, a lifetime seems all too short in which to show one's gratitude. In no more fitting way can gratitude be shown than to labor earnestly, faithfully, and unselfishly to prove to all the world that "God is All in all," and that "Good is ever-present and omnipotent."

Our Ark.

BY A. C. V.

DURING the recent prolonged wet weather, a dear one writing to me said, "I think we had better begin building our arks." Quick as a flash came the realization, "My ark is built; it rests in the secret place of the Most High, where no evil shall befall nor any plague come nigh, neither can floods overwhelm it. I dwell in absolute safety." Thinking further, I realized that I cannot take any one into this ark with me, for I can work out only my own salvation (safety), but *all* may enter through the door of individual effort, and find therein safe abiding from everything unlike divine Love,—sin, disease, death, fear, all the flood of error with which mortal mind would overwhelm us.

Such a comforting train of thought that one little sentence, jokingly written, awakened, bringing with it such a realization of Truth, and an unspeakable sense of gratitude to divine Love, and to her who, through "Science and Health with Key to the Scriptures" and long years of patient, unwearied effort has made understanding and realization a reality to us; has made us to know that we are the sons and daughters of God *now*, and has shown us the way into our ark of safety, even into the "secret place of the Most High."

We shall find that the love of nature, wherever it has existed, has been a faithful and sacred element of human feeling; that is to say, supposing all the circumstances otherwise the same with respect to two individuals, the one who loves nature most will be always found to have more capacity for faith in God than the other.—RUSKIN.

Testimonies.

Christian Science a Great Blessing.

When I was a young boy my folks moved on a wheat ranch in South Dakota, and one of my duties was to go to town for the mail every few days. For this purpose I had a pony which was once owned by the Indians, and was tricky. On one of these trips the pony suddenly reared, and then began to buck, and turn around very fast. I lost my balance, and in falling my foot turned and wedged in the stirrup. The pony then dragged me some distance, and finally stepped on my chest, leaving me in the road.

When I regained consciousness the pony was nearly a mile away, and after a little work I got up and found I couldn't breathe. I walked in a circle until things had turned black and I was beginning to fall, when a little gasp came. I walked for nearly two miles, breathing in short gasps, each one causing a sound which I could not prevent. I would walk a rod or two, then sit down. In this way I walked a mile and a quarter, and then I had to lie down. By doing this I was able to endure the pain. All the time I was repeating the Scientific Statement of Being as given in Science and Health. I had got about half a mile from home when I was seen, and my adopted sister came to me; but being unable to assist me returned for help. I finally reached home and was placed in a rocking-chair, when I broke down.

For two days I lay on my back hardly able to move my fingers. The afternoon of the third day I sat up a little while, the next day I walked to a chair in the yard, and on the tenth day began riding to school, a distance of five miles, and cannot remember missing a day for three months, when we moved to town, and it was no longer necessary to ride.

We were the only Scientists in that country. My mother was in Iowa at the time, working in Christian Science, and owing to the washouts and floods knew nothing of the accident until just as she was getting ready to return. My father and adopted sister were the only ones to help me at the time, though mother took charge of my case before I started to school. I am now a strong and healthy man, with no bad effects from the accident.

The first day I was up one of our neighbors said I was being neglected and started for a doctor, but finding me up when she passed she returned without him, though she kept him informed about me.

Christian Science has truly been a great blessing to our family, having saved the lives of my mother and one sister after the doctors had pronounced them hopeless.

The physical benefits are not all. In my business it is a necessity, for the good there is in it. It is indispensable for happiness; and as the religion of Jesus Christ, it is the religion for every God-loving man and woman.

R. A. B., Ellsworth, Minn.

What Christian Science has done for Us.

I often think as we receive our *Journal* and *Sentinel* which come to us as welcome messengers, that as freely as we have received, as freely should we give, for if the testimonies of others supply our table with such heavenly **manna**, why should we not bring our basket which Christian Science has filled to overflowing?

Last Easter Sunday, as I sat with my husband at the early morning service of the dedication of the Second Church of Christ, Scientist, of Chicago, there came to me a realization of the kingdom of heaven at hand and an **assurance that God does, indeed, dwell among His people.**

My thought then turned back to my starting-point in Christian Science, eighteen years ago, when I was an in-

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles written by the author and published in the *CHRISTIAN SCIENCE JOURNAL* since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.	
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.	

CHRIST AND CHRISTMAS. An illustrated poem,
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Price by mail, 26 cents; per dozen, prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

NO AND YES. A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Price by mail, 21 cents; \$2.00 per dozen, prepaid.

FEED MY SHEEP. Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN. "Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 72 pp. **SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE.** 63 pp.

MR. KIMBALL'S LECTURE. 33 pp.

HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.

THE BUSWELL TRIAL. 24 pp.

THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.

HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 6 cents; 12 copies to one address, 60 cents. Twenty-five copies to one address \$1.15; 50 copies to one address, \$2.25.

SEPTIMUS J. HANNA, C.S.D. CAMILLA HANNA, C.S.D.
Editor. Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.
Twenty-five copies or more to one address, one year, each copy, ninety cents.
Fifty copies or more to one address, one year, each copy, eighty cents.
For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.
Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.
Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

There are upwards of forty rear admirals on the navy retired list of the United States. The oldest is Thomas O. Selfridge, who is now nearly ninety-five, and is said to be the oldest retired naval officer in the world. His son, Thomas O., Jr., is over sixty-five years of age, while there is a younger brother over fifty who is a commander in the navy.

The San Juan Council has appropriated six thousand dollars yearly for the support of a public library. The idea is to combine a public library for San Juan and also have a distributing library for other portions of the island of Porto Rico. The authorities expect to receive from Mr. Carnegie a sufficient amount to build the library.

The second largest claim yet filed with the Spanish Claims Commission has been presented by Francis Seigle, an American citizen resident in Cuba. His claim amounts to \$872,427. He says that in 1896 his plantation was worth one million dollars, but owing to depredations of Spanish troops he is reduced to absolute want.

The city administration of Manila was turned over to Civil Governor Taft and the newly appointed officials, August 7. The control of the city will be in the hands of these commissioners, similar to the government of the District of Columbia. Colonel Herrera, a Filipino, is president.

Six hundred and sixty-five national banking institutions with an aggregated capital of \$34,267,000, have been organized since the passage of the new banking law, March 14, 1900. Of these banks 457 were organized with a capital of less than fifty thousand dollars.

A movement is on foot to organize the veterans of the Philippine war into a compact fraternity on the same general lines as the Grand Army of the Republic.

Rear Admiral Henry L. Howison has been selected to fill the vacancy on the Schley Court of Inquiry, caused by the inability of Rear Admiral Kimberly to serve.

From a statement prepared by the Internal Revenue bureau, the total receipts from the war revenue act from July 13, 1898, to May 31, 1901, amounted to \$310,053,363.

The gunboat Machias has been ordered to Colon to look after American interests there during the trouble between Venezuela and Colombia.

Foreign.

A memorial to Queen Victoria will be erected in front of Buckingham Palace. The whole memorial will be sixty feet high, consist-

ing of a platform approached by five flights of steps and surmounted by a statue of the Queen, flanked by symbolic groups representing Truth, Justice and Maternity, the Army and the Navy, etc. Colonnades, gardens, and gateways have been planned. When completed it is believed the approach to Buckingham Palace will be one of the finest entrances to any royal residence in Europe.

The German Antarctic expedition, under the leadership of Professor Ehrich von Drygalski of Berlin, noted for his study of Arctic glaciers, sailed from Kiel, Germany, August 11. The expedition is financially backed by the German Government though conducted by civilians.

In accordance with instructions received from the imperial government, Lord Kitchener issued a proclamation on August 7, in which he allowed the Boer leaders until September 15 to surrender. If this is not done they will be permanently banished from South Africa.

The signing of the final protocol of agreement between the Powers and China has been delayed owing to objections raised by Great Britain against the international commission for the revision of the tariff.

Andrew Carnegie has offered to give one hundred and fifty thousand dollars to Montreal, Can., to build a public library if the city will provide fifteen thousand dollars a year for maintenance.

The International Association of Botanists completed its work at Geneva, August 8. Among the Americans present was Professor William Gilson Farlow of Harvard University.

The Dowager Empress Frederick of Germany passed away at Cronberg, August 5. She was the eldest child of the late Queen Victoria.

Thirteen American claims now before the South African Compensation Commission aggregate more than two hundred thousand dollars.

Count von Waldersee, field marshal of the allied forces in China, arrived at Hamburg August 8. He received a most cordial welcome.

Andrew Carnegie has been invited to become lord rector of Aberdeen University, Scotland, in succession to Professor Stuart.

Industrial and Commercial.

There are 905 companies operating electric, cable, and horse railways in the United States. The total mileage of single track is given at 20,442 miles, and the total number of cars is 62,918. The aggregate of capital stock for 1900 is \$1,066,196,460, an increase over the previous year of \$75,183,698. The bonded debt of all roads for 1900 was \$866,818,673, an increase over the previous year of \$83,855,202.

The Arbuckle Brothers, coffee merchants of New York, will in the future bring coffee from Brazil on their own vessels. They claim that their rivals, the Sugar Trust, had a decided advantage over them in the coffee warfare because of the rebate they received from the Brazil steamship pool, hence decided to employ their own ships.

There are about seventy-five thousand oil wells in the United States, exclusive of those in the Beaumont district, with an approximate daily production of one hundred and sixty thousand barrels. A dozen wells in the new Beaumont district are producing more than all the other wells in the country combined.

According to a recent report of the State Department at Washington, D. C., the United States is Japan's best customer. Japan's total exports in 1900 aggregated \$101,806,137. Of this amount \$26,178,065 came to

the United States, while the United States exported to Japan \$31,265,075 worth of goods.

A test of American and English locomotives has just been made by English experts at Kingston, Jam. Over a difficult line and under the same conditions the old American engine beat the new English engine, which cost twice as much, by more than seven minutes.

The exports of raw cotton during the fiscal year of 1901 averaged a million dollars a day. The quantity was not so great as in some other years, but the total value was higher than ever before.

General.

A wealthy Russian land owner died not long ago, and after the funeral his heirs looked vainly for the will, but without success. A few days later a young man, seeing a graphophone on the table in the library, put into it a record which he supposed was that of a popular Russian song. To his amazement and terror, instead of a song he heard the dead man's voice recite the words of the missing will. Lawyers were summoned, and they lost no time in examining the record containing the will. It was found to be flawless, and the question whether a will left on a graphophone cylinder is valid is now before the Supreme Court at St. Petersburg.

A concerted effort on the part of missionaries in Porto Rico is being made to send bright children to the United States to attend our schools for a time. It is believed that these young Porto Ricans will exert a most helpful influence upon friends and relatives when they return home.

A new system of wireless telegraphy has been invented by three students at Chicago. The claims for the new invention are that it is quicker, can send messages to greater distances, and that the problem of operating several instruments in the same locality is practically solved.

The first station of Nikola Tesla's wireless telegraph system will be built at Wardenclyffe, L. I. This station will be the main one of the system, and it is stated that Mr. Tesla expects to be able to communicate with all countries of the world from that point.

The highest price for New York real estate was paid recently when a parcel of land at Broadway and Thirty-fourth Street was sold for \$350 a square foot. It contained 1,100 square feet and brought \$375,000. The dimensions are 31x45 feet.

St. Peter's Cathedral at Rome is the costliest religious edifice in the world. About seventy million dollars were spent in its construction. The foundation was laid in 1450 and it was not finished until 1880. It was dedicated in 1826.

In the United States the savings deposits of 1870 were \$549,874,358, distributed among 1,630,846 depositors. This amount was multiplied by more than four in 1900, when \$2,384,770,849 was distributed among 5,875,054 depositors.

An Egyptian boat, said to be four thousand years old, has been donated to the Carnegie Institute of Pittsburgh. The boat was recently dug up from the banks of the Nile and is two thousand cubic feet in size.

The new constitution of Alabama provides that women who pay taxes on five hundred dollars worth of real estate may vote in bond elections.

The twenty-eighth triennial conclave of the Knights Templars will be held the last week in August in Louisville, Ky.

The fifty-fifth annual session of the American Missionary Association will be held at Oak Park, Ill., October 22.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Some Lessons Taught by the Pan-American.

BY MRS. J. EDGAR HUGHSON.

ALL culminating results tell their story of efforts, mental and physical, spiritual and material. To the student who aims at the realization of some ambition there comes a glow of satisfaction, be the endeavor without or within his special field of research, when such a result is secured as wins applause; and glorious indeed are the rewards to the affections and minds of the projectors of any plan and purpose put forth for the elevation and enlightenment of humanity when the results are declared, by all concerned, builders and observers, as surpassing previous efforts.

Then may the world unite in one acclamation of praise for the spirit that is never satisfied with past achievements, but strives for a higher realization of the ideal and a nearer attainment of the perfect pattern.

All higher realizations are the result of higher ideals, and be the language stone or cement, wood or paper, sunlight or electricity, the story related is uplifting as the thought expressed through these forms is elevated and idealized, inspirational in motive.

At the Pan-American Exposition, there comes an impression of the dominating of the ideal as there opens to view the splendor of first one scene then another, arranged for the enjoyment and inspiration of the visitor, and the language is universal, for it speaks, not in arbitrary words, but in Thought structures.

In mediæval times the capture of a royal personage in battle was heralded to the populace by a triumphal entrance of the victorious general to the capital city, followed by the chained captive.

A fine description is given in the historical romance, "Zenobia," of the triumphal entrance of Aurelian into Rome with Zenobia chained by a golden chain to his chariot, he having torn her from her beautiful city of Palmyra to celebrate his own triumph and victory.

To-day, freedom and liberty of thought have made a triumphal entrance into the twentieth century with mediæval paganism and barbarism chained into subjection, which is grandly typified by the entrance to the temporary city constructed as a memorial and a future incentive to the progress of Pan-America.

Passing along Lincoln Parkway, by the Art Gallery in process of erection for permanent use, catching a glimpse through the trees of New York State Building,—a permanent structure to be occupied by the Historical Society,—over a bridge, through a row of columns, there rise in noble grandeur, the four pylons on the Triumphal Bridge, not to celebrate individual achievement, but to commemorate the virtues upon which our nation was founded, and which, in the future, must support all organizations that survive the strenuous efforts of error to tear down the bulwarks of character and strength, and supplant them with unbridled liberty or narrow bigotry.

These massive pylons, two on each side of the bridge, rise high to affirm the realities of brotherhood, liberty, civic virtue, and benevolence. They are united by chains of huge decorative mediæval shields and flags, which

seem to the visitor to show how, through ages darkened by ignorance, this age has reached a period in its development where the new commandment, "Love one another," has become the foundation of true government, and the spirit of the new century just entered upon.

This spirit has already heralded the dawn of desire for the best wherever it originates to be tested, weighed in the balance, but not found wanting, but to bear the test of practical universality in mutual esteem, mutual toleration, mutual liberties, mutual purity and honor, and mutual helpfulness. Having imbibed the spirit which prompted these monumental structures, the visitor, as he stands between them, looks first to the right, then to the left. He rejoices! He has entered the new city through the gateway that leads to the right understanding, and now drinks in the beauties before him from the view-point of the artists who designed them. He observes the true values, notes the perspective, the important points of arrangement, buildings, esplanade, courts, and fountains, and sees that the point of climax is the electric tower, a structure four hundred and ten feet high, from which pours a large volume of water into a wide basin at its foot. Here beautifully designed sprays spurt, play, and bubble water, as though full of joyous glee and a desire to rival each previous effort at sparkling and reflecting sunlight to celebrate this great and memorable creation of this beautiful Pan-American city.

The court of fountains, which indents the broad esplanade is a magnificent conception of the useful and ideal combined in mythological and artistic designs for beautiful effects and the practical utility of supplying moisture and coolness to the air.

Entering thus from the south, with the electric tower about two thirds the distance of the grounds from the pylons, an intelligent idea is obtained, which enables visitors to economize time in passing from one building to another. About half way between the bridge and the tower, unique, helmet-shaped band-stands shelter the musicians, where, surrounded by innumerable seats, the crowds sit and listen at stated hours to the music as it floats on the breeze across the esplanade, a feast to ear and eye sufficient for a lifetime, with the view this affords of fountains and buildings, turret and tower; while, like a Thibetan thread, wind the water-ways or canals through the grounds, adding their artistic reflections of bridges, borders of statuary, vases, and all that their clear depths mirror.

Now and then in quiet enjoyment, floats by a company of tourists in an electric launch or a gondola, while on land whole families,—father, mother, and little ones,—pass by, forming a regular cavalcade in rolling chairs, or the Jinrikshas drawn by Japanese in their picturesque costumes. Truly, Pan-America, with its adaptation of the Spanish Renaissance in its colonnades, loggia, and architecture, is a cosmopolitan city without including the types on the Midway, which, to have the privilege of visiting, is indeed a valuable opportunity that should not be lost to any one, far or near, and particularly to a continent of people limited to their own shores, by many obstacles on land and water, which must be overcome before being permitted to see

even an infinitesimal part of what this segregation of ideas represents.

The illumination of the Pan-American Exposition grounds exceeds any conception hitherto attempted by man to secure light for a city. The legends that transferred the Grecian gods and goddesses to the heavens upon their performance of any deeds of heroism seem here to have been reversed, and the spirit of investigation which seeks to illumine the understanding upon every theme of study has brought the constellations down to earth in seeming fancy, and placed the myriads upon myriads of brilliant stars upon pedestals, colonnades, buildings, fountains, and towers to illuminate not alone the eye of the Exposition, but to furnish the illumined thought to all the world that there is yet to be learned that which will exceed this illumination as far as this exceeds the illuminating power of a candle's light—beyond what human mind can now conceive. For now the dome of the sky grows darker and darker as, after this city's thread of light, which softly and gently steals on from one spot to another like a fiery thread at the edge of evening, deepens to the golden light, out-rivaling the stars that twinkle in the distant heavens.

Is it any marvel that, upon the first sight one cannot refrain from the thought of the "great city" whose "light was like unto a stone most precious, even like a jasper stone, clear as crystal"?

The educational results of this Exposition cannot now be estimated any more than could those of the Centennial in 1876 or those of the World's Fair in 1893. And, as the Centennial was the foundation from which developed that widespread interest in the fine arts and liberal, in all their comprehensiveness, and many of the progressive ideas in mechanical invention, which have characterized this country since that time, so the creation of the White City has with its court of honor, its golden statue to liberty, which, by their purity, symbolized, the court of honor that should be embraced in the heart of every nation and every individual, with each as unalloyed love of liberty as was that statue of pure gold; its vast architectural designs in building and sculpture; its fine art and decorative effects, so has that Exposition of ideas spread until the back coming wave brought new force to, not one America, but all America; and the ray of light from that white city has, like the wisdom of the intellect, been separated, reflected, and refracted in its solar spectrum of crystal time, to produce the rainbow city, where, from her lofty pedestal on the domed cupola of the most beautiful and highest tower ever erected for illumination, stands a goddess of Light proclaiming her double mission to the world—demonstrating not alone a fleeting city's light, but the illumination of a world; and it stands, together with the tower and all its illumined space, above and below, an artistic and historical expression of thought illumined by inspiration.

Scientific Temperance.

THE agitation for total abstinence and stringent restriction of the liquor traffic has ceased to be the special work of "temperance fanatics." Men of Science (who spell the word with a large S) are giving attention to it; and the evils of alcoholism and the means of dealing with them have a conspicuous place in the discussions and transactions of learned societies and among the subjects of articles in scientific journals. The French government is puzzled over the prevalence and growth of the malady. The German government has made the means of repressing the drinking habit a matter of serious consideration for a long time. In fact, the nations abroad are at last beginning to go through an experience like that we have endured; only there the matter is taken up by statesmen and philosophers whose minds are admitted to be broad, instead of

by such as are called "cranks" here. Strong liquors do not alone come in for reprehension. The mischief of wine and beer drinking is recognized as being quite as important under the prevailing drinking habits, and is receiving even more attention than that of the consumption of spirits. We have observed this trend for several years in our journalistic reading of foreign scientific papers, in articles which we have not now at hand, and have contrasted the interest shown in them with the apathy which, till Sheriff Pearson and Mrs. Nation arose, seemed to be coming over our own land. A few recent articles that have come under notice will help show what is going on, and how.

In a recent discussion in the New York Academy of Medicine, by medical men pure and simple, the topics of "Beer Drinking and Kidney Disease," the effects of alcohol on the nerve centres, the care and treatment of inebriates, alcohol and tuberculosis, and ignorance as a cause of alcoholism were dwelt upon. All the doctors seemed to agree that alcohol was bad and only bad, and it had been a mistake ever to regard it otherwise, and all paid very little attention to the supposed distinction as to degrees of badness between the light drinks and the strong ones. Dr. M. Allen Starr expressed the opinion that the most potent influence to be relied upon as a preventive and remedy for alcoholism was the religious one.

Mrs. M. G. Stuckenburg has recently published a pamphlet containing numerous quotations from Germans in various callings—government officers, university professors, physicians, authors, pastors, and bishops—testifying to the evil effects in private and public life of German indulgence in drink; and some of them are particularly strong against beer.

The Archbishop of Canterbury has remarked upon a great progress made in English public opinion in favor of the temperance movement. A special government commission has brought in a report upon the liquor traffic in which, the archbishop says, the things proposed by those most opposed to any progress in the temperance direction must be taken as marking a very considerable advance. Some of the measures suggested in this report are before Parliament for enactment.

The London Lancet of February 9, 1901, while acknowledging that English medical men have been faultily backward in recognizing and exposing the evils of alcoholic indulgence, mentions the names of several eminent doctors who have done their duty in the matter. Of a showing by Dr. William Carter of Liverpool, that the number of cases of admissions for injuries resulting from drunkenness has been greatly reduced at a single institution since the curtailment of the hours of sale, it says that "one such fact as this should dispose of most of the nonsense that we hear to the effect that legislation has done all it can to mitigate the preventable disease of alcoholism." A conviction of the terrible mischief that is done to the country by alcoholic indulgence is shared, it is certain, "by the medical profession of the kingdom, whose position for using words of caution and remonstrance is unique, and who have opportunities for studying the alcoholic question at first hand which are denied to temperance lecturers."

Dr. Victor Horsley, an eminent original investigator in physiology, delivering the Lees and Raper Memorial lecture in St. James's Hall, London, last year, spoke on the effects of small doses of alcohol on the brain, exclusively from the scientific point of view. The test of the "reaction time," or the small fraction of a second which is consumed by the nervous system during which it receives an impression and exerts some movement in response to it, had been applied, he said, by Kraepelin, whose investigations of the subject had been most thorough. Kraepelin had found that this response seemed quickened at first, but that a slowing followed immediately and lasted as long as the

alcohol was in active operation in the body; so that the whole response was much more tardy, and a response in which an association of ideas was involved was never quickened by alcohol. In a case where an arithmetical process seemed to be done more rapidly under the influence of alcohol, analysis showed that the work was wrong; and wine proved itself to be verily "a mocker." The apparent initial quickening effect is not accounted for, but is supposed to be due to a loss of control, as in an engine from which the governor is removed. Voluntary movements are described as being an intermittent succession of impulses. When alcohol is taken the normal summation of impulses is interfered with, and the movement becomes a tremor. In dynamometer experiments an apparent acceleration of work is followed by a depressent effect. The experiments of Aschaffenberg and the experiences of travelers and military expeditions give results in harmony with these. Other experiments point to injuries to the cerebellum as the source of the unsteadiness of the walk of drunken men. Degenerative structural changes in the nerve centres are also described in Dr. Horseley's paper as resulting from the use of alcohol. The conclusion seemed overwhelming to the lecturer that even in very small quantities—that is, in dietetic amounts—alcohol has a most injurious effect on voluntary muscular work, and he finally declared his opinion, "from the scientific point of view," that the contention that small quantities of alcohol, such as people take at meals, have no deleterious effect, could not be maintained. Considering the mass of evidence that has been accumulated on the subject by numerous authors, it followed that from a scientific point of view total abstinence must be our course if we are to follow the plain teaching of truth and common sense.

An International Congress against alcoholism met at Vienna April 9-14. Its transactions, when published in full, will probably furnish more information of value on the subject.—*The Christian Advocate*.

A Novel Steam Engine.

A UNIQUE idea has been worked out by a Des Moines, Iowa, inventor, whereby the boiler of a steam engine is practically avoided. The general principle of the engine is this: That while in the ordinary engine but a small quantity of steam is being used at any one time, yet a great quantity of fuel is necessary in order to keep a large volume of water continually boiling to provide the necessary steam. In the present instance there is no boiler proper, there being substituted therefor a small quantity of water in the lower end of what might be called the steam chest proper, though here called a boiler.

Operating in this boiler is a long, hollow piston, lacking about one thirty-second of an inch of fitting to the sides of the boiler, thus leaving room for a steam cushion all the way around it, and also making it possible for the condensed steam to run down the sides. A rod connected with this piston passes up through the centre of another piston, which operates in a vacuum cylinder above the boiler and is geared direct to the fly wheel.

The upper piston above referred to fits absolutely air-tight in the vacuum cylinder, and is geared to the shaft in the usual crank manner. As the steam piston is forced up, it forces the upper piston up, leaving a vacuum, which draws it back again, thus giving, in addition to the steam power of from forty-five to sixty pounds pressure, the additional fifteen pounds pressure of the atmosphere in the vacuum.

One of the greatest advantages claimed is that, in view of the fact that two pistons are connected direct to the machinery, and there being a great difference in the length of their stroke, it dispenses entirely with the "dead centre"

principle of all other engines, and one of the pistons begins doing business before the other one ceases.

Surrounding the vacuum cylinder is a jacket containing water, which prevents the heat from the friction of the air-tight piston from expanding the metal and wasting any power. It also operates to keep the upper end of the boiler cool, and assists in the condensation of the steam, which trickles down to the lower end of the boiler where it immediately becomes steam again and is used over and over.

There is absolutely no exhaust or escape to the engine. A one sixteenth of a horsepower model, which has been running for some time, requires less than three teaspoonfuls of water, and as the water is in an air-tight chamber, it will last an indefinite length of time, and all the heat that is necessary for this engine is a small alcohol lamp.

There will soon be in operation a five-horsepower engine, standing about four feet high, which will operate with three pints of water and require for fuel but one gasoline generator, such as is on an ordinary gasoline stove. The engine weighs only about one third as much as other types of existing engines, and it is claimed can be constructed and operated much more cheaply. It is at present known as the Kessler-Ellyson hydro-pneumatic engine.

The Railway and Engineering Review.

Oldest Bible in America.

THE oldest Bible in the United States was shown at the state house recently by the owner, Rev. John Herr of Lima, Ill. It is a fine example of mediæval printing, and the original binding is yet almost intact. It is bound in beechwood, and covered with Russia leather, stamped with curious patterns and marked by the depredations of worms. There are only three copies of this edition in existence. The original edition was only fifty copies.

The old volume has a bloody history. The monks who struck it off with clumsy wooden type paid the price of death at the stake for their temerity, and of the twenty-six people who studied it in secret, but ten lived more than five years, while many of the Bibles were burned by the public hangman.

But few of the edition were preserved, hidden away in old chests and secret places, and one of them was this Bible. It was finally purchased by John Herr of Zurich, and in his family it has remained for twelve generations.

The volume bears the date 1553, and was printed at Zurich, Switzerland, by two apostate Carthusian monks, Andrew Gessner, and Rudolph Wessenbach. Its language is a Swiss dialect of German. At the time of printing, Switzerland was under the domination of the Pope. Only Latin was permitted to be used in religious books, and even Latin Bibles were not to be read by any but churchmen. Death was the penalty for laymen who read the Bible, and so the volumes were printed in the closest secrecy.

When it was known that the edition of the Bible had been printed, spies were brought from Italy, and after a long search, the two monks were found. Short shrift was given them, and on Good Friday, in the year of 1556, they were burned in the public square of Zurich, in the presence of a vast multitude. The little circle of Lutheran Protestants who read the Bibles were hounded down remorselessly. Sixteen of them were put to death with the most horrible torture, and but ten were pardoned.

The old Bible possesses a great interest to students, apart from its history, as it contains the twelve books of the Vulgate translation which are missing from the King James version, the one in familiar use in America and England. These books,—Baal, Maccabees, Hester, Baruch, Tobie, Jesus Sirach, Esdre, and others,—are placed between the book of Kings and that of Job. The Bible contains a picture of the last judgment, and wood engravings with hand painting.—*Denver Republican*.

Selected Articles.

The Christian Science View of Sin.

To the Editors of *The Outlook*.

I desire to review some points in an article on Christian Science which appeared in *The Outlook* of July 6.

This essay seems to have been kindly intended, but true to the thought expressed in its first sentence, "It is difficult for any one, not a votary of Christian Science, to understand what it is," it manifests only a superficial view of this Science. This is indeed a Science, and should have been so treated by our worthy editor; then would he have waited until he had become a practical Christian Scientist, and had healed successfully through its teaching, to prove, even to himself, that he understood it, before attempting its explanation to others.

Complaint is made that Mrs. Eddy does not give a clear definition of God, yet hundreds of thousands of people have been able to destroy troubles for themselves and others through the clear understanding of God which they have gained from Mrs. Eddy's book, "Science and Health with Key to the Scriptures." It is too bad that our critic did not give his own definition of the personality of God. I have read a number of criticisms in this same strain within the past few weeks wherein the authors have complained of the Christian Science definition of God, and yet have failed to give their own. Those who are dissatisfied with Christian Science should give us a better way of producing the same results.

Our critic seems to understand Mrs. Eddy's definition of evil as a nonentity; that it bears the same relation to God which darkness bears to light; but in his criticism thereof does not continue to reason consistently therewith. He fails to apply the same remedy to evil which he would apply to darkness, and therefore fails utterly to define the Christian Scientists' method of destroying evil. He admits that darkness is nothing more than the want of light; that it is a nonentity. Does he attempt to be rid of darkness by simply saying that it is nothing? He recognizes that the only way to be rid of darkness is to bring in the light. Now, consistent with his own proposition and his own interpretation of Christian Science, he should recognize that evil can only be overcome with good. This is the method which our great Master advocated, and just what Christian Scientists practise. When God has the ascendancy in human consciousness and in the life of the individual, evil of necessity, finds no place. If God be to us infinitely great, evil must become to us infinitesimal. Herein is the superiority of the Christian Science method of overcoming evil—the sinner is given strength and courage to master evil because of his understanding of the omnipotence of good and the consequent impotency of evil. No class of people know better than Christian Scientists that evil must be grappled with and mastered, and that the sinner will never be rid of his wickedness nor its just penalties until he ceases sinning. To say that sin is an illusion and continue sinning is not consistent, for the evildoer is making it real by his indulgence. Christian Science does not incorporate sin under the name of good and allow it place and power, but draws the line emphatically between right and wrong, and declares that wrong must cease and right must prevail to the utmost.

The Christian Scientist does believe there is an enormous amount of sin in the world, and why? Because he has not through spiritual growth unbelieved this.

When Paul said, "So fight I not as one who beateth the air," he meant that his fighting was done intelligently, not by striking out in an indefinite, ineffectual manner. This same Paul referred to evil as the power of darkness. Darkness has no power except to hide the truth and is always destroyed when the light appears.

I like the definition of sin which our critic quotes from the Westminster Catechism: "Any violation of, or want of conformity to the law of God." In the light of this definition all mistakes as well as wilful wrongs should be included under the name, sin. John said, "All unrighteousness is sin." All unright-wis-ness (all unright-wise-ness) is sin. All wisdom or knowledge which is not right is sin, and all conduct which is allowed or indulged by reason of this wrong or false knowledge is sin. It is error, or unright-wis-ness, to believe that sin, which is not of God, is an entity. Hence the truth of Mrs. Eddy's statement, "To believe sin is real is itself sin." Indeed, this is the original sin, and the proof that we believe it to be real is our indulgence in it. When we are ready to admit that there is nothing in it, having lost all pleasure therein, we are ready to let go of it and cease sinning. No harm can come to the sinner nor any perpetuity of his sin from the knowledge of its unreality. It is because he believes there is something in it that he uses it. It is said that Jesus did not teach the unreality of sin. Will our critic kindly explain what Jesus meant when he said of the devil, "He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar, and the father of it"? It is the vocation of a liar to express lies, and a liar in the strict sense of that word produces nothing else but lies. A lie is utterly devoid of truth, hence altogether untrue and unreal—a mere negation. Here we have the plain declaration that the devil's "own," or offspring, sin and disease, are lies.

We are taught that all evil is the work of the devil; in other words, the work of deception. Believing and acting that which is false constitute the sum total of sin, and this definition is in perfect accord with the one which we have quoted from John, "All unrighteousness is sin."

The Christian Scientist does not wink at sin, does not simply ignore it, but, filled with the understanding of the omnipotence of God and the utter powerlessness of sin, he grapples with it and crushes it out of existence. If all Christians knew and practised what Christian Science teaches concerning sin, the world would rapidly be regenerated and evil would be speedily annihilated. If evil is as real as good, will our critic explain how the power of God destroys evil in the human heart? Is it not true that the wrongs which are mountains to their victims weigh nothing in the sight of God? And is this not why the divine power so easily annihilates sin.

ALFRED FARLOW.

Office of the Publication Committee of The First Church of Christ, Scientist, Boston, Mass.

[We print this letter, selecting it from many received on the same subject, because its authorship makes it really an authoritative statement of the position of Christian Scientists on the point involved.]

THE EDITORS of *The Outlook*.]

No Hate Vibrations.

To the Editor of *The Truth Seeker*.

Christian Scientists are surprised that you should attribute to them such propensities as you mention in your issue of June 15. Christian Science denounces in scathing terms the belief in "witchcraft" of every sort. No one has applied such explicit terms to all forms of evil suggestions as the Discoverer and Founder of Christian Science:—

"The march of mind and honest investigation will bring the hour when the people will chain, with fetters of some sort, the growing occultism of this period" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy).

Christian Science takes the same view of so-called witch-

craft as did St. Paul in his epistle to the Galatians, 5 : 20, where it is reckoned among "the works of the flesh."

Such a term as "hate vibrations" is unknown to Christian Scientists, and must have been borrowed by the writer from some of the occult (so-called) sciences, for it has no place in Christian, or Divine, Science, which defines God as Love and as Omnipotence. The serious and misleading implications that Christian Scientists are capable of using such a power must be ascribed to a complete misconstruction of the teachings of Christian Science. The healing of sin and sickness, through the spiritual regeneration of man, is the aim and object of Christian Science.

Yours truly,

W. D. McCrackan.
In *The Truth Seeker*.

To Prevent Wrecks.

A LOSS of 7,642 human lives is the record of the twenty-three great shipwrecks of the nineteenth century, and this is but a small fraction of the total mortality through accident at sea. The heirs of Anthony Pollock, who went down with the ill-fated *Bourgogne*, have recently offered a prize of \$19,000 "for the best appliance for the saving of life in case of maritime disaster." The award is about to be made, and according to Henry Harrison Lewis, who writes on the subject in *The World's Work*, it is possible that we may shortly bid good-by to all fear of such great ocean calamities as are even now too frequent. Mr. Lewis describes some of the devices offered: Those designed to prevent collisions are most numerous, and depend on wireless telegraphy, the detection of delicate sounds, and on heat and cold. It is practicable to record the approach of a vessel by the heat that it transmits, a feat that does not seem so wonderful when we remember that Ganot recorded in his "Physics" his invention of a thermopile that was sensitive to the heat of a candle held a quarter of a mile away.

Mr. Herman Herberts of Newark, has constructed a thermopile that will detect differences of temperature as slight as one one-millionth of a degree centigrade. One thermopile will be used on each side of a vessel, and wires will extend from it to the bridge of the vessel, where they connect with a galvanometer. One bell will ring on the approach of a heated object, as another steamer; another bell will ring on the approach of a colder object, like an iceberg.

Thomas A. Edison has a plan in which he disregards electricity and depends on the capacity of water for transmitting sound. In the keel he would have constructed a diaphragm operated by compressed air. An electric battery or a dynamo could operate this diaphragm so as to produce an explosive note which would travel miles through the water and be received on the diaphragms of other vessels. A code of signals could be used and long messages exchanged.—*Literary Digest*.

Singing away Pain.

A party of tourists were driving along the country road leading to Killarney, that fine old town among the Irish lakes. As they came within sight of a cottage standing back from the road, with a lovely garden of flowers in front, there reached them the sound of singing.

The voice was full of sweetness, rich and strong, now and then rising into such lofty strains it seemed like an angel's song, then dropping to the mellow softness of a mother soothing her babe to sleep.

The little company was entranced. What genius in obscurity was here? Some one, surely, born to win fame and fortune when brought forward and trained by suitable teachers.

"If I could ever hope to sing like that!" exclaimed the young man who was driving, himself a student of music; and then, stopping his horses, he said: "Let us find who he is; perhaps I might be of help;" but here he paused as a young girl came out of the garden gate toward them. She had a basket on her arm, as if going to market. As she was passing, dropping a slight courtesy as she did so, he asked, "Will you please tell me who is singing so sweetly in the cottage?"

"Yes, indeed," said the girl, turning a bright face toward them. "It is only my Uncle Tim, sir; he's after having a bad turn with his leg, and so he's just singing the pain away the while."

For an instant the company was speechless; then the young man asked, "Is he young? Can he ever get over the trouble? Tell these ladies about it, please."

"O, he is getting a bit old now," was the answer. "No, the doctors say he'll never be the better of it in this world, but"—and her voice dropped into tender pathos—"he's that heavenly good, it would come nigh to making you cry sometimes to see him, with the tears running down his cheeks with the pain, and then it is that he sings the loudest."

With a "Thank you, dear," from the ladies, they drove slowly on.

"And there shall be no more pain, and all tears shall be wiped away," said Aunt Myra, softly.—*Christian Life*.

Notices.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, is now ready for distribution. Leatherette covers, deckled edges; 50 pages. Price, 50 cents; per dozen, \$4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

To Members Admitted June, 1901.

Will those who sent in applications for membership with the Mother Church for the admission last June, and who have not yet received notice of their admission, please send their names and addresses to the Clerk, William B. Johnson, 30 Norway Street, Boston.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Sept. '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for October, November, and December.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Applications for Teaching.

APPLICATIONS for appearance before the Board of Education for next year, will not be received until notice thereof appears in our periodicals.

THE CHRISTIAN SCIENCE BOARD OF EDUCATION.

Peace that Passeth Understanding.

THE Saviour's mission was to bring peace and rest to the struggling heart. Doubtless no sweeter words ever fell on mortal ears than these, "Come unto me, all ye that labor and are heavy laden, and I will give you rest;" and yet, paradoxical as it may seem, these words were uttered by the one who declared that he came not to send peace on earth, but a sword. When the Master's life and teachings are understood these seemingly opposite statements are found to agree. He came not to bring peace to the mortal, sinning sense of existence. To this sense, the teachings of Truth, exemplified in a pure and holy life, bring not peace and rest; they come as a sword, quick and powerful, piercing even to the dividing asunder of the true and the false. The mortal who has seemingly found joy and satisfaction in that which is from beneath, must be brought face to face with the fact that the things of this world do not, cannot, afford any lasting satisfaction, before he is willing to find rest in Truth and enjoy the solace of that peace which passeth all human understanding.

There are those in this age, as well as in the days of Jesus, who are weary of the world, its disappointments and numberless woes, who would gladly find peace and rest. To them the words of the Master are spoken as directly as though they stood on the hillside of Galilee and heard the words as they fell from his lips. It is difficult to grasp this momentous fact; and because we fail to realize God's power and willingness to help His children, we often carry heavy burdens when it is our privilege to lay them down and find rest and peace in the understanding that the present as well as the future is in God's hands, and that He doeth all things well.

Jesus told his disciples that they would receive another Comforter, even the Spirit of Truth, which should abide with them forever. This promise was fulfilled, and how the Master's followers were enabled to continue the grand work of preaching the Gospel, healing the sick, and even raising the dead, is an established fact in history. In the hour of persecution they were not left comfortless; God's grace was sufficient for them, and they were not tempted above that they were able. In the darkest hour of persecution they remembered the Master's words, "Be of good cheer; I have overcome the world," the path grew light about them and they pressed on strong in the faith that overcomes the world.

The Comforter which Jesus promised was not for his immediate disciples only, but for all those who should believe on him through their word. This Comforter came into the world and has not departed from it. Here and now it is possible to find the promised peace and rest. Thousands upon thousands, who failed to find joy and satisfaction in the world of material sense, are daily testi-

fying that Christian Science has been the Comforter leading them into all Truth. It has enabled them better to understand Jesus' words and works. Christian Science has revealed the underlying Principle of those words and works, and has shown how it is possible for the believer in all ages to prove his faith by his deeds. It demonstrates that it is man's blessed privilege, to-day, to know God as an ever-present help. It is not because God has ceased to help that mortals have fallen, leaning upon their own strength, but because they have failed to trust Him implicitly who said, "I will never leave thee nor forsake thee."

The genuine practical worth of Christian Science lies in the fact that it declares God aright. It causes one to feel that the God of his fathers is indeed his God. God has not changed. His power and love are still infinite and His will is manifest in perfect and eternal harmony. This conception of God brings Him near in the day of prosperity and the day of adversity as well. At all times the thought of God's love and presence lifts one above the discords of earth. Thus it is that the weary and heavy laden find peace and rest when the world of mortal thought is saying there is no peace and no place where rest can be found.

The world marvels at these proofs of God's love and power, and seeks to account for them in a material way. But because the world worships a god of matter it cannot understand God who is Spirit, nor comprehend the things wherewith He hath blessed those who love and serve Him. But the one who has within himself the proofs of God's goodness, knows in whom he has believed, and that his faith is not in vain. Even though he is opposed, misjudged, and persecuted by the world he does not lose faith in his God, for "shall not the Judge of all the earth do right?" He recalls the Scripture, "Vengeance is mine; I will repay, saith the Lord," and is at peace with all men. Greater than anything else, greater than all else is his God, and he says with the Psalmist, "The Lord is on my side; I will not fear: what can man do unto me?"

Because he regards his mortal sense of existence as but the probationary school of experience wherein he is working out the facts of spiritual being, he says, in the words of the apostle, "Nay, in all these things we are more than conquerors through him that loved us. For I am persuaded, that neither death, nor life, nor angels, nor principalities, nor powers, nor things present, nor things to come, nor height, nor depth, nor any other creature, shall be able to separate us from the love of God, which is in Christ Jesus our Lord."

When faith lifts man above the earth where he can see that spiritual existence is the only reality of Being, he gains "the peace of God which passeth all understanding," and having that peace he rests in the assurance that the future, with whatever it may have in store for him, cannot change the fact that he is a child of God and has a place in God's universe which no one else can fill.

Public Debate Demanded.

THE editor of the *Helena Evening Herald* of July 29, 1901, very forcibly and ably descants upon the spirit manifested by certain of the local clergy who have recently been declaiming against Christian Science in Helena. The editorial is in the nature of an invitation to public debate between the clerical assailants of Christian Science and some representative of the latter, and is entitled, "Public Debate Demanded."

While we cannot say that we are in sympathy with the editor of the *Herald's* view of publicly discussing Christian Science, we greatly admire his robust candor and fairness in treating the situation.

Here is, in part, what he says:—

"Those who believe in fair play most earnestly hope that some arrangements may be made whereby a joint debate may take place between some Christian Scientist of note and some Montana preacher who thinks he is big enough to hold him down.

"Those of us who are neither Christian Scientists on the one hand, nor church members on the other, have felt a growing interest in the jug-handled controversy that has been going on since the departure of Judge Ewing.

"Many in this city would like to hear the merits and demerits of Christian Science debated, inasmuch as some of the good brethren of other denominations will persist in hammering away against that peculiar faith.

"It appears that Judge Ewing, in his lecture in this city, did not assail any other faith and refrained from personal criticisms of religious teachers of the various denominations in opposition to his own.

"This fact inspired a respect for the doctrines he enunciated, even among those who cannot be induced to accept them, and was in marked contrast to the treatment accorded Christian Science since his departure by some of the professed followers of the lowly Nazarene.

"The rare opportunity of challenging Judge Ewing to joint debate seems to have been entirely overlooked until his professional engagements had taken him beyond the jurisdiction of the Montana pulpit. But after the judge was under headway to other points a number of pulpit orators flew to the attack with great energy and viciousness, if not with ability and good judgment.

"The spirit manifested by some of the local clergy is in such marked contrast to that shown by Judge Ewing, when measured by accepted Christian standards, as to excite a great deal of comment throughout our city and state—so much so, in fact, as to create a universal desire to hear the issues involved debated on their merits.

"Those who heard Judge Ewing's address are positive that he did not, even by implication, traduce the name of a woman, while those who have listened to the pulpit rejoinders unite in saying that, without exception, personal imputations against the character of prominent ladies were freely thrown out, in one form or another, much to the disgust of a fair-minded public.

"It is quite likely that Judge Ewing, who is reputed to be a gentleman of the highest type, might refuse to meet any man in joint debate who will so far forget himself as to cast reflections upon the personal character of respectable women, even though he arrogates to himself the title of a 'reverend.' Almost any gentleman would feel that way about it, no matter what profession of faith the preacher might assume to represent or how large his following.

"Even the general statement that Mrs. Eddy is working for money comes with poor grace from a minister who would throw up his job in twenty minutes if it were not for the salary he receives, notwithstanding the Scriptural injunction to spread the Gospel without money and without price, and to give his other coat to the poor.

"The chances are that Mrs. Eddy does not receive any larger compensation than many a three-hundred-dollar-a-year preacher, when measured by the size of their respective congregations and the influence they relatively exert.

"If it is to be a question of the pocket-book, why not attack the big clerical guns of New York City and elsewhere, whose incomes reach away up into the thousands, while little children are starving to death in the slums?

"The writer believes that the divine gifts of God should be freely distributed, in proportion to the growth of the individual and his capacity to utilize them, that truth should be imparted to all who can use it in the process of moral evolution; but if it is wrong for Mrs. Eddy to accept compensation for her teachings, it is likewise wrong for those who criticise her methods to do the same, even though they receive less through inability to secure more.

"But aside from all the details of selfishness, from which

no religious organization seems wholly free, it would be interesting to know the truth concerning the claims of the Christian Scientists, now under fire in this community, and a joint debate in the Auditorium, the proceeds to go into the charity fund for the coming hard winter, would be welcomed by our citizens as a fitting finale for the pulpit Punch and Judy show that is now going on.

"Let both sides give a reason for the faith that is within them from the same rostrum,—and may the best man win!"

Christian Science Literature.

WE publish herewith an extract from the August, 1901, number of the *Tidings*, published by the Woman's Baptist Home Mission, headquarters at 2411 Indiana Ave., Chicago, Ill., which will be found to be self-explanatory:—

"In May, and again in July, subscribers in one of our large cities have complained that Christian Science literature has come to them folded in *Tidings*. In the first case, there were three leaflets, and in the latter a folder advertising Mrs. Eddy's book and other matter. However and wherever these tracts get into our paper, it is after it leaves our headquarters, and we will be grateful to any one who will help us discover the guilty party. The offence is contemptible and criminal, and it is no credit to Christian Scientists that they should seek to promulgate their doctrines by such sneaking and dishonest methods. We warn the perpetrator that we shall spare no pains to discover the culprit, and we admonish him or her that the offence is one subject to no light penalty. We also ask that all subscribers who have found such literature tucked into their papers, will let us know. As yet, as far as we have information, there has been trouble only in one city."

In explanation of this article we also publish the following letter from Mr. Archibald McLellan of Chicago, a member of the Publication Committee:—

Chicago, August 6, 1901.

Miss Mary Burdette, 2411 Indiana Ave., Chicago.

Dear Madam:—My attention has been called to the August number of the *Tidings*, in which a statement is made to the effect that subscribers to *Tidings* in one of the large cities, received certain Christian Science literature folded in your paper, and there seems to be a disposition to charge the insertion to Christian Scientists as a body.

I do not understand how any person outside of the Postoffice Department could have access to your paper after it left the place of publication, and I am certain that no Christian Scientist is tampering with the mails. Certainly no organization or person acting officially for Christian Science, have had anything to do with the occurrence with which you justly find fault.

I will be much pleased if you will give me the facts in reference to the matter, so that an investigation can be made. I presume that you are the proper person to address in this matter; but fearing that I may be mistaken I take the liberty of sending a copy of this letter to Mrs. J. N. Crouse, 2231 Prairie Avenue.

Sincerely yours,

ARCHIBALD McLELLAN.

In reference to the above matter we simply have to say that nothing whatever relating to it had come to the knowledge of the editor of our publications, or any one connected with the same at headquarters. We deprecate, as much as the editor of *Tidings* possibly can, the method which are described in the above article, and if any Christian Scientist has been guilty of the act charged, we hereby emphatically request that it be not repeated.

While uniting with the editor of *Tidings* in denouncing the action referred to, we cannot refrain from expressing regret that the editor, before publishing so harsh and apparently un-Christian a denunciation, did not make inquiry

either at headquarters, or of some responsible representative of the movement, for the purpose of ascertaining the real situation. It strikes us this would have been a more Christianly method to pursue.

Among the Churches.

New Quarters at Rockland, Me.

The *Rockland Opinion* in its issue of July 12, published the following account of the opening of new quarters by the Christian Scientists in that city:—

An event of importance and interest occurred last Sunday morning, when the Christian Scientists of Rockland, comprising First Church of Christ, Scientist, opened their new headquarters. These consist of two rooms on the second floor of the Kimball Block on Main Street, near Lime-rock,—an auditorium, seating about ninety persons, and an adjoining room in the rear which is to be used as a public reading room during the week, but which can be thrown into the hall on Sundays by opening the folding doors across the full width of the room.

The woodwork of the rooms is cypress, finished with green filler; the floor, varnished yellow pine; the walls are tinted a pale sea green, and the ornamental steel ceiling cream and green, making a very pleasing and harmonious effect. On two of the walls are inscriptions in Old English gilt lettering, very artistically done. One is the Scriptural quotation from St. John, "God is Love," the other, a quotation from Mary Baker G. Eddy, "Divine Love always has met, and always will meet, every human need."

At the street end of the hall are three windows, in front of which is a platform with two oak reading desks and two handsome mahogany chairs. A square piano is used for the accompaniments and is placed near the platform. The seats are cane seated oak chairs, arranged in rows with a centre aisle.

In the reading room is a centre table and easy chairs. There are two windows, which make the room very bright. On the table are copies of all the standard Christian Science publications, including the weekly and monthly periodicals. Some one is in attendance from 10 A.M. to 4 P.M. to welcome visitors and give any information that may be desired.

Services are to be held in the hall Sunday mornings at eleven o'clock, and a testimony and experience meeting Wednesday evenings at half past seven, to which all are cordially invited.

The exercises on Sunday consisted of singing by the congregation; reading from the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy; silent and audible prayer; a short address by Miss Sara Louise Lyon, the First Reader, and the benediction. There was also a musical programme, consisting of two violin solos, by Mr. W. F. Pierce of Vinalhaven; an alto solo with violin obligato, by Miss Alice Gurney Lane and Mr. W. F. Pierce, both of Vinalhaven, and two vocal quartets by Miss Alice Roberts and Prof. T. M. Roberts of Utica, N. Y., in addition to Miss Lane and Mr. Pierce. These numbers were interspersed during the religious services, and were rendered with marked artistic taste and ability. There was a large attendance, every available seat being occupied. Many of the visitors were from neighboring towns, Camden, Thomaston, Warren, and Vinalhaven, and also a number from Utica, N. Y.; Boston, Mass.; Baltimore, Md., and Peoria, Ill. After the services, there were exchanges of greetings and congratulations, all the visitors and members being rejoiced over the acquisition of such beautiful quarters.

It was learned that most of those present had been healed of some serious disease through Christian Science, and had become interested by subsequent study.

The following appeared in the *Opinion*, July 19.

The opening of the new hall of First Church of Christ, Scientist, in this city, last week, was an event that is of interest as marking the growth of a comparatively new school of religious thought in this community. Much has been said of the new cult, but there are many people—and we have been among the number—who have had but very slight acquaintance with the doctrines it holds and the extent to which they are subscribed. Hoping to gain some information of value to ourselves and readers, we asked one of the visitors on the occasion of the opening of the hall, a gentleman of intelligence and high standing, to give us a brief outline of the tenets held by the Scientists and a history of the local society. He says:—

"Christian Science is not a mere method of healing sickness, but is a religious teaching based on the Science, underlying Christianity, which was discovered by Rev. Mary Baker Eddy. It is founded on the scientific interpretation of the Bible. The healing is an outcome of the religion and includes mainly the healing of sin, but also of physical ills. It requires no faith in order to be healed by some one who understands the Science—only a willingness. Many persons have been cured of organic and chronic diseases through the reading of the text-book, 'Science and Health with Key to the Scriptures.'

"Christian Science was first introduced in Rockland when Miss Sara Louise Lyon went to Vinalhaven from Utica, N. Y., in February, 1894, and came here once or twice a week. She settled here in May, 1896, and began holding meetings in her parlor, with three or four others; but regular weekly meetings were not held until the following September. The parlors were soon crowded, and a public place needed; so, in August, 1897, Grand Army Hall was rented for the Sunday services.

"In December, 1889, a society was formed and a hall of their own secured in the Ulmer Block, a public reading room being also then established. In December, 1900, the society was incorporated as First Church of Christ, Scientist, of Rockland, Me., and a state charter secured.

"Christian Science was also introduced at Camden and Vinalhaven by Miss Lyon, and both of these towns now have chartered churches. There are also Christian Scientists at Thomaston, Warren, and Rockport.

"In all there are about fifty members at present in these three churches and an average attendance of almost one hundred, which indicates that there are four or five hundred persons who have been healed or who are interested in Christian Science in and about this neighborhood."

Mixed Figures.

Nothing diverts attention from the subject more quickly than an incongruous mixture of figures in a speech. Not long since we heard a minister of the Gospel, of large fame, so mingle figures in the midst of his sermon as to practically create a new animal, of which neither the science of zoology nor the prophet Ezekiel in his imaginative excursions into that field knows anything. We respect him too much to point the moral with his name. But a Western editor says, "We once heard Mrs. — eulogize Mrs. Stanton, Harriet Beecher Stowe, and Susan B. Anthony as follows: 'These are the women who laid themselves down in the dust, as it were, to form a bridge over which you and I might go dry-shod.'"

The use of different figures in a protracted discourse is proper enough, but one should never lose sight of the natural relations of things used as figures.

The Christian Advocate.

Christian Science Healing.

THE CHRISTIAN SCIENCE CHURCH is one of works. Wherever found it stands as a living monument to the power of the Gospel to heal the sick and reform the sinner to-day. Week after week and month after month this work goes on, as witnessed by testimonies given at First Church of Christ, Scientist, Dayton, O. Among those recently given were the following.

A traveling man from Kansas City spoke of the wonderful growth of Christian Science in that city; he stated that he traveled over a large section of the country and was often in the smaller towns where there were but few Scientists. It is a source of great encouragement to him, he said, to see the zeal and earnestness manifested by the small societies. He then told of the healing of his wife. She had been under the care of eighteen physicians and had two operations performed, and only as a last resort did she try Christian Science. In sixty days from the time she took her first treatment she was well. That was seven years ago. There is something more, he said, than the physical healing; it is the spiritual illumination of the Scriptures that Christian Science gives.

The housekeeper at one of our large hotels said that she meets a great many persons interested in Christian Science. She related the following incident. The night previous an elderly man and wife arrived at the hotel. They came to see their son, who was an actor in the drama to be played that evening at the Victoria. He had been absent from home for seventeen years. She was somewhat interested in Christian Science, but at first did not think that she could come, yet she very much desired to see her boy. After arriving at the hotel, she became very sick, but would not permit her husband to go for a physician, endeavoring to follow out her highest thought of right according to her knowledge of the Science. After some conversation with her, the housekeeper found that she was interested in Christian Science, and the lady was much delighted to find that she had found a friend in Christian Science just at a time when she so much needed assistance, and through the help given, the suffering was soon overcome.

A lady spoke of the value of living Christian Science, as told to her by a neighbor engaged in business. When the Christian Scientist first moved next to her, the lady, owner and manager of the business, decided she would not have anything to do with the Science; rather was it spoken of as something to be shunned. The Scientist was pleasant, but said nothing about the Science to her. In due time she noticed that the Scientist had something that she did not possess, and gradually began to make some inquiry. Her questions were answered, but no attempt was made to talk very much on the subject. Later she asked for help and this was given, and great benefit was received in relief from suffering. But there is still a better part. Before she knew of Christian Science she could and would in various ways tell what some people term "business lies," but now the little Science she had gleaned has changed her course to an honest standard. Her joy for what she knows is very great.

A gentleman stated that some few years ago Christian Science was introduced in a family, the mother of the home receiving great benefit. She had a neighbor who had been in poor health for some time. She loaned "Science and Health with Key to the Scriptures" to her, and through its perusal she was healed and her family have been greatly benefited. This lady in turn had a neighbor who was in poor health and through Christian Science she found health and peace. She had been a searcher for a better understanding of the Truth for a number of years, and never was satisfied until the truth of Christian Science dawned upon her. Not only has she been helped by Christian

Science, but her husband and children also have felt its beneficial influence. A Christian Science tract fell into the hands of a gentleman who had been a great sufferer, and by reading it he was directed to the Truth that healed him. His friends endeavored to discourage him, but he clung tenaciously to the fact that it was Christian Science that healed him.

A young lady testified that for some time she had been greatly troubled with her eyes. She informed a friend who was interested in Christian Science that she had no faith in Christian Science, but would be willing to be helped by it if it were possible for her to be helped. Treatment was given, but she did not experience the benefit anticipated. She felt that she must gain the understanding for herself, and then with the help of her friend she was relieved and healed. Now her sight is much better than it had been for years. Not only has she been benefited, but other members of the family also.

A lady testified: "A friend living in another city, having been engaged in school work for some years, began to think that the arduous duties of her position were ruining her health. She was not only in poor health but was not satisfied with her religion, though her father was a minister. She asked for help in Christian Science. I received a letter from her the past week, in which she says that she is well, that she has been healed physically, morally, and spiritually."

A gentleman told of a case of healing of an old colored woman who had been a slave and never knew how to read. One day she asked him if her eyes could be healed by Christian Science, and she was assured that they could be. In three treatments the difficulty was overcome. She declared that she learned more in one talk with the Scientists than she ever knew before. She is now learning to read Science and Health.

A case of eczema was spoken of. A young man called to see one of our Scientists and took treatment. In due time he acknowledged some benefits. A few months passed and nothing more was heard from him until a few days ago, when the speaker saw his mother and she informed him that his healing had been very remarkable. He had inherited this disease and had always been troubled with it. Now he is almost free from it and greatly benefited in other ways. He is able to work every day.

A gentleman stated that the most important part of the work in Christian Science is the moral reformation. He then spoke of being called to treat a man. In a few weeks all pain was overcome, and he was able to be on his feet all day, working without suffering any inconvenience. He wrote: "I have lost the desire for alcoholic drinks, and rejoice that this cursed habit has been destroyed." When asking me for treatment he did not mention drinking. This proves that the moral reformation and physical healing are one in Christian Science.

A lady gave her experience: "I have much to be thankful for. I was a great sufferer for a number of years with asthma. I was under the care of some of the most eminent physicians in Detroit. I was making arrangements to go to California about the time Christian Science was brought to my attention, but decided to give the latter a trial first. I did so and was restored to health."

A gentleman told of the healing through Christian Science of two little boys of ivy poisoning, covering the hands and a portion of the body. On one of the little boys it broke out on his face, his eyes almost swelling shut so that he could not tell his playmates across the street. This has been met in a beautiful manner with the Truth.

A Scientist spoke of some cases of healing that came under his observation in a town in Indiana. A lady wrote him for treatment a few weeks ago. She was a physical wreck, and had contemplated going to Michigan for her health, but finally concluded to give Science a few weeks'

trial before doing so. She wrote me a few days ago, stating that she was in perfect health.

Another case was that of the healing of a man of cancer of the stomach which occurred seven years ago. He was given up to die. He was reduced in weight from two hundred and twenty pounds to ninety-eight pounds, and in one week's treatment was able to be up and out on the street, eating whatever he desired. He was soon able to be at his work, that of wagon maker, and has remained in good health since. This gentleman continued, "In twelve years of practice, I have seen almost all forms of disease healed in Christian Science. To me there is nothing else but this Truth, all else is hypothetical."

The humane teaching of Christian Science in behalf of animals was spoken of. A lady had a pet dog. Several dogs in the neighborhood had been poisoned. One day her mistress came to her very much excited, stating that the pet dog was dying. To all appearances the story seemed true. She immediately commenced to apply her knowledge of Christian Science, and in a short time the dog was running about as frisky as ever.—*Dayton (O.) Herald.*

Arnold Arboretum.

THE work of the Arnold Arboretum is of sufficient national importance to justify its friends in appealing to all Americans who care for trees, forests, and gardens, in whatever part of the United States they may reside, in behalf of a larger endowment for that institution.

It is a department of Harvard University and one of the largest scientific gardens in the world, comprising about two hundred and twenty acres. It is a museum of living trees in which, according to the terms of the James Arnold endowment, every tree and shrub able to support the climate of Massachusetts must be cultivated; and it is a scientific station where by study, experiment, and publication, the knowledge of trees is increased.

By a contract with the city of Boston, running for a thousand years and securing to the Arboretum a condition of permanence and stability which is believed to be unique, the city has built and agrees to maintain roads and walks, provide police protection, and assumes the liability of taxes. The scientific control is reserved to the University.

The Arboretum has become recognized everywhere as one of the most important scientific stations of its kind in the world. It has already introduced into the gardens of this country and of Europe many new trees and shrubs. Every park in the country now feels its influence; and it is visited by landscape gardeners, students of forestry and horticulture, and other lovers of trees from all parts of the United States. The amount of useful scientific work which can be directly traced to the Arboretum is considerable; but much remains to be done in other parts of the world which the Arboretum better than any other establishment can now accomplish, and which may well be expected to result in great benefit to America.

Believing that its growth and care are a matter of concern to every one interested in the welfare and educational progress of the United States, and to all who love trees and gardens, the committee now makes known the needs of the Arboretum and appeals to the public in all parts of the United States for aid for its care and development, feeling sure that every dollar contributed will in due time be returned a hundred-fold in the increase of the general prosperity of the country.

Money now given to the Arboretum will be added to the Endowment Fund in the hands of the President and Fellows of Harvard College. The addition of at least \$300,000 to the present endowment is absolutely needed to carry on in the most economical manner the Arboretum and its work.

A Cottage Portrait.

BY CLARENCE A. BUSKIRK.

WITHIN my humble hall there hangs against the wall
A fairer flower than summer garlands show,—
A beautiful old face whose gentleness and grace
Beam forth like winter flowers beside the snow.

How calm the light which lies within those dear old eyes,
How noble the sweet patience of that brow;
Those furrows which the years wore deep with many tears,
Ah, how serene beneath life's sunset now!

As on that face I gaze, my fancy seeks the days,
Long vanished, which her laughing girlhood knew;
I see the well-sweep move she oft has told me of,
And forest paths her bare feet rambled through.

And then my fancy strays to those romantic days
When maidenhood built castles in the air,
And saw in bright day-dreams idyllic vales and streams
Where dwelt no sordid souls and all was fair.

Is all that now remains of years of joys and pains
But pictured in that face upon the wall?
Do all our lives then bloom so nigh the fatal tomb,
In its dumb darkness to extinguish all?

Is earth a prison-cell where only convicts dwell,
To a sure doom thence to be led away?
Nay, Life is not a breath chilled by the touch of death,
And Love and Truth are not the serfs of clay.

Our Father-Mother God is not some Jove whose nod
Is wrathful,—a fierce giant-man above;
God's children are we all, and, whatso'er befall,
Elysian is our fate, for God is Love.

Constant and faithful friend, within these lines I send
My greeting to thee, whereso'er thou art;
For, like a thornless rose, thy lovely memory grows
And blossoms at the gateway to my heart.

Dreams and Realities.

BY CAROLINE E. MILLER.

WHEN I was a small child, I suffered terribly from horrible dreams; so much so that I actually dreaded going to bed at night.

This miserable state of mind continued for several years, but gradually my sufferings were alleviated to a considerable extent, because, although my dreams were still replete with terror, I had a vague underlying consciousness that they were but dreams and not realities. In proportion as the dream horror grew in intensity did my struggles to rouse myself increase, until, just as a climax was about to be reached, I would wake to the blessed realization that I was safe and sound in my own bed, and surrounded by those I loved.

Naturally as the knowledge grew upon me that I had the power to banish these false claims by simply rousing myself to wakefulness, the dread of bad dreams vanished from my mind, and thereafter my sleep was peaceful and undisturbed.

Not long ago, I suddenly awoke to the realization that I was living over again this same childish experience in my waking dream of mortal existence. Before I realized the Truth as revealed to me by reading Mrs. Eddy's wonderful book, the dream of mortal existence was to me

an intensely vivid reality, a reality sometimes fraught with as much suffering as the dreams of my early childhood. And then when I first became conscious that this life which I had been enduring was only a dream, and that all I had to do to banish it from my mind forever with all its miserable uncertainty and unhappiness, was to wake to the blessed reality of a life in Christ—perfect and eternal—what a glorious sense of freedom it gave me! And every day life grows more beautiful and more perfect. So long as we trust to the guidance of divine Love, we can never go astray or make a mistake.

Only a short time ago, a friend who is becoming interested in Christian Science said to me, "Well, I must confess I never saw such a happy, calm, self-possessed lot of people in my life, as the Christian Scientists. They act like veritable kings, and seem to possess something which makes them superior to every ill." Is not that a beautiful tribute to the children of God? Yet how divinely natural it is that they should be always happy and serene and proud of their inheritance. "Behold what manner of love the Father hath bestowed upon us, that we should be called the sons of God." And to every son of God the Bible is full of beautiful promises: "Thou wilt keep him in perfect peace, whose mind is stayed on thee: because he trusteth in thee." "Because thou hast made the Lord . . . thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling," and so on, an infinite number.

When I think of the many ways in which mortal mind has held me in bondage all these years, and realize that every day my sense of freedom grows more comprehensive, a lifetime seems all too short in which to show one's gratitude. In no more fitting way can gratitude be shown than to labor earnestly, faithfully, and unselfishly to prove to all the world that "God is All in all," and that "Good is ever-present and omnipotent."

Our Ark.

BY A. C. V.

DURING the recent prolonged wet weather, a dear one writing to me said, "I think we had better begin building our arks." Quick as a flash came the realization, "My ark is built; it rests in the secret place of the Most High, where no evil shall befall nor any plague come nigh, neither can floods overwhelm it. I dwell in absolute safety." Thinking further, I realized that I cannot take any one into this ark with me, for I can work out only my own salvation (safety), but *all* may enter through the door of individual effort, and find therein safe abiding from everything unlike divine Love,—sin, disease, death, fear, all the flood of error with which mortal mind would overwhelm us.

Such a comforting train of thought that one little sentence, jokingly written, awakened, bringing with it such a realization of Truth, and an unspeakable sense of gratitude to divine Love, and to her who, through "Science and Health with Key to the Scriptures" and long years of patient, unwearied effort has made understanding and realization a reality to us; has made us to know that we are the sons and daughters of God *now*, and has shown us the way into our ark of safety, even into the "secret place of the Most High."

We shall find that the love of nature, wherever it has existed, has been a faithful and sacred element of human feeling; that is to say, supposing all the circumstances otherwise the same with respect to two individuals, the one who loves nature most will be always found to have more capacity for faith in God than the other.—RUSKIN.

Testimonies.

Christian Science a Great Blessing.

When I was a young boy my folks moved on a wheat ranch in South Dakota, and one of my duties was to go to town for the mail every few days. For this purpose I had a pony which was once owned by the Indians, and was tricky. On one of these trips the pony suddenly reared, and then began to buck, and turn around very fast. I lost my balance, and in falling my foot turned and wedged in the stirrup. The pony then dragged me some distance, and finally stepped on my chest, leaving me in the road.

When I regained consciousness the pony was nearly a mile away, and after a little work I got up and found I couldn't breathe. I walked in a circle until things had turned black and I was beginning to fall, when a little gasp came. I walked for nearly two miles, breathing in short gasps, each one causing a sound which I could not prevent. I would walk a rod or two, then sit down. In this way I walked a mile and a quarter, and then I had to lie down. By doing this I was able to endure the pain. All the time I was repeating the Scientific Statement of Being as given in Science and Health. I had got about half a mile from home when I was seen, and my adopted sister came to me; but being unable to assist me returned for help. I finally reached home and was placed in a rocking-chair, when I broke down.

For two days I lay on my back hardly able to move my fingers. The afternoon of the third day I sat up a little while, the next day I walked to a chair in the yard, and on the tenth day began riding to school, a distance of five miles, and cannot remember missing a day for three months, when we moved to town, and it was no longer necessary to ride.

We were the only Scientists in that country. My mother was in Iowa at the time, working in Christian Science, and owing to the washouts and floods knew nothing of the accident until just as she was getting ready to return. My father and adopted sister were the only ones to help me at the time, though mother took charge of my case before I started to school. I am now a strong and healthy man, with no bad effects from the accident.

The first day I was up one of our neighbors said I was being neglected and started for a doctor, but finding me up when she passed she returned without him, though she kept him informed about me.

Christian Science has truly been a great blessing to our family, having saved the lives of my mother and one sister after the doctors had pronounced them hopeless.

The physical benefits are not all. In my business it is a necessity, for the good there is in it. It is indispensable for happiness; and as the religion of Jesus Christ, it is the religion for every God-loving man and woman.

R. A. B., Ellsworth, Minn.

What Christian Science has done for Us.

I often think as we receive our *Journal* and *Sentinel* which come to us as welcome messengers, that as freely as we have received, as freely should we give, for if the testimonies of others supply our table with such heavenly **manna**, why should we not bring our basket which Christian Science has filled to overflowing?

Last Easter Sunday, as I sat with my husband at the early morning service of the dedication of the Second Church of Christ, Scientist, of Chicago, there came to me a realization of the kingdom of heaven at hand and an **assurance that God does, indeed, dwell among His people.**

My thought then turned back to my starting-point in Christian Science, eighteen years ago, when I was an in-

valid who had been seeking health, employing all kinds of remedies and different schools of medicine without avail.

A friend called to see me one day and asked me why I did not try metaphysics. I asked her what that was, but she could not tell me much about the treatment, but told me her cousin, who had been on her back for four years from spinal trouble and had been given up by the doctors as incurable, had been healed, and that in three weeks from the time she took her first treatment, for which she came to Chicago, from Austin, she was well.

I caught at it like a drowning man, and asked her to give me the address of the healer. There were only five or six persons practising in Chicago at that time. She gave me the address of one of these. I went to him, and found a room full of waiting patients. When I asked what the treatment was, I was told it was not magnetic, spiritualistic, or mesmeric, but the influence of divine Mind.

So I took my first treatment and looked for a physical manifestation at once. I went home, went to bed, and lay a short time, when I felt an uplifting feeling come over me. I arose and dressed myself, saying, "I feel much better."

I was not healed very quickly, but not feeling discouraged kept on with the treatment. I longed to know what it was that was so wondrously healing me. I was told that it was called Christian Science, and that if I understood it I should find a present help for myself and family at any time. As we had had to have a doctor nearly every week in our family and many times at night, I thought how grand it would be to have a remedy always with us; but I had no money, and my husband did not believe in it. Although he saw me growing well he said I might have got well any way; "but," said he, "there is that tumor on your eyelid which has been there three or four years, if they can remove that I will get the money for you to receive instruction, for I shall know there is something in it." I told the healer and in a few days the tumor was gone, my husband believed, and I had class teaching.

My two younger children were two and four years old, and I commenced to meet the ills that came to them. First our little girl had measles. I treated her and she was not sick in bed. Our boy did not take them, as I handled the thought of contagion. After this the boy had the mumps and that was met without contagion to the others. Then the worst form of croup made its appearance, and that was completely destroyed and never returned. My children grew up and never took medicine or had a doctor, and I have not had a doctor for myself, or medicine, for these eighteen years.—M. E., Chicago, Ill.

Grateful for Science and Health.

I have been made very happy by the complete healing that has just been brought out in a patient, a sweet German woman. She had endured intense suffering for over thirteen years, had been confined to the house almost constantly for three years, and to her bed for six months. She could eat but little, often going two and three days without touching food. She could only lie in a certain position, and slept but little, taking morphine continually to deaden the sense of pain.

Her physician did all he could for her, but seemingly she grew worse, till the day before I was asked to take the case her suffering seemed beyond human endurance and she felt she had reached the end of everything. With the third treatment the pain was almost, if not entirely destroyed, and she was eating heartily three meals a day. On the sixth day she was up and dressed, remaining up till eight o'clock in the evening. The eighth day she began going down stairs to her meals. In less than two weeks she had prepared a supper and also cooked a dinner. Within four weeks from the first treatment, the entire spring house cleaning had been done, she superintending

and helping, and for two days of that time was on her feet constantly. The fifth week she went driving, and paid a visit to a married son, doing some shopping meanwhile.

She is radiantly happy, not only because of the healing, but for the spiritual awakening and the new life she has found, which she feels to be of much greater importance. Her heart is so full and overflowing with gratitude that she begs me to write this letter to tell our Leader how she loves her for giving us "Science and Health with Key to the Scriptures," that unlocks, with the key of Love, all the promises of Life and ever-present Good, which God has given to us in the Bible, and shows us so clearly how to-day we can claim those promises and make them our own.

The world is a new world to her now, for everything is far brighter and more beautiful through the thought of God as ever-present Love. When I read her our Leader's hymns, she exclaimed, with tears in her eyes, "Oh, how beautiful! they are far better than our old hymns, for they give us such a sense of Life, Truth, and Love." She is now making her own little demonstrations, and her desire is to be a true and loyal Christian Scientist.

MAY S. BROWER, Albany, N. Y.

It is now three years since I began to study Christian Science, and for some time I have wanted the Field to know what it has done for me and is doing for Hamburg, N. Y.

It is bringing me out of darkness into the light, into a most beautiful understanding of what life is, and I am trying each day to the best of my understanding to live the life that is being unfolded to me.

We started in Hamburg two years ago with five who were interested in Christian Science, and now have twenty-two members in our society, and others who are beginning the study of it. We have a Sunday School of eighteen members. We rejoice more and more each day for what Christian Science is doing and has done for each and every one of us, that it is bringing us more and more to see the perfect man.

We have had many good demonstrations here, proving to us that the promises in the Bible are all true, and they are for us now. I want to thank the workers all through the Field for the many helpful thoughts they give to us through the *Sentinel* and *Journal*; also to our Leader, Mary Baker G. Eddy, for the way she has been able through God to lead us out of darkness into the light.

MRS. ADDA H. VAN DUZEE, Hamburg, N. Y.

This was the happiest Fourth of July I ever had. I began the day by sending off a big basket bomb for Mrs. Eddy and another for my healer. I am twelve years of age, and for several years have been ill with kidney disease and abscesses on my spine. I was in a plaster cast fifteen months and went to the hospital and had two operations. I had to lie down in a wheel-chair all the time.

I was healed by God through Christian Science in a few months, and can now run and play and ride a bicycle.

My little brother and I go to Sunday School at Second Church of Christ, Scientist, and like it very much.

WILLIE ALLEN, Portland, Oregon.

There are great truths, which every honest heart may be assured of. There is such a thing as a serene, immovable conviction. Faith is a deep want of the soul. We have faculties for the spiritual, as truly as for the outward world. God, the foundation of all existence, may become to the mind the most real of all beings.

WILLIAM ELLERY CHANNING.

Religious Items.

1. The truly earnest heart is never without some revelation of God.

2. In Rome a man does not need to do as the Romans do; he may and ought to do in Rome, as anywhere else, what he thinks God would have him do.

3. Abram no doubt felt rather strange and alien among his neighbors, who worshiped as he felt he could not worship. But God was a nearer neighbor, and Abram in such company would not be lonely.

4. Nobody nowadays doubts that conscience can be cultivated. It should be the first duty of every man to have that voice of God sound ever more clearly as the years go on.

5. It is cultivated only as it is obeyed. One disobeys at the peril of losing it altogether.

6. It cannot be denied that some have misunderstood and misinterpreted conscience; but no man seeking honestly to do the will of God is ever permitted to go long or far astray.

7. We are not all selected for Abram's work, nor can we all have Abram's glory with men. But we can all have Abram's spirit, and we can all have equal favor with God.

8. "We are called whenever we feel within an inspiration to a higher life or to some special divine action; we make our calling and election sure when we are obedient to the divine voice."

9. As Abram was to be much of the time an itinerant, it was well he had a portable religion; "that is a poor religion which will not travel."—*The Christian Advocate*.

The Congregationalist and Christian World contains the following with reference to a new Episcopal revision of the Bible: "The English language is constantly changing. Many words have not the same meaning in present use they had a century or even twenty years ago, when the Revised New Testament was issued. Therefore new versions of the Bible will be called for and provided in every generation. The Episcopal Church, at its next General Convention in October, is expected to authorize the use in its public services of a Bible with new marginal references. These have been prepared with great care by a commission of bishops and clergymen. The text is that of the King James version. But ministers may substitute, if they prefer, the marginal readings, thus relieving their consciences of compulsion, as the committee says, 'to read to their people what is generally felt to be an inaccurate rendering of the words of the inspired writers.' Gradually such of these marginal readings as are seen to be preferable will be used so generally that they will take their places in the memory as integral parts of the text. Here we see an illustration of the way in which so many various readings appear in ancient manuscripts of the Bible in its original languages. It would be impossible for any manuscript in use and frequently copied to resist altogether the changes of meaning in language."

Writing on the subject of revivals in *The Examiner*, the Rev. E. T. Hiscox, D.D., says: "Revivals, like individual conversions, depend on the Spirit—on the Spirit's quickening the soul, convincing of sin, and leading to faith and salvation. Can the churches have the Spirit? Yes, providing they are living spiritual and not carnal lives. Did Jesus speak the truth in soberness when he said the Father was more willing to give the Spirit to those who asked him than parents to give good things to their children? The only sign that appears to me that revivals have had their day and are passing, is the fact that the churches, and to some extent the pastors, are indifferent to their claims, and fail to meet their conditions. They all want additions to the Church membership. But that is a widely different thing from the salvation of sinners. When Christians humble themselves before God and the world, in the presence of which they have so poorly represented Christ their Lord, when they make confession for sins, and set right

the things that are wrong, when with fasting and prayer they make their common supplication unto God for the Spirit, then shall showers of blessings come to the churches. There are as devout and godly people in the churches to-day as ever walked the earth. But godliness and marked spirituality are not the prevailing type of current church life, as any one can see."

Among its editorials for young people the *Universalist Leader* has the following: "Have you ever suffered defeat where you might have gained a victory, because of some one's scorn of your ability to conquer? Have you ever been grieved by the heartless jest of the thoughtless concerning your pain or confusion or misfortune? Have you ever writhed under the sting of false accusation from any you have called friends? Have your kindly offers ever met with indifference or ungrateful acceptance? If so, the bitterness of your experience should teach you to offer no such hurt to any other soul. What have been as stumbling-blocks in your path, must be cleared away that others may be spared similar hindrances. Think soberly about this. Your earnest, loving endeavor to help, should be emphasized by what you have missed. If you may make the rough places smooth, and the dark, chill days radiant with sunshine for all whom your life may touch, your very anguish shall become gladness, and your spirit of heaviness shall give place to the joy of being a helper rather than a hinderer."

Dangerous as the devil is, dangerous as worldly amusements are, the most dangerous enemy that we often have to encounter walks in our own shoes. That cunning, artful, smooth-tongued heart-devil, self, is the foe that needs the most constant watching and subjects us to the worst defeats. "The flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other." Paul had a tremendous battle along these lines, beating down his carnal nature by hard blows, and the old hero was able at the last to shout, "I have fought a good fight; . . . henceforth there is laid up for me a crown of righteousness." Whoever among my readers has, by God's help, laid his desires, his plans, his purposes, his property, and, above all, his own will at the feet of Jesus Christ is already one of the overcomers. He already begins to wear clean raiment, and the omniscient eye of God discerns on his brow the first flashings of the victor's crown!

THEODORE L. CUYLER, D.D.

Upon the subject of Biblical miracles Prof. Marcus Dods thus writes in *The Standard*: "The very strongest evidence in their favor is their congruity with the person who wrought them and with the revelation in connection with which they were wrought; and this evidence is regularly left out of account. In this respect Matthew Arnold, who compared them with the marvels recorded in Grecian history, is as superficial as Huxley. Of course we should find it difficult to believe in the resurrection of Julius Caesar or of Trajan; but given a unique person, a person already miraculous in his sinlessness, and on whose resurrection the hope of the world depended, and I find the incredibility immeasurably diminished. Is it nothing in favor of the miracles that they were wrought for the accomplishment of the greatest end that is to be served in this world? Does it make them no more credible, that they were relevant, significant, congruous, necessary?"

In the Philippines an Evangelical Union has been organized by all the Protestant missions now established there except the Episcopalians. It includes the Baptist, Presbyterian, Methodist, United Brethren, and Christian Alliance Missions; and the branches of the Young Men's Christian Association, the American and the British and Foreign Bible Societies. The principal object of the Union is to compel the Catholics to recognize the Protestant missions as one united and harmonious force. A division of territory on the island of Luzon was agreed

on between the Methodist and Presbyterian Missions, others are to continue where already established, and unoccupied territory is open to any first ready to enter. Rev. Charles W. Briggs of our Baptist Mission is first vice-president of the Union.

The Watchman.

Says the Rev. William Ashmore, D.D., in *The Examiner*: "The Word of God stands unique and supreme in judgship over men and angels. It makes a use of the content of human consciousness and of human experience as a higher court may affirm and ratify the decisions of a lower court, but it never holds its own decisions open to the approval of that lower court in order to make them binding. The word that I have spoken, the same shall judge him at the last day."

From the *Examiner* (New York) we excerpt the following: "There are many aspects of the mission of Jesus, but we should not overlook that which he himself emphasized: 'To this end I was born, and for this cause came I into the world, that I should bear witness to the truth.'"

REV. J. D. BURRELL.

The prospects of a rapid spread of the Christian faith increase daily. Even Mohammedanism is affected in Egypt and Syria. There is a great demand for the Arabic Bibles pouring forth in thousands from Beirut, while many Mohammedans are becoming hearers of the gospel.

The Watchman.

LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science. Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Theory vs. Realization. Is Christian Science an Opinion?

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Ideal and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Address all orders for above literature to—The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

- Cloth binding, each \$3.18
- Two to Twelve books to one address, each, prepaid . . . 3.00
- Twelve or more books to one address, each, prepaid . . . 2.75
- Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid 4.00
- Twelve or more to one address, each, prepaid 3.75
- Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid . . . 5.00
- Twelve or more to one address, each, prepaid 4.75
- Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 6.00
- Twelve or more to one address, each, prepaid 5.75
- Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS.

- A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
- Price (cloth) each, prepaid \$2.25
- Twelve or more books to one address, each, prepaid . . . 2.00
- Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid . . . 4.00
- Twelve or more to one address, each, prepaid 3.75
- Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid 5.00
- Twelve or more to one address, each, prepaid 4.75
- Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
- No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS.

An illustrated poem,

- Single book, prepaid \$3.00
- Twelve or more books to one address, each, prepaid . . . 2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

OUR LEADER'S MESSAGE.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Leatherette covers, deckle edges; 50 pp. Price, 50 cents; per dozen, \$4.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; \$2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; \$2.00 per doz., prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Six months' subscriptions received at half the above rates.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

Arrangements are being made by the Post-office Department and Weather Bureau whereby the farmers living on the free rural delivery routes can have the benefits of the Weather Bureau's forecasts. The mail carts will be equipped with signals which can be read at a considerable distance from the highways.

At a recent banquet Governor Taft said that in order properly to develop the Philippines satisfactory tariff legislation must be passed at the next session of Congress. Laws providing for the granting of franchises and mining rights, and also for the incorporation of American banks, are greatly needed.

In a general order recently issued by General Miles, the purpose of which is to improve the condition of the army, patriotism, discipline, physical development, self-respect, self-reliance, and resourcefulness are especially mentioned as being among the essential things of a good soldier.

The second annual reunion of the National Society of the Army of the Philippines was held at Salt Lake City, Utah, August 13-15. The next meeting will be held at Council Bluffs, Ia., and it is thought the society will unite with the Philippine Islands Veterans' Association.

Every one of the five hundred World's Fair emblems which have been submitted to the St. Louis committee has been declared unavailable. "Barren in conception and not artistic enough in execution," is the way the judges describe the designs offered.

Peter Cuneo of Upper Sandusky, O., an old neighbor and friend of President McKinley, has been appointed United States consul at Turin, Italy. Mr. Cuneo was born in Genoa, Italy, in 1837 and came to this country when a lad of twelve.

The United States has been invited to send delegates to the International Congress of Historical Science which will be held in Rome in the spring of 1902. The congress will include all subjects of a historical character.

A complete and modern printing plant, costing about one hundred thousand dollars, will shortly be sent from this country to Manila, in which nearly all the Government printing needed in the Philippines will be done.

Civil Governor Taft will immediately reduce the police force of Manila by one-half. At present there are thirteen hundred policemen in the city whose population numbers only two hundred and fifty thousand.

Wednesday, September 4, will be President's Day at the Pan-American Exposition. It is expected that President McKinley, the Cabinet, the United States Supreme Court, and the diplomatic corps will be present.

The Olympia, Admiral Dewey's flagship at Manila, may be one of the squadron which will probably be sent to represent the United States at the exercises in honor of the coronation of King Edward.

Rear Admiral Mortimer L. Johnson, U.S.N., commandant of the Port Royal naval station, will relieve Admiral Sampson at the Boston Navy Yard November 1.

Engineers' estimates show a probable expenditure of \$44,348,404 for river and harbor improvements during the year ending June 30, 1903.

Foreign.

The draft of the final protocol of the agreement between China and the Powers has been agreed upon. It provides for a tariff of five per cent ad valorem to take effect two months after the signing of the final protocol. The Chinese free list will include rice, foreign cereals and flour, gold and silver bullion and coin. The inclusion of flour on the free list is of much importance to Pacific coast shippers.

An Irish company proposes to build docks at Berehaven, on the west coast of Ireland, for a service of steamers, probably with turbine engines, which will cross the ocean in four days and a half. A railway will be built across the south of Ireland to connect with boats crossing the Irish Channel to London by the Southwestern railway.

China will erect a legation building at Washington. It is proposed to make the new legation one of the most palatial and ornate residences of any diplomatic corps represented in Washington. The chief artistic attraction will be the interior decoration, which will be characteristic of the best taste of the Celestial decorators.

Sir Thomas Lipton and his party sailed from Queenstown for New York, August 15, on the White Star line steamer Teutonic. Sir Thomas feels confident that he will be able to lift the cup. Shamrock II. is seventeen minutes faster than the old challenger was two years ago.

France is said to be seriously considering the question of digging a canal from the Bay of Biscay to the Mediterranean. This gigantic undertaking is roughly estimated to cost from two to five hundred million dollars.

It is reported that General Kitchener will return to England about September 15. He will be succeeded in military command by General Lyttleton, who is now on his way to the Cape.

The government of Jamaica will further the establishment of several large sugar factories on the island by guaranteeing the interest on the investment for a number of years.

By a vote of 188 to 60 the House of Commons rejected an amendment to the king's title whereby the words "defender of the faith" should be omitted.

Industrial and Commercial.

According to recent plans of J. Pierpont Morgan, several million dollars worth of stock of the United States Steel Corporation have been set aside for purchase, at inside figures, by the 165,000 men employed by the companies that make up the great steel combination. This arrangement will form a copartnership between the shareholders and employees. The plan is nothing more than the higher development of the scheme that has prevailed in the Carnegie plants since 1892, where it has proved successful.

The National Transportation Company with

a capital of two and a half million dollars, has been organized for the purpose of carrying freight over the Great Lakes. Contracts for a fleet of vessels having a capacity of twenty-seven thousand tons has been let to the American Shipping Company. Chicago, Duluth, Buffalo, and intermediate points will be the ports visited.

The total production of petroleum in the United States in 1900 was 63,362,704 barrels, valued at \$75,752,691. Ohio produced 22,362,730 barrels; West Virginia, 16,195,675 barrels; Pennsylvania, 13,258,202 barrels; Indiana, 4,874,382 barrels; California, 4,099,484 barrels; New York, 1,300,925 barrels, and Texas, 836,039 barrels.

South Chicago's two lodges of steel workers have been expelled from the Amalgamated Association of Iron, Steel, and Tin Workers because of their refusal to strike in compliance with President Shaffer's order. The two lodges will continue a local organization of their own.

General.

About a year ago there was invented an electric light buoy, the power for which was generated by the motion of the waves. No practical use of the invention has been made until recently, when one of the buoys was moored in the North Sea off Bunsum, in Holstein. There are very dangerous sands at that place, and the tests that have been given the automatic light have proven so satisfactory that it has been determined to place them along the entire coast. Even a slight motion of the waves generates sufficient electricity for illumination, and to regulate the clockwork in the interior of the apparatus, which shows and extinguishes the light at intervals of thirty seconds.

A successful test of the Marconi wireless telegraph system was made on August 16. Messages were sent from the Cunard line steamship, *Lucania*, seventy-two miles east of Nantucket. The messages were received by lightship and transmitted to Siasconset where they were telephoned to Nantucket.

At the recent sale of town lots at Lawton, Oklahoma, town lots sold as high as \$140 a front foot. It is estimated that the sale of lots will exceed five hundred thousand dollars. Four banks have been established in the town.

The Prince Edward of York diamond has been purchased by a New York firm for one hundred thousand dollars. The stone was found in South Africa in 1894 and weighs sixty and one-fourth carats.

The United States has been invited by Germany to co-operate in weather and magnetic observations south of parallel 30 south latitude, during the south pole expedition she is about to undertake.

The nineteenth national convention of the Woman's Relief Corps will be held in Cleveland, O., next month at the same time as the thirty-fifth national encampment of the Grand Army.

An engine on the Great Northern Railway, England, built in 1870, has just completed four million miles. It is believed that this breaks the English record.

Two Denver men recently climbed Pike's Peak in an automobile. This was the first time any one ever reached the summit in a horseless carriage.

Vice-President Roosevelt laid the cornerstone of the new eighty-five thousand dollar Y.M.C.A. building at Colorado Springs, August 10.

According to recent census returns, the population of France is 38,641,333, an increase of 412,364 during the last five years.

Sir Thomas Lipton's yacht, *Shamrock II.*, arrived at Sandy Hook, N. Y., August 11.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

"The Homestead State."

A Name Likely to be Given to Oklahoma.

THE government lottery for the homestead lands in the Kiowa reservation closed Saturday, July 27. When all the land available has been taken at least ten thousand one-hundred-and-sixty-acre farms will have been added to the seventy-five thousand or more homesteads which comprise the territory now known as Oklahoma.

When Congress reserved the lands of Oklahoma for homesteaders, the tacit admission was made that of all the methods for acquiring the public domain, the homestead law was the only one which carried out the purpose of the government honestly and fully. Under the provisions of that law the land grabber finds no opportunity and speculation is reduced to the minimum. The results have been significant and marvelous, for in ten years an uninhabited country has gathered to itself nearly four hundred thousand people, taxable property to the value of \$150,000,000 and its annual production of the treasures of the earth now approximates \$75,000,000 in value.

When Oklahoma is admitted to the Union, which it probably will be during the coming session of Congress, it should be known as "the Homestead State." No other commonwealth can claim this title, and to the homestead character of her settlement will Oklahoma owe her admission, for by no other method could she have obtained so quickly the population, wealth, and stability now necessary to secure recognition from Congress.

To the south of Oklahoma lies the great State of Texas, with its big ranches, vast tracts of land under fence, with no annual output but a few cattle, with its landlordism due to the ownership of thousands of acres of fertile cotton and corn lands by men who will not sell to the homeseeker, but who exact of the tenants a rental or tribute equal to "all the traffic will bear." It was with some idea of the evils of land absorption that Congress tried the experiment of forcing the division of a new and fertile territory into small farms. The results have been so eminently satisfactory that the defeat of any proposition which may be made to Congress to allow the control of great areas of the public domain to pass under other and single control may be reckoned in advance.

When Oklahoma was organized as a territory there were about twenty-five million acres of land within the boundaries as established. Over seven million acres were reserved from settlement for Indians and other purposes. In ten years homesteaders have filed upon twelve million acres. That is to say, seventy-five thousand single men or heads of families have used their right to appropriate one hundred and sixty acres each of the public domain. Nearly all this land is now patented to the owners. They have complied with the requirements, the principal one being residence.

Those who filed on the land originally are not in many instances the same who have secured the final deeds. On the whole, the population of the territory may be said to have changed several times during the past decade. But

actual residence and improvement of the property was a requisite to securing title, and if one settler relinquished his rights another purchased or appropriated them, and so carried out the contract with the government, which contemplates results rather than individuals, being impersonal.

Every man who takes up a homestead and complies with the law builds a house of greater or less pretensions. This takes labor and material. A sufficient amount of cultivation must then be given the land to prove good intentions. To cultivate land, horses and implements, barns, fences, and all the other appurtenances of a farm are necessary. The result is a home. It may be a poor one, and generally is at first, but it is an important unit in the community nevertheless.

Oklahoma, by virtue of the very manner in which it has been settled, was a refuge for people of limited means. The rich had no need to brave the hardships of sod farming. Those who were well enough off where they were saw no inducement to leave a sure thing for a questionable venture in an unknown land, which ten years ago possessed a not entirely enviable reputation, to say the least. For this reason the \$150,000,000 in tangible property now possessed by the people of this territory is newly created wealth, and this amount does not include the value of many thousands of acres of land, the title to which has not yet passed from the government.

These homesteads have built towns and railroads, opened banks and coal mines, created great mercantile business of every description. In short, they have built up a prosperous commonwealth now demanding of Congress the rights pertaining thereto. Of the four hundred thousand people in the territory one hundred thousand are children enrolled in the public schools. These children are living testimony to the permanence of population and the sure foundation of the family unit.

The opening of the Kiowa reserve will add one hundred thousand in population to Oklahoma before statehood can be accomplished, even at the best. It will add ten thousand farms to the tax-paying property. The three thousand farms which have been allotted to the Indians are exempt from taxation for twenty-five years to come, but the people of Oklahoma have cheerfully undertaken the burden this will impose, because of the greater area and wealth this adds to the territory, thus adding to the force of their claim for statehood.

The opening of the reservation and the rush thereto has diverted public attention from the great demand which still prevails for land in Oklahoma proper. In 1900 over eight thousand applications for homesteads were filed upon land in the western part of the territory. This is probably as many as will finally materialize in the reservation just opened, and yet this western Oklahoma country has been obtainable all the time. In earlier days it was classed as uninhabitable, but the line of settlement has pushed rapidly westward year by year, and the waving wheat has rolled across the plain nearly to the Texas line. He is a bold

prophet who dares say now that this or that section of the United States is to be forever uninhabitable.

Previous to the opening of the Kiowa reservation there were thirty-three counties in Oklahoma, and in sixteen of these countries every foot of land is occupied by settlers. There are still five million acres of government domain left in the territory. At the rate this is now being taken by settlers there will not be a homestead left in five years. The rush to the Kiowa reservation will stimulate settlement throughout this entire section of country. There is still unappropriated land in Oklahoma which is as good as some of that which will be taken on the Indian reserve. The latter has had the advantage of advertising and of having been unattainable in the past.

On the reservation the Indians have naturally secured the best land; that is, the bottom land along the flowing streams. Many thousand acres have been reserved by the government for Indian stock grazing, forest reserves, and such purposes. The result of this system is that the settler now seeking a farm finds himself about in the same position as a man entering a long-occupied country. With the exception of a few speculative possibilities in the shape of town sites and choice localities between Indian selections, he must take what is left. The man who is wise will prefer good land where it can be irrigated rather than poor land where the rainfall is alleged to be adequate. This is especially true of the western half, where the annual rainfall is only about twenty-eight inches, an amount which means a heavy percentage of short crops.

When the homesteader first took up land in Oklahoma he agreed with the government that a dollar and a quarter an acre should be the price of the land. The industrious and thrifty worked hard, saved their money, and paid the price. Others put off the evil day, and the politicians came to the rescue with the so-called "free homes bill," which enabled the repudiation of this indebtedness. This was worth about twenty million dollars to the farmers of Oklahoma who had delayed payment. Those who had paid received no relief.

The Kiowa reservation is opened with the same provision that each homesteader shall pay a dollar and a quarter per acre for his land, but it is now being freely promised by the politician in that section that as soon as Congress meets the "free homes bill" will be so extended in its operations as to throw the burden of the purchase of the lands from the Indians upon the national treasury.

These are but details, however, of the great lesson in land legislation which has been taught by the operations of the homestead law in Oklahoma. A great state has been built from its foundation to completion in ten years by the simple process of giving the land only to the man who was willing to earn the same by actual residence. Had the desert land law for instance prevailed in Oklahoma from the time of the opening to settlement, thousands of acres of land now contributing their quota to the annual wheat yield of twenty-five million bushels would be inclosed in some cattleman's fence, where twenty acres of land are allowed as only sufficient for the support of a single cow. Oklahoma, when admitted to the Union, will possess the proud distinction of being the only "homestead state," and there can be no other, for the lesson has only been learned as the last commonwealth was in the final stage of ripening.

In the *Boston Transcript*.

A Revolution in Type Casting.

A NEW method of casting type at high speed has been invented in England. This method is so swift and withal so inexpensive that hereafter it may be cheaper to make new type than to distribute the old, and type once used will go at once into the melting-pot. The process is described in *The Publisher's Weekly* as follows:—

"Briefly, it is performed by a rotary machine capable of producing sixty thousand types in an hour, as against the average three thousand types cast in an hour by the ordinary type-casting machine now in use. While the ordinary machine casts only one letter at a time, the new machine casts a whole alphabet in proper proportion. A single one of the new machines in full operation produces half a million types a day. Distribution, therefore, becomes a waste of time. The advantage held out by the project, however, consists not merely in economy of time and money in the composition of a book or newspaper, but also in the printer's having at his disposal a perfectly clear, sharp, undamaged surface from which to obtain an impression every time he puts his work on the press. The types, we learn from another source—*The British and Colonial Printer*—are most accurately cast and finished, and although cast at a phenomenally high rate of speed, are quite equal in appearance and wear to any type cast in the ordinary way. . . . The prices charged are only about half what other foundries charge."

"For four centuries type has been cast singly from single molds; and, although the product has been improved in many ways, the speed of production has left much to be desired. In every instance the apparatus used has been confined to the simplest form of reciprocating motion. The original hand mold, formed of two parts, separated from each other by the two hands, was eventually hinged together, and so hinged it is in one form or another in use to-day, side by side with machines of an advanced character invented in recent years.

"The new method, which has now come into practical operation, has been designed upon entirely new lines. The motion is a continuous rotary motion, as distinguished from the intermittent and reciprocating. The rotary type-casting machine stands in relation to the machines it is superseding precisely as the rotary printing-press stands to König's reciprocating cylinder press, with which *The Times* was printed in 1814. In both cases the machines are automatic; and in both the rapidity of production is limited mainly by considerations of prudence.

"The invention is the work of neither an engineer nor a type-founder, but of one who, being a journalist and wholly ignorant of typefounding and engineering, perceived a want and imagined a means of satisfying it. Mr. Wicks, who has devoted twenty years to the realization of his idea, had his attention first directed to the subject by seeing some of his own manuscript being set up at a composing-machine in *The Times* office thirty years ago, when he also became aware of the difficulties attending the distribution of type in a form suitable for the composing machines. Had he been a typefounder or an engineer, he would probably never have approached the subject on the lines he did, for those lines are diametrically opposed to all the conditions which have controlled the casting of types up to the present time; and, had he been an engineer, he would have known that tools necessary for the construction of his machine had not then been designed. The main problem of producing a disk of twenty inches in diameter capable of working on a shaft without variation at the periphery to the extent of a thousandth of an inch was enough to discourage some of the best engineering firms in the country, especially when they found the disk was to revolve within a few inches of a bath of half a ton of molten metal, and was to fit to a hair a piece of curved iron still nearer the heat. Special tools, metals, and lubricants were required, and, above all, special workmen. The result, however, has been attained, and it constitutes an improvement which may possibly revolutionize the whole system of type-setting, and ultimately the production of books and periodical matter."

The Lectures.

At Montrose, Col.

Monday night (July 29) the Opera House was completely filled by an audience gathered to hear what Judge Ewing had to say about Christian Science. The throng was anxious and expectant, many having come considerable distances to hear the speaker, and we believe none were disappointed in the result.

Promptly at the hour Hon. John C. Bell ascended the platform, the back of which was a mass of flowers and foliage, and in a few brief remarks introduced the speaker of the evening.

From the time the speaker ascended the platform to the close of his remarks the large audience listened with rapt attention, and though he did not speak loudly, yet his utterance was so distinct that he was clearly heard in the farthest portions of the house. The address was not marked by any attempt at oratorical display, yet it was an oration in its simplicity and the earnestness with which it was uttered, and the skill of the lawyer was well displayed in the logical sequence of each succeeding point, the whole concluding with a beautiful and brilliant peroration.

The whole address was to show the false conception which so many people have concerning Christian Science to be without foundation, and to remove the prejudice which is in the public mind. It was an effort well worthy the audience and the speaker, and few who listened to it would not be glad of another opportunity to hear the distinguished speaker.—*Montrose Enterprise*.

The introductory remarks of Congressman Bell were as follows:—

Ladies and Gentlemen:—By the kindness of the good ladies having this meeting in charge, I am requested to call you to order and to introduce appropriately the speaker of the evening.

Public speakers never desire a grandiloquent introduction to an audience; such is embarrassing, but all public speakers prefer that the presentation of the fundamental principles of their argument may serve as an introduction. However, I may say in leading up to this introduction, that the greatest obstruction to human progress is human prejudice, and the greatest security for fundamental error is an unwillingness of some people to hear both sides of a question. A just and conservative man never disputes or plays at another's game until he thoroughly understands it. He never takes the tenets of another's faith from an enemy of the creed. He never decides a question until he has thoroughly considered both sides, and never assumes that any great question is wholly one-sided. He never permits insinuating fancy or prejudices incident to old traditions or sacred forms to usurp the God-like functions of imperious reason, which should always be upon the throne. All the truth is never found bound up in any one creed. There is good mixed with all creeds, otherwise they could not be perpetuated. It is the good and the true that perpetuates all social, religious, or political orders, and but for the good interwoven with the bad which more or less permeates all creeds, their lives would be ephemeral. The poet expresses the same idea in substantially these words:—

A lie which is all a lie may be met and fought outright;
But a lie that is part a truth is a harder matter to fight.

It is unfortunate for the race that we are not all liberal enough to garner the good from all creeds and weave it into a complete whole for the guidance of struggling humanity everywhere, but we are human and loaded down with all the imperfections and prejudices of the race that must be eliminated through a long course of evolution.

However, there is one thing that we can safely guarantee to the eminent speaker who has traveled a thousand miles to express to this splendid audience the reasons for the faith

that is in him. First, that this is a splendid audience, both in numbers and in the high character of the individuals composing it; and secondly, that he will have the sincere and honest attention and consideration of every one within these walls. And now, without further preliminaries, I take great pleasure in presenting to your kind consideration, Judge William G. Ewing, who will discuss with you the principles involved in Christian Science. This will be along the lines sometimes designated as the new or advanced thought, though the subjects have been discussed as long as men have been discussing their thoughts.

Correspondence.

At Butte, Mont.

Judge Ewing's lecture on Monday, July 22, was delivered at Butte, Mont., instead of Anaconda as reported in the *Sentinel* of August 8. The *Anaconda Standard*, from which the report was taken, is published in Butte, hence the mistake.

Lectures at Other Places.

Missoula, Mont.—William G. Ewing, July 19.

Board of Lectureship.

THE Board of Lectureship for the present year is as follows:—

EASTERN SECTION.

The lecturers for the New England States are:—

Rev. Irving C. Tomlinson, C.S.B., Concord, N. H.

Rev. William P. McKenzie, C.S.B., 1010 Massachusetts Avenue, Cambridge, Mass.

Maritime Provinces, Rev. William P. McKenzie, C.S.B., 1010 Massachusetts Avenue, Cambridge, Mass.

The Province of Quebec, the cities of Ottawa and Kingston, Rev. Irving C. Tomlinson, C.S.B., Concord, N. H.

MIDDLE SECTION.

For the States of New York, Pennsylvania, New Jersey, and Delaware, and the Province of Ontario:—

Carol Norton, C.S.D., 1123 Broadway, New York.

Rev. Arthur R. Vosburgh, C.S.B., Powers Block, Rochester, N. Y.

SOUTHERN SECTION.

Mrs. Sue Harper Mims, C.S.B., 575 Peachtree Street Atlanta, Ga.

John Freeman Linscott, C.S.D., 321 Bond Building, Washington, D.C.

WESTERN SECTION.

For the Western States and all Southern States west of the Mississippi River:—

Edward A. Kimball, C.S.D., 5020 Woodlawn Avenue, Chicago, Ill.

Mrs. Annie M. Knott, C.S.D., Suite 508 Chamber of Commerce Building, Detroit, Mich.

Judge William G. Ewing, C.S., 2932 Indiana Avenue, Chicago, Ill.

Silas J. Sawyer, C.S.D., Room 301, Masonic Building, Milwaukee, Wis.

PACIFIC COAST SECTION.

F. J. Fluno, M.D., C.S.D., 1319 Grove Street, Oakland, Cal.

Abraham A. Sulcer, M.D., C.S.B., 1062 Ninth Street, Riverside, Cal.

GREAT BRITAIN.

William N. Miller, Q.C., C.S.B., 57 Bryanston Street, Marble Arch, W., London, Eng.

Selected Articles.

Christian Science Fact.

THIS article is written in defence of no cult or creed. It is not even a plea for justice. Its purpose is to set before the readers of *The United Presbyterian* real facts as they exist, and if vital danger threatens teach them to overcome, not ignorantly ignore it.

The antagonistic attitude employed by so many in the columns of the religious press, by long array of argument, obscuring real issues, belittling real accomplishments, and ridiculing real virtues is repellent to the student of twentieth-century civilization. We are no longer influenced by old, perfunctory, battering-ram tactics, in our battles against untruth. Narrow-minded, fossilized pelters of strained and distorted logic are back numbers in the field of thought. We conquer by full and careful investigation, confessing the good, and warning against the evil.

In forming our judgment of Christian Science, the Saviour's question will be suggestive, "Think ye that they were sinners above all men?" There is a basic principle of truth in the pope, faith cure, Christian Science, mind cure, osteopathy, etc., and only the wilfully blind, or unfair and dishonest writer will attempt to conceal it. If it were entirely false there could be no danger. To say that Christian Science is the work of the devil because it is the revival of black art, is all rot. It degrades the ministry in the eye of well thinking scholars of to-day that such utterances emanate from the pulpit. To assume that faith has no power in the healing of disease is to discredit a cardinal principle of the gospel. Distinction against Christian Science must be finely woven, and in argument cautiously drawn out.

This school of faith was organized in 1879 and now numbers eight hundred churches, eighty educational institutes, and one million adherents. They have eight churches in New York City, and all are crowded Sabbath mornings and evenings. Last year they built one church in New York City costing five hundred thousand dollars. This year they are building another in the same city, costing six hundred thousand dollars, and we all know that hundreds of the ripest scholars in the land are among them. College graduates, lawyers, physicians, popular authors, and even clergymen join them. These facts are certain.

Christian Science has had hundreds of thousands of successful cures that the public has not known. The press seems to publish only the occasional failure, and make a mountain of it. If we were to publish the failures of physicians, the columns of every paper would every day chronicle nothing else than obituary notices.

Mrs. Eddy at first appealed to the Christian Church to hear her discoveries, and consider the advisability of teaching divine healing. It was laughed at and cast aside. Compelled to establish a school of her own, the Christian Science Church is the result. They do no proselyting. The million of membership is for the most part drawn from outsiders who do not attend church. Why is it those churches in our cities are thronged while other churches are falling behind in their attendance? It is a serious question. All the controversy you may urge will encourage rather than check Christian Science. They have the most spiritually minded and holy living people of any sect on earth. It will not injure a member of your flock, should he imbibe the life of Christian Science. He will be all the better United Presbyterian. They are all religiously alive and striving after spiritual advancement. "Who is he that condemneth?" If you are better, cast your stone. No doubt they have incompetent teachers, no doubt they are misrepresented by their own people. A lady in my first charge when asked by a Methodist sister if she had ever been con-

verted, replied, "Why, bless you, no. The United Presbyterian Church does not believe in conversion until after death," and in the same presbytery a minister, when asked about our distinctive principles, said, "The distinctive principles of the United Presbyterian Church are Baptism and the Lord's Supper."

Our plan of conquest is to put ourselves in conformity with the advanced spiritual light and life of the times. We are wasting energy and printer's ink by newspaper attack. People are attracted to Christian Science because they see a benefit to humanity in both soul and body. We must labor more vigorously to reach the people. Announce spiritual laws, make them understood, and demonstrate their practical uses. Cannot we adopt methods along the same line and draw the masses? We study methods that were successful fifty years ago, and expect them to meet the demands of the hour. We are overloaded with ideas of Edwards, and Finney, and George Whitfield. Were they living to-day, I have faith to believe they would be wise enough to change their tactics.

I have studied Christian Scientists for years, and I never found such a uniformly good people in my travels. They are purely Christ-like. They are all willing to endure stripes, and go naked and hungry, if by any means they may save some. Brethren, is it not better that people, who are not drawn to our conservative churches, do find a home where Christ is taught and lived? This higher spiritual life is in the air. It is the logical remedy for secularism, Romanism, and all the evils that menace the true Church of Christ. I wish every United Presbyterian were as spiritually alive and as ready to sacrifice for our beloved communion, as multitudes in these new sects do for theirs, and until then my voice will be silent against them. Then only shall we be able to judge and say whether they be of God.

REV. ALBERT K. DUFF.
In *The United Presbyterian*.

Christian Science and the Doctors.

Editor the *Democrat*.

Perhaps you can inform the public why it is that when a woman of the ripe age of eighty-six—who has for the last five years received no treatment other than that administered by Christian Scientists—"passes quietly away," it is considered necessary to call in the coroner? Also why, in the case of a healthy thirteen-year-old boy—who dies of lockjaw, despite of amputation and the efforts of near half a dozen doctors, as the result of a trifling finger-wound from Fourth of July powder—no coroner's investigation whatever is thought necessary? Had the lad Van Zee received Christian Science treatment, with fatal results, what a howl would have been set up. But, since he died *secundum artem*—i.e., from the anti-Christian Science view-point, no questions are asked.

Respectfully,
H. S. C.

It is an easy matter to ask questions. But it is not so easy, in cases like the foregoing, to answer them in a manner at once brief, clear, and satisfactory. And the *Democrat* will not here attempt answer, except by way of suggestion.

Time was—and not so many years ago, either—when the homœopathic physician was looked upon by the regular "orthodox" Æsculapians and the great mass of the lay public generally with as little, if not less, favor than is now vouchsafed to the Christian Science school. The "new doctrine," however wise or foolish, however useful or useless, is, as a rule, always counted heresy by the acceptors of the old faith. And this whether that faith be religious, scientific, literary, or social.

Not to instance the Man of Nazareth, it is only necessary to mention the names of Socrates, Copernicus, Galileo,

Shakespeare, Newton, Descartes, Darwin, Spencer, Channing, Dale-Owen, Garrison, Lucy Stone, Julia Ward Howe, Susan B. Anthony, Henry George, and others whose names these will suggest, to emphasize the general fact that the new doctrine, as a rule, in the eyes of the old doctrinaires and the mass of the public, is but "a pernicious heresy" which, in the "interest of the public welfare," should receive no favor or mercy at the hands of the "enlightened" public.

Half a century ago the contention that women should have equal rights with men to an education in the University of Michigan had fewer friends among the leading educators of the state than have now the Christian Scientists among the medical profession; while among the general public the Christian Scientists have, to-day, probably a much larger following than had the homœopathic school of physicians in 1850.

It is the lot of all new doctrines to be forced to stand on the defensive until they demonstrate by works, over and over again, the beneficence of their cult. The world—religious, scientific, social, literary, artistic—is, and always has been, rigidly sceptical in regard to new doctrines, of whatsoever nature. Christian Science is but receiving from the professional and general public similar treatment to that which has been accorded—almost without exception in the world's history—to all new doctrines.

Time only will determine the legitimate status of the new cult. Meantime it will be well for the timid and fearful, on both sides, to take upon themselves something of that sturdy faith of Gamaliel of old who, in regard to a certain other then "new doctrine," thus advised his followers: "Fear not, then, this new thing; for, if it be of man, it will surely come to nought; and, if it be of God, ye cannot prevail against it."

Grand Rapids Sunday Democrat.

Standard Time.

The difficulty of appreciating the difference in time that prevails between different countries is very general, and the following list is printed for the purpose of a ready reference guide by which to calculate the time of any occurrence in another country. All nations, except Spain, Portugal, and Russia, calculate their time from the meridian of Greenwich, accepting as standard some even hour meridian east or west of Greenwich. For instance:—

Western European time, or that of the meridian of Greenwich, is legal in England, Belgium, Holland, and Luxemburg.

Central European time, or one hour east of Greenwich, is legal in Germany, Austria-Hungary, Bosnia, and Herzegovina, the Kongo Free State, Denmark, Italy, Servia, Sweden, Norway, and Switzerland.

Eastern European time, or two hours east of Greenwich, is adopted by Bulgaria, Roumania, Natal, and Turkey in Europe.

Eight hours east of Greenwich applies to the Philippines.

Nine hours east of Greenwich is adopted by central Australia and Japan.

Ten hours east of Greenwich is official in Victoria, Queensland, and Tasmania.

Eleven and a half hours east has been adopted by New Zealand.

The United States, Canada, and Mexico have adopted the fifth, sixth, seventh, and eighth hours west of Greenwich.

The Hawaiian Islands adopt the meridian of ten and one half hours west.

In Spain the meridian of Madrid, fourteen minutes forty-five seconds west of Greenwich, is legal; in Portugal, that of Lisbon, or thirty-six minutes thirty-nine seconds west,

and in Russia, that of St. Petersburg, or two hours, one minute, and thirteen seconds east of Greenwich.

Detroit Free Press.

Notices.

Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, is now ready for distribution. Leatherette covers, deckled edges; 50 pages. Price, 50 cents; per dozen, \$4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Applications for Membership.

Applications for membership with the Mother Church, to be acted upon at the meeting to be held in November for the admission of members, must be in the hands of the Clerk by the 15th of October. Inviters of applicants will greatly assist the Clerk if they will send the applications as early as possible.

Mr. Farlow's Address.

After September 1, the office of Alfred Farlow, C.S.D., Publication Committee of The First Church of Christ, Scientist, in Boston, Mass., will be located in Huntington Chambers.

New Edition of the Manual.

The twenty-second edition of the Church Manual containing the names of the members admitted in June, 1901, is now ready for delivery. Send all orders to The Christian Science Publishing Society, 95 Falmouth St.

To Members Admitted June, 1901.

Will those who sent in applications for membership with the Mother Church for the admission last June, and who have not yet received notice of their admission, please send their names and addresses to the Clerk, William B. Johnson, 30 Norway Street, Boston.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Sept. '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for October, November, and December.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Christian Science and its Leader.

CHRISTIAN SCIENCE is an onward and upward religious movement—the greatest of the ages. Even those who would oppose it admit its growth and potentiality. It is moving forward with unprecedented rapidity. The life of its Discoverer and Founder is an open book. The Rev. Mary Baker Eddy's career and labors are known and read of men everywhere. Her character is matter of current history. Careful historians, discriminating writers who searched carefully and sought information from all available sources, have written of her life and character and published what they have written in standard histories, dictionaries, cyclopedias, and numerous periodicals. Her life and character speak for themselves. Her public career tells its own story. Her great reformatory work is awakening the world to higher and better conceptions of life and of religion. Her pure and lofty literature is everywhere arresting the attention of thinking and well-disposed people. Thousands are being healed by it. Thousands more are being redeemed from sin and sickness as the result of her nearly thirty-five years of labor and ministry. Mary Baker Eddy is a Religionist, a Reformer, a Philanthropist, the Herald of the healing Truth that is reaching around the globe and touching to life, and health, and peace, myriads of her fellow beings; and scores of these are daily rising up and calling her blessed. Let those who doubt this read the testimonies that flow in from all quarters of the globe, many of which are published, and many more remain unpublished for want of space.

The mighty religious Reformation which God, through Mary Baker Eddy, has inaugurated, is an established fact. It is moving forward with increasing acceleration, and no power on earth is sufficient to stay its mighty sweep, for it is of God, who is almighty and whose Kingdom has come for time and for eternity. No wiles of error can prevent the sick from being healed, the sinner from being reclaimed, the needy from being aided, or mankind from being reformed on the basis established by the Founder of Christianity.

Eternal Truth has decreed that the lame shall walk, the blind shall see, the deaf shall hear, the sick shall be healed, and the sinner redeemed, and the hosts of darkness are impotent to say it nay.

As to Mrs. Eddy's state of health, we speak from personal knowledge when we say, that she is not palsied, is in her usual health, takes her daily drives, and rejoices in God.

Message to the Mother Church.

THE Message of the Rev. Mary Baker Eddy to the Mother Church read at the several communion services held Sunday, June 23, 1901, and since revised by her, is now out and in the hands of the Publisher for sale. The importance of this Message at this time is so obvious that merely to call attention to the fact that it is now ready for perusal and distribution, is, no doubt, sufficient for all Christian Scientists.

This booklet is a most noteworthy and valuable contri-

bution to Christian Science literature. It is comprehensive in an unusual degree.

In its definitional aspects, it is lucid, concise, and full. No one can intelligently read it without getting a clear conception of the fundamental tenets of the Christian Science doctrine.

In its strong and pungent affirmations it meets and refutes many current misapprehensions and falsehoods.

No good person can read such utterances without being better for it, nor lay down the book after reading it without a feeling of love, veneration, and gratitude for its author.

We take the liberty of briefly extracting from this booklet, for the purpose of showing Mrs. Eddy's position on the subject of mental malpractice. It will readily be seen how exalted are her views, how scrupulously conscientious her practice,—her prayer, for such it is in the highest sense. What she practises herself she imparts carefully and conscientiously to her students. She says:—

"From ordinary mental practice to Christian Science is a long ascent, but to go from the use of inanimate drugs to any susceptible misuse of the human mind, such as mesmerism, hypnotism, and the like, is to subject mankind unwarned and undefended to the unbridled individual human will. The currents of God flow through no such channels.

"The whole world needs to know that the milder forms of animal magnetism and hypnotism are yielding to its aggressive features. We have no moral right and no authority in Christian Science for influencing the thought of others, except it be to serve God and benefit mankind. Man is properly self-governed, and he should be guided by no other mind than Truth, the divine Mind. Christian Science gives neither moral right nor might to harm either man or beast. The Christian Scientist is alone with his own being and with the reality of things. The mental malpractitioner is not, cannot be, a Christian Scientist; he is disloyal to God and man; he has every opportunity to mislead the human mind, and he uses it. People may listen complacently to the suggestion of the inaudible falsehood, not knowing what is hurting them or that they are hurt. This mental bane could not bewilder, darken, or misguide consciousness, physically, morally, or spiritually,—if the individual knew what was at work and his power over it."

For the price, etc., of this booklet, see notice on preceding page.

The Spread of Christian Science in London.

AN article headed as above, appears in *The British Weekly*, "a Journal of Social and Christian Progress" published in London, England. As a whole the article is fair and friendly in tone, although it contains some of the current misconceptions of Christian Science. While we regret these misconceptions, we nevertheless feel it to be due to the editor of this able and important periodical to express our high appreciation of the kindly spirit which evidently dictated the writing and publication of so lengthy a paper. It occupies nearly four columns of editorial space, and is a striking indication of the fact that Christian Science is indeed spreading rapidly and gaining a strong foothold in England.

We extract the following:—

The most striking proof of the advance of Christian Science in London and other large towns of the United Kingdom is to be found in the growing numbers of its authorized practitioners. *The Christian Science Journal* publishes each month a directory of teachers and healers, who must all be members of the Mother Church in Boston, and amenable to its discipline. A few years ago there were only three or four practitioners in Britain, now we find thirteen names for London alone. First come those of the Earl and Countess of Dunmore, and next Mr. and Mrs. Miller, so well known to the congregation which attends the Sunday services in Bryanston Street. Lady Mildred Murray, Mrs.

Blanche Ward, and the majority of the leaders, live in the West End; there is one healer at Highbury, and several in South London. At Cambridge, where there is now a regular Sunday service, the new cult is represented by Mrs. Butler and by Mrs. Smith, of Sidney Sussex. Dublin has one name, that of Lady Frances Ashbourne. Six ladies are mentioned for Edinburgh. A well-known Scottish Scientist is Lady Charlotte F. Ramsay, of Alyth.

Returning to London, we observe the significant increase of the attendance at the two Sunday services. Five years ago the present writer found the upper room in Bryanston Street only half full, now it is crowded to the doors. It is probable that "First Church of Christ, Scientist," will shortly require enlargement.

The morning congregation assembles at half past eleven. Little colonies of Christian Scientists have established themselves in many of the huge blocks of residential flats, which have transformed the appearance of this neighborhood. At not a few houses the *Christian Science Sentinel*, the weekly organ of the denomination, is regularly taken. It is published in Boston, and has for the motto on its title-page, "What I say unto you, I say unto all, Watch!"

When the ordinary morning church-goer has disappeared from the streets, hansom and carriages draw up in the quiet thoroughfare which runs behind Oxford Street, near the Marble Arch. Scarcely any of the poor may be seen entering the Christian Science Church, yet they, too, are beginning to hear of the strange new religion. A few weeks ago a char-woman came to her employer in great excitement. "Oh, ma'am, have you heard of Christian Science?" "Yes, Mrs. Brown; but what have you heard about it?" "Well, ma'am, I work for a lady down Edgware Road way, and she has been ill for months, and thought she could not walk up or down stairs, and now the Christian Science healer has cured her, and she is as well as ever."

On the ground floor at Bryanston Street there is a reading room, which is open free on week-days, and where Christian Science literature may be purchased and its journals read. The books and pamphlets offered to the enquirer are much the same as those which were on sale three years ago. First and most important is Mrs. Eddy's great work, "Science and Health with Key to the Scriptures." There is a steady demand for this, the one authorized text-book.

Most of the regular worshipers take in the *Christian Science Quarterly*, which contains the lessons for three months at a time. The large hymn-book costs 4s. 6d., and there is no cheaper edition. Many of the hymns are adapted from those in other collections; a few were written by Mrs. Eddy. One of those chosen on Sunday was an aspiration for the spread of the "Christian Science Gospel." Another was sung to the well-known tune of "The King of Love my Shepherd is." Few of the hymns have more than three verses, and at no point in the service is the congregation allowed to stand long.

At the end of the sunny room are placed two desks for the Readers. The First Reader was absent on Sunday, and the desks were occupied by a lady and gentleman, the former of whom was described as the Second Reader. The audience included a fair proportion of men, but women were naturally in the majority. All were well-dressed, prosperous, comfortable-looking people, and they sang with great heartiness. A remarkable feature of the service were the numerous passages chosen from the Bible. After the first hymn, the lady at the desk, whose voice was clear, sweet, and distinct (a point to which importance is attached by Christian Scientists), read the 64th of Isaiah, and part of Revelation 21. Revelation is a favorite portion of the canonical writings with the Scientists. Mrs. Eddy expounds the visions of the Apocalypse at some length in *Science and Health*. An interval for silent prayer was followed by the repetition of the Lord's Prayer, each petition followed by a brief commentary.

A responsive reading, taken from the New Testament,

brought the first part of the morning worship to a close. No sermons are preached by Christian Scientists; instead of the sermon a long series of Scripture passages was read aloud from one desk, while from the other we heard the correlative passages from the denominational text-book.

Those who have personal acquaintances amongst Christian Scientists, in London as in America, cannot fail to note the reverence with which they speak and write of Mrs. Eddy. She is referred to in their newspapers as "the Founder," "the Mother," "the Discoverer," to whom a great final revelation has been given. She has told the story of her life in a small book, entitled "Retrospection and Introspection," which is frequently asked for at the London headquarters. Her great-grandfather was John McNeil, of Edinburgh, whose wife was related to Hannah More. Famous American soldiers were also amongst her kindred. She was married three times, her last husband, Dr. Eddy, who was her first pupil in Christian Science, dying in 1882. The message by which she has undoubtedly attracted multitudes in America, and growing numbers in Great Britain, is the promise of bodily healing bound up with her religious belief. "Christian Science," one of her principal followers wrote two years ago, "shows that all the laws of God are contrary to disease. It shows that sickness is not in accord with natural law, or with any fundamental law of divine ordination. It shows that the so-called laws of disease inhere in the universal mortal or human mind, and that they act not as law, but as human belief and fear only." Christian Scientists claim that they can cure, and have cured, not only nervous troubles and functional disorders, but the gravest organic diseases. As regards surgery, Mrs. Eddy says that "the work done by the surgeon is the last healing that will be vouchsafed to us, or rather attained by us, as we near a state of spiritual perfection. At present I am conservative about advice on surgical cases."

It is a curious fact that the votaries of Christian Science, after receiving treatment, often come to believe that their **infirmity** is completely cured, although to others it may seem to persist as before.

The *Journal* and the *Sentinel* contain each month numerous testimonies from those who profess to have been cured by Christian Science. Every variety of disease is mentioned, and English readers must often wish they could track to their source and verify some of the marvelous statements which reach them from remote parts of America. In the June number of the *Journal* there is one "testimony" from an English lady, whose address is given as "London." "Being a recent convert to the Church of England," writes this lady, "I thought it met all my requirements. but I soon saw that it did not give me the solace that the Christian Scientists derived from their Church, and on reading the Bible I realized that the Church of England only fulfilled half of Jesus' commands; they preach the Gospel, but they do not heal the sick, as we are told to do." The writer proceeds to tell that she had suffered for years from astigmatism, and had been told by Dr. Parchenstecher and Dr. Mauser, of Wiesbaden, that unless she wore glasses, she must become blind. "I wore them for nine years, and every two years I had to get stronger ones. If I went without them an hour, I suffered from severe headache and nausea. As soon as I realized that Christian Science was the Truth, I went to a healer to be treated, and after the first treatment I was able to read the Bible and *Science and Health* without my glasses, but if I tried to read anything else my eyes ached. I had three weeks' treatment. That was two years ago, and I have never suffered with my eyes since. After the first week I was able to read anything. Christian Science has not only healed my eyes, but has helped me in a great many ways, and has made me much happier. *Science and Health* has unlocked the Bible, so that it is a pleasure to read it now, and I cannot be too thankful to Mrs. Eddy for giving us this Truth."

The writer proceeds to tell how on visits to France she had noticed how the peasants there were taking to Christian Science, and she mentions the case of a woman who had undergone three operations for cancer, and who, after Christian Science treatment, "is now a well and strong woman, working in the fields from sunrise to sunset without fatigue, knowing that God is her strength." A French farmer is said to have been cured of epileptic fits by treatment given him by the writer of this testimony. Can we wonder that suffering men and women, hearing of the marvels which Christian Science professes to have accomplished, should turn from the orthodox Churches in the hope of obtaining relief from the new healers? It would be interesting to trace the future of these Christian Science converts.

Another recent English testimony is contained in the *Sentinel* for June 20th, where a Manchester lady states that through Christian Science she was cured of a painful and troublesome disease of the throat, which had baffled the late Sir Morell Mackenzie and other specialists. "Shortly after beginning to study Science and Health I felt that my throat was perfectly well, and since then I have not felt it. I am able to read aloud for hours at a time and sing, which formerly I was quite unable to do."

Such testimonies from English patients were absent from the Christian Science publications a few years ago, and their appearance shows that the sect is quietly gaining ground amongst us.

Among the Churches.

Reading Room at Spokane, Wash.

We are pleased to report growth and progress in the cause of Truth in Spokane, Wash. The demand for more commodious quarters for our reading rooms has been met. Rooms were secured in the Spokane and Eastern Building, and have been nicely furnished and arranged for the convenience of the public, visitors in our city, and for the members of our local church.

On Thursday, July 11, 1901, the rooms were formally opened, and during the afternoon and evening a large number of people visited the rooms, many expressing delight and thankfulness for this step taken in advancing the work in Truth.

We feel very grateful for the writings of our Leader, Mary Baker G. Eddy, and also for all the publications of The Christian Science Publishing Society. Another evidence of the growth in Truth is the steadily increasing demand and sale of all the literature.

The *Spokesman Review* of July 12 had the following to say of the opening of the reading rooms.

First Church of Christ, Scientist, has moved their free reading room from the Chemical Block to the fourth floor of the Spokane and Eastern Building, and formally opened the same yesterday afternoon and last night.

Three rooms are occupied by the library, while the remaining rooms on the floor will be occupied by practitioners of the society. The rooms are elaborately furnished, and during the reception yesterday were decorated with pink and red roses.

Among the ladies who assisted in receiving were Mrs. F. E. Snodgrass, Mrs. Robert Ewart, Mrs. F. E. Goodall, Mrs. V. T. Case, Mrs. Fultz, Mrs. F. E. Lucas, Mrs. George T. Crane, Mrs. T. Waldo Murphy, Mrs. Virginia Davis, Mrs. Smith Ely, Mrs. Adams, and Mrs. Bonner. Several hundred people visited the rooms during the day.

In the three rooms set apart for the library can be found the literature of the society. The rooms will be kept open to the general public every day except Sunday from ten o'clock in the morning until five o'clock in the evening.

The society was organized in Spokane in 1896 with twenty members, and now has one hundred and twenty-five, with a Sunday attendance, at the Jewish Temple, of three hundred. F. E. Goodall is its president.

Organization in the City of Mexico.

At a very harmonious meeting held on Saturday evening, July 13, at the residence of Mr. and Mrs. E. C. Butler, Church of Christ, Scientist, of the City of Mexico, was organized with a membership of thirteen. Mr. and Mrs. Butler were elected First and Second Readers respectively, positions which they have held since January, 1899. The first meetings of Christian Scientists were held in this city during December, 1898, at the rooms of Mr. and Mrs. Adam H. Dickey of Kansas City, at the Hotel Jardin. The meeting also elected a Treasurer and a Clerk, as well as a Superintendent and Teacher for the Sunday School, which will be held at the hall and reading room, Calle San Juan de Letrán, No. 13 (Post Office Building). A committee of ladies and gentlemen was also appointed to be in attendance every week day at the hall, for the purpose of giving information concerning Christian Science.

The interest in Christian Science is steadily increasing in Mexico, as is evidenced, not only by the organization of this society, but by the fact that whereas two years ago there were in circulation in this city only three or four copies of "Science and Health with Key to the Scriptures," there are now in the neighborhood of one hundred copies. The make-up of our society is quite cosmopolitan, four languages being represented among us. In this connection it may be interesting to add that a number of Mexicans have been in regular attendance at our meetings and have practised successfully in Christian Science. We look for an early development among them in the way of special services.

Deeply grateful for all the foregoing, the Scientists of Mexico are still pressing "toward the mark for the prize of the high calling of God in Christ Jesus."

ALFRED M. GOLD, *Clerk*.

Christian Science in Centerville, S. Dak.

In the year 1897 a lady of Centerville was healed by Christian Science. From that seed sown others became interested, and three families began holding Christian Science services at their homes. In November, 1899, they secured rooms in the Noble Building. In April, 1900, they elected the regular officers and Readers and also opened a free reading room to the public, with all Christian Science literature by Mary Baker Eddy on the table. They also organized a Sunday School. In 1900, one hundred and twenty-two dollars worth of books were sold—Mrs. Eddy's works seventy-eight dollars and Bibles forty-four dollars.

March 23, 1901, there was organized a society to be called the First Christian Science Society of Centerville, with fifteen members and an enrolment of twenty-seven in the Sunday School. They now use thirty-six quarterlies, a gain of twenty-four since April, 1900. Rheumatism, insanity, fevers, blindness, immorality, tobacco using, and drink habit have been overcome through the understanding of Christian Science.

The Principle of Christian Science is God—God who forgiveth all our iniquities and healeth all our diseases. We have proved it true by healing the sick and reforming the sinner.

MRS. ALLIE HATCH.

In the *Centerville Journal*.

Give me the gospel of the fields and woods—
The sermons written in the book of books;
The sweet communion of the things of earth
Fresh with the warm baptism of the sun.
Give me the offertory of bud and bloom,
The perfect caroling of happy birds.
Give me the creed of one of God's fair days
Wrought in the beauty of its loveliness;
And then, the benediction of the stars,
His eloquent ministers of the night.

Wednesday Evening Meeting at Cleveland, O.

THE following testimonies were given at the Wednesday evening meeting of First Church of Christ, Scientist, Cleveland, O., June 19, 1901. The first speaker was a lady who spoke as follows:—

"I feel an ever-growing sense of gratitude for the little understanding I have of Christian Science, and I wish to give two little demonstrations that seem small in telling them, but I think they never seem small to those who experience them.

"I have been more or less troubled with headaches,—what people call nervous headaches,—and heretofore I have just permitted it, believing that if I would go to sleep for a certain length of time, the headache would go away. About two weeks ago I was attacked with one that was quite violent. At first I was inclined to just suffer it as I had always done. But immediately I took up the thought of the ever-presence of divine Love, and it seemed, almost in less than five minutes, that the attack disappeared.

"Last Monday evening when I returned home my husband told me our little boy had met with quite a severe accident. It seemed that he had fallen on the hard pavement, and a larger boy had accidentally jumped on his arm. It was very badly swollen and painful. My husband had declared the Truth when I was away, and I also when I returned home. In the morning the arm was very much better and the boy went to school. The little fellow returned home at noon and began to cry, saying, "My arm is broken. I fell on it again this noon. I heard something snap and I can't raise it at all. I know it is broken." I experienced not the slightest fear, but knew that divine Love was ever-present and the only Power. From that minute the arm began to mend. We used no material remedies of any sort, and he is all right to-night and says the arm is just as free as the other."

A gentleman said:—

"This summer I was with a family whose little child had the measles, that developed into scarlet fever, and finally the physicians claimed it to be smallpox. The house was quarantined. I was asked if I would stay. It seemed as if the attending physician knew I was a Scientist. I said, 'Yes, there is nothing to fear.' He said, 'You know we are going to quarantine the place. You can't go out or have any one to see you.'

"One morning they wakened me and said, 'Iona is passing on.' From all appearances it seemed to be true. I took up the thought of death and handled it to the best of my ability and with what understanding of Science I had. Previous to this, when they realized that she was beyond the help of the physicians, they had written to different clergymen of the city, asking them to pray for the recovery of their child. The child lay in that deathlike stupor from four o'clock that Saturday morning till the next day. The child regained consciousness and then they came to me and asked me if it was the physician's help, or whether I thought calling upon God, He had helped them in their affliction and healed the child, and what I did in order to keep myself from getting the disease. I told them I used the ninety-first Psalm and took up the thought that there was no such thing as contagious disease, and that, according to my understanding, they owed the recovery of the child to God's power. The Truth was leading them, but they did not know it.

"They commenced to watch me, and every now and then told me that I was not looking well, etc. I denied all these assertions. Finally they said, 'Well, if you are going to come down with this trouble, you ought not to stay and expose the rest of the family. The only thing that will prove to us that you are not coming down with it is to allow us to have a physician come and examine you.' I said, 'Very well,' and submitted to a physician. He ex-

amined me and said, 'Well, you do look a little pale, but nothing at all is the matter with you. You are all right.'

" 'Well,' they said, 'you had all the symptoms that Iona had.'

" 'That may be,' I replied; 'but I haven't them now.'

"So the physician gave me some medicine and pills, and asked if I would take them. I said, 'Why do I need these if nothing is the matter with me?'

"He replied that I had better ward off the disease anyway.

" 'I don't need the pills,' I said, 'there is some one taking care of me. I will be all right.'

" 'Well,' he said, 'I presume you use faith.'

" 'No, not exactly; I am trying to do and live up to God's ideal, as nearly as I know how, and He will take care of me.'

" 'Well, if that is all that is necessary, all right.'

"Perhaps it may be helpful to some who are present to know something of my experience before and after coming into Christian Science. A large majority come for physical healing. In my case, it was not so. I was looking for a supreme power or ruler that the world called God; and we are told that 'Man's extremity is God's opportunity.' This saying is familiar to all, and I have proved it. It was in the dark hours that I consented to investigate Christian Science. I had tried to find the truth in Spiritualism and failed. I found it absolutely wanting. After Science was presented to me, a friend who was a strong Scientist tried to persuade me to attend the meetings or read Science and Health, and I am surprised now to have to acknowledge that I was three years in making up my mind to really investigate in earnest. This is very strong in my mind to-night, because two or three times lately persons have spoken to me against Science, or their conception of Science, without ever having studied or looked into the matter for themselves. That was where I stood. Finally I made up my mind, after three years' struggle in darkness, to go and see what Christian Science really is.

"Almost the first I heard of it I found that in Christian Science I had found my God, and I had never been able to before. I have seen a number of cases of healing wonderful to human sense,—physical healing,—in Christian Science; but to me the great wonder is the moral healing. The power of divine Love is absolute, there is no failure. We only have to seek and we shall find. It is ours, it is for us all, and all we need is to make the effort, and we shall surely find the Truth."

The next speaker said:—

"A lady who is not a Scientist, but who had often attended our meetings, sent word a few days ago and asked if Christian Science could help her in case of an extreme nervous trouble. She was relieved in one treatment. In two days from that time she sent word that she had suffered all night with pleurisy. She said that with every breath she drew, she would moan. Two treatments entirely relieved her."—E. A. M.

Three Gates.

If you are tempted to reveal
A tale some one to you has told.
About another, make it pass,
Before you speak, three gates of gold.

These narrow gates: First, "Is it true?"
Then, "Is it needful?" In your mind
Give truthful answer. And the next
Is last and narrowest: "Is it kind?"

And if, to reach your lips at last,
It passes through these gateways three,
Then you may tell the tale, nor fear
What the result of speech may be.

From our Contributors.

"The Harvest truly is Plenteous."

BY MRS. FRANCES H. COIT.

"THE harvest truly is plenteous,
But the laborers are few;"
The work is ready and waiting,
Waiting for me and for you.

Then come in the early morning,
While the dew is on the flowers;
Come with joy and gladness,
And improve the golden hours.

Far away on the distant meadows,
White fields of ripened grain
Await in expectant beauty,
The reapers' joyous train.

Let us heed the Master's bidding:
"Go work in my vineyard to-day;"
For we have his precious promise,
"Lo, I am with you alway."

Adhering to Principle.

BY JOHN B. WILLIS.

HE was only a plump little squirrel, but he was both wise and cheery, and he taught me a most helpful lesson that morning.

It had snowed abundantly during the night and the path to his storehouse in a neighboring stable was hidden beneath a deep covering of white. Under these circumstances the little fellow sallied out via his air-line, and I, sitting at my window, saw him springing fearlessly from branch to branch of the interlacing trees. The last drooping limb brought him within a broad jump of the eaves-trough, and with a daring leap he landed safely in the downy depths at the foot of the slope.

I had expected to see a bit of plucky floundering, in his effort to ascend the steep roof to the cupola where he was accustomed to enter, but it was soon apparent that he knew a better way.

After standing up long enough to flash his eyes about and take in the situation, he disappeared, and instantly I perceived an advancing line of upheaved snow, like a mole's burrow, indicating the course he was taking.

He was just a little squirrel, but he knew that if he kept a tight grip on his base of operations—the shingle roof—he could easily make his way through the opposing obstacle. Now and then he would let go his hands and standing up on tip-toe, show his eyes and ears above the surface and look at me saucily as if to say, "Isn't this fun, and don't I know a thing or two?" and then down he'd bob and the shaded snow line would move on toward his goal, until at last a spring and dash of fluffy grey spanned the interval and he reached his open door to haunts below.

Just one of God's wee creatures, and yet how wise! Wise enough to avoid disabilities so long as he could; wise enough, when he had to meet them, to keep a firm hold on his *base of ascent*. Wise enough; and yet he didn't know lots of things. Very little, probably, of God, little of the philosophy of life, little of the source and nature of the obstacles he had to overcome; but he knew enough to get on with, and what he did know he knew exceedingly well and could put it to immediate use. He didn't know much about creeds, and all that, and yet, like Socrates, he was so much of a Christian as to be able to keep bright and good-natured though he had to get his own breakfast, and that, too, when not everything was to his hand. He knew enough to work, too, with both hands and feet, and to a

worthy end, for the unselfish thought of somebody, left behind in the squirrel tree, surely added a span to every flying leap and helped him to hold on to the shingles as he pushed ahead.

Yes, he taught me many a lesson, that little squirrel did, and these especially: that it pays to cling to fundamentals when you're in for a stiff climb, and to keep sunny, and get all the good fun you can out of the commonest everyday undertakings when they're needful and right, for if the spirit of this little teacher be in us and abound, we shall not only get ahead ourselves, but we shall not fail also to interest, instruct, and encourage the world as it looks at us from the window.

To do Good and to be Good.

BY A. D.

THERE is no position in life, wherein we are placed, that we cannot better, be it high or low. Pure thinking and pure living, sweetness of disposition, meekness of heart, are the essentials in our efforts to uplift the human race, and God works with us in this undertaking. Sometimes we wonder what possible good we can do under the circumstances in which we find ourselves placed. It seems as if our example, and the *striving* after spiritual things, were entirely thrown away on people who have neither eyes to see, nor ears to hear, and yet, years after, we find some word or act of ours had sown a seed that bore good fruit. It is the little beginnings—the being faithful over a few things—that lift us to greater achievement and to spiritual heights, and our influence for good is felt, even when unacknowledged.

"Let us not be weary in well doing: for in due season we shall reap, if we faint not." Let us do good and de-accomplished nothing, for in years to come, the spiritual cline to be discouraged, even though seemingly we have bread cast upon the waters of mortal belief will return to us bearing the blessed fruits of Love.

One of my small beginnings, I remember, was in overcoming my antipathy to a person who had been most unjust to me, enough to quietly and without her knowledge give up my room, which was the coolest and pleasantest, to her. The next time I wanted to do a kindness to any one, it was very much easier, and Love was much nearer my heart; finally it has come about that to do good and to be good, is the natural impulse, and to do evil is repulsive.

If we wish to help the Wayshower in this age, it seems to me the only way is, "to go and do likewise," to follow her example. First in the little things, until we are called upon to go up higher, then we shall be found with our lamps trimmed and burning—all ready for the midnight call. We can do good always and at all times, under all circumstances. No matter what our surroundings may be, there will always be some one who needs our help, and if we can render this aid to those who have spoken falsely about us, or "despitefully used" us, then the blessing is greater from the open fount of Love. If we truly wish to do good and to be good, our Father will supply the opportunity, and help us to accomplish our desire, even though the accuser (mortal mind) tries to tell us that we do not wish to bless our enemies or those who have reviled and hated us.

God searches the heart, He knows all things, and if the soil of the heart is honest and good, with pure desires taking root therein, we shall be able to bless our enemies simply because our desires are right desires, and so be the "light of the world," the "city that is set on a hill," and all men will come unto us to be healed and saved by Christian Science. Only living Truth and Love in the innermost recesses of the heart and being, will do this, and enable us to follow the example given us by our Teacher.

Growth.

BY A. E. ALFORD.

THAT growth which is the most rapid is not always the most desirable. Many will be familiar with the illustration used when reference is made to the peculiar form of parasitic growth, known as "suckers" which supports itself upon fruit-trees, notably the apple-tree. It shoots out and up from any part of the trunk, growing with great rapidity, beautifully straight, with pretty green leaves spaced at equal distances upon its length. It, however, is only good to look at as it bears no fruit and only lives by virtue of the sap which it sucks from the main trunk. The more legitimate branch, the working, fruit-bearing branch, is often bent, gnarled, and unsightly in its growth, and is always the fruit of many years of steady development. Its position is also higher up, where the sun's light may fall upon its leaves and blossoms, thus giving to its fruit the full, rich development of perfection.

Thus it is with the spiritual.

Beware of the seeming spiritual growth which, thinking only of self, regards too much the beauty of outside appearance from the view of the world, forgetting that while this takes place support is drawn from honest, earnest work which has already been done by others. Beware of rapid growth in knowledge if it is gained at the expense of real understanding which comes through the demonstration of every-day problems by personal effort. When a hard proposition confronts you, face it with all reliance upon Truth and work it out upon that basis, even though it takes more time than you think it ought, and though the outside appearance may seemingly be scarred and gnarled through contact with its error. The strength and life which results will become a part of yourself, and in the reception of God's sunlight of Truth and Love, to which influence you by your action have placed yourself open, will bring forth the beautiful blossoms, ultimating in the rich, substantial fruit of maturity.

Our Father's Business.

BY GRACE SAFFORD FARRINGTON.

WHEN Mary sought Jesus in the temple, he said, "How is it that ye sought me? Wist ye not that I must be about my Father's business?" If we wish to follow Christ let us be found ever about our Father's business, faithful always in little things. Faithfulness in little things brings the heroism to meet the great trials when they come.

Busy with the things of God there is no time for any part in that which "maketh and worketh a lie;" no time to listen to evil or to voice evil; no time for self-condemnation or the condemnation of others; no time for vain regrets over past mistakes; no time for inquisitiveness, gossip, criticism, scorn, hate, envy, jealousy, or greed. But busy with the things of God there is ever time enough to lend a helping hand; to be courteous, tender, strong, brave, and true in every relation of life; time enough to be always earnestly striving to reflect more and more of the divine Love and Power which heals the sick and sinful, and which makes life blossom like the rose that gives its fragrance and beauty alike to every one who passes, be he beggar or king.

Emerson says: "Man must expect no other good than the just fruit of his own labor and self-denial. The only reward of virtue is virtue."

Busy with the things of God we shall go forth into life with that charity which Mrs. Eddy speaks of in "Miscellaneous Writings:" "A charity broad enough to cover the whole world's evil, and sweet enough to neutralize what is bitter in it,—determined not to be offended when no wrong is meant, nor even when it is, unless the offence be against God."

Testimonies.**Healed of Many Diseases.**

It is with heartfelt gratitude that I desire to make known what Christian Science has done for me. In July, 1900, I went east with my family to a quiet resort in Massachusetts, where I hoped to regain health of body and mind. After two years of terrible affliction, the passing away of father, brother, and two children, and numerous other troubles, the condition of my mind was almost beyond description. I had been East but two weeks when I became a very great sufferer from pains in my head and spine.

The best physicians were consulted and their medicines taken, but with no relief. In fact, my suffering increased until it seemed as though I would go mad. Surely such agony could not continue long. My nights were sleepless, and after a night of terrible suffering, I decided then and there that what little faith I had left in medicine had gone forever, and at sunrise I quietly stole out of the cottage and threw all the medicine I had into the lake, declaring that if I were ever cured it would be by some other power.

I had heard of Christian Science through a very dear friend, but had but little knowledge of it. However, I was determined to try it for myself as soon as possible.

As we were to return home in a few days, I was obliged to wait until then. The next morning early found me at the home of a Scientist who consented to take my case. According to *materia medica* I had a number of diseases, so that I did not anticipate quick relief, but after my first treatment I was able to sleep the greater part of the night. In one week the liver trouble was overcome. In about two weeks the trouble, for which a physician said nothing but an operation would bring relief, was gone, and in sixteen days I was relieved from all suffering in my head. Since that time I have had no return of those three diseases. With the healing came a knowledge and understanding of the Truth that makes us free. Words fail to express the love, peace, and joy that has filled both heart and mind. Grateful as I am for the physical benefits, it is but little compared to the spiritual gain. To know and feel that God is Love, and "God is All in all" and an ever-present help, is joy unspeakable. I wish to express my deepest gratitude to God and to our dear Leader, Mrs. Eddy, for her message of Truth to the world.—MRS. CLAIRE FAIRBANKS, Oak Park, Ill.

Wonderfully Helped by Reading Science and Health.

In India, nineteen years ago, I had a fall from my horse, so serious that I could not mount again, and my husband had to return for a conveyance to take me back to the hotel.

Whether from the fall, or from exposure to the broiling sun, I cannot say, but all these years I have suffered dreadful pains in my head, and have seen great specialists in Paris and here in London, but none gave me relief.

Three years ago I placed myself in the hands of a lady doctor. She had been a friend for twenty-two years, and consequently had a good knowledge of all I had gone through. Being such an intimate friend, she took me to a specialist of great fame and authority, and he at once said I had injured my spine, and there was no hope of recovery. For three years I had gradually lost the power of walking, and suffered great pain almost daily.

There are three old friends here to whom Dr. B.'s verdict of no hope for recovery was as much a shock as to me and my family. My husband, fearing some mistake had been made, begged me to get the opinion of two other specialists. I did so, and received the same verdict—"No

hope!" My doctor, Mrs. K., however, was not despondent, and she thought that with great care I might not get worse, but she also feared I would never be well again.

Last January I had a very severe attack of pain, and implored my doctor to give me a dose of morphine, but she refused as she always did. I got up that afternoon, and went to see a friend on a business matter. I cannot think how I had the energy to go out, I was suffering such dreadful pain in my head and body. My friend was quite shocked to see me looking so ill, and suggested as a distraction, as well as a comfort to me, that I should go with her to the Christian Science meeting. It was the first time I had heard of Christian Science. I went, and was so deeply interested in the testimonies that at the close of the meeting I bought the text-book, "Science and Health with Key to the Scriptures," and on my return home read until 3 A.M. To my great surprise I felt no pain, and fell asleep peacefully, a thing quite unknown to me for two years unless from the effect of a sleeping draught. For six whole weeks this freedom from pain continued, all by the help of my book. I felt like a new creature, and seemed to be in a wonderland. Truth indeed was having its healing effect, even though little understood.

After this I had some worry, and, I am sorry to say, neglected my book and Christian Science. A very severe attack of pain and a sleepless night made me send for a healer, who, after being with me for an hour, left me again well, and ever since I have been quite free.

Last week I had to go to Southampton to see my son off to India. We were kept nearly two hours on the quay in a bitterly cold east wind. I feared I should catch cold, and I did, and for three days was very ill with an internal chill. I got frightened again, but by the help of my healer, I recovered, and that same evening was quite myself again, and ate everything that my guests had for dinner. I mention this, as I know that a doctor would have kept me in bed on strict milk diet.

I give my testimony as a token of gratitude to my healer, who so unselfishly helped me, and to Mrs. Eddy, who has given to the world this precious revelation of Truth, which teaches us what God really is, and does for us.

MRS. HARRY WILLIAMS, London, Eng.

Daily Proofs of God's Care.

Each week we read in the *Sentinel* of wonderful demonstrations of the Truth, and they are of great interest to us all, but we seldom are told of cases of healing in or about Boston. I have felt for a time it would be well for some of us here to tell a few of the many wonderful things that almost daily come under our notice, as it would add to our good work if we make the effort to let the world near about us realize the fact that we are quite ready to testify as to the truth of our statements, and the information can be had near at hand. This fact will do much toward impressing our friends who are not in Science. We want them to realize that God's healing is here as well as far away.

I wish to tell of a case of healing in my own family. My son had been spending a few weeks in a logging camp in the northern part of Vermont, and being in the woods a whole day, the weather very cold although still early in November, he froze two toes on one foot, snow having worked into his boot. He remained in the camp a week, suffering greatly. At the end of that time he managed to get home. We realized that help must be had immediately as a surgeon would have amputated the large toe. We knew, however, that it could be saved.

We sent for a practitioner who came to the house twice, and the rest of the treatment was given absently. The circulation again started in both toes. The nails dropped

off but new ones seemed to crystallize, as it were, into form, instead of growing up from the quick as is usual. At the end of ten days my son put on his ordinary shoes, and went out of doors with no lameness whatever. During the days he was confined in the house, he sat with his foot up on a chair with a handkerchief laid over it. No material means were used. We waited with perfect faith, knowing that God would do His work. The healing was complete and far quicker than we had dared to hope for.

The small daily proofs of our Father's care and love are of priceless value. The feeling of the constant nearness of God is to me the greatest blessing that has ever come into my life.—GRACE S. ADAMS, West Newton, Mass.

Sight Restored.

My mother eighteen years ago was stricken instantly blind. After consulting one oculist after another of noted ability, in different parts of the United States, we decided to give Christian Science a trial. It was not yet known in our city,—Denver, Col.,—and we went to Chicago where a small band of devoted Scientists were at work. We selected a practitioner and began the treatment. My mother was not only blind but lame as well; she had not used her foot for fourteen months and had been blind eighteen months. The doctors had advised amputation of the foot, but we would not consent to it. We remained four months in Chicago devoting our time to the study of "Science and Health with Key to the Scriptures," and having daily treatment for the afflicted one.

At the end of three months, we were rewarded by "the light coming into the eyes," at she expressed it; and at the end of the fourth month, she was healed of blindness and lameness and had taken the first course in Christian Science under an authorized teacher.

After that time she devoted her life to the cause of Christian Science. The words of the Scripture, "Whereas I was blind, now I see," have been proven true in the physical as well as in the spiritual sense.

So many very rapid cures are given that I take pleasure in this testimony to encourage those who do not find the immediate results they are hoping to receive, and become discouraged. During these months, took place the unfolding of a Christian life from the old school to the new, from being unable to pray with understanding, to that understanding gained by Divine Science.

MINNIE B. HALL PERRY, Denver, Col.

The heart of a Christian Scientist goes out in daily thanksgiving for the great blessings which this wonderful Truth is ever bringing. We are indeed learning that God is an ever-present help in time of trouble, and are glad to tell of what Christian Science is doing for us.

Some time ago, I was crossing the continent with my younger brother and sister, who had been attending school in the West. We had a beautiful proof that God is everywhere and constantly cares for His children when they seek Him.

My brother was taken quite sick at Salt Lake City, and during the day which we spent there constantly grew worse. Our train was due to leave at eight o'clock; at half past six he seemed unable to raise his head. I found a Scientist and asked him to give my brother absent treatment, which he readily consented to do. The improvement was such that an hour later we could go to the station, and by half past eight every trace of the trouble was gone, so much so that he had a lively frolic with a small child in our car. This meant a good deal to me, as we were quite alone and hundreds of miles from friends.

K. D. G., Franklin, Pa.

Religious Items.

But God wants the people to have the light. You are not asked to subscribe to a mere set of formulae. Christianity is something eminently common-sense—something demanding reason on your part. There is a great deal of talk about Freethinkers, and I remember the time when, if you spoke of a man as a Freethinker, you simply condemned that man to annihilation, to utter destruction, to hell forever and ever. I am going to say that before a man can be a Christian he must be a Freethinker. It is not merely that you may think for yourself, but that you must think for yourself. It is impossible to conceive such an abnormality as a machine-made Christian—that is, if you have any common-sense about you. You cannot possibly understand, if you read your Bible, how a man can be made a Christian by machinery. Hundreds and thousands—ah, millions—of our fellow-men believe that strange and monstrous thing—that by virtue of certain words being said for you by another man you can be made an heir of God and a joint-heir with Christ; that without knowing personally anything for yourself of these matters, but by simply taking, as the callow nestling takes its food from its mother's beak, what this man has thought out for you or professes to have thought out for you, you become a Christian. But that kind of Christianity does not work a bit, it is not one atom of comfort to you.

The Watchman.

The Gospels are full of instruction concerning the kingdom of God, or, as it is frequently called, the kingdom of heaven; and this instruction is of a very wide and all-embracing nature, comprehending details of every description relating to that kingdom, thus enabling us to know what it is, and to prepare aright for entrance into it.

For example, it is likened to leavened meal, to hidden treasure, and to a net cast into the sea, to show how it is connected with the different planes of our lives. It is likened to leavened meal because it has to do with the purifying and nourishing of our wills. It is likened to hidden treasure, because it has to do with the enriching of our understanding. It is likened to a net cast into the sea, because it has to do with the way in which facts are drawn forth from the depths of the memory, influencing our deeds, so that the bad may be rejected and the good preserved. Then, when from good motives and correct thoughts, right actions follow, the kingdom of heaven acquires a firm foothold in human character; for "such as the will and thought are which produce a deed or work, such also is the deed or work. If the thought and will be good, the deeds and works are good; but if the thought and will be evil, the deeds and works are evil, although outwardly they may appear good."

The New-Church Messenger.

Ever since the beginning of recorded history, three personages have played important parts in the religious life of the human race. They are the king, the priest, and the prophet. Although these three exercise functions which vary almost infinitely in different times and places, they are really representative of three common forms of human need and experience. They differ in detail, but their offices are simple and easily comprehended. The king represents moral authority; he stands for the law; he is the earthly viceroy of the supreme lawgiver. The priest is the atoner, the one who stands between the lawgiver and the multitude of human beings who have broken the moral law, or, at least, who have not lived up to its requirements. The prophet is the messenger of truth, the revealer of the Divine Wisdom. He is the friend of the race, and the interpreter of the lawgiver, the Deity.

The Christian Register.

It has come to pass that the nations of the world have at last realized that greater than abundant stores of raw materials, greater than multitudes of men rated as military combatants, greater than important dynastic

connections, is the actual and potential value of educated citizens and bread-winners. To-day the sages, as they peer out into the century just begun, do not foresee wars of the old type, but wars of a new sort, rivalries that are to be economic, not dynastic nor military; and they promise victory to the nation that knows the most—the one whose wage-earners, professional men, and capitalists have the best education, the most personal initiative and freedom, the freest and least expensive transit from the playroom of the home to the schoolhouse, the college, the university, the technical school, the professional school, the arena of life. Mind, and not matter, is regnant in the diplomacy of the world to-day as well as in the schools of philosophy, and politics. Commerce and industry now pay homage to the man who knows.

The Congregationalist and Christian World.

An American scholar who has been a Christian student of social matters for more than thirty years has lately said that the test which this generation, rightly or wrongly, is applying to Christianity is the power of its adaptability to social problems. If Christianity be able to face the social situation with moral power and creative energy, then, rightly or wrongly, the verdict will be in its favor; if it fails to meet this test it will suffer, rightly or wrongly, an eclipse in favor of a theory, a doctrine, or a social life which shall exhibit sufficient energy to deal adequately with the social situation, and to ease "the social compunctions" which stir in the hearts of all our contemporaries.

JANE ADDAMS, in *The Independent*.

This poor lost world that has swung out into the cold and the dark doesn't know anything about the love of God, and if we do not love men with the same kind of love that Jesus had for this lost world we are not going to reach them. I wish we could rise to a higher plane of duty and let love be the motive power. How easy it is to work for God if the heart is filled with love! And if it is not filled with love let us pray God to fill it with love. What we want is to be baptized with the love of Christ for this world, and if we are full of love for the perishing, we are sure to succeed.—D. L. MOODY.

Earnest men inform me that they want religion and not rubbish on Sundays. They want the doctrine of the soul, the helpful instruction of the perfect man, Jesus Christ, for their spiritual uplifting. How much is the Church, through her authorized teachers, teaching to-day about sin and of him who alone can forgive sin. It is not fashionable in some places to preach about sin. It has been relegated to the attic as not up to date, because there are grave questions as to its origin and its eternal duration.

BISHOP LEONARD of Ohio.

That spiritual life and self-life are directly opposite each other, involves vastly more than we would at first imagine. This opposition between the service of God and mammon necessarily contains the truth that all goodness is from the Lord, and that self is nothing. Self-emptiness and divine fulness is the first meaning of the doctrine that we cannot serve God and mammon. For if man were in any sense the source of his own heavenly life, he could serve himself in the very act of serving his heavenly life.

New-Church Messenger.

In the present age some men think to broaden their ideas of religion by making a divine revelation equivalent to a human discovery or deduction. Others, more truly broad-minded, while they will not exclude or deny the function of the human mind and heart in feeling after God, if haply they may find Him, yet rejoice in that very process to behold the evidence of a God who is seeking to be discovered, and to that end is continually offering some new revelation of himself.—*The Church Standard.*

The following excerpt is from an editorial in *The Christian Advocate*: "The great need

of the Church of God to-day—in all its branches—is the reassertion, with holy fervor, from its pulpits of the profound spiritual essentials for which the Church stands; and the appropriation and enjoyment on the part of the people of the Church generally of those spiritual experiences which are guaranteed in the Scriptures to all who have been born again, and follow their Lord in sincerity and truth.

The *Evangelical Messenger* says: "Nothing is truer than that joy is strength. The joyful spirit is the strong spirit. Optimism is exhilarating. Pessimism is depressing. These are not merely points of view, but mental moods which reveal moral character and indicate spiritual status. But the soul which is filled with divine joy is also filled with divine strength. Divinely inspired joy is the loftiest mood of which we human beings are capable."

The *Universalist Leader* in an editorial says: "The number of those who are not fulfilling the apostolic injunction in 'working out' their own 'salvation' is beyond calculation in any religious census. This spiritual apathy of the multitude is to no small extent the result of erroneous views touching the conditions of salvation that the churches have taught and are still teaching."

It is said that Count Tolstoi is undesignedly becoming the leader of a religious revolution in his native land. Numerous societies have been formed secretly to study and diffuse the tenets of the Tolstoian doctrine.

RULES TO BE OBSERVED.

We request our co-workers throughout the Field carefully to observe the following rules in sending in their orders to the Publishing House:—

All orders for Journals, Sentinels, Quartermasters, Hymnals, Manuals, Bibles, "The Mother Church," "Communion Hymn," "Mother's Evening Prayer," tracts, pamphlets, personal cards and Church notices should be sent directly to The Christian Science Publishing Society.

All orders for the publications of our Leader, Rev. Mary Baker G. Eddy, should be sent directly to Mr. Joseph Armstrong, Publisher, 95 Falmouth Street.

Remittances for goods ordered from The Christian Science Publishing Society should be made payable to The Christian Science Publishing Society. Remittances for the publications of our Leader should be made payable to Joseph Armstrong. Remittances should always accompany orders, and should not be made payable in any case to the Editor or the Editorial Department.

Do not mix orders belonging to The Christian Science Publishing Society with those for the publications of our Leader, or vice versa.

Articles for publication and communications relating thereto, belong to the Editorial Department, and should be addressed to that department.

Full name and address should be given in each communication. Matter intended for publication cannot be used unless name and address are given.

We especially request our contributors to write plainly, and only on one side of the paper.

The Christian Science Publishing Society does not receive money for Church dues or per capita tax; this should, in all cases, be sent directly to the Treasurer, Mr. Stephen A. Chase, Box 56, Fall River, Mass.

The Clerk of the Mother Church, William B. Johnson, C.S.B., receives many letters of inquiry, etc., relative to matters not within his knowledge or line of duty. It is obvious that, with his onerous duties, he should be relieved of this. We bespeak for him but fair, brotherly consideration, when we request the Field to write to him only upon matters pertaining to his duties as Clerk of the Church.

We again ask that no money remittances whatever be made to the Editor or Editorial Department.

Works on Christian Science.

Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.

In one volume, 675 pp.

THE ORIGINAL, STANDARD, and only text-book on
CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each	\$3.18
Two to Twelve books to one address, each, prepaid . .	3.00
Twelve or more books to one address, each, prepaid . .	2.75
Full Sheep, stiff covers, Bible paper, marbled edges, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	6.00
Twelve or more to one address, each, prepaid	5.75
Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.	

MISCELLANEOUS WRITINGS.

A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid	\$2.25
Twelve or more books to one address, each, prepaid . .	2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid	4.00
Twelve or more to one address, each, prepaid	3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid	5.00
Twelve or more to one address, each, prepaid	4.75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.	
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.	

CHRIST AND CHRISTMAS.

An illustrated poem,
Single book, prepaid \$3.00
Twelve or more books to one address, each, prepaid . . 2.50

RETROSPECTION AND INTROSPECTION.

A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

PULPIT AND PRESS.

A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, \$1.06; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

UNITY OF GOOD.

It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen, all prepaid.

RUDIMENTAL DIVINE SCIENCE.

An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages: Leatherette covers, gilt top. Price by mail, 37 cents; \$3.00 per dozen, prepaid.

CHRISTIAN SCIENCE *versus* PANTHEISM.

The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, \$2.50.

MESSAGE TO THE MOTHER CHURCH.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Leatherette covers, deckle-edged. Price, 26 cents; per dozen, \$2.50, prepaid.

OUR LEADER'S MESSAGE.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Leatherette covers, deckle edges; 50 pp. Price, 50 cents; per dozen, \$4.50, prepaid.

NO AND YES.

A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; \$2.50 per dozen, prepaid.

CHRISTIAN HEALING.

A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; \$2.00 per doz., prepaid.

PEOPLE'S IDEA OF GOD.

A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; \$2.00 per doz., prepaid.

FEED MY SHEEP.

Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

Christian Science Bible Lessons.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

COMMUNION HYMN.

"Saw Ye My Saviour." Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; \$5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER.

A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, \$1.00 per copy, \$9.00 per dozen.

CHURCH MANUAL.

Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$5; twelve copies to one address, \$9.

THE CHRISTIAN SCIENCE HYMNAL.

Cloth, per copy, prepaid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, prepaid, \$1.40 each; per dozen, \$12; per half dozen, \$6.50. Full Morocco, \$2.50 each. Levant, \$3.50 each.

THE MOTHER CHURCH.

By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00

THE NEW WORLD, 1492, 1866, 1892.

A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE.

By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE.

72 pp. SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE. 63 pp.

MR. KIMBALL'S LECTURE.

Entered at the Boston, Mass., Post Office as second-class mail matter.

Items of Interest.

National.

The seventeenth annual report of the United States Civil Service Commission shows that during the past year 46,763 were examined, of whom 35,025 passed and 9,889 of these received appointments. During the past three years 27,316 have received their appointments through the examinations provided by the civil service rules, while for the period beginning July 16, 1883, the date when the civil service act became operative, and terminating June 30, 1900, a total of 78,791 persons have thus been appointed.

President McKinley has issued a proclamation inviting the nations of the world to participate in the exposition to be held at St. Louis in 1903 in celebration of the one hundredth anniversary of the Louisiana purchase. It is claimed that about thirty million will be expended on the exposition.

During the fiscal year just ended the coal exportations from the United States amounted to 7,676,149 tons, valued at \$22,317,496. The United States is now third in the list of coal exporting countries, the United Kingdom being first and Germany second.

Major-General MacArthur arrived at San Francisco on the army transport Sheridan, August 18. He says that the whole country is practically pacified but not tranquillized; however, it will not be many months before law and order are established everywhere.

Minister Conger arrived at Peking on Saturday, August 17. It is not known whether he will take up the Chinese negotiations or leave them in Mr. Rockhill's hands until the final signing of the protocol.

United States Judge Estee has decided that all Chinese born in the Hawaiian islands are American citizens, no matter under what government they were born.

There was a large attendance at the second annual convention of the National Army of Spanish War Veterans which met at Buffalo, N. Y., August 23.

Rear Admiral Schley will retire from the United States Navy October 10.

Foreign.

The butter of Denmark is considered superior to that of all other countries. It is shipped to all parts of the world and brings the highest prices. There are 1,713,735 cows in Denmark, 456 for every hundred acres of land and 756 for every thousand inhabitants. In 1900 the butter exported amounted to 124,623,211 pounds.

King Edward will erect an English memo-

rial to his sister, the late Dowager Empress Frederick of Germany. The memorial will probably be erected at Frogmore, where Queen Victoria and her consort, Prince Albert, are buried.

A Paris newspaper announces the invention of an instrument called the topophone, which registers sound too faint for human hearing, and which will enable navigators to determine the exact position of other vessels in a fog.

It is said that Germany has more trusts than any other country. There is hardly a branch of trade the members of which are not combined to regulate the prices and output.

In a dispatch dated August 8, Lord Kitchener stated that there are more than 13,500 Boers in the field and the employment of a large number of troops was still necessary.

A secret service fund is voted yearly by the English Parliament for the purpose of defeating conspiracies against the state. Last year £13,000 was paid to spies.

The Pan-Celtic Congress opened at Dublin, August 20. It created considerable interest in the maintenance of the ancient language and customs.

The first Parliament of King Edward VII. was prorogued August 17.

Industrial and Commercial.

The Rocky Mountain Telephone Company will build from its present eastern terminus, Billings, Mont., to Miles City, and the Northwestern Company will build from its North Dakota terminus to the same place. This will form a complete circuit via New York, Chicago, the Twin Cities, Helena, and Portland, from Boston to San Francisco and Los Angeles. This will be the longest line in direct communication in the world.

It is estimated that Canada furnishes forty per cent of the world's production of nickel. The ore is found near Sudbury in the province of Ontario, and covers a district of about forty by seventy miles in area. The ore is about three per cent nickel and contains considerable quantities of iron, sulphur, and copper.

It is estimated that the wheat crop of the great wheat importing area of northwestern Europe will amount to 396,000,000 bushels, while the amount needed is 664,000,000 bushels. America has 675,000,000 bushels, a surplus of 275,000,000 bushels, and will be able to meet the demand.

The Chicago Great Western expects to employ electric motive power for all its suburban service out of St. Paul for a distance of thirty miles. It has not been decided whether the overhead trolley or the third rail will be used.

Rather than comply with the demand for an eight hour day Senator Clark has shut down the United Verde copper mine, which earns a million dollars a month.

General.

A movement is on foot in the Actuarial Society of America to compile a new series of tables for the life insurance companies of America. It is expected that the new tables will reveal a decreased mortality among the people in this country.

One of the leading actuaries of New York City says that the tables which have just been completed by the British life assurance societies display such a complete change in the conditions of modern life that the American companies feel the need of a complete re-examination of the situation in this country.

Sir Thomas Lipton, owner of Shamrock II., arrived in New York, August 21, on the Teutonic. Fifty years ago, August 21, 1851, the yacht America won the first cup race.

The prize then was one thousand dollars. The race was sailed in British waters—around the Isle of Wight. It is said that Sir Thomas Lipton's two attempts to win the America's cup will have cost him nearly a million dollars by the time the present series of races are completed.

Lewis Elkins of Philadelphia, who was at the time of his death a member of the Board of Education, has left the bulk of his fortune, valued at \$2,000,000, in trust to create a fund for the benefit of disabled female teachers who have taught in the city's schools for twenty-five years and have no means of support. The beneficiaries of the fund are to receive an annuity of four hundred dollars.

The Evangelical Church at Industry, Kan., adopted a novel plan to liquidate a church debt. Last fall the pastor and a number of members rented forty acres of ground and sowed it with wheat. The yield was nine hundred and fifty bushels, one-third of which went for rent. The remainder was sold for enough to pay the three hundred and fifty dollar mortgage on the church.

A most important event of New Hampshire Old Home Week was the dedication of two granite monuments at Temple. One shaft is in honor of the twenty-nine men from Temple who took part in the battle of Bunker Hill and the other in honor of General James Miller, the hero of Lundy's Lane. It bears the memorable words, "I'll try, sir."

Six students from the Pei Yong College at Canton, China, have arrived at San Francisco and will enter the University of California to complete classical and scientific educations. They were selected by the Chinese Government to study modern American methods with a view to spreading them in their native land.

The general council of the American Bar Association, which assembled at Denver last week, has decided that women are ineligible for membership in the Association under the present constitution. It is possible that next year an amendment will be adopted which will admit them.

The attorney general of Indiana says that marriage licenses issued to non-residents are illegal, and the clerk, justice, or minister can be prosecuted in each case. The licenses must be issued in the county where the female resides to make it legal and the marriage binding.

About a month ago a movement was set on foot to present a loving cup to Admiral Cervera for his kindness to Lieutenant Hobson at Santiago. Commander Hobson endorses the scheme, and so does Secretary Long.

The Zadoc Long Memorial Library, which Hon. John D. Long built and filled with books for the town of Buckfield, Me., in memory of his father and mother, was dedicated August 17.

Brookline, Mass., claims to be the wealthiest town in the world. The total valuation for 1900 was \$77,952,900, and the tax rate is \$10.20 on \$1,000.

The American Bar Association has taken steps to secure a universal congress of jurists and lawyers at the St. Louis World's Fair in 1903.

The bi-centennial celebration of Yale College will be held in October. It is thought that all classes since 1840 will be represented.

The Patterson (N. J.), city government has passed an ordinance legalizing the practice of peaceful picketing around the mills.

The first union of Chicago retail clerks, composed exclusively of women, was organized August 19.

CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

Came back to the Old Home.

Notable Observance of the Day in Concord.

TUESDAY, August 20, was Concord's great day in New Hampshire's Old Home Week celebration. At eleven o'clock the literary exercises of the day were held at the State Fair grounds, where eloquent addresses were delivered by men prominent in politics and letters. The celebration closed with the most elaborate display of fireworks ever seen in the state.

Full and complete accounts of the exercises of the day, including the many addresses, were published in the Concord papers. We make the following extracts from *The People and Patriot*:—

The hand that penned that beautiful line, "How dear to my heart are the scenes of my childhood," must have been guided by a keen touch of Old Home Week sentiment, for never have words been more wisely or truthfully written; never has such truth or wisdom been more emphasized than during the three celebrations of this festival in the three years past.

When Frank West Rollins, one of the ablest, most enterprising, and most wide-awake men who ever occupied the gubernatorial chair, conceived the suggestion of a festival that should bring back to the Old Granite State,—famous in verse and song, and noted from one end of the country to the other for its beautiful and varied scenic attractions,—its wandering sons and daughters, he little dreamed that the suggestion would be so widely adopted, that the movement would become so popular in the short space of time that has intervened since he first promulgated it, and that the idea would be so quickly taken up and put into practical execution in other states. Governor Rollins placed his personal enthusiasm and tireless energy at the service of the movement, and this year he has the satisfaction of seeing more Old Home gatherings than in the two years past, and can lay back on his oars, so to speak, and watch the movement drift of its own accord to the winning goal.

The benefit that the state has derived from Old Home Week cannot be estimated in dollars and cents. New Hampshire has been advertised thereby as never before in its history. The old home call has entered every state of the Union, and thousands of those to whom the Old Granite State gave birth and nurtured in their infancy, nay, even in their youth and till they attained the state of manhood and womanhood, hastened back to its verdure-clad hills and its massive mountains, its beautiful green valleys, and its shimmering lakes, its babbling brooks, and its picturesque homes, to gaze once more on the scenes of their childhood, dearer to them far than anything else. It is easy to picture the thrill of pride and the joy of return that filled their breasts as they once more stood in paternal halls; renewed the acquaintances of years gone by; visited the familiar haunts of their younger days; and offered up thanks to their Maker for their birth in the Old Granite State.

His Honor Mayor Sargent called the assemblage to order and extended the greeting of the city, speaking in part as follows:—

Fellow Citizens, Ladies, and Gentlemen:—When

Governor Rollins issued his proclamation for the observance of Old Home Week, he could have scarcely foreseen or realized the extensive results which would follow such action. It was indeed one of those happy thoughts which need only to be suggested to be accepted by every one.

To-day we celebrate for the third time Old Home Day in the capital city. In the midst of our festivities we cannot help a feeling of disappointment that Governor Rollins is unable to be present and participate in our ceremonies, but we know that although far across the sea, he is with us to-day in spirit, and in heart and mind is joining with us in our festivities. I know that I express the sentiments of you all in wishing him and Mrs. Rollins an enjoyable trip and a safe return, reinvigorated in body and mind.

The Old Home idea seems to be growing, and bids fair to extend, indeed does extend, all over the country. The formation of state and local associations tend to make it a permanent affair, and it would not be strange if in the course of a few years Old Home Day will come to be as generally recognized as a day of celebration as Fourth of July and Thanksgiving.

While there is a grand sentiment underlying the whole idea, it is not by any means entirely a matter of sentiment. Material and permanent benefits have followed the interest awakened in local history. The evident determination to improve the home surroundings, the more hopeful view of existing conditions, the rehabilitation and renewal of old homesteads by returning sons and daughters—all have contributed to quicken the pulse of the people and spurred them to fresh efforts to achieve that happiness and prosperity, both temporal and spiritual, which is the goal of human endeavor.

I take great pleasure in presenting Hon. Charles R. Corning of this city as master of ceremonies, under whose direction the further services of this occasion will be conducted.

Judge Corning said:—

That man would indeed be rash who dared to venture it as his opinion that Old Home Week was merely a transient—a short-lived—institution.

While it is true that this is but the third year of its observance, the sources whence it springs are as old as human nature itself. This endearing festival is dedicated to the sweetest and most enduring sentiments of which we are capable. And for this reason alone Old Home anniversaries will go on gaining strength year after year until they become one of the fixed and most longed-for holidays in all our civic calendar.

In common with you all, I regret the absence of our genial ex-governor, whose heart I am sure beats responsive to this celebration, but with kindly appreciation he bethought himself of a distinguished guest—Winston Churchill.

Mr. Churchill spoke in part as follows:—

Last month I went out to the Buffalo exposition to make a speech at the dedication of the building which is devoted to the interests of the Louisiana Purchase. While there I was struck irresistibly with a fact that had indeed occurred to me before, but never with such force. Just one hundred years ago the site of that magnificent exposition was one of

many Indian battle grounds, and the city of Buffalo itself a collection of log cabins. To-day that exposition represents the power and wealth of a nation which is now unsurpassed in wealth and power. And this has all been done in the space of a single century,—as short a space in the life of a nation as is a decade in the life of a man. In that time the United States has grown up from the small confederation that stretched along the seaboard, and that nobody thought much about, to the country which we know and honor to-day.

The acquisition of the territory of Louisiana was the most momentous thing that ever happened to this nation. It was then that we began to grow.

The story of the conquest of that three thousand miles of wilderness is the most absorbing story in the history of the world. It is not merely a tale of battle and murder, of starvation and hardships of every kind. Other peoples have been able to conquer wildernesses. But it remained for the American to conquer this vast wilderness scientifically.

It seems a very curious thing—that which has happened almost in one generation. Some of you who are living in the town of Concord to-day can look back fifty years and remember how your own friends were leaving for the wild plains of Kansas to save that territory from the curse of slavery. Chicago was then a wooden village on a swamp beside Lake Michigan; San Francisco, the end of the world, was a collection of miners' huts, and the vast domain between them as much of a desert as were Germany and Gaul in the time of the Cæsars. Yet how much greater than Germany and Gaul.

But what I particularly wish to dwell upon here is not the story, wonderful enough, of the emigration and settlement of the West, but the fact that within fifty years these people—your people—have done their work and are coming back. What is more wonderful still, they are coming back here to settle again where their fathers were born and brought up, and in many cases where they themselves were born. Some of them are here at your Old Home Day this afternoon. And this movement may be called the backward wave—the backward wave of emigration. That swift and restless tide had swept westward until it has reached the western ocean and is now coming back again.

Hon. N. J. Batchelder said:—

I appreciate the honor of representing the New Hampshire Old Home Week Association upon this notable occasion, an honor that would be worthily bestowed upon another, were he not in a distant part of the world. The occasion is graced by the presence of men and women distinguished in business, literary, professional, or political life. It is worthy of your attention and you honor it by your presence. Old Home Week has established itself within two years in the hearts of New Hampshire people as was never known in any previous matter, as evidenced in celebrations in over one hundred towns the present week. From the lighting of the first bonfire last Saturday evening to the departure of the last guest at the close of the week, it will be a happy, jolly time from Coos to the sea.

The observance of Old Home Week adds to the religious life of the state. I do not wish to appear to pose as an expert on religious matters, but venture to express the opinion that the old-time long sermons, long prayers, and long faces on Sunday as evidence of Christianity have been superseded by a more practical and reasonable evidence of the faith within us every day in the week. Many agencies unknown half a century ago, are at work in our state and nation to-day, and wielding a powerful influence for good. People cannot engage in Old Home Week observance or listen to sentiments expressed on these occasions without being better men and women in the truest sense of the term. We believe much sectional strife and personal animosities existing between people residing in different sections of the towns have been obliterated by joining hands in Old Home Week

observance, and if this cannot be called a religious action it is something very akin to it.

It is with sincere pleasure that I present Judge Alvah K. Potter of Lockport, New York.

Mr. Potter's address was in part as follows:—

Mr. President, Friends and Fellow Citizens:—My residence is in the state of New York; my home is in this Granite State. Business interests bind me for the present to the place where I reside, but my heart abides in the place where it began to beat, among the rocky hills, the verdant valleys, and the "babbling brooks that make the meadows green" in old New Hampshire.

This love of home is the noblest sentiment we possess. It involves the holy ties of kinship, the never-dying love of mother and father, and the only lesser fondness of his sister and brother and friends. It is the very mainspring of patriotism. We fight the battles of our country that we may preserve our homes and the rights and pleasures which centre there.

He who is so unfortunate as not to possess this feeling is a mere wanderer upon the earth. No tie is strong enough to hold his fidelity to any person or place. He has no home; he has no country. He seeks in vain for a place where he may with contentment rest his head or a friend who can cheer his lonely heart.

Mr. President, the inauguration of Old Home Week was an act of patriotism. May it be observed by all future generations.

Prompt Postal Service.

In one feature of the public service the British are far ahead of us, and that is their mail deliveries. From any point in London a man can write a letter in the morning and get an answer the same day, and if not too far off he can do the same in the country, depending, of course, upon the promptness of the person to whom the letter is addressed. This rule will apply anywhere within one hundred miles of the Bank of England. There are hourly collections and hourly deliveries in all parts of the city, the business as well as the residence quarters. The average number of deliveries in cities of over ten thousand inhabitants is fourteen a day.

There is a letter box at every corner. A person mailing a note at nine o'clock is sure to have it collected before ten in the morning and delivered at its destination anywhere within the limits of London before twelve, and if the reply is posted before one he will receive it within three or four hours at the farthest. This quick postal service has been a great obstacle in the way of telephones. There are probably fewer telephones in London when compared to the population than in any city of the United States. Many people do their marketing by post. My lady makes out her list between eight and nine o'clock, writes it on a postal card to her butcher, baker, or grocer, and the goods are delivered before noon.

The parcel post deliveries are quite as prompt, the rate of postage is low, and the service is extensively used by merchants for small packages. London is so large that the ordinary delivery by wagons would be slow and expensive. Hence a merchant finds it cheaper and more convenient to pay the postage, and there is a basket in every shop to receive parcels intended for the mail. Boys weigh them and put on the stamps, take them to the nearest box or postal station at frequent intervals, and they are always delivered the same day, and often before the purchaser reaches home. If you go into a book store and buy a magazine or an illustrated paper it is customary to request its delivery. The clerk writes your address upon a wrapper and passes it over to a lad, who wraps it, puts on the stamp, takes it to the mail box at the next corner, and within an hour it is on its way to your house.

Selected Articles.

Christian Science and Absent Treatment.

Editor of *The Macon Telegraph*.

In a comparatively recent issue of the *Telegraph* you have an editorial on "absent treatment" in which you quote from the *Philadelphia Record* to the effect that "absent treatment is an invention of Christian Science," and that it may be used to injure as well as benefit, "since it can work in silence as well as at a distance."

The recognition that good thoughts, the prayer of faith and love, bless and heal both those who pray and those who are prayed for, seems to have been as ancient as God's revelation of Himself to man, and man's first glimpses of God as a good Mind or as a beneficent Spirit. As early as God was even vaguely apprehended as infinite Intelligence, omniscient Good, or as omnipresent Spirit instead of a material, corporeal, finite object or person, it inevitably followed that the answer of prayer would depend upon a right understanding of God and a right mental or spiritual attitude toward His ethical nature and character, and not upon the physical presence or absence of the object of one's prayer. When "Abraham prayed unto God: and God healed Abimelech, and his wife, and his maidservants;" and when "Moses cried unto the Lord, saying, Heal her now, O God, I beseech thee," their prayers were made to a God who was recognized as being able to hear and answer prayer independently of the physical locality of the person praying or the person prayed for.

Jesus, who made the healing of disease a significant part of his ministry, healed by absent treatment as well as present treatment, as God, the infinite Spirit or omniscient Mind, in whose name and by whose power, wisdom, and love he did these mighty works, is not limited by any material law or by any human sense of space or locality.

The belief that an evil mind or spirit has power to deceive, to pervert, and to cause sin and suffering, is as ancient as the ancient of days. It tempted Adam and Eve to seek to know evil as well as God, Good, when their whole duty was to know and live the Good and only the Good; and so the loquacious serpent practised in Eden "the black art" of "evil mental suggestion." Job recognized the injury of an evil desire expressed in a wrong word when he said, "neither have I suffered my mouth to sin by wishing a curse to his soul." The Psalmist also recognized the evil of wrong thoughts when he said, "Every day they wrest my words; and their thoughts are against me for evil," which is the counterfeit of God's way: "He sent his word, and healed them, and delivered them from their destructions." Jesus felt the thoughts of those who opposed and hated him as well as those who sought his healing and redemptive love, and he sometimes failed to do many wonderful works on account of the unbelief or wrong thoughts of others.

In Christian Science, the healing work is done both by present and absent treatment; the present treatment being the prayer of faith and understanding that is made in the presence of the person healed, and the absent treatment being the prayer that is made for one who is not physically present at the time he is prayed for and healed. In fact, Christian Scientists recognize that their problem is to be present in spirit and in truth with God,—omnipotent, omnipresent, and omniscient Good, Mind, Spirit, Life, Truth, Love, who forgiveth all our iniquities and who healeth all our diseases.

Christian Science does not recognize the human, carnal, or mortal mind as a healing agent; and it has nothing in common with any form of hypnotism, mesmerism, or human will power. One of the fundamental postulates of Christian Science is that the carnal or the mortal mind makes sick, and that there is and can be no genuine mental healing except through the understanding and the reflection of the

divine Mind, or the spiritual Mind of love, peace, goodness, purity, and harmony that was in Christ Jesus.

In fact, the problem of Christian Science is to overcome, in the Christ-way the carnal or mortal mind and all its beliefs, matter, sin, disease, and death; and Christian Scientists, to the degree that they carry out the spirit and letter of their Science, apply the Golden Rule to their thoughts as well as to their deeds. They, therefore, pray for others and think of others as they would have others pray for and think of them, and they never enter into the sacred precincts of another's mentality uninvited, and only then to bless, to heal, to comfort, to make better and more Christly.

J. R. MOSLEY.

P. S. I also find in a recent issue of the *Telegraph* a news article on Christian Science and its risks to life insurance companies. In answer to the article, I quote the following from the *Christian Science Sentinel* of June 27, 1901, which was copied from the *Chicago Daily News*:—

Owing to a report that certain life insurance companies are discussing the advisability of discriminating against Christian Scientists, the *Chicago Daily News* recently interviewed the local insurance men as to their personal views on the question. We make the following extracts from the published report of the investigation.

J. W. Jackson, general manager of the Home Life Insurance company, said:—

"This company has taken no steps in regard to the question. We proceed on the theory that self-preservation is the first and most powerful law of nature, and we believe that if a man has the sense to get his life insured he certainly has enough sense to take care of his life. It is a self-evident proposition that people generally have such an interest in their own lives as will induce them to adopt the most effective measures for their own preservation, and I think the life insurance business may be safely conducted on that theory."

J. D. James, general agent of the Prudential Insurance Company, said:—

"I am not a Christian Scientist, but I have been brought up against so many physical demonstrations of its workings in the cases of relatives and personal friends that I have the highest respect for the belief, and I will say that I will write a Christian Scientist every time I get a chance. Instead of being bad risks, they are good risks, if for no other reason than that their habits are correct. I have never seen a follower of the belief who had any vicious habits. I have never seen one who used tobacco or liquor. Of course, the life insurance companies will consider this question purely as one of business. The objection to writing such persons is based on the assumption that by refusing medical aid they hazard their chances of living out the natural span of life, and that the death rate is greater among them than among those who use medicine. The result of my own observation is precisely the contrary. Some of my relatives and several of my friends who have been given up to die by the doctors—some of them two years ago—are to-day sound and well as the result of Christian Science treatment. I have seen the changes in them myself, and I tell you it was marvelous."—*The Macon (Ga.) Telegraph*.

Mr. Hering to Rev. Crawford-Frost.

To the Editor of the *American*.

In your issue of to-day (August 12) you publish a report of a sermon delivered yesterday by the Rev. Crawford-Frost, in the Church of the Holy Comforter, in which the reverend gentleman is quoted as saying:—

"Nowadays the claims of Christian Scientists, spiritualistic mediums, and theosophists bring St. Paul's ideas before us with renewed interest. The first thing to do with all such claimants is to apply St. Paul's test: Do they believe in the divinity of Christ? If they do not we should be careful about accepting their views on other points of doctrine."

To answer this question authoritatively I quote the reply made by Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science and Leader of the denomination, to a direct question put to her by the editor of the *New York Evening Journal*, and published in the issue of that paper of May 16, 1901, as follows:—

Concord, N. H., May 16.

To the Editor *Evening Journal*.

I do not deny, but definitely believe in, the Divinity of Christ.

In the tenets of the Mother Church of Christ, Scientist, Boston, and in Science and Health, of which I am the author, you will find declaration of the Divinity of Christ and Oneness of the Christ.

MARY BAKER EDDY.

In her famous and widely-published message to her church on the occasion of the Annual Communion last June, Mrs. Eddy discussed very thoroughly many of the teachings of Christian Science which have been commonly misunderstood and much misrepresented lately. I quote two sentences from the chapter, "Christ is One and Divine:—"

"Again I reiterate this cardinal point: There is but one Christ, and Christ is Divine—the Holy Ghost, or spiritual idea of the divine Principle, Love.

"The spirit of Life is divine Love, and Truth, and Christ Jesus possessed it, practised it, and taught his followers to do likewise; it is the spirit of God made manifest in the flesh, healing and saving men—the Christ Comforter, which taketh away the sins of the world; and yet this Christ is rejected of men!"

I hope this will answer the query at least partially; a fuller understanding of this subject can only be gained by a close study of the writings.

As Rev. Crawford-Frost classes "Christian Scientists, spiritualistic mediums, and theosophists" together, I desire to say that Christian Science is the exact opposite of both Spiritualism and Theosophy, and has nothing whatever in common with either of them, as any one may learn upon investigation. Christian Science is the practical application of primitive Christianity, the teachings of Christ Jesus on a scientific basis; that is, on a basis of demonstrable truth. It reveals the "mystery of iniquity," and the "mystery of godliness," thus separating the tares from the wheat and enabling its followers to receive the fulfilment of Jesus' promise: "If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free."

Rev. Crawford-Frost suggests that St. Paul's test should be applied. Why not also the test Jesus gave? "And these signs shall follow them that believe; in my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

HERMANN S. HERING.

In the *Baltimore American*.

The Municipal Flag.

At the last meeting of the city government, a letter was read from ex-Governor Frank W. Rollins urging the city fathers to adopt a municipal flag. This idea has been talked of in other cities, and such a flag has been adopted in many foreign and a few cities in this country.

In his letter, Governor Rollins says: "Let us adopt a flag, with a suitable emblem or device, which shall wave over our city building side by side with the Stars and Stripes, and which shall, whenever seen, mean Concord with a big C. If we send away a delegation—whether it be of the city fathers, or our police, or firemen, or our veteran firemen, or our own high school athletes, or a baseball club, or a golf team, let it be accompanied by our municipal flag, and let

our representatives do their best for our lovely city, inspired by its presence, and bring it back triumphantly."

His idea of such a flag he further gives and states in his letter. "The body of the flag to be made of three perpendicular bands, green, white, and red, of equal width; the green to represent our lovely scenery, the white to represent the peace for which our name, 'Concord,' stands, and the red to show that, if need be, we are ready to spend our hearts' blood in defence of our firesides. Upon the middle or white stripe, I would have a single golden star, representing the Capital city, and below it two crossed hammers indicating our principal industry (the stone business), while beneath the hammers or over the star I would have a quill pen, denoting that Concord is the home of learning and education, which it is and always has been.

"This may be improved upon, but I hope the general plan will be adopted. As to the size, the one for the city building should be about the size of the state flag, but smaller ones could be made for other purposes."

The letter was referred to the committee on public instruction.

Alderman Justin E. Robinson has on exhibition in the window of W. S. Baker's tailoring establishment a sketch of a flag such as Governor Rollins suggests.

Concord Evening Monitor.

Harvesting on the Rev. Mary Baker Eddy Place.

FEW of the many visitors to Concord, who enjoy so much the charming drive cut to Pleasant View, with its macadamized road, well-kept lawns, flowers, and shrubbery, imagine that the Rev. Mary Baker Eddy has one of the best-equipped model farms in New England. This is under the careful management of Mr. August Mann, and it would well pay any one interested in agriculture to look over Pleasant View's farm machinery and pattern after its methods. One of the latest acquisitions is an Adriance Rear Discharge Reaper and Binder, working in the twenty-acre field of rye, which handles the six-foot grain with perfect ease, though badly lodged in places. It is a great favorite with the farmer. The large grass crop at Pleasant View is handled by a six-foot Adriance Buckeye Mower and New Yorker Rakes, and while the territory mowed over is not so large, the crops are very heavy. They have a full equipment of plowing and pulverizing machinery, including New Yorker Disk and Loam Smoothing Harrows. One should not forget the dairy at Pleasant View. It is fully supplied with cream separators, churns, and butter workers of the latest improved patterns, in fact, every department of the estate of the modest owner is looked after with great care.

Adjoining Pleasant View on the south is what was known as the old trotting park, but was last fall purchased by the Concord State Fair Association, and under their careful management has been converted into one of the most picturesque and attractive fair grounds in the East, and with the outside decorations donated by Mrs. Eddy for the commodious buildings, adds to the fine landscape from the rightly named Pleasant View.—*Concord Monitor*.

Old Home Week at Bow, N. H.

THE citizens of Bow started the twentieth century Old Home week celebration with one of the largest bonfires in the state on Pleasant View hill—named on the first eve of Old Home week, 1901, in honor of the Rev. Mary Baker G. Eddy, being close to her birthplace. The attendance was very large, people from Norfolk, Va., New York, Boston and its suburbs, Concord, and citizens of Bow. A large number came in carriages. At ten o'clock a vocal concert was rendered by colored persons from the South, and others assisted. The programme concluded with an old-fashioned sweet corn roast, which was enjoyed by all.

People and Patriot.

My Thought of God.

BY WILLIAM CROFTS.

God is my Life, and God is good,
And in His goodness I'll rejoice;
His care supplies my daily food,
He guides me with His loving voice;
And day by day my way I'll wend
To Him, my Father and my Friend.

God is my Mind, and God is pure;
So all my thoughts shall stainless be;
His promise stands forever sure:
The pure in heart their God shall see;
And blest are they who thus behold
The Truth of Life and Love unfold.

God is my Rest. He gives me peace
Though tempests rage both fierce and loud;
Full soon I know the storm will cease,
His bow of promise spans the cloud.
The Light of Love shines through my tears
And calms and dissipates my fears.

God is my Strength and God my Song,
Upholding, cheering all my way,
What though the path be dark and long,
His arm is still my strength and stay.
My cruel foes shall all depart,
"Songs of deliverance" make glad my heart.

God is my Hope; in Him I'll trust,
Nor be afraid, whate'er befall;
This mortal frame is "dust to dust,"
But God, I know, is All-in-all;
And trusting in His wondrous Love
I "more than conqueror" shall prove.

God is my Health. His Love renews
From day to day my failing power;
Nor scorching sun, nor chilly dews,
Nor noontide blaze, nor midnight hour,
Can hurt or harm me while I cling
To God, my Life, my Health, my King.

God is my Light. When I was blind
To Life and Love He gave me sight;
He shone into my darkened mind;
He blessed my soul with heavenly light;
And walking in the Light of Love
His grace and goodness constant prove.

God is my All. I fain would know
Nothing but Him,—Life, Truth, and Love,—
And strive to make my life below
Shine with His radiance from above;
That I, in deed, and word, and thought,
May love and serve Him as I ought.

Love for Success.

A generation ago Russell Sage was a leading figure in financial affairs in New York as he is to-day. He was an associate of Jay Gould and Cornelius Vanderbilt, the grandfather of the young Cornelius who surrendered a fortune to marry the girl he loved, and who is pluckily winning his way to the front as a practical railroad man. His former associates have long gone, but at eighty-five Mr. Sage still attends to business as closely as ever. In explanation of this he makes a statement which is probably true of many other successful business men besides himself: "I do not care for money as money. I am not avaricious. I enjoy my work,

and like to be successful." It is impossible to believe that many of the multi-millionaires are continuing to work merely to make more money. They already have far more than they can get any benefit from. But they want to be successful. They keep on working hard and put all their power into their schemes for the same reason that other men spend every energy in their trained bodies to drive a football past the goal or bring their boat first over the line. They want to be successful.—*The Watchman*.

Notices.**Our Leader's Message.**

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901, is now ready for distribution. Leatherette covers, deckled edges; 50 pages. Price, 50 cents; per dozen, \$4.50, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

Applications for Membership.

Applications for membership with the Mother Church, to be acted upon at the meeting held in November for the admission of members, must be in the hands of the Clerk by the 15th of October. Inviters of applicants will greatly assist the Clerk if they will send the applications as early as possible.

Mr. Farlow's Address.

After September 1, the office of Alfred Farlow, C.S.D., Publication Committee of The First Church of Christ, Scientist, in Boston, Mass., will be located in Huntington Chambers.

New Edition of the Manual.

The twenty-second edition of the Church Manual containing the names of the members admitted in June, 1901, is now ready for delivery. Send all orders to The Christian Science Publishing Society, 95 Falmouth St.

Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* take note of the label on the cover of the last number received. If this reads Sept. '01, it means that you have received the last number for which you have paid, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for October, November, and December.

Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

We ask that no money remittances whatever be made to the Editor or Editorial Department.

Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass.

Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Editorial

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Reforms and Reformers.

SOLOMON said, "There is no new thing under the sun." This truism might well be applied to all who have appeared in the world as the originators and leaders of religious movements. Looking back upon the history of the religious world we find that no departure from conventional religion, no matter what its form or origin, whether Pagan, Judaic, Mohammedan, or what not, has ever escaped criticism, anathematism, misrepresentation, misconception, and consequent persecution.

A careful study of this phase of history also shows that the greater the religious reformation the more violent the opposition. This is inevitably so, for the more radical the change the more conventional predilections are interfered with and stirred.

The greatest stir which ever took place in the religious world of the past was that which marked the advent of the Christian era. It aroused every form of opposition of which the mortal mind of that time was capable. It was opposed as being hostile to every existing religious system of that time. Paganism opposed it because it was anti-Pagan. Judaism opposed it because it was thought to be anti-Judaistic. The secularism of the time opposed it because it was thought to conflict with secular affairs. The manufacturers of idols opposed it because it interfered with their craft, and threatened them financially. The people opposed it because they feared it would take away their idols, and idol worshippers could conceive of nothing that would take the place of their long-cherished gods of wood and stone. The priesthood opposed it because they believed it contrary to the true religion, inimical to the hoary "traditions of the elders," and dangerous to their profession. The wizards, soothsayers, sorcerers, and necromancers opposed it because they plainly foresaw that if its claims were true and it became established, their false pretences would be exposed and their occupation gone. The lawyers—the scribes and Pharisees—opposed it because they saw no good in it. They had their long-settled opinions as to what was good, and the kind of good Christianity was inculcating and showing forth was not the kind of good they loved. It did not meet their views nor suit their purposes, therefore they thought it bad.

There have been many repetitions, in relative degree, of this history of early Christianity. The great German Reformation was opposed with a bitterness scarcely less intense than that which resisted early Christianity. The Wesleyan departure from the established Church was attended with a similar spirit; and so with every sect that has been set up. In greater or less degree it has shared the fate of its predecessors.

A study of religious history discloses also another fact, namely, that the personal founders of religious movements, reforms, and sects, have been opposed, misunderstood, maligned, and persecuted not less, but often more, than their systems. Jesus' opposers believed that if he could be gotten rid of his system would fail. Luther's opposers thought that if Luther could be gotten out of the way, either by death or imprisonment, the Reformation would die. So with Wes-

ley's opposers and those of all other originators of sects and reforms.

The opposition, in every instance, was really against the principles involved. The attempt to remove the person was wholly incidental to the desire of extinguishing the principles. The spirit of blind opposition flattered itself that the getting rid of personality was the destruction of Principle.

Jesus' method of healing sickness and destroying sin was obnoxious to prevailing methods, therefore it must cease. Remove the personal Jesus and the Principle he demonstrated would become extinct. Remove the personal Luther and the spirit of the Reformation would die. Expatriate Wesley, or malign and ridicule him into silence, and Methodism would disappear, and opposition to the established Church expire with its chief exponent. So reasoned the opposition.

Was the reasoning sound? Was the action wise? The reasoning was fallacious, therefore the action failed in every instance. Christianity was established, the Reformation succeeded, Wesleyanism became a fact and force in the religious world.

What of the lives and characters of the persons who founded the reforms? Were they not consistent with the reforms? Was not the pure and holy Nazarene the fit representative of the Father who sent him? Would he otherwise have been sent? Could he otherwise have reflected to humanity the divine character of the Father? Could Luther have established the Reformation if he had not possessed the heart and soul of a reformer? Could Wesley have founded Methodism had he not possessed a nature and a character which enabled him to do so?

If what we have briefly outlined is true of the past, it is true of the present. The same spirit that opposed religious change and reformation in the past would oppose it now. The same false reasoning and consequent unwise action that prevailed then, seeks to assert itself now. But now, as then, false reasoning is impotent.

American Baptist Flag.

THE above is the name of a weekly denominational newspaper published in Fulton, Ky., and St. Louis, Mo. As its name indicates, it is of the Baptist persuasion. Its editor is evidently not friendly to Christian Science, and does not have an exalted opinion of Christian Scientists, as appears from the following editorial squib in a recent number:—

"Christian Science orators claim about one million converts to that religion, but as a matter of fact there are only forty or fifty thousand of them, and these are mostly hysterical women and disappointed and disgruntled politicians, and apostate church members."

If it were true that even fifty thousand Christian Scientists were "mostly hysterical women and disappointed and disgruntled politicians, and apostate church members," we would ask our editorial friend if he objects to Christian Science coming to the rescue of this hysterical, disgruntled, and apostate army of his fellow-citizens, and endeavoring to do for them what manifestly the system of which he is a representative, and correlative systems, have been unable to do? or does he not think them worth saving?

He should remember that Jesus came not to save the righteous, but sinners. It may be that hysterical women, disgruntled politicians, and apostate church members were sinners. If so, according to Jesus' saying, they should be saved, whatever view our editorial friend may take. He might read with profit some of the things Jesus said relative to self-righteous people. These, for instance, from Matthew 7: "Judge not, that ye be not judged. . . . Thou hypocrite, first cast out the beam out of thine own eye; and then shalt thou see clearly to cast out the mote out of thy brother's eye;" and this from the twenty-third chapter: "But woe unto you scribes and Pharisees, hypocrites! for ye shut up the kingdom of heaven against men: for ye neither go in

yourselves, neither suffer ye them that are entering to go in."

Our friend thus concludes his editorial squib: "Sensible people have to play the fool in order to believe the foolishness and nonsense of Christian Science."

We fear our friend's logic is a little mixed. Sensible people never play the fool. Wisdom does not become foolishness, and foolishness never becomes wisdom. This is impossible.

We recommend to our friend among many others, these sayings from Proverbs: "He that is void of wisdom despiseth his neighbor: but a man of understanding holdeth his peace. . . . He that hideth hatred with lying lips, and he that uttereth a slander, is a fool."

It would seem that our friend is bitterly opposed to any other kind of healing than the strictly orthodox-material, for in another editorial squib on the same page he thus anathematizes all extra-medicine healing: "The *Flag* believes this whole divine-healing business is a work of the devil, a fraud of the first water, and deserves special exposure."

We trust the day will come when our friend will hoist a more liberal *Flag*; his present one is surely not an American *Flag*—that stands for liberty and truth, not for bigotry and falsehood.

Christian Science.

UNDER the above caption the *Daily Mail* of London, England, has recently published a series of three interesting articles by the Earl of Dunmore, which we herewith gladly republish.

The fact that this great daily newspaper has given so much space to the subject of Christian Science is additional evidence of the interest it has awakened in Europe, while Lord Dunmore's able and dignified presentation of the subject reflects credit alike upon the authorship of the articles and the newspaper publishing the same.

EDITORIAL INTRODUCTION.

The following introductory remarks were made by the editor of the *Mail*:—

The rapidly extending influence of Christian Science—that extraordinary religious movement which has swept like a wave over the great northern continent of America—makes it a subject of pressing interest. In the United States its adherents number over a million, and in England it is enrolling recruits every day in all classes of society.

So phenomenal is its progress that we cannot refuse to take account of it. With this view, we have asked the Earl of Dunmore—a great traveller and man of affairs, who is among the most distinguished of the English adherents of the new creed—to explain what it is and why he believes in it. Lord Dunmore has written the following article in reply, the second and third parts of which will appear tomorrow and on Wednesday respectively.

We give Lord Dunmore's articles in the order of their publication.

ITS GROWTH AND PROGRESS.

There never has been a period within the history of mankind when religious thought has been so sedulously employed as at the present time, when many deep thinking men and women are earnestly striving to solve some of those religious problems that have for so many generations baffled human intelligence.

We live in an age of progress, when new theories are being constantly evolved and fresh conclusions deduced, in an age when the spiritual activity of the human race is making itself earnestly felt in the anxious research into the real Truth of Being and its many accompanying propositions.

With Christianity in the abstract we have all been familiar since the days of our childhood, but with Christianity as a demonstrable science, and as it has been defined by Christian Science teaching, many are not familiar.

The truth about any doctrine is always more or less of an interesting subject to reflect upon, but the truth concerning this great scientific proposition which is now engrossing so much public attention cannot fail to be of interest to the public generally, and perhaps to some of those who may read these lines.

Free investigation into the working of Christian Science as into the working of any other religious organization is the recognized right of every man and woman in this country, where freedom of thought obtains, for no one can be expected to accept any doctrine before it has been duly explained to him in such a comprehensive manner as to reach his higher intelligence.

Let us then commence with the dissection of its title, and I will then proceed later on to endeavor to show a valid justification for the existence of Christian Science under that particular appellation.

The proper definition of the word Science is "knowledge reduced to a system," or, as Webster has it in his dictionary, "ascertained truth;" and the universally accepted definition of the term Christian is "one that believes in and is a follower of Christ."

The primary object of every Christian Scientist is to endeavor to gain a spiritual insight into the knowledge of those laws and principles which relate to Christ and to his teaching as we find them in the Scriptures, and to so order their lives as to act up to these principles.

ITS DISCOVERY.

It is but a short five-and-thirty years ago since the revelation of Christian Science came to Mary Baker Eddy, a gentle, pious, unassuming Christian woman, who (to quote the words of an eminent exponent of Christian Science), "after a life and experience that fitted her in the highest degree for so grand a ministry, stood out far in advance of the common frontage of human mentality, and announced the discovery or revelation of that Science of Life which she afterwards named Christian Science."

During the course of the thirty-five years since the discovery of the Science of Metaphysical Healing from sin and from sickness, countless benefits have accrued to the human race: sinners have been reclaimed, habitual drunkards have turned from intoxicants and have regained not only their health but their self-respect, the sick have been healed of every conceivable disease, lunatics have regained their sanity, and one law after another that constituted the illusory bondage of mortal mind has been broken in the name of the Son of God.

Christian Science can count to-day among its followers in both hemispheres professional men and women of the highest class, scholarly ecclesiastics, students of both sexes with brilliant university records, officers of high scientific attainments in both services, statesmen, judges, lawyers, philosophers, and doctors.

Such has been the rapidity of the growth of this science that, notwithstanding the comparatively short time that has elapsed since its foundation, its adherents number considerably over a million persons, and there have been organized in America, Canada, Australia, England, France, and Germany nearly five hundred Christian Science churches and over one hundred training institutes. Some thousands of persons are doing noble work among the sick, while, as for those latter who have been benefited by the practice of this Science, it was authoritatively stated at the World's Congress of Religions, as long ago as 1894, that more than a million cases of disease had been healed by Christian Science up to that date, and that many of these cases had been previously pronounced incurable by the doctors.

NOT A NEW RELIGION.

So much for the growth and progress of this science, whose milder opponents term it "The New Religion," "The New Faith Cure," little knowing that, so far from its being a new religion, it is in reality the oldest Christian religion in the world, inasmuch as it is a clear and intelligible apprehension of the religion of Christ, the rules of which were laid down nearly two thousand years ago by the Master himself.

Christian Science has no connection in any way with what is called the "Faith Cure," because it is not through blind faith in a personal God that the curative work is accomplished, but through the understanding and realization of two of the main axioms of Christian Science—namely, first, that there is but one Mind (God), and that Mind governs all; secondly, that man being God's spiritual idea is the reflection of his divine Father (God).

CHRISTIAN SCIENCE TEXT-BOOK.

This volume, which is the only recognized Christian Science text-book, was given to the world by Mary Baker Eddy, the Discoverer and Founder of Christian Science. It is entitled "Science and Health with Key to the Scriptures," and if any proof were required to show the interest the world has evinced in its publication, it will be found in the fact that the work has already reached its 203rd edition of one thousand copies per edition.

I think that, on careful investigation, it would be found that ninety-nine people out of a hundred who refuse to accept the doctrines laid down in this book do so not from any real conviction that those doctrines are erroneous, but simply because the teaching fails to agree with the preconceived notions with which they have been brought up from their childhood, and also because they differ from the old hard and fast ritual that forms the foundation of their religious education, and did that of their fathers before them. And yet I venture to think that if a man took every one of these same ninety-and-nine people and questioned each one separately as to his or her own individual religious beliefs and Christian professions, he would find in all probability that no two out of these ninety-and-nine persons hold the same religious opinions.

WHAT IT IS.

One of the most eloquent of Christian Science lecturers says: "You cannot always tell what a man believes by what he says. It is not enough to say, I am this, or that. Suppose a man says to you, 'I believe that God is omnipotent,' you turn to him and say, 'So do I.' Then he says to you that he believes also in the power of evil, and that there is an entity called Satan possessing all the characteristics of immortality, possessing power akin to the divine power, who is able to hold mankind in eternal punishment, and has the power to drag man down from the image and likeness of God to perdition. And when you see that this man, who is trying to believe in the omnipotence of God, lays a good deal more stress on the power of evil; when you find that he believes in an entity and intelligence opposed to the Omnipotent, then you see and know that that man does not believe in an omnipotent God at all. It makes no difference how a man tries to persuade himself that he believes in an omnipotent God. If, at the same time, he is trying to believe in a devil, or power opposed to the Omnipotent, all the sophistry he can bring to bear upon the subject cannot outweigh the utter falsity and futility of the effort and of that conclusion. Christian Scientists believe that God is omnipotent, omniscient, and omnipresent. That being the case, we have to account for evil in some other way than by calling it a power opposed to God. It is utterly impossible to conceive of God as infinite Good and then incorporate within that an entity called Satan, or Spirit of evil."

RELIGIOUS TENETS.

Christian Scientists have on more than one occasion been

spoken of as infidels, and their teaching and practice classified with hypnotism, mesmerism, and spiritualism.

I find, on reference to Walker's Etymological Dictionary, that an infidel is defined as an unbeliever, a miscreant, a pagan, one who rejects Christianity.

On reference to the Christian Science text-book written by Mary Baker G. Eddy, wherein are laid down its religious tenets, you will find that Christian Scientists, as adherents of Truth, take the Scriptures for their guide to eternal life. They not only believe in the Bible, but find that, through the understanding of Christian Science, all Biblical mysteries are effaced and all seeming contradictions are reconciled.

They "acknowledge and adore one Supreme God." They "acknowledge His Son, and the Holy Ghost." And they conclude the summing up of their religious tenets in the following impressive sentence: "We solemnly promise to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus, to love one another, and to be meek, merciful, just, and pure." Are these the words of the pagans, unbelievers, and miscreants who reject Christianity?

To the question found in the same text-book, "Does Christian Science, or Metaphysical Healing, include medication, hygiene, mesmerism, or mediumship?" the answer is an emphatic denial, Mrs. Eddy saying that "Every conscientious teacher of the Science of Mind-healing, knows that hypnotism is error, and he must recognize this in order to defend himself from its influence. . . . It is the action of one mortal mind taking control of another, without the other's knowledge or consent, and is practised from mistaken or wicked motives" (Science and Health, p. 448).

Christian Science, therefore, has no connection whatever with either spiritualism, mesmerism, or hypnotism; very much the reverse, seeing that it absolutely refuses to recognize the power of the human mind or of the human will as having any status at all in God's kingdom, but claims *per contra* that there is no other Mind but the One Mind (God), and no other Will but the One Will (God).

NO PERSONAL GOD.

Christian Science recognizes the Almighty as being a God of Infinite Love and not a Personal God. It has come to us after all these hundreds of years to revive the teaching of Christ through spiritual understanding, not to teach any new doctrine, but rather to show us how to unlearn all the false theories and traditions on which we had pinned our faith.

Jesus said, "Except ye be converted, and become as little children, ye shall not enter the kingdom of heaven."

It is impossible for us to cling to our old beliefs and try to augment them with new theories; we cannot hold to the old idea of a personal God and expect to add to this belief the true understanding of the Almighty. Therefore our willingness to drop all false beliefs must be taken as an earnest of our desire to possess the true understanding of divine Truth and to be taught anew of God.

This is what Christian Science teaches us, and it is through its doctrine that God is being at last understood to be a God of infinite love and compassion instead of an avenging judge. And as this true conception of the Almighty becomes more fully realized, so will the beauty of Truth, Life, and Love become more fully recognized by the world.

HEALING THE SICK AS WELL AS THE SINFUL.

It is to sick, suffering, and diseased humanity that Christian Science comes like an Angel of Light, bearing in one hand the Gospel of Health and Truth, and in the other a message of Peace and Love to man from God.

It reveals to the world the fact that the healing of sickness as well as of sin is another natural concomitant of true Christianity. I use the word another purposely, because

there is a very prevalent idea among a large portion of the community that Christian Science is simply a newly discovered healing process for physical ailments, and has little or no moral side to it, and it is that erroneous idea which arouses so much antagonism; whereas all Christian Scientists know very well that the healing of physical ailments is but a very small part of the great Christian Science whole.

Although the proof is the fact of the healing, yet the healing itself, to quote Mrs. Eddy, is but "the bugle call to thought and action in the higher range of infinite goodness."

Mrs. Eddy also says, "In order to cure his patient, the metaphysician should first cast moral evils out of himself, that he may thus attain the spiritual freedom which will enable him to cast physical evils out of his patient; but heal, he cannot, while his own spiritual barrenness debars him from giving drink to the thirsty" (Science and Health, p. 365).

A man, therefore, has to study well the moral side of Christian Science and to go through a course of self-purification before he can attain that "spiritual freedom" which will enable him to cope with the sufferings of his fellow-creatures.

When Jesus commanded his disciples to preach the Gospel, he, in almost every case, added the injunction to heal the sick, and Christian Science has not the power, any more than any other Church has, to separate one part of the Gospel of Christ from the other, because the healing of the sick is, and always was, part of the Gospel of Christ.

HEALING THE SICK.

Those whose duty it is to-day to preach the Gospel of Christ reject the healing part of it, making use of the old threadbare argument that the days of miracles are past.

Have these same persons ever realized the fact that in rejecting the practice of healing the sick they are denying the omnipotence of God, inasmuch as they place more reliance on a box of pills or a bottle of medicine than on the power of Him who rules the universe?

Do they consider that sick and suffering humanity twenty centuries ago in Palestine was more in need of being healed than the sick and suffering of to-day, who are spread over the whole world?

Jesus, on several occasions, spoke to his disciples regarding the ability of mankind to reflect divine power and thus heal the sick. We find in John, 14: 12, he says, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do."

On another occasion he said: "These signs shall follow them that believe; . . . they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

That promise given by Jesus was not confined to a year or to a century, it was given in perpetuity. Again, Jesus never intended the ability to reflect this divine power to be confined only to his own disciples, for if he had had such intentions, he would have said, "These signs shall follow you that believe;" but in saying that the signs shall follow them it clearly meant all mankind and for all time and in all places. The power and love of God are not confined to any one locality or to any one age. Jesus taught his disciples to heal the sick, and they passed it on to some of their followers, and we have the authority of Gibbon, the well-known historian, for saying that until the close of the third century healing was a regular phenomenon of primitive Christianity.

THREE ESSENTIAL POINTS.

Christian Science rests not on theory for the evidence of its truth, but rather on proof, and must be, and is, supported by indisputable demonstrations.

It is a subject that covers such a limitless area that to attempt to write about its every phase would occupy too

much space, but we may safely affirm that among its most essential points there are three which stand out pre-eminent, and they are these:—

(1) That Life never dies, for God is the only Life.

(2) That God is not the author of sin, sickness, or disease

(3) That Divine Truth, which is Life, casts out human error and heals the sick.

Let us consider these three points for a moment.

(1) Life cannot die, for God is Life, and God cannot die. John said, "In Him was life, and the life was the light of men," and Christian Science says that man is only able to demonstrate Life through Christ in proportion to his purity and perfection.

(2) God cannot be the author of sin, for the Bible says: "God is of purer eyes than to behold iniquity." Therefore, sin can have no part in God's kingdom. Neither can God be the author of sickness and disease, for the Bible tells us that "all things were made by Him, and without Him was not anything made that was made;" and again, "God saw everything that He had made, and behold it was very good." Then, as sickness and disease cannot be called very good, the logical deduction is that as God made everything, and as everything He made was very good, sickness and disease were never creations of the Almighty.

(3) Metaphysical treatment through the power of Divine Truth is able to heal mortal mind of the illusion of sickness, and when the mind is relieved of its illusion there is no sickness left to disappear. Under this head, which Christian Science calls Science of Mind, a few words concerning thought and its influence on human affairs may not be out of place.

THOUGHT.

Thought is one of the chief factors in the every-day transactions of the world. Thought dominates the concerns of mortal man and rules the destinies of empires. Thought, governed by Fear, which we may call Fearsome Thought, is as much the immediate producer of sickness and disease as is Sinful Thought the primary instigator of sin and crime. Fearsome Thought, as well as Sinful Thought, is Thought directed into a wrong channel; but Christian Science shows us how to counteract these evils in demonstrating how this Thought of the human mind, if directed into a right channel, can heal both sickness and sin.

Let us say, for the sake of argument, that man's normal state is one of harmony and concord, and then let us take as an example the case of an individual surrounded by sin and temptation and manifesting every conceivable kind of evil; then, if we know that evil is nothing more than an outcome of erroneous thought, what can be the only possible course for us to pursue in order to deliver that individual from this evil condition?

Is it not obvious that there can be but one remedy possible, and that is change the thought in order that error which kills, may be supplemented by truth, that gives life?

Change the thought into the right channel, and truth must triumph.

WHY SIN CAUSES SUFFERING.

We will now turn for a moment to the contemplation of the real nature of sin and see if we can discover why sin should cause such a sense of suffering.

We have already learned the following maxim: "All is evil that is unlike God." Hence all evil must of necessity be harmful. Some forms of evil are manifested in sin, others are manifested in sorrow, many in misfortune, more in sickness, and each one is the offspring of that "carnal mind" which is in perpetual "enmity against God."

If a man could be really induced to take to heart the statement that "Whatsoever a man soweth, that shall he also reap," then the fear of suffering alone would deter him from sinning, and if before sinning he had only known that every

sin reacts upon himself and causes inevitable suffering, that man would have been so absolutely horror-stricken by the prospective misery that evil entails upon the sinner, that fear of the consequences alone would surely have turned him from it.

Much more could be written upon this theme, especially dealing with the subject of fear and its action on thought, but space forbids.

In conclusion, I may say that experience has undoubtedly taught us that the teachings of Christian Science not only make men and women happier and bring them nearer to God, but that its tenets and principles purify the motives, exalt the aims, and increase the wisdom and intelligence of man.

THE SOCIETY FOR THE PROTECTION OF NEW HAMPSHIRE FORESTS.

Under the above heading the persons in authority are sending out circulars, of which we herewith publish a copy. The movement is a wise one, and we trust it may be successful. It surely deserves to be.

Following is an extract from the circular:—

Concord, N. H., 1901.

The above society was recently organized in Concord, N. H., and the object of sending out this circular is to acquaint the public generally with its purposes, and to induce all who are interested in its purposes to become members; and you are earnestly requested to send in your name as such.

The intention of the Society is very clearly set forth in its Constitution, but it may be summed up briefly by saying that it is a society to preserve the forests of New Hampshire, to protect our scenery, and to encourage the building of good roads.

The Society may undertake any other good work under its Constitution, and we hope it will undertake other good work, but at the outset its aims are broad enough.

It is intended to take up an active campaign in the interests of our forests and roads, and all can help by becoming members and contributing.

There are several bills now before the New Hampshire legislature bearing upon this subject, which the Association is pressing.

The Association is as yet in its infancy, and welcomes assistance of every kind.

Brotherhood.

THAT plenty but reproaches me
Which leaves my brother bare,
Not wholly glad my heart can be
While his is bowed with care.
If I go free, and sound and stout
While his poor fetters clank,
Unsated still, I still cry out,
And plead with Whom I thank.

Almighty: Thou who Father be
Of him, of me, of all,
Draw us together, him and me,
That whichsoever fall,
The other's hand may fail him not—
The other's strength decline
No task of succor that his lot
May claim from son of Thine.

I would be fed. I would be clad.
I would be housed and dry.
But if so be my heart be sad—
What benefit have I?

E. S. MARTIN.

From Our Contributors.

A Lesson from Truth.

BY STELLA F. MERRITT.

NOT long ago a lesson came to me in the form of a dream, which proved so helpful that I send it to the Field in the hope that others may be benefited thereby.

I seemed to be in school again, and the teacher had given our class a problem to work, the correct solution of which would give the exact proportion of a geometric figure drawn upon the board.

Having obtained the required figures each pupil was requested to draw the form as proof that his work was correct. I was very ambitious to be the first to complete the problem, that I might have the honor of being thought the brightest of the class. So I looked over my neighbor's shoulder to see if I could not copy some of her work, and thus save doing it myself; but I could make nothing out of it. I stole a glance at another's paper, but with no better success; the figures all seemed to run together. I then tried copying the figures from the board; but some of the lines were too long, while others were not long enough, thus necessitating repeated erasing and drawing over again.

After losing a great deal of time, the thought came,—there is an underlying principle by which this problem must be solved, and I must abide strictly by its rules. With this thought I carefully proceeded to work the problem. As I advanced, step by step, all thought of being first was forgotten. I had no desire to steal from or copy my neighbor; my only thought was to be so thorough and faithful in performing the work that the result would produce the perfect model. At last the work was complete and, as I thought, I had but to draw the figure, when—to my surprise—it appeared in perfect symmetry beside my work.

Wonderingly, I presented my paper to the teacher. I waited for no word of approval, the consciousness within myself that the work had been faithfully done was, in itself, sufficient reward. As I awoke, this thought came: "The longing to be better and holier,—expressed in daily watchfulness, and in striving to assimilate more of the divine character,—this will mould and fashion us anew, until we awake in His likeness" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 310).

In Science we all have our problems to solve; and the sooner we awaken to the fact that each one must be worked out according to Principle, and apply ourselves to the task, in just that proportion will self-thoughts be destroyed and harmony manifest itself in our lives.

I wish to express my thanks for the many helpful articles published in the *Journal* and *Sentinel*. They are a source of continual refreshment and blessing. Many times, when reading them, it has seemed as though Love was speaking directly to me, so fitting to my own need has been the application of the thought expressed.

Be ye Faithful.

BY E. B. L.

IN obeying this mandate man reaps a blissful recompense for well doing. Never could the apostles have been in accord with divinity had they not expressed God's ideas. Faithfulness to God is a recognition of His ever-present power. Spiritual blessings come through seeking and praying, in acting the verities of God's ways. Brightness enters our lives as we open the portals to let the Light flow in, and Truth is ever ready to illumine the darkest cavern.

As our relation to God is better understood, we learn our duties to our fellow-man, and we should not increase our brother's burdens with our human propensities.

When we seem to be drawn out of the atmosphere of

divine Love by a sense of weariness, when our burdens appear to be heavy and our demonstrations impossible, we must try to remember in our trials that God is very near, and that only our material senses shut us out from His sustaining power. Our daily battles with the ills of the flesh prove that our problems are being met. When we repose in apathy our advancement is retarded. If we listen, Truth will uncover to us our errors as fast as we are prepared to overcome them. The laggard tarries at the cost of spiritual growth. Yesterday's errors should be swept aside (*i.e.*, overcome) to prepare us for a higher conception of Truth on the morrow.

All are struggling under difficulties of some nature, each probably feeling his burden is heavier than his neighbor's. This is not true. We have the lessons we require as we progress. Our daily experience is separating the dross from the gold. We are brought into our purity by the unquenchable fire of Love, fanned by our earnest desire for understanding.

The road may seem rugged as we slowly wend our way; perhaps we may often be lost in the thicket of discouragement, but in those wanderings we must, as our dear Leader says, "Listen for the mountain-horn, and it will call thee back to the path that goeth upward" (Miscellaneous Writings, p. 328).

"Well done, thou good and faithful servant: thou hast been faithful over a few things, I will make thee ruler over many things." This promise is the divine signal of approval beckoning us from doubt and fear to our reward, "Enter thou into the joy of thy Lord."

A Word in Season.

BY ISAI T. KAHN.

I HAVE often heard people say that if they could write well they would send their testimonies to the *Journal* or *Sentinel* without further delay. Whenever I hear this said I am reminded of a story I once heard of a writer who was noted for his easy, graceful style of expressing himself in his writings.

A visitor to this writer was quite nonplussed on reading some of the author's manuscripts, at the inelegance of diction. On being chided for this seeming omission, the author explained that the ease and grace so much admired in his writings was only acquired by many hard days' labor, and he would accomplish that part of it later.

I think a lesson can be drawn from this little story. When the thought comes to us that it is time for us to send a contribution to our publications, we should write down the main facts as best we can, and afterwards clothe them in as good language as we can command, and if we are not satisfied with our own effort we can always enlist the aid of some one else who has had better educational advantages. Our efforts should not end here, but we should continue in our endeavors, and Love will guide us to write well and wisely.

Perhaps few will read these words who would not be more than overjoyed to be asked by our Leader to do something for her, but see how slow we are to appreciate the opportunity when it is within our reach.

If we are not faithful (obedient) in little, easy things, why wish for greater things to do?

Whenever we find ourselves unwilling or unable to meet the demands of Love, the needful thing for us to overcome is self, and if we have not learned how to do this, it is our own fault, as we have the Bible and "Science and Health with Key to the Scriptures" to show us the way out of this very condition.

Our Leader has given us the *Journal* and *Sentinel* to write to, and it is for us to do our part by supplying our faithful ones at headquarters with such an abundance of material that they may have much to select from to meet the needs of the hour. "Freely ye have received, freely give."

Testimonies.

A Few Words of Gratitude.

Many times when the *Sentinel* has come, just at the right time, with the helpful word, either in poem, prose, or testimony, I have thought, "I must send a few words to tell those dear people how I am helped."

Three summers ago, when I was in great need spiritually and physically, a dear friend said, "L., if you would read a book I know of, you need not suffer so." I asked her what it was; she turned to the book shelves and took down *Science and Health*. I gave her one disgusted look and said, "That old gag!" "Yes," she answered smilingly, "that old gag." Well, I took home some *Sentinels*, and before I got to Newton, a two hours' ride on the electrics, I was deeply interested in *Science*.

My friend told me to go to the church on Falmouth Street, which I did, and have continued to go there every Sunday afternoon. I soon owned *Science and Health*, took the *Sentinel*, and have the *Journal* sent me by my friend.

If I could only tell what *Science* has done for us all! Still, I am the only one in the family who will read and understand. The thought comes, "Why, I knew of Christian Science for twenty years and did not read and understand!" Now I am so busy doing the housework, sewing, and everything for four in family, with only the dear books to help. Sometimes, as it was last night, I felt as if I must give up. The heat (ninety) and the ironing tried to make me believe they were something. I retired about nine o'clock, after entertaining company. I was awakened in the night by a pain in the pit of my stomach. I thought, "cucumbers," and knew the agony of a fit of indigestion. I repeated the Scientific Statement of Being, and before I knew it I was sound asleep and did not waken again until six o'clock. Every day something or other comes up to be destroyed, and the love and joy of this freedom is past finding out.

A short time ago my daughter had a spot come at the corner of her mouth and another on the opposite cheek. Soon after that I noticed the humor coming in two large ugly patches on her right limb; then I said, "Well, dear, how long are you going to let this run on? Are you going to the doctor, or will you let me treat you?" She chose the *Science* treatment. The humor is all gone. *Science and Health* has opened a new world (God's world), and the Bible is more precious than ever.

MRS. L. R. F., Newton, Mass.

Healed by Christian Science.

A good report of healing has come to me from a dear student living in a rural district. A stranger went to see her, to ask if she would allow her daughter to go to them, as his wife was very ill and they could not get any person to go to wait on her and do the necessary things in the house. Although she could not easily spare her daughter, owing to the circumstances, she promised to let her go. After he had started for home she rather regretted having done so, as her daughter was young and these people were strangers to Christian Science; and it might not be a very wholesome atmosphere for this young girl. So she decided to drive to their place and see what kind of people they were. Upon arriving there, she found three little children, the eldest only six years of age. This little one showed her into a dark room, where their mother was confined to bed. She said, the thought came to her, how much they need the light of the glorious gospel of Christian Science here. She saw the woman had been crying, and learned from her conversation that she did not expect to recover. She had not been out of bed for eight weeks. She had both heart trouble and consumption. Later in their conversation the sick woman said she feared she would not last through the next night, as she suffered so much at night.

The student began to show her what Science and Health teaches about the heart, also how to place her affections on things above, not on the earth; showed her the promises of God, that it was not His desire to remove her from those dear little ones who needed her protection and care. She also asked her if she would read some of our literature. The sick woman expressed a strong desire to do so. The student then left, but went again on Sunday evening with the literature, read to her, and left it with her. From the time of that visit she had no more of the heart trouble. The student took her daughter over during the following week and found the woman able to sit up for a short time in a chair, and longing for her to return as she wanted treatment. It was given, and she was healed. She has been busy ever since doing her household duties, which are onerous. She is studying our text-book, and giving glory to God.—ISABELLA M. STEWART, Toronto, Ont.

Epilepsy Healed.

In walking to town I often passed a little shoe shop, and noticed the owner, a young man, who attracted me at first by a fancied resemblance to a younger brother. One day my husband was about to leave the house with a pair of shoes that needed mending. I asked him, "Why not take them to the little shop on 11th Street. The young man does not seem to have much work, and it will help him." That afternoon I was out with my husband, and about six o'clock we stopped to get the shoes. I noticed the young man looked disfigured, one side of his face was raw as though it had been beaten or he had had a very bad fall. In answer as to whether the shoes were ready he said yes, but it was a wonder that they were, as he was subject to fits, and while at work had fallen and lain on the floor unconscious for a long time. He then went on to tell that he could not keep a job of any kind working for others, owing to the malady with which he was afflicted, that he had doctored and doctored but could get no relief, and, as the tears rolled down his cheeks, he said he wished he were dead, he could not earn enough to support himself, and could barely make his most necessary expenses. He said one day he fell on the street and was allowed to lie there for hours, the passers-by thinking him intoxicated.

My heart overflowed with pity for him, I did want so much to tell him of Christian Science, but my experience had many times been such in similar cases that I hesitated. Finally I told him I knew he could be healed if he were willing to accept help in Christian Science. He knew nothing regarding this great Truth, but before we left we gave him the name and address of a prominent healer, and he promised to go there at once. He did so, and was completely healed in a very short time. He gave up his little shop and is now engaged in regular employment. He is the picture of health and happiness, and is a very faithful attendant at Christian Science Church services.

MRS. EMMA HAGENOW, Lincoln, Neb.

Disappointment Overcome.

At this time, when so many are rejoicing over the privilege which has been theirs of visiting our dear Leader at her home in Concord, N. H., I should like to tell how it was proven to me that when we seem to be deprived of some great pleasure, if we will but listen we may hear the still, small voice, "Lo, I am with you always," which gladdens the heart.

On the afternoon of June 25 I picked up a Boston daily paper and read an account of the invitation to Pleasant View and the happy throng that had been spending the day there,—the first that I had heard of this addition to the season's spiritual feast of Truth and Love. For a moment my sense of disappointment seemed great, for

I could easily have been with them had I known, and I should have been so glad to have seen our Mother again; but immediately the thought came to me, I cannot be grieved or disappointed. Since God is All, and my life is hid with Christ in God, there can be nothing lost.

As this thought crept deeper into my consciousness, all sense of disappointment immediately vanished. Although I was not privileged to be there in person, and share our Mother's greeting, in reality I had lost nothing, but rather had I gained the sweet assurance that the Comforter is ever-present, strengthening me and enabling me to overcome all disappointments and inharmonious conditions of thought.

"What a glorious inheritance is given to us through the understanding of omnipresent Love! More we cannot ask: more we do not want: more we cannot have. This sweet assurance is the 'Peace, be still' to all human fears, to suffering of every sort" (Miscellaneous Writings by Mary Baker G. Eddy, p. 307).—E. J. C., West Newton, Mass.

Healing of a Broken Bone.

A case of the healing of a broken limb that came under my observation proved to me the power of Truth, not only to myself, but to all those interested.

The accident occurred in the afternoon to a child about twelve years old. When the Scientist reached the home, there had been great suffering because of the fear, not only from the child, but from the father, when he found out the condition. He knew something of Science, and this was the test for him. But in a very short time the child was resting comfortably and went to sleep. All went to bed, and the father, I think, was up with him twice during the night. The Scientist remained in the home two days and a half, and great peace came with it. By Thursday, the fifth day, the Scientist was dismissed. The trouble was overcome. In two weeks and three days the child began to walk without any material assistance. In four weeks' time he was doing his chores about the house. It has been a great help to the whole family at large, particularly to the father, because he was undecided, and this helped him to decide for Truth. The demonstration has been of great help to the entire community.

Q., Cleveland, O.

I overturned a tea-kettle of boiling water on our little daughter, severely scalding both feet. In less than ten minutes not one trace of redness was there and no soreness at all. We have proved the nothingness of poison, rheumatism, neuralgia, sick headache, female troubles, toothache, colic, and hives. Discord of every name and nature has vanished under Christian Science treatment.

Science and Health has taught us to have more love for God and for our neighbor. It has also taught us to love our Bible and all Mrs. Eddy's works. My kind, patient, loving healer is not with us now, and we feel that we have to learn more than ever from Science and Health.

My husband has been a great comfort to me in many trials. He has bravely held up, never fearing or being discouraged. We look forward to the *Sentinel* every week, as we gain much from it and our *Quarterly*. Surely Truth is gaining ground.—MRS. LIZZIE DOUGLAS, Carterville, Ill.

I feel that the time has come for me to express my gratitude for what Christian Science has done for me, and to thank all the writers of the *Journal* and *Sentinel* for the beautiful thoughts they send us through those periodicals. In every number I find something that just meets my need.

Since coming into Christian Science, the Bible has become the Book of all books to me, and with Science and Health is my daily companion.—E. L., Ogden, Utah.

Religious Items.

A writer in *The Congregationalist and Christian World* has the following to say on "What is the Matter with the Congregational Minister?"—

"It is rather his misfortune than his fault. He is the victim of circumstances over which he has no control. The spirit which Paul met at Athens confronts him to-day. It is not the 'old, old story' which the people want, but something new. This is the age of unrest, and a mighty craving for novelty is upon all.

"The average Congregational minister cannot satisfy this spirit. He has been trained in a Congregational home, church, Sunday School, college, and seminary. He is one of the people, and like them in thought and aspiration and action. There is therefore a familiarity, a sameness, about him which does not satisfy the demand for novelty.

"But the man from another denomination is new. His training, his language, his thought are novel. Therefore he is sought out and welcomed when found. He is no better than the Congregational minister, but he is fresh and unusual, and therefore he pleases.

"A prominent Congregational minister, whose praise is in all the churches, once said that he would give \$5,000 for a brogue. Congregational ministers do not usually speak with a brogue, therefore he felt that if he were thus endowed he would be a *rara avis*, and so more in demand.

"No Congregational Church really seeking for a minister to preach the gospel need go outside the denomination. The Congregational minister to-day is as learned, as orthodox, as godly as any other minister. Only a desire for novelty calls in a stranger to minister in our household of faith."

The Standard has the following regarding "The Menace of Gambling:"—

"Various recent attempts to stop race track gambling in the vicinity of Chicago have come to nothing because of a lack of funds, lack of perseverance, or unexpected rulings by the courts. A new movement has just been started which may accomplish some more definite results because of the motive that lies behind it. A few business men, not heretofore known as reformers, have banded themselves together and retained an attorney to close the bookmaking establishments at the race tracks; and the reason they give is the very practical one that they have been losing money by the dishonesty and carelessness of clerks who have become infatuated with the gambling habit. One man recently had to lose a thousand dollars through a trusted employe who went wrong on account of race gambling. These employers of young men believe if they are to have trustworthy clerks and be free from constant anxiety the public gambling must be stopped. Even should this attempt, like the preceding efforts, be a failure, the stigma put upon the evil from a commercial point of view will be a powerful aid in the future to those reformers who work on moral principles rather than with regard solely to immediate results. What the leading business men of our cities already believe in theory—that young men who drink, gamble, or speculate are not to be trusted with important responsibilities—they should put into practice. If they did there would be some great changes in municipal morals."

"What do you think of yourself?" said a friend to Dr. Channing, as they were walking one day on the cliffs at Newport after a great ocean storm. "What do you think of yourself in the presence of such exhibitions of resource and of power?" "In such a presence as this," was the reply, "I do not think of myself at all." What a help it is to be sensibly near enough to God in God's world to forget one's self, and to reach out in thought and adoration "to the author, and maker, and ruler of all." It begets humility. It begets thankfulness and obedience and trust. It sweeps the brain clear of false conceits and gives perception of simple eternal truth. The Psalmist knew very well this depth of religious

experience. Long before Kepler's day there were men of God who had learned to think God's thoughts after Him in His own world. Read once and again those sacred oratorios written for all generations in the eighth and nineteenth and fiftieth and one hundred and fourth and one hundred and seventh Psalms. Commit them to memory. Let them become a part of your deepest thinking and being. Thus shall you study the character of God from His own open book, and as Longfellow said of Agassiz,—

Read what is still unread
In the manuscripts of God.

REV. EDWIN P. FARNHAM,
In *The Watchman*.

It is one of the curious incidents of the present curious age of the world that the missionary activity of Buddhism, which once spread that religion over many nations, has now so far revived that a Buddhist missionary from Japan has just established a mission in San Francisco. What is more, the "Rev." T. Mizuki has an incorporated society of which the chartered members are two men and four women who profess to be disciples of the Buddha Sakyamuni. Their services are held on Sunday mornings and their ceremonies are said to be not unlike those of the Roman Catholic Church, though part of the service consists of voluntary addresses made by persons in the congregation. It is all very curious, as we have said above, but one of the most curious things about it is this, that just at the time when one of our own bishops in Japan is reported to have declared, after a careful study of the Japanese, "that their capacity for receiving religion is limited and uncertain," a Japanese missionary should actually be finding men and women in America whose capacity for receiving Buddhism or any other exploded superstition is well-nigh unlimited.—*The Church Standard*.

Treating of the subject of universal salvation, *The Universalist Leader* says:—

"The extraordinary struggle of the Orthodox world to escape from the logical conclusion of the new premises it is now practically admitting, would be amusing were it not so serious a matter. God is infinitely wise,—but; God is omnipotent,—but; God is our Heavenly Father,—but; God is love,—but; and so on until there is no God left, but a sort of an infinite manikin.

"There appears to be a sort of horror of the thought that God not only 'wishes all men to be saved,' but will have all men to be saved. Men have stood out against this Godlike consummation of a Godlike purpose, and much of theology has had its origin in the attempt to buttress this extraordinary position.

"First it was the Devil who stood in the way, and in his successful contest with God he was made into a very God-like creature himself, while God was belittled, until the growing intelligence of the people abolished the personal devil. Then resort was made to the omnipotence of the human will; that has been made the idol which outranks God."

The blessed relief that, in many parts of the world, has come with cooler air and rain is no mark of special divine favor, as the drought was no sign of the wrath of God. To some extent the devices of man can prevent the worst consequences of such a dislocation of climate. But when man has done all that he may there remains an unusual and unexpected threat of suffering which could not be foreseen and could not be provided for. In all ages some of the wisest and best of men have sought for the signs of spiritual providence, which, while not changing the physical order of nature, would make them in faith and hope superior to it. While we would not say that God plans the drought for spiritual discipline, we may easily see how out of it come mutual sympathy and helpfulness that serve to strengthen the bonds of society, and dispose all classes to fulfil the law of Christ by bearing one another's burdens.

The Christian Register.

There were many missionaries in China during the recent disturbances who do not in the slightest degree sympathize with Rev. Gilbert Reid's views as to the "ethics of loot." Our Baptist missionaries to a man would repudiate any such doctrine. The friends of the missionaries who have been carried away by these theories and the Boards with which they are connected naturally enough desire to make the best defence possible of their conduct. But they are making a mistake. These theories are radically and totally indefensible from any Christian point of view. The better course would be to acknowledge frankly that some missionaries, in circumstances of unusual provocation and temptation, failed to illustrate perfectly the Christian ideal.

The Watchman.

As Universalists we do not believe in the perseverance of sinners as a way to felicity in sin. We don't believe hell can become heaven by wider and longer acquaintance with it. Let no one made as man is, and so overwatched and ordered of God, delude himself with the idea that he can sin himself into a state of happiness. It is not so. He may come to pluck some flowers from the upas, but more and more he will find he is clutching thorns and sucking poison.

The Universalist Leader.

We are to be rewarded, not only for work done, but for burdens borne, and I am not sure but that the brightest rewards will be for those who have borne burdens without murmuring.—BONAR.

LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science, the Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, 60 cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Practical Demonstration. Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Love. Theory vs. Realization. Is Christian Science an Opinion?

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, \$1.25; one thousand, \$2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL. The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, \$1.75; one thousand copies, \$3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Witness my Pet. Hand Edgar G. Eick.

2000

RETROSPECTION AND INTROSPECTION. A historical sketch of the nation. The way we have led to the slavery of Colored Americans is given in a chronological order, 180 pages. *Price, cloth, 25 cents.* *Bound in half, cloth, \$1.00 and upwards.* *Single copies, 50 cents.*

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PEOPLE'S IDEA OF GOD. A Million Dollars in Bibles—100,000
Bible copies. Price \$1 per copy. \$100 per box. **FREE**.
FEED TY SHEEP. Written by Mary Blair G. Eddy. Made by
Lyman F. Brewster. Price \$5 per copy. \$50 per dozen.

95 Fairmount Street, Boston, Mass.

Founded April, 1883.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One Copy, one year, 50 cents: Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

Miscellaneous Publications.

CO. 1. M. U. N. H. M. N. "Saw Ye My Saviour." W. 1872.
REV. MARY BAKER G. EDDY, MUSIC BY WILLIAM LUDWIG LUDWIG.
SON. Price, 50 cents per copy; \$5.00 per 100. W. 1872.
By special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MISS
BIKER G. ELLY. Music by WILLIAM LYMAN JOHNSON. For
soprano or tenor. C sharp to A; for lower voices. B flat to F.
Price, \$1.00 per copy. \$9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, \$1; six copies to one address, \$4; twelve copies to one address, \$4.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, pre-paid, \$1.15 each; per dozen, \$9; per half dozen, \$5. Half Morocco, per copy, pre-paid, \$1.40 each; per dozen, \$12; per half dozen, \$7.50. **Small Morocco**, per copy, pre-paid, \$1.60 each; per dozen, \$13; per half dozen, \$8.00.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A HISTORY of the Building of the Mother Church, The First Church in the City.

One copy, \$1.50; Six copies, \$7.00; Twelve copies, \$12.00

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 72 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF

CHRISTIAN SCIENCE. 63 pp.
